the schools; but even here he was not without danger. The jesuitical doctrine which he has most absurdly, as we shall see hereafter, put into the mouth of one of his most virtuous heroes, that a mental reservation might dispense with the sanctity of an oath, subjected him to severe though not unmerited censure. An Athenian, named Hygieonon, was so indignant at this sentiment, that he accused the poet of impiety, as teaching that perjury was lawful. He escaped, however, by alleging that he was responsible only to the theatrical judges for matter introduced into plays, and that he was ready to make his defence before them, but denied the power of any other tribunal. It is said also, that he introduced Bellerophon making an elaborate eulogy on riches, and declaring that if Aphrodite, who was denominated the Golden, shone like gold, she was deserving of universal love, which so enraged the audience, that they burst into a tumult, and desired to wreak their indignation by violence on the actor and the bard. Euripides, however, pacified them, by appearing on the stage, and assuring them, that if they would wait till the conclusion, they would find that a fit punishment would be awarded to the miser. On another occasion he gave offence by exhibiting the guilt of Ixion, and defended himself by referring to the catastrophe, when he would be broken on the wheel. Still he seems to have found a recompense for the occasional hostility of the people in the friendship of the philosophers. Socrates honoured him with peculiar regard, and always attended the theatre on the representation of his pieces. Perhaps the incessant attacks of Aristophanes, who seems to have had a peculiar delight in ridiculing both, might have served to unite them.

According to some authorities, Euripides composed ninety-two tragedies; according to others, seventy-five; but only five of them were so fortunate as to obtain the victory, four during his life time, and one after his death. If this want of success had resulted merely from the partiality of the Athenian audience to *Æschylus* and *Sophocles*, it would not certainly excite our wonder. But we know not how to account for the circumstance, which is related by Varro, that the most wretched pretenders to the poetical art were preferred before him. In the very onset of his career he was conquered by *Xenocles*, a low and contemptible writer, whose works have long sunk into merited oblivion. Some circumstances of party, or of prejudice, with which we are unacquainted, must have blinded the judgments, or destroyed the equity, of the refined people of Athens, before they could have thus decided. In other regions Euripides obtained that renown which was denied him at home. In Sicily he seems to have been admired with a feeling almost amounting to devotion. When *Nicias* had been overthrown, and his army placed at the mercy of the Sicilians, this respect for the tragedian of Athens interposed between them and destruction; and as many as could repeat the verses of their illustrious countryman were dismissed, with the respectful attentions of their foes. At another time, the crew of a Canian vessel, chased by pirates, desired permission to enter some port of Sicily, and were refused, till it was known that some among them could recite the poetry of the favourite bard, on which they were allowed admission. Euripides, like all who have attained excellence, was fondly attached to his art.

Biography. He was accustomed to retire to a dreary cave in the isle of Salamis, to compose his pieces, in the stillness of the deepest solitude. When he complained to a cotemporary writer, named Alcestis, that he had not been able to produce more than three verses in the last three days, and the latter replied that he had made three hundred during the same period, Euripides observed, that there was this further difference between them—that the productions of this facility would last three days, while his were intended to endure for ever.

There has been much difference of opinion respecting the private life and domestic history of our bard; many of the tales related respecting him have arisen from attempts to account for the contempt and aversion towards the female sex which seems to breathe through his writings. According to some, he had two wives at the same time, with both of whom he was heartily disgusted, and therefore vented his spleen on the sex. Others contend that he took his consorts successively; that the first he was compelled to repudiate for abandoned conduct; and that the second not only disregarded the ties of her condition, but caused, by her open profligacy, so great ridicule to be poured on her husband, that he was forced to leave Athens. Sophocles is said to have attributed the low opinion which his rival entertained for women, to his having been chiefly acquainted with the vicious and degraded among them; but this opinion may reasonably be taken with some allowance for the jealousy of an author. There are several disgusting stories told respecting the conduct of Euripides, but as they are both contradictory and improbable, we do not think it necessary to pollute our pages by repeating them.

In the decline of life, Euripides, probably in consequence of the profligacy of his wives, left Athens and repaired to the court of Archelaus, king of Macedonia, by whom he was received with the most distinguished honours. There in peace and ease he passed the remainder of his days. When, however, he was importuned by his royal patron to celebrate his actions in a play, he declined, gracefully observing, that he trusted the reign of the monarch would furnish no materials for tragedy. The mode of his death is variously related, though all agree that it was violent, and took place about three years after he had come to reside at Pella. The common account is, that he was torn in pieces by dogs, some alleging that their fury was only accidental, and that they seized him while walking in a wood, engaged in deep contemplation; and others, that two poets, Aridous and Cratesus, the former a Macedonian, and the latter a Thessalian, hired the keeper of the royal hounds thus to accomplish his destruction. It seems to be the better opinion, that his death was accidental; though violent, it could scarcely be regarded as untimely, since he fell in his seventy-fifth year. His remains were removed from Bermicus, where he died, to Pella, where Archelaus honoured them with a sumptuous funeral, and erected a monument over them. This munificent patron is even said to have cut off his own hair, and put on deep mourning, as a testimony of respect for that genius, which living he had delighted to cherish. The Athenians, who had done him so little honour in life, were, according to their custom, exceedingly ready to lament his death. They sent an embassy to Archelaus, to request that they might bring his relics to Attica, a demand which was

premptorily rejected. They erected, however, a noble cenotaph to his memory, which, Pausanias says, was standing at the time he wrote. According to the superstitions of the time, Plutarch informs us, that his tomb at Pella was struck with lightning, which was regarded as consecrating the spot, and a signal token of the divine favour.

Nineteen of the plays of Euripides have reached us, besides a number of fragments. In him, many of the critics conceive that the Greek tragedy attained its perfection. Highly, however, as we estimate his powers, to which Schlegel has scarcely done justice, we are inclined to agree with that high modern authority, that we must look in this poet for the symbols of its decline. A slight view of his general character, and a rapid survey of his numerous pieces, will, we think, suffice to justify this opinion.

We have seen that a certain elevation above the common realities of life is essential to tragedy. In Sophocles and Æschylus this dignity is preserved, not merely by the circumstance of the selection of persons from among the list of heroes and of gods, but by the stateliness of their thoughts, the religious solemnity of their actions, and a kind of consecrated air breathed over them; but the ambition of Euripides seems to have taken a direction not only different from that of his predecessors, but incompatible with that peculiar style of excellence which they invented and finished. His efforts are directed less to the imagination than to the sensibilities and the understanding. He loves to triumph by involving us in metaphysical subtleties, or by dissolving us in tears. He scarcely ever labours to attain that which the other tragedians made their great object, a representation of perfect beauty. They made the very sorrows and deaths of their heroes something above humanity, which should excite awe rather than compassion; he delighted in rendering their distresses of the lowest and most physical complexion. They cast around their sufferers a solemnity in grief, which breaks the force of sympathy; he strove to tear away all the disguises of rank, and claimed our agonising pity for his persons as the lowest of mortals. The pangs of their heroes had for their causes the immediate retributions of heaven; his were exposed to cold, beggary, and pitiful needs. While the former preserve a majesty in affliction, the latter court our sympathy in the eloquence of rags. The truth seems to have been, that the mind of Euripides was more penetrating and refined than exalted. With great sweetness and elegance, he appears to have wanted a sense of high and austere virtue, and even of sustained heroic grandeur. Thus, he has scarcely, in all his pieces, one character of consistent excellence, where the virtue is brought into action. Alcestis is a beautiful picture of self-devotion, but she has nothing to do but to die. Ion is a lovely portrait of consecrated and unconscious piety; but it is the excellence of a recluse, of too glossy and ethereal a texture for this world. This poet cannot even paint high and enormous vice, or un governable passion of a uniformly grand and heroic kind. Medea, the wonder-working enchantress, that "soul of fire, with whom revenge is virtue," calmly, before she begins her terrible operations, intrigues to obtain a comfortable asylum for herself, when her revenge shall be completed. Clytemnestra is accused by her indignant daughter, not

Character
as a poet.

His death.

Biography. only of having murdered her husband on his return, but having taken too much time in dressing her hair during his absence. If the essence of tragedy consists in the mere excitement of tears, Euripides is far the greatest of the old tragedians. He depicts situations too most wretched, cheerless, and desolate, and carefully deprives his sufferers of every possible consolation. Electra appears not only tottering beneath the weight of affliction, but of a huge pitcher of water; and Menelaus, mourns at once the mangled honour of his wife and the tattered state of his garments. His pathos is not like that feeling which dissolves us in sweet tears before the Niobe, but that oppressive grief which a real catastrophe occasions. The mirror he holds up to nature is microscopic rather than enabling. Some there are, doubtless, who think the power he possesses a higher one than that exercised by his predecessors; we only contend that it is quite of a different description.

The quality for which Euripides has been so highly extolled—the eloquence of his disputations—far which he was naturally loved by Cicero, and recommended by Quintilian to youthful orators, was alone sufficient to lead him astray from the path in which *Æschylus* and *Sophocles* had trodden. Logical quibblings have little relation to pictures of ideal grandeur; when these are thickly strewn, they necessarily destroy all the rounding and the finishing, the delicacy, and fair proportion. The composition does not appear with every line possessing a wave-like flexibility; but the curves of beauty are broken into angular points by the sharp collisions of argument, the quick turns of satire, the jostling of opposite reasons. Most of the principal scenes in the plays of this author become debates, in which the passion and the beauty alike evaporate, and instead of the persons speaking as those whose lives are in immediate jeopardy, they seem merely anxious for the credit of vanquishing, and possessed of no more earnestness than hired advocates naturally acquire in the heat of the cause. The mind of Euripides seems to have had a peculiar tendency to the poising of opposite reasons, and his great pride to have been in showing how much he could say, and how ably he could clothe his arguments, on every side of every question. Hence he takes all occasions of making his persons plead their cause; but betraying an evident consciousness that he is doing it for them. Thus Clytemnestra calls on her daughter to give her reasons against the murder of Agamemnon, and then defends herself in a long sophistical harangue. Thus he causes Hecuba, after imploring Menelaus to execute immediate vengeance on Helen, to entreat him to allow her to make her defence, in order that she may have the pleasure of replying to it. In the discussion, Helen represents her antagonist as more guilty than herself, because she had borne Paris, and her husband had refused to slay him; but for which events the evils deplored could never have arisen. Criminals are perpetually introduced defending their enormities by the most hollow and palpable sophistries; and, when all other excuses fail them, referring to fate as the sole author of the wrongs of which they have been the mere instruments. If this plea had any force to defend men from the charge of guilt, it might as well be brought forward at once to end the question, and cut the Gordian knot before so many vain efforts have been made

to untie it. Fate, however, is the cloud in which the guilty escape, like that which the divinities in Homer throw over their favourite heroes. This tendency to forensic eloquence and logical subtleties seems to have rendered every thing problematical in the mind of Euripides, and causes him to pronounce the most contrary sentiments with equal energy. The excuse that his persons only speak in character will not avail him; for some of the most questionable or bold opinions are placed in the mouths of those who were the least likely to utter them. Thus Andromache, when she is vowing to live, if possible, entirely devoted to the memory of her lord, is made to utter a piece of the coarsest ribaldry respecting her sex at large: thus Ión, brought up from infancy in a temple, whose very thoughts should be sainted, abuses the gods, with great justice but little consistency, as worse than men; and thus Hippolytus, the noble-hearted, the generous, and the self-denying, utters the famous piece of casuistry respecting an oath, and then dies rather than break his own. Nothing but an invincible love of paradox, at which even Rousseau might smile, could surely have induced the Grecian poet to this last violation of character. This philosophy, if not "lins and crabbed," is at least thorny and perplexed; a thicket so closely intertwined, that the flowers of poetry can scarcely find room to flourish beneath its shadow.

The peculiar beauties to which the genius of Euripides inclined, no less than his defects, tended to lead him from the style which the former tragedians had adopted. His imagination "looked before and after." His poetry is the sweet and lingering echo of joys past, or the hope of delight to come. Hence it is essentially different from that of his precursors, who, rejoicing in the glorious objects immediately before them, were contented to exhibit these in their fairest proportions, without introducing objects which were remote or obscure. They felt the joy of the present moment so intensely, that they required little from remembrance or hope to gild the scene. Euripides, on the other hand, with a sense of pleasure less vivid, is more contemplative; speculates more on the probabilities of our future condition, and dwells with greater fondness on the recollection of the past. He may be almost considered as the father of the sentimental style; his best passages consist of "thoughts that voluntary move harmonious numbers" and there is often a sweet accordance between the music of the verse and the images, which dwells on the mind with a soothing, tender, and gentle emotion. Nothing, for example, can be finer, in this way, than the passage in the *Mædea*, respecting the possible effects of music in harmonizing the tenor of existence. But this kind of excellence is evidently different, and even opposite, from that of *Sophocles* and *Æschylus*. The analogy to the plastic arts, so perfect in them, is lost in their rival. At the same time, he possesses a faculty of exciting genial though undefined emotions, of which they are destitute. He abounds also in *fancy*, which they either did not possess, or the austerity of their genius did not allow them to cherish or display. Notwithstanding his tendency to excite sensibility by means of low devices, he sometimes affects us with a real and genuine pathos, while he diverts the force of grief with tender remembrance of former bliss, or casts over the waves of trouble the sweet radiance of hope. Sorrow,

Biography. indeed, is never with him of that wild and super-human cast which it wears in the works of his predecessors; but it is often still, mild, and placid, and tenderly relieved by elegant allusions, and gentle touches of humanity. In modern times, and in the imitation of the romantic models, Euripides would probably have attained a higher poetic excellence than his remaining works exhibit. It is only to the high rank assigned to him, as one of the Greek tragedians, that we object; now do we mean so much to show that his genius was, in itself, inferior to theirs, as that it was unsuited to that grand and simple style of art with which his name is usually connected.

The Medea. The "*Medea*" of our author has, perhaps, been the most popular of his works; partly owing to the dazzling terrors of its plot, and partly to the comparisons so often made in its favour with the Roman tragedy on the same subject, which bears the name of Seneca. The opening speeches of the Nurse, recounting the distresses of her mistress, which are interrupted and heightened by her sorrowful exclamations behind the scene, are singularly beautiful. In the middle of the piece, when the heroine consents to deception, in order to accomplish her design, the interest seems to languish; but nothing of the kind can be more fearfully grand than the description of the death of the bride of Jason and her father, and the ferocious joy with which the enchantress listens to the tale. Her speeches, when meditating the death of her children, are admirably varied, by the struggles of natural affection, which almost shake her soul from her purpose; and her final appearance in the air with the bodies is exceedingly picturesque. She is, however, the only character in the piece. Jason is mean, hypocritical, and low-minded; Creon at once tyrannical and imprudent; and the chorus (who are necessarily acquainted with the dreadful designs, which they make no attempt to frustrate except by persuasion) of rather dubious virtue. The versification of this play is peculiarly sweet and flowing, and a bright fancy sparkles over it.

Euripides has written, among the tragedies that survive, no less than four of which the family of Agamemnon are the subjects: Iphigenia in Aulis; Electra; Orestes; and Iphigenia in Tauris—besides others, in which the chief himself or his brother Menelaus appears. The first of this series is, we think, on the whole, the best. The struggles of Agamemnon between his imaginary duty, as commander of the Greeks, and his love for his daughter, as represented in the first scene, form a very affecting picture. The subsequent passages, however, seem greatly to destroy the effect of the opening. Menelaus is depicted as mean and selfish in the extreme. He urges, with ferocious indifference, the sacrifice of his niece to promote his revenge, after having intercepted the letter of his brother, in which he countermanded his fatal orders. On the arrival of Clytemnestra and her daughter, for the supposed marriage of the latter with Achilles, the distress of Agamemnon increases; and Menelaus, touched with something like compassion, offers to forego the sad offering; when, to the disgust of the reader, the father himself changes his purpose; and alarmed lest the Greeks should discover the oracle, and mortify against him, resolves to complete the sacrifice from which he had so lately revolted. From this point, however, the interest is sustained to a very high pitch; and the

VOL. IX.

pathos, which would otherwise be overpowering, is relieved by pictures of tender resignation, fearful innocence, and generous courage. Achilles is represented in the most ingenious and amiable character. And though the heroine at first shrinks from the dreadful fate prepared for her, she speedily seems inspired with the most heroic feelings, and devotes herself to die with a noble firmness, which faintly reminds us of Antigone; she goes out to death as to a festival. The images of the victim, and of the hind substituted in her room, as pictured by the messenger who relates the catastrophe, possess a beauty of the plastic kind, of which Euripides affords few similar examples.

A long space of time elapses between this tragedy and that of "*Electra*," during which Orestes, who was introduced as an infant in the Iphigenia, grows up to manhood; Agamemnon returns conqueror, and is slain; Orestes is banished; and Electra discarded from the palace where Ægisthus and her mother reign. In this piece Euripides has unfortunately trod on ground which was completely occupied before him. All that the Choephore of Æschylus wanted in variety of incident, and felicity of development, had been supplied in the *Electra* of Sophocles; and nothing remained to be done by an author who should even bring to the work an equal genius. Compelled, however, to attempt some novelty, Euripides has accumulated woes on the head of his heroine,—"*step'd her in poverty even to the very lips*,"—and given her a generous present for her pretended husband. He has also removed the scene from the palace to the country, and employed artifices to bring Clytemnestra and Ægisthus to the place where they are to die, which are not very probable. Castor and Pollux are also introduced at the close, for no other conceivable purpose than to patch up a marriage between Pyrrhus and Electra; for the journey of Orestes to Athens belongs to a new action. In all respects, this piece is of a much lower tone than those of the two elder tragedians.

The "*Orestes*," in point of time, almost immediately follows the *Electra*. Euripides here represents his hero as not only driven to distraction by the furies of his mother, but as condemned to death, together with his sister, by the citizens of Argos. The distress, at the opening of this play, seems nearly to have reached its utmost pitch: Orestes is discovered lying on a couch, distracted, and Electra, worn out with grief and fatigue, sitting beside him; the Argives have forbidden all succours to be given to the miserable pair, and are about to assemble to decide in what manner they shall put them to death. This is rather an unpromising commencement of a tragedy; we see, at all events, the worst; for the actual death of the persons would be happiness compared to the prolongation of their sufferings. The wild exclamations of Orestes, however, when the madness comes over him, are at once grand and terrific. A gleam of hope breaks in on the arrival of Menelaus; but this piece, whom Euripides delights to represent as despicable, finally leaves his kinsman in despair. Tyndarus, Menelaus, and Orestes make long speeches, filled with many rhetorical flourish, which produce nothing. After the hard-hearted selfishness and unrelenting cruelty of the two relatives, the disinterested friendship of Pyrrhus is truly refreshing. He leads Orestes to make his defence to the people; but the only favour this measure procures is,

The Electra.

The Orestes.

The Agamemnon.

Biography. holy reverence in the mind of its youthful hero, is no less distinct and lovely than that of the scenery with which he is surrounded. His feelings of humble gratitude to the power which has protected him, his virtue unspotted from the world, and his fond cleaving to the sacred seclusion which has enveloped him from childhood, are beautifully drawn. The picture seems sky-tinctured—of an ethereal purity of colouring. The poet also is very skillfully conducted to the conclusion: though, with the exception of the attempt on the hero's life, the whole might pass for a sentimental comedy. The story is quite of this cast: a foundling is discovered by a mother, who had since married, to be her son, and is palmed off on her husband as the fruit of an early amour of his own; thus securing a wished-for happiness on Xanthus, an inheritance on Iön, and, at once, her child and her character to the mother. This is strictly a piece of intrigue, though it must be allowed that the imagination of the poet, here most felicitously exerted, has elevated it far above ordinary dramas of this description. In this, as in many works of Euripides, we trace the origin of the new comedy, and find ample reason to justify the admiration of Menander. The great blemish of the piece is the contrivance of the mother to slay the youth, whom she does not know to be her son. A lady, who has been represented as of peaceable and domestic manners, bears that her husband has discovered a son, and an attendant no sooner proposes in her that she should murder him, than she acquiesces, without the slightest scruple, and only expresses her fear that so desirable an event will be difficult to accomplish. Afterwards, when the scheme has been frustrated, and the recognition takes place, all is forgiven and forgotten; Iön embraces his mother without shuddering at her baseness, and this intended murderess is rewarded by the discovery of her son, and the combination of Apollo with her to deceive her husband. One would almost think, that before Euripides could make such a representation as this, he must have lost all sense of distinction between crime and excellence among the miserable sophistries of the schools.

The Suppliants. The "Suppliants" must, in justice, be regarded as a fugitive piece: written on political grounds, and for a temporary occasion. It was acted just after a treaty had been concluded between the Argives and Lacedæmonians, during the Peloponnesian war, in order to remind the latter of their ancient obligations to the Athenians. It consists simply of the entreaties of Adrastus, the king of Argos, and the matrons of that state, to Theseus, that he would interfere, and procure for them an opportunity of burying the slain who had fallen before Thebes, and to whom that city, in the pride of victory, refused a sepulchre—the consequent expiation of the Athenians, and their complete victory—the lamentations over the bodies thus redeemed—the appearance of Minerva, who exhorts the Athenian prince not to allow the Argives to receive the favours conferred on them, without a return, but to compel them to swear never to attack Athens—and finally, the exhortation of the chorus to Adrastus to take the oaths required by the goddess. The piece also contains a long and very elegant discussion between Theseus and the herald from Thebes, on the relative value of democratical and monarchical governments; and, what is far better than this, the sweet and touch-

ing lamentations and death-songs of Evadne, the widow of one of the fallen chiefs, who, at the conclusion of her strain, leaps on his funeral pyre and dies beside him.

The "*Children of Hercules*," like the former piece, is essentially political. It was intended to remind the Spartans of the protection afforded by Athens to the race of the hero, from whom they gloried to derive their origin. It bears internal marks of haste, and was probably composed to meet the public feeling at some peculiar crisis. There are, however, two circumstances which throw a splendour over it; the voluntary sacrifice of Macaria to propitiate the gods, and the generous heroism of Iolaus, whose youth is miraculously renewed, in answer to his prayers, in order to enable him to perform the noblest feats of valour, and to save, by his prowess, the family of his friend. There is a singular want of catastrophe. In the last scene, Eurystheus, whose life has been spared by the Athenians, is menaced with death by Alcmena; and while she threatens, and he replies, the tragedy abruptly concludes. The conduct and language of this spouse of Hercules, however prompted by her wrongs, are very unbecoming—though, probably Euripides was of a different opinion.

The "*Phænician Democrats*" occupies the same ground with the Seven Chiefs of Æschylus: it is of much greater length, and contains a far more numerous dramatic personæ than the preceding tragedy; but it is almost needless to say, that it is far inferior in spirit and vividness to that mighty work, in which the heroes with their martial panoply seem like shapes of fire seen in terrific vision. In the production of Euripides there is, however, some reflection of this prodigious and meteor-like brightness. The picture of the fatal combat between the brothers is exceedingly characteristic and striking. The scene in which Antigone, from the walls, inquires and learns the names and characters of the chiefs before Thebes is very injudiciously copied from Homer; for though such an enumeration may be exceedingly beautiful in an epic poem, it is unsuitable to tragedy, because it is purely episodical, and tends, in no way, to advance the action. There is a great deal of declamatory vituperation in this tragedy; indeed Polynices seems to have entered the city for no end but to debate and retire. Jocasta, whom Sophocles had killed, is here revived to endure fresh afflictions. We cannot say we should have desired this resurrection. When we consider the involuntary offence of which she has been guilty, we look on her with shuddering; and feel relieved when she dies for whom there could be no repose hut in the grave.

The "*Raging Hercules*" consists of two distinct fables; the imminent danger of the father, wife, and children of Hercules, with their deliverance by the return of that hero, and the madness in which he kills most of those whom he had so lately saved. Notwithstanding this fault, there is much power in the latter part of the tragedy. The description given of the dreadful scene in which the slaughters are perpetrated is very striking—and the condition of Hercules when he wakes to a consciousness of the past, most heart-apalling and fearful. The force of the pathos is pleasingly broken by the kind attentions and unchanged friendship of Theseus, whom the Athenian poets delighted to extol. Sophocles has very finely delineated this favourite character; but how much more sweetly is this idol of

Biography. Athens portrayed by Shakespeare than by any even of the most gifted of his own countrymen; when with a courtesy so graceful, and a philosophy so mild and prince-like, he is made to receive the theatrical efforts of the immortal company of fanciful mechanics!

Alcestis.

"*Alcestis*," if not the most beautiful of all the productions of its author, unquestionably contains the most exquisite scene. The descriptions given of the preparations made by the heroic wife for her approaching end—the sweet apostrophe to the nuptial chamber her own gentle departure and leave-taking of life, preceded by maternal anxieties and thoughts of love—form an instance of the pathetic of which all the works of ancient times can furnish no similar example. For the sake of the feelings thus excited, we readily pardon the necessary debasement of Admetus and his father—the strange account of the manner in which Hercules seizes the phantom Death at the tomb, and compels him to relinquish his prize, which seems at variance with every intelligible scheme of metaphysics or of mythology—and the undignified manners of the hero, who restores Alcestis to her husband. In this piece one might almost fancy that the first hints were contained of that divine picture of dying excellence which it was reserved for Richardson to exhibit in full grandeur to the world. It is astonishing that Euripides was not converted from his heresies respecting the female sex by the perusal of his own *Alcestis*.

Hippolytus. "*Hippolytus*," with the exception of the single unfortunate piece so much censured, is a most noble work. The author seems to have derived a purity of mind from the act of depicting such a character as that of the hero; for nothing can exceed the delicate propriety with which the revolting part of the subject is touched on. There is this peculiarity in the virtue of the unfortunate youth that his goodness seems altogether innate, and his soul is as unsupported as his actions. Euripides appears to have had a congenial feeling for this description of angelical beauty of mind, but to have wanted all moral principle; all sense of the struggling and subduing power of virtue which gives a mastery over itself and awes all around it. Moral beauty with him is always in repose—soft, placid, unconscious. Of all his persons who engage in the active scenes of crowded life, scarcely one has unmingled claims on our admiration and sympathy.

Rhesus. The admirers of Euripides usually give up "*Alcestis*" as unworthy of its alleged author, and have made great efforts to prove it spurious. There is, indeed, much reason to suppose it the production of a later age. No subject could have been chosen less adapted to tragedy than the episode of the liad on which this piece is founded; and the unfortunate choice of the materials is not compensated for by the skill of the finishing.

The Bacchantians. The "*Bacchantians*," though unfit for theatrical representation, is full of power, spirit, and poetry. The frenzy of the votaries of the god, with all their strange and wild frolics, are described with a vividness truly picturesque, while the choral songs breathe forth the same inspiration in verses which seem to reel and dance in union with the general emotion. The catastrophe would be too dreadful a conclusion to a piece of this kind, were it brought home with reality to our bosoms; but the whole is carried off by a sort of ethereal intoxication in which the misery is diabolized or forgotten.

Helén. "*Helén*" is as marvellous as a fairy tale. It is written on the supposition that the celebrated beauty whose

name it bears, never was really at Troy, but was entertained in Egypt, while Paris bore away a cloud instead of the reality for which the Greeks and Trojans contended. Mr. Bryant triumphantly adduces this story, which is found in several ancient writers, as a proof that the whole tale of Troy is "the baseless fabric of a vision." The conclusion of this tragedy is, like many of its author's, comic;—a universal reconciliation takes place, and all parties are made happy. The impression left behind by the perusal is pleasing; because the most exalted beauty is not here divorced from virtue, for which it is so fit a shrine.

The "*Cyclops*" is the only specimen which remains to us of the ancient satirical drama, with which the representation of the tragedies of the old tragedians was usually closed. Although the substance, and even the pun, by means of which Ulysses escapes, are taken from the *Odyssey*, the piece is worked up with great effect; the humour wears a romantic form, and the very parody on the heroic tales is itself heroic. There are, even in this ludicrous effusion, nearer approaches to the high and plastic style than in most of the serious pieces of the author; a circumstance which may lead us to believe that Euripides was seduced from the path trodden by his predecessors chiefly by his desire to triumph in the tears of his audience; so that when this temptation was removed, he was able more closely to follow them.

Of the successors of Euripides in Grecian tragedy we have no remains. Perhaps this circumstance is not to be regretted. They would only have afforded a gratification to curiosity in tracing the decline of the art, while they would have interrupted our admiration of the grand relics which we now possess. At present the Greek tragedy stands alone, as one of the grandest vestiges of the mighty times of old; and when we consider the immense number of plays which each of these poets produced, and the consequent facility with which works so perfect in their symmetry, and so exquisite in their minutest parts, were struck off at once, we are lost in admiration at the fine spirit of that golden period.

The Greek tragedies have been translated into English: those of *Æschylus*, by Potter—of *Sophocles*, by Franklin—and of *Euripides*, by Potter and Woodhull; but we cannot think, in any instance, with considerable success. The Greek language, perhaps, was essential to the harmony of these perfect works. The words themselves often form parts of that grace which is no where else to be supplied; and the divine workmanship of *Sophocles* and *Æschylus* would have been, in a degree, lost, if employed on less pure and delicate materials. Nor can we give much praise to any modern attempt at imitating these productions of Athenian genius. The texture of our minds is very different from that of those by whom they were produced or enjoyed—our joys and sorrows refer to a different sphere—the colouring of existence is altered. We have exchanged present unthinking gladness for a distant hope; the distinctness of a beautiful foreground for the dimly-seen glories of an endless perspective. Infinitely is the advantage ours, as immortality is superior to time. We must, however, resign the graces by which the ancients attempted to supply the want of prospects beyond the grave. We must content ourselves with the admiration of those works which the changes of mortality have left us. The moulds in which those exquisite groups were cast are for ever broken!

Origin of the poetry.

ALTHOUGH the lyric poetry of Greece attained a degree of excellence which has in no subsequent period been surpassed, it scarcely forms so distinct a class of imaginative works as the productions of her great tragedians. Yet still this description of poetry, while its subjects vary with the ages and nations in which it flourishes, will be found nearly the same in its texture and philosophical principles from the earliest to the most recent times. The reason of this peculiarity will appear from a very slight sketch of its principles and origin.

Lyric poetry, as its name denotes, was originally accompanied by instrumental music. Not only was it sung or chaunted by the bard, like the ancient rhapsodies, but attended with such rude harmonies as could be produced from the rude instruments of the early ages. Hence it became distinguished, in very ancient times, from every other description of poetry. It was, necessarily, short, striking, vivid, and singularly harmonious; not like an epic rhapsody, referring to something precedent, and broken off as a fragment, but containing, in itself, the complete expression of the feeling which it was intended to convey. It is the musical development of some noble emotion or deep and solemn thought. In its nature it differs essentially from the epic and the tragic. In the former of these, while the poet himself relates the events which he desires to immortalize, he refers to them as at a distance, or represents them as objects rather of contemplation than of passion, and throws over the whole an air of stillness and repose. In the latter, the hard altogether disappears, and we are made at once spectators of the high scene of action, or of suffering, which is placed before us, as in actual progress. In the lyric, the poet appears immediately before us, not merely to tell of things past, or to sing the glorious deeds of other times, but to pour forth his own present emotions. The reality here is not in the memory of the past, as in the epic; nor in the view of the present, by personal representation, as in the dramatic; but in the poet's own mind. He throws himself into no other age or person, but speaks of his immediate feelings in his own character. He is triumphant, festive, joyous, solemn, or melancholy, according to the mood of his own mind. He has no guide but his own feeling, modelled and attuned by his sense of the harmonious.

Hence we may perceive the reason why the *internal principles* of the ode have not partaken of the changes which have affected other descriptions of poetry. It is the mere expression of individual feeling which does not alter. As tragedy and epic poetry relate to things

foreign to the poet himself, they have taken their form and colouring from the times, and the plastic and the picturesque have alternately prevailed as the mind was led to rest on the present, or prompted by high, though indistinct, expectations of the future. But the simple feelings of sorrow and of joy—the sense of delight—the awful throbs of suspense—the mounting enthusiasm of patriotism—the thrilling raptures of love—and the soft contemplations of lone philosophy, are essentially the same from age to age. Their objects change indeed with the progress of time; but in lyric poetry it is not the object, but the feeling, which is all in all. Thus the lyrical pieces interspersed in the Old Testament, though more sublime than any works of other times, because their objects are grander and more dignified, and the poetical feeling is supplied by the immediate inspiration of heaven, are the same in texture with the odes of the latest bards. They are equally the music of language expressing the music of thought. There is, in fact, no philosophical division of lyrical poetry into distinct classes. Some critics, who know of no distinctions in imaginative composition which lie deeper than the mere subjects on which it dwells, have divided lyrical effusions into various kinds, according to the occasions which have prompted them or the sentiments which they breathe. Such a mode of classification requires as many divisions as there are variations in circumstance and shades in passion and in thought. As we shall have proper occasion to point out the nicer adaptations of the sentiment and imagery to the feeling, in a particular view of the productions of each poet, we shall here rest contented with the glance we have taken at the philosophical principles on which all lyrical compositions are framed, and which distinguish them from the severer kinds of poetry.

But as one form prevails through the greater portion of the Greek odes, it may be proper to state here the constituent parts of which they are framed. They are, generally speaking, divided into three stanzas, which were denominated by the ancients the *strophē*, the *antistrophē*, and the *epode*; of these parts, the two former were the larger, and consisted of an equal length and measure; and the latter was the lesser stanza. The chorus sung the *strophē* on solemn festivals at the altar of the gods, and at the same time danced to the right; they then inverted the dance to the left, chaunting the *antistrophē*; and afterwards, assembling round the altar, they stood still and sang the *epode*. It has been generally considered among those who have excelled in Grecian literature, that the

strophé and antistrophé, of the Grecian lyrists and tragedians answered to the modern recitative in music, and the epode corresponded with the "air." A passage from Marius Victorinus, an ancient grammarian, confirms the account we have above given of the parts which comprised the ode. "Pleraque lyricorum carminum, quæ versu, colossæ et commatibus componuntur, ex strophæ, antistrophæ, et epodo, ut Greci appellant, ordinata subsistunt. Quorum ratio talis est. Antiqui Deorum laudes carminibus comprehensas, circum aras eorum cantes cæbant. Cujus primum ambitum, quem ingrediebantur ex parte dextrâ, strophæ vocabant; reversioem autem sinistrorsum factam, completo prioro ædæ, antistrophæ appellabant. Deinde in conspectu Deorum soliti consistere cantici, reliqua consequentibus, appellantes id epodon.—We shall now proceed to give some account of each of the Grecian lyric poets, in the order of time.

Alcman.

ALCMAN was one of the most ancient of the lyric poets of Greece, and is supposed by some to have been the inventor of love-songs and the elegiac measure, his predecessors having uniformly written in hexameter verse. The place of his birth cannot be positively ascertained, for some authors assert that he was born at Lacedæmon, and others contend that this honour belongs to the island of Sardinia. It is, however, probable that Lacedæmon gave birth to this poet, for we find from ancient writers that the Spartans exulted that their country had produced a bard of such a genius, and after his decease erected a splendid monument to his memory. We are told by Athenæus that Alcman was addicted to the pleasures of the table, and was so popular among his countrymen for the beauty and excellence of his amatory effusions, that he was the favourite of the Spartan fair, who committed his verses to memory, and sang them at their feasts and entertainments. Notwithstanding the merited celebrity which Alcman once enjoyed, the bard of Lacedæmon has suffered so much from the ravages of time, that his very name is scarcely known to the moderns, except as attached to a particular kind of verse, which is named after him, *ALCMANIAN*, for which see *ALCMANIAN VERSE*, in our Miscellaneous Division. He is said to have written six books of verses in the Doric dialect, and also a play entitled *Colymbosus*; of these compositions only a few lines remain, and these are preserved in the works of Athenæus and Heplæstion. The works of Alcman having thus perished, we can form no accurate judgment respecting them; we are only enabled to glance at the opinion of his countrymen respecting their peculiar quality from a line which occurs in a Greek epigram:

in young Alcman.
Alcman's style was sweet.

Anacreon.

ANACREON, who carried the gay, luxurious, and festive style to its highest degree of perfection, was born at Teos, a city on the coast of Ionia, in Lesser Asia. Celebrated as the works of this poet have always been, we know little respecting his personal history. The names of his parents are lost, though, according to Plato, his family was noble, deducing their origin from Codrus, the last and best of the Athenian kings. He appears to have enjoyed, in a singular degree, the favour and patronage of the great. At the court of Polycrates, the monarch of Samos, he was held in peculiar esteem; and was honoured by

the friendship of Hipparchus, the son of Pisistratus, Lyric Poets of Greece. who, like his father, delighted in assisting the development of genius. In the earlier part of his life he seems to have left his native country, at the request of Polycrates, and to have resided at Samos; but quitted this asylum at the invitation of Hipparchus, who, desirous of enjoying the society of the poet, sent a vessel of fifty oars to convey him to Athens. In that city he continued until the murder of his patron, and the restoration of the Athenian liberties, on which event he retired to his native country, where he reached the advanced age of eighty-five. He is said to have been chafed with the stone of a grape, a characteristic conclusion of the intemperate mode of life in which he indulged.

For although we know so little concerning the events of Anacreon's story, we have ample testimony respecting his character in those of his works which have reached us. From these it appears that he was a voluptuary, not only in practice but in principle; at once one of the many who practised what he taught, and of the few who would dare to teach all that he practised. He did not, however, unite avarice with voluptuousness; for Polycrates having presented him with four talents, which prevented him from sleeping, he returned them, observing, that though the sum was of great value, sleep was of greater value still. Some parts of his conduct, as it appears from his poems, were of the deepest moral die; but it is hardly our province in this place to detail them. A statue was erected to his memory at Athens, representing him as singing a Bacchanalian air when elevated with wine; thus perpetuating at once the recollection of his genius, and of the debasing purposes to which he made it the minister.

Many of the poems of Anacreon have escaped the ravages of time. They are, for the most part, in praise of wine, and of the appetites which have been so often and so improperly dignified by the name of *force*. In their kind, however, they are matchless. "A careless charm, a natural and unthought grace," is lent to all the festivities which he celebrates. A roscate and lovely bac is thrown over every thing. His pieces abound in the happiest turns, the most appropriate imagery, and the most singular felicities of expression. His verses are exquisitely musical. The circle through which his muse ranges, if not very extensive, is crowded in every part with beauty and with grace. The wine seems to sparkle, and the flowers which crown the bowl to bloom for ever in his song. He has the power of rendering every subject subservient to his favourite themes, and extracts from every thing a spirit of festive joy. If he alludes to the shortness of life, he makes it a plea for enjoying to the utmost the present hour; and strangely makes the prospect of the grave itself to give a zest to the pleasures he is so soon to leave for ever. He strives to make up in intensity what is wanting in duration, and seems almost to succeed in living years in the space of a few short hours: there is a festive air even in his very sorrows. No one can deny to him the genuine poetical faculty, however much he must be considered as having abused it; for he eminently possessed the rare power of making a boundless variety of objects participate in one common expression, and of diffusing one feeling and sentiment over each of the beauties of the material creation at which he glances. It need hardly be added that he thus

Biography. stands far beyond all his imitators; although, from the too fascinating taste of his poison, they have been exceedingly numerous.

From A. M. 3334. We present our readers with the following specimen, as giving some idea of the peculiar excellencies of Anacreon, subjoining the imitation of Cowley, who has very happily caught the careless graces of the original:

to A. M. 3552. *Εἰς Κένωρον.*
 Ἐν ποσειδῶνι τρυφῶν,
 Ἐν λαρύρεσσιν ἄνθος,
 Στραπὸν, δὴν σπονδῶν,
 Ὁ Ἰπποκρίτης θύει·
 Τὸν ἄλκιρον κένωρον
 Μὲν καὶ λαοκτόνον,
 Τρυφῶν ἀνταρτήσας
 Βασὶς τρυφῶν κολοῦσιν, &c. &c.

Underneath the myrtle shade,
 On flowery beds supinely laid,
 Odorous this my head overflowing,
 And around it rises glowing;
 What shall I do but drink away
 The heat and troubles of the day?
 In this more than kindly state,
 Love himself shall on me wait.
 Fill to me, Love! Nay, fill it up!
 And mingled cast into the cup
 Wit, and mirth, and rosy dews,
 Vigorous health and gay desires.
 The whet of life no less doth stay
 On a smooth than rugged way:
 Since it equally doth fer,
 Let the noxious pleasure be!

Ode iv.

Cowley.

We will present our readers with only one extract more; to give all that is beautiful of his kind in Anacreon, would be to quote the whole:

Εἰς το φίλνιστον.
 Ἢ γὰρ ποσειδῶνι τρυφῶν,
 Πῶς ἢ βελγῶν αἶμα,
 Πῶς βύσσινον ἀνθος,
 Ὁ φίλος βύσσινον,
 Τὸν ἄλκιρον κένωρον,
 Τὸν ποσειδῶνι τρυφῶν,
 Εὐφροσύνην κένωρον.

Ode xiv.

Thus rendered by a translator in Bland's "Anthology:"

The black earth drinks the falling rain,
 Trees drink the moisture's earth again;
 Ocean drinks the mountain gales;
 Ocean's self the sun inhales;
 And the sun's bright beams as ween
 Are swallowed by the thirsty moon.
 All nature drinks,—if I would sip,
 Why dash the nectar from my lip?

M.

But perhaps a favourite Anacreontic of our own country will give the mere English reader a better idea of Anacreon's peculiar character of style, than any of the passages we have quoted above:

Busy, curious, thirsty fly,
 Drink with me, and drink as I;
 Freely welcome to my cup,
 Couldst thou sip, and sip it up;
 Make the most of life you may.
 Life is short, and wears away.
 Both alike, both thine and mine,
 Hasten quick to their decline;
 There's a summer, mine's no more,
 Though repeated to threescore;
 There are summers, when they're gone,
 Will appear as short as one.

The works of Anacreon, at least in detached portions, have been very frequently rendered into our language. Cowley has translated twelve odes; but has rather given the light, airy, and sportive graces

than the full-hearted jousness of his author. He Lyric Poets was himself exuberant rather in his wit than in his sense of pleasure; and, happily for the morals of himself and of the world, but half an Anacreon. The translation of Fawkes is not unfaithful to the letter, but almost entirely destitute of the spirit of the poet. It seldom rises above respectable mediocrity. Recent attempts have been made to translate the works of this great voluptuary by Mr. Young and Mr. Thomas Moore, with very different success. The version of the first is coarse and revolting, while that of the latter is not only elegant, graceful, and most harmonious, but is executed in a spirit congenial with that of the Grecian. Perhaps, however, the very resemblance of the genius of Mr. Moore to that of Anacreon has prevented him from giving to the world a faithful translation. He has himself such singular quickness in forming the happiest combinations, and so ardent a feeling of the pleasurable, that he could not be restrained even to the text of him whom he has delighted to imitate. Unhappily for the cause of virtue, his paraphrase is more seductive than even the original. While he deserves praise for the total suppression of some things which a Christian age would not endure, he has rendered immortality more refined, and has heightened its charms by the glossy veil in which he has enveloped them. His works, in short, is liable to all the censure which attaches to his earlier writings.

The following are the principal editions of the works of Anacreon:

Anacreontis Odes, Gr. et Lat. Hen. Stephan. 1554. Editio princeps.

— Gr. et Lat. à Fabio, 12mo. Salmarsi. 1660 et 1690.

— Gr. cum Gallick Intrepretatione Annæ Dacæ, ejusque ac Tan. Fabri notis. Parisiis, 1662, in 12mo.

— Gr. cum Longopetri (Longepierre) metrica Versione Gallick et Notis. Parisiis, 1682. 12mo.

— à Baxter, 12mo. Lond. 1710. This is an excellent edition.

— à Joshua Barnes, Cantab. 8vo. 1705, 1721. Lond. 1734.

— à Mattaire, Gr. cum Lat. Versione et Notis. Lond. 1725. 4to. Excudebat Gul. Bowyer.

— Gr. et Lat. à Mattaire apud Bowyer. Lond. 1740. 4to.

These are Mattaire's splendid and accurate editions; and only one hundred copies of each were printed by Bowyer. See Nicholls's Life of Bowyer. Note, p. 168.

— à Pauw. Gr. et Lat. cum Notis. Traj. ad Rhen. 1732. 4to.

— Gr. 12mo. edit. Brunck, Argentor. 1778. This is a beautiful and correct edition.

STESICHORUS, one of the nine lyric poets of Greece, *Stesichorus* was born at Himera, a town of Sicily. Plutarch informs us that his original name was Tisias, but that he was afterwards called Stesichorus, or Stesichorus, in consequence of the improvements which he introduced in the arts of music and dancing. Isocrates, and other authors, assert that the Sicilian poet was deprived of his eyesight for writing invectives against Helen, and that he only again received it upon the condition of making a recantation of his calumnies. The anachronism of this assertion is as self-evident as its absurdity. We learn from Aristotle, in his Art of Rhe-

toric, that Stesichorus was the first inventor of the well-known fable of the Horse and the Stag (which has been imitated by Horace and other poets), and that he composed it to prevent his countrymen from entering into an alliance with Phalaris, the tyrant of Agriguntum. Stesichorus is affirmed by some writers to have been the first who composed an epithalamium. He is said to have died at Catana, in Sicily, in the eighty-fifth year of his age; and to have been magnificently buried there at the public expence. Mr. Cumberland, in one of the numbers of his Observer, has favoured us with some remarks upon the funeral honours paid to the Sicilian bard, and the esteem and admiration in which his memory was held by his countrymen. "A tomb was erected to his memory near one of the city gates, which was thenceforward called the gate of Stesichorus; this tomb was composed of eight columns, had eight steps, and eight angles, after the cabalistical numbers of Pythagoras, whose mysterious philosophy was then in vogue; the cubic number of eight was emblematic of strength, solidity, and magnificence; and from this tomb of Stesichorus arose the Greek proverb *Ποσειδώνος*, by which was meant any thing perfect and complete. Phalaris of Agriguntum erected a temple to his name, and decreed him divine honours; all the cities in Sicily conspired in lamenting the death of their favourite poet, and vied with each other in the trophies they dedicated to his memory." This is all which is known of the life of Stesichorus. His compositions are said to have been written in the Doric dialect, and to have consisted of no less than twenty-six books, all of which are now lost, with the exception of a few fragments preserved in Athenæus and Aristotle. We must be therefore satisfied, in the absence of the poems themselves, to rely upon the judgment passed upon them by the ancient critics and writers. Quintilian esteemed Stesichorus in no degree inferior to Pindar, either in the sublimity of thought, the harmony of versification, or the beauty of language, which are the essential requisites of lyric poetry. He asserts that Stesichorus sustained all the dignity and majesty of the epic muse upon the lyre, and would have risen to the grandeur and sublimity of Homer himself, had not his style been too redundant. We may also form some idea of the genius of the Sicilian bard from what Horace, in his Odes, says respecting him.

Non latent
Stesichoræque graves Cumanæ.

The dignified strains of Stesichorus are well known.

Statius, in his *Sylve*, characterises him as

Stesichoræque ferax, &c. &c.

The impetuous Stesichorus.

The Greek epigrammatist speaks of him in the following manner:

Αἶψα Στεσιχόρου τι, &c. &c.

Stesichorus blazes or glows.

And again:

Ὀρυσσὸν αἶψ' ὡς ἄνθη

Εὐρώπης Στεσιχόρ', &c. &c.

Thus, O Stesichorus, hast drawn along with thee the European storm.

Every one of these recorded opinions bears testimony to his poetical merits, and they all agree respecting the peculiar character of his genius, which seems to

have reached the true sublime, both in thought and expression.

SAPPHO, the most celebrated for her genius of all the females of antiquity, was born at Mitylene, a city of the island of Lesbos, situate in the Ægean sea. The precise time of her birth is uncertain. According to Suidas, however, she was contemporary both with Stesichorus and Alcæus, and, if the opinion of Wolf is correct, was born in the thirty-sixth Olympiad, or about six hundred and thirty-two years before the Christian era. Herodotus and Suidas inform us, that the name of her father was Scamandronymus; while others assert that he was called Symon, Semus, or Etarchus; and that the name of her mother was Cleis, or Clois. According to Suidas, the poetess had three brothers, one of whom, Charaxus, seems, from the testimonies of Herodotus and Ovid, to have disgraced his family by his extravagance and shameless debaucheries. Herodotus represents the poetess herself as lamenting in verses the depravity of her relative, while she seems, with great simplicity, to have overlooked her own. She was married to a Lesbian of the name of Cercæla, by whom she had a daughter, whom she called by the name of her mother, Cleis. Her husband, however, soon died, and she passed the remainder of her life in a state of widowhood. After the death of Cercæla, Sappho conceived a violent passion for a young man of Lesbos, named Phaon, who seems at first to have returned her love, but afterwards to have grown weary of his mistress, and to have fled to Sicily to avoid her reproaches. Thither she determined to follow him, but was received only with contempt or hatred, and returned to Greece to put an end to her existence in shame and despair. Unable to endure the sense of her disappointment, she precipitated herself from the promontory of Leucæa, or Loucutte, in Acarnania, a country of Epirus, into the sea. The declivity afterwards bore the name of "the Lover's leap," and is now called St. Maura. To this catastrophe Anonius alludes.

Et de ninthoso vultum Leucææ mimor
Masculi Lesbicis Sappho priores sagittis.

And the masculine Sappho, about to perish with her Lesbian arrows, threatens a leap from the snow-crowned Leucæa.

Statius, in his *Sylve*, bears testimony to the fatal close of Sappho's life:

Non formidat temeris Leucææ Sappho.

Book iii. 154.

And the rash Sappho did not dread Leucæa.

Among the moderns, a noble author has described the spot where the still fond, but despairing woman put a period to her sorrows and her existence:

But when he saw the evening star above
Leucæa's far-projecting rock of woe,
And hail'd the last resort of fruitless love,
He felt, or deem'd he felt, so common glow:
And as the stately vessel glided slow
Beneath the shadow of that ancient mount,
He watch'd the billows' melancholy flow,
And sunk, albeit in thought, as he was wont;
More placid seem'd his eye, and smooth his pallid front.

Childe Har. can. ii. l. 41.

Sappho was so much esteemed by the inhabitants of her native place, Mitylene, that they paid her divine

honours after her death, erected temples and altars to her memory, and even stamped her image upon their money. Bayle, in his Dictionary, under the article of Sappho, alludes to the last-mentioned act of esteem paid to the Lesbian minstrel; and adduces the authority of *Ælian* and *Pliny* in support of this circumstance.

Notwithstanding the amatory disposition of Sappho, there is every reason to believe she was not favoured by nature with any remarkable beauty of person. Some, indeed, infer that she possessed great personal attractions, from an expression of *Plato*, who, in his *Phædrus*, puts into the mouth of *Socrates* the phrase *ἡ καλὴ Σαπφώ*, "the beautiful Sappho." But this may well be supposed to relate rather to the superiority of her genius than to the beauties of her person. It must, however, be confessed, that both *Athenæus* and *Plutarch* follow the statement of *Plato*, and make use of the epithet *καλὴ* whenever they mention her name. But, on the other hand, *Maximus Tyrius* plainly asserts that she was both diminutive in her stature and swarthy in her complexion. *Ovid* confirms this description in his *Heroides*, in the celebrated Epistle from Sappho to *Phonon*.

Si mihi difficilis formam natura negavit,
Ingenio formæ dantes potiusda mæno,
From leavis; at nomen, quod terras implent omnes,
Est mihi; mentem notissim ipsas fero.
Candida si non sum, placuit Cephæis Perseis,
Andromedæ, patris fœcæ colore sum.

Thus elegantly translated by Pope:

To me what nature has in charms deny'd,
Is well by wit's more lasting flours supply'd.
Tho' short my stature, yet my name extends
To heav'n itself, and earth's remotest ends.
Brown as I am, an Ethiop's dance
Inspir'd young Perseus with a gen'rous flame.

Among modern critics upon this point, Mr. Bayle gives his opinion that Sappho was, "laide, petite, et noire," "ugly, little, and dark." Madame Dacier, that she was "petite et brune," "little and brown;" and Professor Dalzel holds nearly the same opinion: "Que neque inter pulchras neque inter deformes sui sexus numerari possit."

The character of Sappho sufficiently appears, even from the small remains of her works which have reached us. It is not of a description on which we should choose to dwell, even if we were to believe, as we incline to do, that the worst accusations brought against her are unfounded. There are, however, few intellectual treasures, the loss of which is more deeply to be regretted than that of the works of this poetess; for the remnants which have reached us certainly display genius of the highest order; they are rich even to exuberance, and yet directed by the most exquisite taste. In these most delicious of love-songs the tide of passion seems deep and exhaustless; it flows rapidly yet gently on, while the most sparkling fancy is ever playing over it; and the words themselves seem to participate in the sentiment which they develop. It is a mistake to imagine that the fragments of Sappho are nothing more than the elegant expressions of amatory feeling; they are really works of high imagination, which renders them as beautiful as they are intense, and, in the opinion of some writers, raises them even to the sublime. Thus Longinus quotes the

following celebrated ode as an example of sublimity: a species of excellence, however, which Dr. Blair warmly denies to it. The poem itself will be a better plea for its great enlanger than any observations of ours.

Θάνατον μὴ δέος ἀντὶ θανάτου
ἔργον ἔσθ', ὅστις παύσει τοὺς
ἰβήτας, καὶ κλέψει ἀπὸ φόνου
τοὺς ὀϊστούς.
Καὶ γὰρ ὅστις ἄνθρωπος μὴ μὲν
καρῆος ἢ τῆς ἀντιθέου ἔστιν.
Ὡς γὰρ ἴδω τοὺς ἑρπύλιν μὴ φόνου
ὄντα τὸν ἄνθρωπον.
Ἄλλα παρὰ μὲν γλῶσσον ἔσθ', ἵππον δ'
ἀνταρὰ χροὶ τοῦ σφαιροβόλου,
ὀκτανέμετον δ' ἂν φόνου θάνατον
τοὺς ἄνθρωπον.
Καὶ δ' ἄνθρωπος φόνου χροὶ, ἵππον δ'
παρὰ ἑρπύλιν, γλῶσσον δ' ἂν
ἔσθ' ἵππον δ' ἂν φόνου ἄνθρωπον.
Θάνατον ὄντα.

This exquisite composition is thus translated by Mr. Phillips:

Blas't as th' immortal gods is he,
The youth who fondly sits by thee,
And hears and sees thee, all the while,
Softly speak and sweetly smile,
Twice this depriv'd my soul of rest,
And ruin'd such transports in my breast;
For, while I gaze'd, in transport lost,
My breath was gone, my voice was lost;
My bosom glow'd; the subtle flame
Ran quick through all my vital frame
O'er my dim eyes a darkness hung;
My ears with hollow murmurs rung;
In dewy damps my limbs were chill'd;
My blood with ghastly horrors thrill'd;
My feeble pulse forgot to play;
I faint'd, I sunk, and died away.

Here are, indeed, "thoughts that breathe and words that burn." The imagery is as vivid as the passion is intense. Most truly it is observed by Longinus, that we see every thing described distinctly before our eyes: τὴν ψυχὴν, τοὺς οὖρους, τὰς ἀκούς, τὴν γλῶσσον, τὰς ὀφθαλμοὺς, τὴν χροὶν ἐκείνην.

The critique of Dr. Blair on Longinus's decision will not be uninteresting to the reader. Having remarked that there is an indefinite, and therefore an improper sense in which sublimity is sometimes attributed to mere elegance or beauty of composition;—"I am sorry," he says, "to be obliged to observe, that the sublime is too often used in this last and improper sense, by the celebrated critic Longinus, in his treatise on this subject. He sets out, indeed, with describing it in its just and proper meaning; as something that elevates the mind above itself, and fills it with high conceptions and a noble pride. But from this view of it he frequently departs, and substitutes in the place of it whatever, in any strain of composition, pleases highly. Thus many of the passages which he produces as instances of the sublime are merely elegant, without having the most distant relation to proper sublimity; witness Sappho's famous Ode, on which he descants at considerable length. He points out five sources of the sublime:—the first is boldness, or grandeur in the thoughts; the second is, the pathetic; the third, the proper application of figures; the fourth, the use of tropes and beautiful expressions; the fifth, musical structure, and arrangement of words.

Biography.

This is the plan of one who was writing a treatise of rhetoric, or of the beauties of writing in general; not of the sublime in particular. For of these five heads, only the first two have any particular relation to the sublime. Boldness and grandeur in the thoughts, and, in some instances, the pathetic, or strong exertions of passion: the other three, tropes, figures, and musical arrangements, have no more relation to the sublime than to other kinds of good writing, perhaps less to sublime than to any other species whatever; because it requires less the assistance of ornament." (Lectures on Rhetoric, v. i. 8vo.)

No less beautiful is the Hymn to Venus, preserved by Dionysius Halicarnassus, a portion of which we give, in the amended form of Mr. Upton's edition of that author:

Εἰς Ἀφροδίτην.

Πικρὸν ἄνθρωπος Ἀφροδίτην,
Παῖς ὦν, πόλιν ὠκείαν, ἡμετέρην τε,
Μοι μὲν ἀνέστη, πάλιν ἀνέστη ἡμεῖς,
Πῆμα ἔχοντες.

Ἄλλα τοῦτο τίλ', αἰ νόμα παρθένα
Ταί ποῖς ἄνθρωπος ἀνέστη πάλιν
Ἐλπίς, παρὰ δὲ ἵδμεν ἡμεῖς,
Ἐρῶν ἔστιν.

Ἀπὸ τοῦτο ἔλκεν, καὶ δὲ τὸ δῶν
Πῶς ἔστιν, ὦν, πόλιν ὠκείαν
Πῶς ἡμεῖς τε, πάλιν ἀνέστη ἡμεῖς
Πῶς ἡμεῖς τε, πάλιν ἀνέστη ἡμεῖς.

Ἄλλα δ' ἔστιν ὦν, πόλιν ὠκείαν,
Πῶς ἡμεῖς τε, πάλιν ἀνέστη ἡμεῖς,
Πῶς ἡμεῖς τε, πάλιν ἀνέστη ἡμεῖς,
Πῶς ἡμεῖς τε, πάλιν ἀνέστη ἡμεῖς.

Oh Venus, beauty of the skies,
To whom a thousand temples rise,
Daily false in gentle smiles,
Full of love-perplexing wiles:
Oh, goddess! from my heart remove
The wasting cares and pains of love.

If ever thou hast kindly heard
A song in soft distress prefer'd,
Fragrant in my tuneful voice,
Oh! gentle goddess! hear me now;
Descend, thou bright, immortal guest,
To all thy radiant charms confest.
Thus once didst leave almighty Jove,
And all the golden rooks above,
The car thy wanton spiritus drew,
Hovering in air thy lightly flew;
As to my bowers they wing'd their way,
I saw their quiv'ring gleams play.
The birds dismiss (while you remain),
Bore back their empty car again:
Then you, with looks distinctly mild,
In every heavenly feature smil'd,
And ask'd what new complaints I made,
And why I call'd you to my aid?

Philips.

Mademoiselle Le Fevre (afterwards Madame Dacier), conjectures that this ode was composed by Sappho during the absence of her lover Phaon, when he fled from her arms into Sicily. We shall close our extracts from the writings of Sappho with two fragments, the one preserved by Demetrius Phalereus, and the other by Fulvius Ursinus.

Ἐρῶν, ὦν, πόλιν ὠκείαν,
Πῶς ἡμεῖς τε, πάλιν ἀνέστη ἡμεῖς,
Πῶς ἡμεῖς τε, πάλιν ἀνέστη ἡμεῖς.

Oh, Evening! thou bringest every thing; the wine, and the goat;—thou also bringest the child to its mother.

The second fragment is of singular beauty; "we may

suppose," as Warton remarks, "the fair author looking up earnestly on her mother, casting down the web on which she was employed, and suddenly exclaiming"—

Πῶς ἡμεῖς τε, πάλιν ἀνέστη ἡμεῖς,
Πῶς ἡμεῖς τε, πάλιν ἀνέστη ἡμεῖς,
Πῶς ἡμεῖς τε, πάλιν ἀνέστη ἡμεῖς.

Beloved mother, I can no longer weave the web, inspired with love for some beautiful lay, by the gentle Venus.

This short effusion might have afforded a worthy subject for the first among the Italian painters, who alone could have transfused this inimitable expression of deep affection to the features of a love-inspired form.

Sappho is said to have composed nine books of lyric poems, besides epigrams and elegies, which seem to have been extant in the days of Horace and of Catullus. No poet of antiquity has ever been praised with more rapture by succeeding critics and bards. In the following epigram, descriptive of the merits of the chief Grecian lyriists, she is celebrated as the tenth muse.

Ἐλπίς, ὦν, πόλιν ὠκείαν, ἡμετέρην τε,
Μοι μὲν ἀνέστη, πάλιν ἀνέστη ἡμεῖς,
Πῶς ἡμεῖς τε, πάλιν ἀνέστη ἡμεῖς,
Πῶς ἡμεῖς τε, πάλιν ἀνέστη ἡμεῖς.

The last two lines, which relate to Sappho, may be thus literally translated:

Sappho is not the ninth lyrist of human beings; but she is the tenth among the lovely muses.

Horace, in his Odes, again, thus panegyriszes her poetry:

Spiculae cunctis coloribus
Alidum libetis putat.

The *Alidum* is the soft numbers breathe
The sighs of tenderness, the soul of love.

Boswell.

Dionysius of Halicarnassus and, as we have seen, Longinus, speak in terms of the warmest admiration of two fragments which are preserved in their works; but we need not multiply quotations to establish her fame.

The verse in which the two odes quoted above are written, and which he is supposed to have invented, has been always denominated Sapphic. It is a noble measure, equally adapted to the expression of tenderness and of lofty thought, as the Odes of Horace, in which it is adopted, abundantly prove. From the different construction of modern languages, attempts to introduce it in later times have, however, failed of success.—See SAPPHIC VERSE, in our Miscellaneous Division.

The translations and imitations of Sappho have been numerous in our own country, as well as in France and Italy. Addison published an entire translation of the two celebrated odes, the six fragments, and the two epigrams, in 1733, Lond. An anonymous translation has also appeared in Bland's Anthology of part of the ode "Πῶς ἡμεῖς τε, πάλιν ἀνέστη ἡμεῖς," 1813, Lond. Mr. Phillips's translations we have already given. The Ode to Venus has been also imitated by Smollett, and by Akenside, in his elegant "Ode on Lyric Poetry."

The chief editions of Sappho are as follow:

Sapphōs Fragmenta, à Jona. Christoph. Wolfio, Gr. et Lat. 4to. Hamb. 1733.

This edition is an admirable one, and the only fault which we can find with the learned editor is, that he has, perhaps, needlessly illustrated the sense of his author by long and tedious quotations; at least, Professor Dalsē is of this opinion: "Hoc exquisitissimum odoratum Wolfius in sua editione oneravit annotationum farragine tam immensa, ut lectori fastidium pariat."

Alcæus.

ALCÆUS was born at Mitylene, the chief city of Lesbos, and is represented by some as the contemporary of Sappho and Stesichorus. He is reported, but perhaps scarcely on sufficient authority, to have offered his hand to Sappho, who rejected his suit. The ancient writers represent our poet to have felt an enthusiastic attachment to the cause of liberty; a feeling which was not only expressed in his poetical effusions, but which directed and impelled him in his conduct. He appears, however, to have possessed more zeal for liberty than personal courage in its defence. Herodotus informs us, that in an engagement between the Athenians and the inhabitants of Mitylene, Alcæus made his escape from the battle by flight, and having thrown away his arms, the victorious Athenians obtained possession of them, and hung them up, as trophies of their success, in the temple of Minerva, at Sigeum. The following are the words of the historian: Ἰελαμέντιον ἐν πύρῳ, παντοῖα καὶ ἄλλα κεινὰ ἐν τῷ μυχῷ ἐν ἐξ ἐξ καὶ Ἀλκαῖος ἡ ποιήτρα, συμβόληθι γυμναστῆς, καὶ κινῶντος Ἀθηναίους, αὐτοὺς μὲν φεγγῶν τεύχεσσι, τὰ δὲ οἱ σέλα κρηαὶ Ἀθηναίους, καὶ πρὸς ἀναιρέμασαν πρὸς τοὺς Ἀθηναίους ἐν Σέγει. τὰντα δὲ Ἀλκαῖος ἐν μὲν ταῖς πύραις, πεσὼν δὲ Μιτυληνῶν, εὐαγγελισμένος τοὺς ἰσθίους τοῖς Ἀθηναίοις ἀντί τῆς ἐπαι. The two parties having made war against each other, various events took place in the battles. Among the rest, the poet Alcæus, an engagement taking place, and the Athenians proving victorious, fled, and the Athenians obtaining possession of his arms, hung them up in the

temple of Minerva, at Sigeum. Alcæus putting this account into verse, sent it to Mitylene, charging his disaster upon his friend and comrade Melanippus.

Alcæus is said to have been the first inventor of the "barbion," or harp; and has given his name to the measure which is called Alcæus, which, if he did not actually invent, he brought into high repute by constantly employing, and probably rendered it more perfect and harmonious. See ALCÆUS, Div. iv. The spirit of liberty by which he was animated seems also to have inspired the minds of his descendants; for we read that his sons, in conjunction with Pittacus, one of the seven sages of Greece, fired with indignation at their country's wrongs, gallantly delivered Lesbos from the oppression and despotism of the tyrant Melanippus. Here must close our account of Alcæus, for history supplies no further materials concerning his life and character. Alcæus, though a Lesbian, wrote in the Æolic dialect; but of his numerous lyrical compositions, which are said to have comprised satomy, Bacchanalian, political, and martial effusions, none have come down to us entire; and the few convivial fragments which survive are preserved in the works of Athenæus. We must, therefore, have recourse to the opinions of the ancients, as the only guides to a just estimate of his merits as a poet. Horace mentions him in an animated panegyric.

Est te acanastem plenis aureo,
Alcæe, plectro dura navis,
Dura figis mole, dura brili!
Utrouque sacro digna silentio
Miratur umbra dicere: sed magis
Pugnas et cæcos tyrannum
Deussum humeris libit mare vulgus.

Book i. Ode xii.

Thus rendered by Mr. Francis :

Alcæus strikes the golden strings,
And seas, and war, and rills sing;
Thus while they strike the various lyre,
The ghosts the sacred sounds admire;
But when Alcæus lifts the strain,
In thicker crowds the shadows throng
Drink deeper down the martial song.

Again :

— Alcæi mænace
— Canam.

Book iv. Ode i.

The threatening strains of Alcæus.

Ovid, in his Heroides, also hears testimony to the martial and enthusiastic strain of the poetry of Alcæus :

Nec plus Alcæus, cossos patrisque lyraque,
Laudis habet, quamvis grandis illa sonet. L. 35.
The great Alcæus more majestically sings,
And strikes with bolder rage the sounding strings.

Ppy.

The Greek epigrammatist thus speaks of his poetry and character :

Καὶ ἔπος Ἀλκαίου, τοὺς σπλάχνους αἵμα τρυφῶν
Ἐπαιρῶ, πατρὶς δαίμων ἰουμένη.

The sword of Alcæus was often bathed in tyrant's blood, in defence of the liberties of his native land.

And again :

Ἀλκαῖος ἀπαρτὶς Ἀλκίους ἄνδρ' ἄνδρ'
Τὸν ἔλκετο Ἀλκαῖος σὺν τοῖς ἑλλήσιν ἔπῳ.

The Lesbian Alcæus sung of various themes in his Æolian lyre.

Among the moderns, Dr. Akenside, in his Lyric Odes has passed a high eulogium upon the compositions of Alcæus; and the passage which we shall quote will

Biography. serve the double purpose of pointing out the probable peculiarities of the Lesbian's style and manner, and of showing the admiration which the English poet entertained for his talents and his genius :

From
A. M.
3334.
B. C.
670.
to
A. M.
3552.
—
B. C.
452.

Broke from the fetters of his native land,
Devoting shame and vengeance to her lords,
With leader impulse and a threatening hand
The Lesbian patriot smites the sounding chords :
Ye wretches, ye perfidious train,
Ye curs'd of gods and free-born men,
Ye murderers of the laws,
Though now ye glory in your lust,
Though now ye tread the feeble neck in dust,
Yet Time and righteous Jove will judge your doubtful cause.

On Lyric Poetry, st. iii.

The measure in which Alcæus wrote has been adopted by Horace in some of his noblest compositions, and has consequently been chosen by many of the modern writers of Latin verse; among whose efforts an Alcæic ode composed by Mr. John Tweddell, a *pneumopoe*, entitled "Batavia Rediviva," which was published in the *Muse Cantabrigiense*, has received high commendation.

Ibycus.

Ibycus was a native of Rhegium, a town of Italy. The life of this poet, if possible, is involved in still greater obscurity than that of Alcæus; for of his private history nothing is known; and of his works, not a single line of them has reached the moderns. From the testimony, however, of Cicero and *Ælian*, it appears that his lyrical compositions were celebrated for their spirit and dignity; and the latter, in his "Various History," has given us a singular narrative of the poet's death. According to this, he was attacked and murdered by robbers; and when on the point of death, implored the assistance of some crows, who were at that moment flying over his head. A few days after, as the murderers were standing in the marketplace, they observed the same flight of crows, and one of them exclaimed to his companions, *Αἱ Ἰβύκειον ἄνθρωπον*, "There are the avengers of Ibycus." These words, and the recent murder, exciting suspicion in the bye-standers, they seized upon the assassins, and having put them to the torture, they all confessed their guilt, and suffered the punishment due to it. The Greek epigrammatist thus mentions Ibycus amongst the nine lyric poets of Greece—

— ἰβύκειον ἄνθρωπον
Ἰβύκειον ἄνθρωπον.

And then, too, Ibycus, hast plucked the sweet flower of persuasion.

Simonides.

Simonides, who was born in the island of Cos, a little before the time of Pindar, enjoyed the singular felicity of acquiring, while living, a large portion of honourable renown. His fame was not confined to the narrow precincts of Cos, but extended, long before his death, through Greece and Sicily. The estimation in which his genius was held by the polite and learned of those ages, may be inferred from the terms of familiarity with which he lived at Athens with the tyrant Hipparchus; the honours with which he was welcomed to Sparta by Pausanias, the Lacedæmonian general, and finally, the attentions which he received at the elegant court of Hiero. The Sicilian monarch particularly valued his compositions for their pathos, elegance, and sweetness; and he is said to have preferred the effusions of his muse to the sublimer strains of Pindar or

the moral dignity of Bacchylides. It appears that the name of the father of Simonides was Leoprepis or Theoprepis, but nothing is known of his circumstances or history. Simonides, according to Cicero and Quintilian, added the two long vowels η, ω, and the two double consonants ξ, ψ, to the Greek alphabet; and is said to have first introduced the artificial improvement of the memory: he is also reported by Horace to have been the inventor of elegiac writing. He carried off the prize for poetry when he was eighty years of age, but this was not the only instance which is recorded by the ancient writers of his good fortune; for Phædrus, in one of his fables, informs us, that he was so great a favourite with the gods, that the life of the poet was miraculously preserved at an entertainment when the roof of the house fell down upon all those who were present at the banquet. The life of Simonides was protracted to the advanced period of ninety years; he died in the capital of his royal friend and patron; and the inhabitants of Syracuse who had highly honoured and esteemed him when living, erected a magnificent monument to his memory. According to some writers, the lyric and elegiac poet of Cos left behind him a grandson, whose name also was Simonides; it is likewise said that he was the author of some books of inventions and genealogies, and flourished a few years before the breaking out of the Peloponnesian war. The poetical writings of Simonides, composed in the Doric dialect, consisted of lyrics, elegies, epigrams, and dramatical pieces, and we are told that he composed an epic poem on Cambyzes, king of Persia; but Pindar more than once insinuates that his muse was prostituted for the love of gain. There are known at present only a few fragments and epigrams of, perhaps, the most pathetic poet which antiquity can boast. One of these fragments is founded upon the following circumstance: Danaë, the daughter of Aërius, king of Argos, according to the ancient mythological fables, became pregnant by Jupiter in a shower of gold, and brought forth, as her son, the celebrated Perseus; the father of Danaë seized upon the mother and child, and enclosing them in a chest, committed it to the sea, there to drift at the mercy of the winds and waves. Our poet puts into the mouth of the suffering Danaë the following beautiful lamentation, alike inimitable for the simplicity and feeling with which it abounds. We give, in the original Greek, the verses as they stand in Mr. Upton's edition of the *Treatise of Dionysius Halicarnassus* "De Structura Oratoris":

Ὅτι λαοὶ καὶ βασιλεῖς ἀνέστη
ἐκείνῃ σπῆντι, κινδυνεύειν τὴν ἡμέραν
Δαναὸν ἀπὸ τοῦ ὕδατος ἀλάνθῃ
Περσέην, ἀπὸ τοῦ Περσέως βαλὼν
αἷμα χύει, αἷμα γὰρ ἐστὶν ὁ γέννη,
πᾶν ἔχει τὸν σῶμα τὸ κατὰ γέννησιν
ἡμέρᾳ σπῆντι καὶ σπῆντι ἡμέρᾳ
κατακτείνῃ δὲ, κατακτείνῃ
καὶ τὸν ἑαυτοῦ τὸν ὕδατος
τὸν αἷμα τὸν αἷμα
Περσέην ἀνέστη καὶ ἀλάνθῃ
Ὀδὲ ἀνέστη πρὸς τὸν ἀνέστη
καὶ τὸν ἑαυτοῦ, ἀνέστη καὶ τὸν αἷμα
καὶ τὸν αἷμα τὸν αἷμα
καὶ τὸν αἷμα τὸν αἷμα
καὶ τὸν αἷμα τὸν αἷμα
καὶ τὸν αἷμα τὸν αἷμα
καὶ τὸν αἷμα τὸν αἷμα
καὶ τὸν αἷμα τὸν αἷμα

Biography.

This exquisite fragment has been elegantly translated into Latin verse by Dr. Jortin, and admirably imitated by Dr. Markham. It is thus translated into English by a writer in the "Greek Anthology":

From
A. M.
3334.
B. C.
670.
to
A. M.
3552.
B. C.
452.

When the wind, resounding high,
Bluster'd from the northern sky,
When the waves, in stronger tide,
Dash'd against the vessel's side,
Her care-mere cheek with tears bedew'd,
Her sleeping infant Danaë view'd,
And trembling still with new alarms,
Around him cast a mother's arms.
"My child! what woes does Danaë weep!
But thy young limbs are wrapt in sleep.
In that poor nook all sad and dark,
While lightnings play around her bark,
Thy quiet bosom only knows
The heavy sigh of deep repose.
The howling wind, the raging sea,
No terror can excite in thee;
The angry surges wake no care
That burst above thy long deep hair,
But could'st thou feel what I deplore,
Then would I bid thee sleep the more!
Sleep on, sweet boy, still be the deep!
Oh, could I lull my woes to sleep!
Jove, let thy mighty hand o'erthrow
The bold'st ruler of my foe;
And may this child, in future years,
Avenge his mother's wrongs and tears."

Of the Epigrams of Simonides, which have come down to us, and which are preserved in Brunck's *Analecta* and Jacobs' *Anthologia*, we shall select one as a specimen of his manner:

Μίσην γὰρ Ἀχιλλεύς Μενέλαον, οὐκ ἔμελλ'
Ζεύς τε καὶ Ἄρης ἀνέρες ἀνὰ-βόρην,
παύειν, οὐκ ἔμελλ' ἀνέρες ἀνὰ-βόρην
οὐκ ἔμελλ' ἀνέρες ἀνὰ-βόρην.

Thus rendered by an anonymous translator in the *Anthology*:

This tomb records Megistias' honour'd name,
Who, boldly fighting in the ranks of fame,
Fell by the Persians near Sperchius' tide.
Both past and future well the prophet knew,
And yet, tho' death was open in his view,
He chose to perish at his general's side.

Perhaps the old English ballad of "Sleep, baby mine," may be deemed an imitation of the *Cosan* bard; and the lines of Mr. Campbell, beginning, "Lo! at the couch where infant beauty sleeps," bear no small resemblance to the Grecian original. From the fragments which are in our hands we should imagine that the style of Simonides was remarkable from its sweetness and elegance, and we find this opinion confirmed by the Greek epigrammatist:

Ἦν ὡς Ἰωνίου πόντος ἑὸν, ἔκ. ἔκ.

The sweet page of Simonides.

Again:

Ἦν ὡς Ἰωνίου πόντος ἑὸν, ἔκ. ἔκ.

The muse of the honey-tongued Simonides breathed forth enchanting strains.

Horne merely says of his poetry "Cempe Cœmentis;" and thus praises his elegies:

Sed ne religis, mœna prociis,
Cœn retractis, mœna iuvenis.

But, oh, sacred muse! do not thus presume upon the province of the *Cosan* elegy!

Pindar.

PINDAR, the most celebrated of the lyric poets of Greece, was a native of Thebes, the metropolis of Boeotia, which country his name alone might well redeem from the stigma of dulness. His birth seems to have

taken place about B. C. 520. According to some writers, the name of his father was Daiphantus, according to others, Scopelus, and that of his mother Myrtis, or Myrtis. It is related of him, that when he was an infant, a swarm of bees settled on his lips, and left their honey there—an omen of his future excellence in the arts of poetry and music. The history of Pindar's early days seems to refute, in some degree, the opinions of those who think education has a tendency to repress originality of genius, and to tame it down into dexterous imitation or humble correctness. No poet, perhaps, ever dared so much as Pindar, and yet none was ever instructed in the finest arts with greater care. It is singular, that for much of his instruction he was indebted to the female sex, at a time when they were themselves in general excluded from the higher departments of knowledge, and regarded as scarcely endowed with intellectual faculties. According to Suidas, he was first taught to combine simplicity with elegance in the composition of his verses by Myrtis—probably his mother, who was herself the author of poems adapted to the lyre. At a subsequent period the beautiful and accomplished Corinna became his instructor. Some assert that he enjoyed also the singular advantage of having been the pupil of Simonides, though no styles of poetry can be more dissimilar than the ardent, impetuous, and daring spirit of Pindar, and the soft, peevish, and mellow tenderness of his reputed master. Not only poetry, but also the sister art of music, was carefully studied by the embryo bard. Athenæus informs us, that Lasus of Hermione, an excellent musician, and dithyrambic poet, imparted to him his skill in playing on the lyre. Certain it is, that he was prepared by no common attention for that high and glorious career in which he was about to leave every competitor behind him.

Pindar seems to have been early received with great honour by Alexander, son of Amyntas, at the court of Macedonia. He overcame his teacher Myrtis in a contest of musical skill; but was no less than five times defeated by Corinna in striving for the reward of poetry. It is intimated, indeed, by some, that the judges were inclined to favour the female candidate rather by the admiration of her personal charms, than of her poetical genius. Our hard most, however, have been very young at this time, as Diodorus Siculus asserts that he had only attained the age of forty at the time of the battle of Salamis.

In the public assemblies of Greece, Pindar no sooner appeared than he attained a height of popular favour, which seems never to have left him; nor was his fame confined to the people. As he sung the praises of the conquerors in those games at which kings and princes strove for the prize, he naturally acquired the favour and patronage of the great. He particularly enjoyed the favour of Hiero, king of Syracuse, whose munificence he delighted to repay by his songs. His partiality to the Athenians, however, drew on him the resentment of his countrymen. Because he had celebrated Athens as the chief support of Greece, they laid on him a heavy fine, on which the Athenians presented him with a sum of double the amount. Authors are divided respecting the time in which he died, some asserting that he only reached the age of fifty-six, while others maintain that he was eighty-six at the time of his decease. His departure from life was gentle, for

it took place while he was sitting in a public assembly, and, till the spectators retired, he was thought to be slumbering. As a prodigy is related of his birth, so attempts were made by the Greeks to surround his death by mystery. It is said, that having in one of his poems represented Agamemnon and Troilus as rewarded by sudden death, for having built the temple of Apollo, he was referred by the priestess, on his inquiring what was best for mankind, to his own verses. This reply he understood as an intimation of approaching and sudden dissolution, which soon after took place.

Extraordinary honours were paid to Pindar, both during his life and after his decease. His odes and religious hymns were chanted in the temples of Greece before the most crowded assemblies and on the most solemn occasions. The priestess of Apollo, at Delphi, declared that it was the will of that divinity that he should receive half of the first fruits annually offered at his shrine. The Athenians erected a statue of brass in honour of him, representing him with a diadem and a lyre, and a book folded on his knees, which was remaining in the time of Pausanias; and a portion of the sacrifices at the great festivals of Greece was, for a long time, set apart for his descendants. When the Lacedæmonians took Thebes, they spared the house and family of Pindar; and, when afterwards, the city was taken by Alexander, the same mark of veneration was shown to his memory. His works have been extolled in terms of the most ardent admiration by some of the first ancient writers. Quintilian says of him in his Institutes, *Novem Græcorum Lyricorum Pindarus princeps, spiritus, magnificentiæ, sententiæ, figuris; beatissimum rerum verborumque copiam et velut quoddam eloquentium flumine, propter quæ Horatius nemini credit eum imitabilem.* "Of the nine Greek lyric poets, Pindar is the chief, in spirit, in magnificence, in moral sentiment, and in metaphor; most happy both in the abundance of his matter and of his diction; and, as the world, with a certain torrent of eloquence, so that Horace says no man can imitate him."

A yet higher authority—Horace himself, has thus expressed his admiration of our bard:

*Pindarum qualem studet æmulari,
Jule, cernit ipse Dardania
Nihil penitus, vitæ daturus
Nona pinto.
Monte de cæcis velut arvis, inbre
Quæ super montes solent ripas,
Fervet immensusque rull profundus
Pindarus ore.*

He who to Pindar's height attempts to rise,
Like Icarus, with waxen pinions, tries
His pathless way, and, from the venturous theme
Falling, shall leave to æneas seas his name.
As when a river, swollen by sudden showers,
O'er its known banks from some steep mountain pours;
So, in profound, unremembered song,
The deep-mouth'd Pindar, foaming, pours along.

Francis.

In the course of this ode, the epithet of *Dircæus cæcus*, "the Theban swan," is given to him; and the judgment of the Greek epigrammatist is in unison with the opinions of Horace and of Quintilian:

*Pindarus Mæcenæ ipse carmen, Æc. Æc.
Ohi, Pindar! thou sacred mouth of the Muses.*

Again:

*Πολύγλωσσος ὡς ὁδὸς ποταμὸς Πινδαροῦ, Æc.
Pindar's lyre changed loftily from Thebes.*

We cannot sufficiently regret the loss of the compositions which called forth these eulogies, because, though compared with the works of many other renowned authors, a considerable number of Pindar's odes have reached us, those which survive are not the most interesting in their subjects, nor probably the most felicitous in their execution. The works of Pindar consisted of hymns and pæans in honour of the gods; hyperchemata, songs accompanied by dances in honour of Apollo; dithyrambic verses to Bacchus; and some minor effusions; with the odes on the Olympic, Nemæan, Isthmian, and Pythian games. Of these latter forty-five remain, which, with a few fragments, form the only ground on which we can now form any opinion of the extent, or peculiar character of Pindar's genius.

No subjects, at first sight, could seem more unfitted for aniline poetry than those of the Pindaric remains; but the poet has, with characteristic impetuosity, overcome this difficulty by almost invariably abandoning the professed objects of his panegyric, and bursting into celebrations of the heroes of former days, the mighty exploits of demi-gods, and the gorgeous fables of oldest time. In the transition he uses little art; but seems to rely, as he safely might, on its being, in itself, most welcome. He is chiefly remarkable for the gigantic boldness of his conceptions and the daring sublimity of his metaphors; and may be called the *Æschylus* of lyric poetry. The flights of his imagination are not, however, like those of the great tragedian, mingled with the intensity of human passion, which, while they carry us beyond ourselves, still come home to the heart. He has the light without the heat; his splendours dazzle, but do not warm us. There is very little of human feeling in his works; they are little more than exhibitions which excite our surprise, but not our sympathy. His compositions have something hard and stony about them—the sublimity and the nakedness of the rock. The sunshine glitters on the top, but no verdure or foliage adorns the declivity. All the interest, such as it is, arises from the earnestness of the poet himself, and the intense ardour with which he is ever impelled in his lofty career. Hence we think more of him than of his work; while in Homer and the Greek tragedians the author is entirely forgotten. His conception is so ardent that he cannot wait to develop his metaphors; he often but half unfolds them, and suffers them to blend with the literal descriptions and form part of the subject; and hence, it appears to us, the obscurities so frequently complained of in Pindar have, in a great degree, arisen. In the mechanical composition of his odes, however, Pindar is by no means so irregular as some have been disposed to imagine. He commonly preserves the arrangement of strophe, antistrophe, and epode; and though the construction of these vary in different odes, all the strophes and antistrophes in the same ode are framed on the same principles, and all the epodes are composed in similar measures to each other.

The following is the commencement of the Ode to Hiero:

*Χρῆμα φεράμεν, Ἀπόλλων
καὶ καὶ ἀνθρώπων
Σύνατον Μοῦσας κτάνον
Υἱὲς αἰῶνος μὴ βέβαια, ἀνέκλιτα, ἄλκιρα,
Πότῃσι δ' ἄνδρα κερταῖον,*

The chief editions of Pindar are as follow:

Pindari Carmina. Græcæ. Venetiis in Ædib. Aldi, 1513, fol. This is the Præncipes and Aldine edition.
—— Operâ Zachar. Callergi Cretensis Romæ, 1514. Heyne says of this edition, that it is the foundation of all the subsequent ones.
—— Gr. et Lat. Henricus Stephanus, Parisiis, 1560.

—— Operâ Erasmi Schmidii, Græcæ. Vitebergæ, 1616. Professor Heynæ says of the editor that he is "Editorum Pindari facili principem."

—— Jo. Benedictus, M. D. Salmurii, 1620, 4to. This is an excellent edition, and is accompanied with a Latin translation, and a paraphrase. Mr. Huntingford has made an abundant use of it in his respectable and useful edition of Pindar.

—— per Nicolaum Sudorium (Le Sueur), Oxon. 1697, fol. This splendid Oxford edition was edited by Richard West and Robert Welsted. According to Professor Heynæ, it is not celebrated for its critical research and acumen.

—— à Christian Gottl. Heynæ, Gottingæ, 1773, 8vo et 4to. Interpretatio Latina Koppil. This is by far the most complete edition which has ever been presented to the learned world. Professor Heynæ attached to it his "Additamenta" in 1791. This edition was reprinted, with the valuable Scholia, at Oxford, 1807, by Nathaniel Bliss, with great and laudable accuracy.

—— Selecta. Cum Scholiis selectis sinique notis, edidit Fredericus Gedike. Berolini, 1786. A very useful edition, and the notes are elegant and learned.

—— iterum curavit Chr. Gottl. Heynæ, 3 vol. Gottingen. 1798, 8vo. To this edition is added a dissertation upon the metres of Pindar, by Godfrey Hermann, a celebrated German critical scholar, and well known as the opponent of Professor Porson. Mr. Huntingford also published, in 1816, a new edition of Pindar, with notes, taking for his text that of Heynæ, and subjoining the excellent paraphrase of Benedict. This is a very good edition, especially for young students; and, upon the whole, may be considered as the most useful which has yet appeared; for it was the object of the editor to combine in one publication the various excellencies of his critical predecessors.

Those of our readers who would wish to see a complete list of all the editions of Pindar which have appeared, we refer to Professor Heynæ's admirable preface to his edition of that poet, where a full and detailed account of them is given.

BACCHYLIDES, the last of the nine lyric poets of Greece, was a native of Julius, a city in the island of Cos, or Ceos, and nephew to the poet Simonides. He seems to have been a favourite at the court of Hiero, in common with Pindar and his uncle; and it is said that his poetical works were preferred by the Sicilian monarch to the compositions of the latter. Of the particulars of the life of Bacchylides we know nothing, and of his numerous productions only a few small fragments remain. His writings are asserted to have been so pregnant with moral sentiment, that the Emperor Julian, on that account, particularly esteemed them, and was in the habit of committing them to memory, and of frequently repeating them.

Hesiod is said to have imitated him in several of his poems, particularly in his Prophecy of Nereus, which is founded upon an ode of our bard, in which he introduced Cassandra as predicting the fall of Troy. Of the numerous odes, hymns, and epigrams, composed by Bacchylides in the Doric dialect (although he was not a Dorian by birth), the following lines, addressed to Peace, form the principal fragment remaining:—

ΤΑΥΤΑ ΚΑΙ ΤΑ ΘΕΟΙΣΤΕΣ ΕΥΡΕΤΑ ΜΑΡΤΥΡΑ,
ΠΛΕΥΡΑ, ΚΑΙ ΠΑΡΕΠΟΡΕΥΟΝΤΕΣ ΑΝΘΩΝ ΑΝΘΩ,
ΔΑΔΕΛΑΝΕ Τ' ΕΝΕ ΕΙΡΗΝΗΝ ΔΙΟΤΕΡΟΝ ΑΝΘΩ
ΣΑΦΕΙ ΦΩΤΕ ΜΑΡΤΥΡΑ, ΚΑΙ ΤΡΟΧΩΝ ΤΑ ΜΕΛΟΣ
ΠΡΟΚΕΙΜΕΝΟΝ ΤΙ ΜΗ; ΑΝΘΩ ΤΙ ΚΑΙ ΑΝΘΩ ΜΕΛΟΣ
ΕΙ ΚΑΙ ΕΠΙΔΕΙΚΝΥΜΕΝΟΝ ΠΥΡΡΑΝ ΑΝΘΩ ΑΡΧΗΝ
ΕΝΩΝ ΣΦΟΔΡΑΝ ΕΥΧΕΤΑΙ ΤΙ ΛΑΧΥΝΤΑ
ΕΥΡΕΤΑ Τ' ΑΡΧΑΙΩΝ ΕΥΡΕΤΑ ΔΕΙΟΝΤΑ, ΧΑΛΚΕΩΝ
Δ' ΕΥΡΕΤΑ ΚΑΛΥΠΤΟΝ ΕΥΧΕΤΑΙ, ΑΝΘΩ ΕΥΛΕΙΠΕΤΑ ΜΑΡΤΥΡΑΝ ΟΥΤΩΣ
ΑΝΘΩ ΔΑΔΕΛΑΝΕ ΔΙΟΤΕΡΟΝ ΑΝΘΩ ΑΝΘΩ.
ΣΑΜΟΝΤΕΣ Τ' ΕΥΧΕΤΑΙ ΕΥΡΕΤΑΝ ΕΥΧΕΤΑΙ,
ΠΛΕΥΡΑ ΚΑΙ ΕΥΧΕΤΑΙ ΦΩΤΕΡΑΝ.

For thee, sweet Peace, abundance leads along
Her jovial train, and bards awake to song.
On many an altar, at thy glad return;
Pure victims bleed, and holy odours burn;
And fruitful youth their happy age apply
To graceful movements, sports, and minstrelsy.
Dark spiders weave their webs within the shield;
Rust eats the spear, the terror of the field;
And brazen trumpets now no more affright
The silent slumber, and repose of night.
Plausant and song and revel fill the ways,
And youths and maidens sing their roundelay. Blend.

We have only to add to this account of the life and writings of Bacchylides, that he is extolled, by two of the Greek epigrams in the Anthologia, for elegance and cheerful grace:—

—— καὶ λαλῶν Ἰσχυρῶς

Βακχυλίδης, ὅς, &c.

And Bacchylides, the eloquent stren.

Again:

Δαμνὶ τ' αὖτε εὐφραντο φθγγόντῳ Βακχυλίδῃ.

Bacchylides' was a cheerful muse.

This kingdom of Lydia comprehended a territory in Asia Minor, of various extent, in different periods of ancient history. It was sometimes called Meonia, from King Meon, and often distinguished into Lydia Superior, whose inhabitants were called Meones, and the Lower Lydia, afterwards called Ionia, possessed by the Lydi.

Josephus derives the Lydians from Lud, one of the sons of Shem; and the learned Stuckford (l. iii.) adopts that opinion. But while Bochart agrees in this derivation of Lydia, he refers the origin of the word *Lud*, not to the son of Noah, but to the circumstance of that word signifying *wind*; and this country being watered by the river *Mæander*, celebrated for its windings (hence our English word *meander*, to wind), he concludes that it refers to the inhabitants of the banks of this winding river; and he supposes Meonia to be a translation of the Phœnician word *Lud*: others deduce it from a Hebrew word signifying *metal*. Herodotus, however, supposes the appellation to arise from Lydus, one of their kings.

In this country an absolute monarchical government appears to have been very early established, and, so far as can be ascertained, the crown was hereditary. There have been reckoned three distinct dynasties: the *Atyæda*, named from Atya, the son of Manes, the first of the kings of Lydia of whom there is any record; the *Heracleidæ*, or descendants of Hercules; and the *Mermnadæ*. This Manes has been conjectured, not improbably, to have been the king mentioned by the philosopher Heraclides, who, from being slave to a cartwright, was raised to the throne of Lydia. In the reign of his son Atya, Herodotus places the event of a severe scarcity, which he describes as enduring for eighteen years. The Lydians, he says, invented games to amuse their distress, and in these occupied every day, strictly abstaining from food; by these measures, however, the calamity remitted nothing of its violence, but rather increased; at length (which is the only probable part of the story) the king divided the whole nation by lot into two bodies, one of which should continue at home, and the other emigrate.* These placed themselves under the conduct of his son, whose name was Tyrrhenus. They passed to Smyrna, where building a number of vessels, they sailed in search of another country, till they settled in Umbrina, or Etruria; and thus, according to Herodotus, was peopled the country which forms the modern Tuscany.

After Atya there is a catalogue of kings, of whom nothing has been told except their names, and a few disgusting and improbable stories. Without admitting the whole which these narratives affirm, it is nevertheless certain that the Lydians became proverbial for profligacy and effeminacy. His dynasty appears to have ended with the transfer of the crown to Argon, who made Sardis the seat of government, and whom Herodotus describes as the first of the *Heracleidæ*. A few names of Argon's descendants bring down the history of the Lydian monarchy to Candaules, whose tragical end concluded a dynasty which, according to Herodotus, had continued five hundred years.

Candaules, whose reign is placed about the year 735 before the Christian æra, was contemporary with Romulus; but has not, like the founder of Rome, provided any valuable materials for history; and unless Pliny, the naturalist (lxxxv.), had applauded his munificence, as having purchased a picture for its weight in gold, the king of Lydia would now be known only by the folly to which he sacrificed his life, if, indeed, we may rely on the testimony of Herodotus relative to that event.

Under the influence of an extravagant passion, Candaules engaged his favourite courtier, Gyges, in a conversation on the consummate beauty of the queen, and to convince him of her superior charms, would expose her to his observation. The courtier in vain expostulated against the indecorous and extravagant proposal. The infatuated prince insisted that he should be concealed in the bed-chamber, and Gyges was obliged to acquiesce. On his retiring from the chamber he was observed by the queen, who concealed her resentment from the king until the morning, but determined to revenge the indignity which he had offered her.

No sooner was she risen than she sent for Gyges, and proposed to him the alternative of death, or the destruction of Candaules, the accession to his throne, and the hand of his queen. Ambition conspired with the love of life to determine the courtier's choice, although he seems to have shown considerable reluctance to destroy his prince. He assassinated Candaules in his sleep, and attained the promised rewards. "Gyges," says Gyges, Raleigh, "being brought again into the same chamber by the queen, slew Candaules, and was rewarded not only with his wife, but with the kingdom of Lydia."

Such is the account of the accession of Gyges, on the authority of Herodotus; but, like most relations, especially in ancient history, it has been disputed. Plato describes Gyges as a shepherd, and by the assistance of a marvellous tale of a magical ring, the philosopher brings him to the court, where he seduces the queen, and then murders the injured monarch: while Plutarch represents the succession of Gyges to the throne of Lydia, as the result of a battle which he waged against Candaules. Herodotus has, however, been generally followed, as he was born in a city near to Lydia, and at a period when he was likely to be able to ascertain the particulars of its early history.

The Lydians were attached to the memory of their late monarch, and appeared in arms against his suc-

* It is extraordinary, however, that the Romans should derive the word signifying sport, from the Lydians, *ludo*.

Biography. deror, when Gyges availed himself of the reverence generally paid to the oracle of Delphi. He agreed with the malecontents, that his possession of the royalty should depend on the determination of the Pythia, whom he doubtless knew how to propitiate. The decision was favourable to the usurper. The throne was secured to him, though the vengeance of the Heraclids was denounced on his descendant in the fifth generation.

Lydia abounded in mines of the precious metals; hence, as we have seen, some have deduced its name; and Gyges became renowned for his riches. He employed them in rewarding munificently the obsequious oracle, and thus gave the example, afterwards so amply followed, of presenting costly votive offerings at Delphi. This prince soon extended the bounds of his kingdom by successful military adventures, and reigned thirty-eight years, leaving his son Ardyes to complete his conquests, till he was himself invaded by the Cimmerians, Sadyattes succeeded his father Ardyes, and carried on that war against the people of Miletus, which was further prosecuted by his son Alyattes: of this prince several events are recorded.

Alyattes. He was engaged in a war with Cyaxares the Mede; the occasion of which is thus related by Herodotus. There were certain Scythians who fled from a popular tumult, and took refuge in Media, where they were protected by the king. He entrusted some youths to their care to be taught the Scythian language, and the use of the bow. These strangers were skilful hunters; but one day, returning from the chase, without bringing any game for the king, he reproved them in very provoking terms. They consulted on a method of revenge, and determined on a retaliation the most horrible. Killing one of the youths committed to their care, they dressed the flesh in the manner of game, and it was thus served up and eaten by Cyaxares and his guests. The Scythians fled and sought the protection of Alyattes, who refused to deliver them up to the justly exasperated king of Media.

On this refusal, a war commenced between the Lydians and the Medes, which continued five years; and was attended with various success.—A remarkable event happened during one of their engagements. In the sixth year, and in the midst of a battle when neither side could reasonably claim superiority, the day was suddenly involved in darkness; this phenomenon, and the particular period at which it was to happen, had been foretold to the Ionians by Thales the Milesian. Awed by the solemnity of the event, the parties desisted from the engagement; and it further influenced them to listen to propositions of peace, which were made by Syennesis of Cilicia, and Labynetus of Babylon. To strengthen the treaty, these persons also recommended a matrimonial connection; they advised that Alyattes should give Aryenis, his daughter, to Astyages, son of Cyaxares, from the just conviction that no political engagements are durable unless strengthened by the closest of all possible bonds. Alyattes also, according to the same historian, drove the Cimmerians out of Asia, possessed himself of Smyrna, and invaded Clazomenæ.

But the longest of his martial exploits was the war against the people of Miletus, which his father had begun, and which he prosecuted during six years. Of

his policy in the conduct of this war we have, from Herodotus, the following account:

"When the time of harvest approached, he marched an army into their country, to the sound of the pastoral pipe, harp, and flutes. He neither pulled down, nor burned, nor in any respect injured their edifices which stood in the fields; but he totally destroyed their trees, and the produce of their lands, and then returned. As the Milesians were masters of the sea, the siege of their city would probably have proved ineffectual. His motive for not destroying their buildings was, that they might be induced again to cultivate their lands, and that, on every repetition of his incursions, he might be secure of plunder."

In the twelfth year his soldiers burnt, by accident, a temple of Minerva. The king, soon after, being severely indisposed, inquired of the oracle respecting his recovery; but the Pythia refused to answer till he had restored the temple. To effect this it became necessary to procure a truce with the king of Miletus, who, being apprised of the circumstance, practised a stratagem, which succeeded to his purpose. "All the corn which was found, or could be procured, was, by his direction, collected in the most public place. He then ordered the Milesians, at an appointed period, to commence their convivialities; and the herald of the king of Lydia witnessed the scene. Alyattes had imagined that the Milesians suffered extremely from the scarcity of corn. The report of his messenger produced a different impression. A strict alliance was formed between the two nations, and, instead of ass, Alyattes erected two temples to Minerva." Herodotus adds, that the prince was restored to health, and presented at Delphi "a large silver goblet, with a saucer of iron, curiously insaid," which was the second offering made by his family. Alyattes dying after a reign of fifty-seven years, was buried at Sardis, where his sepulchre remained in the time of Herodotus. He was succeeded by his son Croesus, whose reign gave celebrity to Lydia, while his name became proverbial for riches, and his story has assisted the moralists of every age to describe the uncertain tenure of worldly prosperity.

It was about 563 years before the Christian era, when Croesus became king of Lydia, at the age of only thirty-five, according to the common computation. He commenced his reign with a war against the Ephesians; a family quarrel, if, as Elian relates, he was uncle to the prince of Ephesus. However that may be, he laid close siege to the city, which the inhabitants, according to a common heathen superstition, vainly endeavoured to defend by connecting their walls with a rope to the temple of Minerva.

Croesus proceeded to attack the Ionian and Æolian states, and having reduced the Greeks on the Asiatic continent, he projected the formation and equipment of a fleet to invade the islands. But Bias, one of the wise men of Greece, dissuaded him from a contention with islanders in a maritime war, and he wisely preferred to secure their friendly alliance. He now pushed his conquests till, excepting the Lycians and Cilicians, he had subdued all the nations to the river Halys.

By these conquests of Croesus the kingdom of Lydia became of great extent, far beyond what it had comprehended in any former reign. Sardis, the capital, advantageously situated at the foot of mount Tmolus, and watered by the Pactolus, famous for its golden,

Biography. sands, was now distinguished among the cities of the ancient world. In the estimation of Xenophon, it was "the richest city in Asia, next to Babylon." According to Herodotus, it "became the resort of the great and the affluent, as well as of those who were celebrated in Greece for their talents and their wisdom."

In another place (article Solon) we have mentioned the interview of Cræsus with the Athenian sage and lawgiver, in the palace of Sardis. Plutarch, indeed, proposes some chronological difficulties, started in his time, respecting the reality of this interview, by some who considered the story as fabricated for the uses of its excellent moral. The biographer, however, considers a story not to be rejected, which is "so famous, so well attested, so agreeable to Solon's character, and so worthy of his wisdom and magnanimity." According to the combined narratives of Herodotus and Plutarch, the account of this interview is as follows:

Cræsus invited Solon to Sardis, and hospitably entertained him in the palace, where the sage beheld the magnificence of the king and his courtiers with a calm and mortifying indifference. He was conducted to the royal treasury to view and admire the vast riches it contained. At length the king flattered himself that Solon was now prepared to decide in his favour, upon being asked who was the happiest man; but he was disappointed. The preference was bestowed on Tellus the Athenian, of whom, in answer to the inquiry of the astonished and mortified prince, Solon gave this account: "Under the protection of a most excellent form of government, he had many virtuous and amiable children; he saw their offspring; and they all survived him; at the honourable close of a prosperous life, for he died in the field of victory, we gave him a public funeral."

Cræsus, not yet discouraged, inquired to whom Solon would assign the next degree of felicity, when he named Cleobis and Biton, young Argives, who, as an act of filial piety, had yoked themselves to their mother's chariot, and drawn her to the temple of Juno, where they died in the night, without sorrow or pain, in answer to the mother's prayer for their happiness.

Dissatisfied, and now indisposed to further inquiry, Cræsus exclaimed, "Man of Athens, think you so meanly of my prosperity, as to place me even beneath men of private and obscure condition?" Solon, unwilling either to flatter or to exasperate him, replied, "King of Lydia, the Greeks have no taste for the splendours of royalty. Moreover, the vicissitudes of life assure us not to be elated by any present good fortune, or to admire that felicity which is liable to change. Futurity carries for every man in its bosom many various and uncertain events. He, therefore, whom heaven blesses with success to the last, is in our estimation the happiest man. But the happiness of him who still lives, and has the dangers of life to encounter, appears to us no better than that of a champion, before the combat is determined, and while the crown is uncertain." With these words Solon departed, leaving Cræsus chagrined, but not instructed. *Æsop* was now at the court of Sardis, and said to Solon, "you see that we must either not come nigh kings, or else entertain them with things agreeable." To which the sage replied, "we should either say nothing, or what is useful."

The vicissitudes of fortune, which Solon would have led the king to contemplate, were presently exemplified

in the royal family. Cræsus had two sons; one of them was dumb, but the other, whose name was Atys, was distinguished by superior accomplishments. Cræsus is said to have had a vision, which warned him that this son would die by the point of an iron spear. The terrified father determined to settle his son in marriage, and to devote him to a pacific life; taking away his command in the army, and removing from about his person every military weapon.

In the mean time an unfortunate homicide, named Adrastus, arrived at Sardis; a Phrygian, and of the royal family. He had killed his brother, was punished by his father, and, according to the custom of pagan antiquity, sought *expiation* of a neighbouring prince. This Cræsus bestowed, and gave the fugitive an asylum in his court.

Herodotus, who is almost the only authority for the domestic history of Cræsus, next relates, that a wild boar of an extraordinary size appeared near Olympus, in Mysia. The terrified inhabitants requested Cræsus to send his son with hunters and dogs to destroy the formidable animal. The king, remembering the vision, withheld his son, but promised them a chosen band of Atys.

The young man, mortified by his father's determination, expostulated, and at length was allowed by his father to pursue the chase of this *sworn enemy*, being placed under the special guardianship of the young Phrygian. They attacked the boar; when, the Phrygian's spear, by a fatal mischance, killed the son of Cræsus. "Thus," says Herodotus, "he was destroyed by the point of a spear, and the vision proved to be prophetic. Cræsus was in an agony, and his anger was excited against the destroyer of his son, the fugitive to whose distressful tale he had listened, and whose former crime he had gently *expiated*."

While his thoughts were thus occupied, the Lydians appeared with the body of his son: the homicide followed. He advanced towards Cræsus, and with extended hands, implored that he might suffer death upon the body of him whom he had slain. Cræsus listened to him with attention; and although the father was oppressed by his own grief, he could not refuse his compassion to Adrastus, to whom he spoke as follows: "My friend, I am sufficiently revenged by your voluntary condemnation of yourself. You are not guilty of this event, for you did it without design. The offended Deity who warned me of the evil, has accomplished it! Cræsus, therefore, buried his son with the proper ceremonies; but the unfortunate descendant of Midas, who had killed his brother and his friend, retired, at the dead of night to the place where Atys was buried, and confessing himself the most miserable of mankind, slew himself on the tomb."

Cræsus passed two years in extreme affliction for the tragical death of a son, who was the only hope of the royal house. At length his jealousy was awakened, and his military ardour roused, by the progress of a neighbouring power, which was rapidly advancing to a formidable greatness.

It is remarkable that Cyrus, whose name will be connected with all the remaining history of Cræsus, appears to have assumed the military government of Media, on the death of his grandfather, Astyages (who is said to have been the brother-in-law of Cræsus), the same year in which the king of Lydia commenced his reign, on the death of his father Alyattes.

tical ac-
count.

But before we proceed in the history of Cræsus, we must notice an apparent inconsistency respecting the alleged years of that prince's age, and of his reign, which we know not how to explain: for if Cræsus were only thirty-five years of age at his accession, it is difficult to understand how he could have a son advanced to manhood and disposed of in marriage, apparently some time before his tragical end, which we have related. If, again, the king of Lydia reigned only fourteen years, according to Herodotus (i. 86.), and two years of inaction be allowed to pass after the death of his son, the wars he waged against his neighbours, the extension of his dominions, the accumulation of treasure, and the embellishment of the metropolis of his kingdom; all these important transactions will be crowded into three years. Such conclusions are extremely improbable; and it can scarcely be doubted that both the age and the reign of Cræsus far exceeded the extent assigned them by the common computation.

The kings of Babylon had been for some time advancing their conquests, and were permitted, as a just judgment on the Jews, to bring the land of Israel under their despotic sway. According to Xenophon, they had not only overthrown the Syrians, but also the Arabs and the Hyrcanians; they were attacking the Bactrians, and sought to break the power of the Medes, and thus to obtain the command of Asia. These conquests and further projects of dominion naturally excited the jealousy of neighbouring states. The kingdom of Media, especially, was aroused to military activity; and Neriglassar, the king of Babylon, son-in-law of the Nebuchadnezzar of Scripture, was soon alarmed by the advance of Cyrus, with an army of Persians, in support of his uncle Cyaxares, the king of Media.

Cyrus.

Cyrus, whose name has been famous for his connection with the sacred history, and the particulars of whose life and reign will be found in another place, must have been esteemed, from all the accounts of him which have escaped the ravages of time, a most formidable competitor. He had been educated under his father, in Persia, from his twelfth year, and was now at the mature age of forty. The interval had been passed, not in those pursuits of luxury and indulgence which too often enervate the constitutions and debilitate the minds of princes, but in military exercises, instructive society, hardy toils, and salutary privations. He had learned to govern from having been habituated to obey. Such was the great captain with whose rising fortune the king of Lydia was now to contend.

Neriglas-
sar's alli-
ances.

The advance of Cyrus may be easily supposed to have alarmed the king of Babylon; especially when he understood that the Persian prince had defeated and reduced to new terms of subjection the king of Armenia, a tributary prince, who had revolted from the Medes. Neriglassar, on this emergency, in the first place summoned to his aid, according to Xenophon, his own tributary states. He also sent to Cræsus, king of Lydia; to the king of Cappadocia, to both Phrygians, to the Carians, Paphlagonians, Indians, and Cilicians; loading the Medes and Persians with calumny and reproach; describing their power, their union of interest by family alliances, and their design, by attacking each nation separately, to subdue them all.

According to the same historian, the Lydians who joined the confederated forces on this occasion under

Cræsus, were 10,000 horse, and targeteers and archers upwards of 40,000. The whole of the allied army he computes as 60,000 horse, and more than 200,000 targeteers and archers. The army of Media is described by Xenophon as "in horse less than a third part of the enemy's force, and scarce half the number of their foot." But the historian was also the panegyrist of Cyrus, and this is not the only occasion on which we may raise some *historic doubts* of his strict veracity.

The confederate army, under the king of Babylon, Cræsus, and the other leaders, appeared at first disposed to remain in their strong camp, while Cyrus and Cyaxares waited to give them battle. The next day, however, according to Xenophon, the *Asians*, meaning the allied army, when they had dined, marched boldly out, and formed themselves with great resolution. The king, Neriglassar, himself ranged them in order of battle, driving round in his chariot, and exhorting the soldiers, in a spirited oration. On this occasion Cyaxares blamed the deliberate policy of Cyrus, sending messengers to entreat that he would march immediately against the enemy. He, at length, gave out the word, *Join, our assistant and leader*, and began the usual hymn to the *youths of Jore, Castor and Pollux*; in which the army accompanied him.

The spot on which this battle was fought has not been recorded. It was probably in the territory of Babylon, and on the confines of Media. If Xenophon may be credited, the Assyrians, or Babylonians, who fought from their chariots, were soon discomfited, and fled when closely pressed by the Persians, though it is admitted that Neriglassar sustained his military renown, falling in the field, surrounded by his bravest soldiers.

His death.

On the death of the king of Babylon, Cræsus, as the most considerable person among the confederates, assumed the command of the allied army, and made the best disposition for a retreat which their desperate circumstances would allow. He sent off the women and the principal part of the baggage in the night after the battle. Cyrus, reinforced by the Hyrcanians, who had revolted to him, pursued and routed the retreating army; Cræsus, abandoning the country to the conqueror, and, accompanied by his cavalry, retiring with all possible expedition into his own kingdom. Such are the representations of Xenophon in his *Cyropædia*; for Herodotus gives no account of the preceding military transactions.

That historian first connects the names of Cyrus and the king of Lydia in relating the solicitude of the latter to ask counsel at the different oracles of Greece. Some modern writers have introduced those consultations at an earlier period; but they, most probably, occupied part of the five years which are supposed to have elapsed between the retreat of Cræsus from Babylonia, which has been just described, and his fatal resolution again to pass the river Halys. This conjecture is confirmed by the pretence of the oracle to have deferred, for three years, the destruction of Sardis, related by Herodotus (i. 91.)

Herodotus.

During the five years that succeeded the battle in Nabera, which the king of Babylon was slain, Nabonodius, *dias*, who, according to Josephus, was the Belshazzar of the Scripture, had attained to the empire, on the death of Laborsorachod, the unworthy son of Neriglassar, who had reigned only a few months. In the mean time

Dositheos from Babylon, says Xenophon, and prisoners which were now taken, reported, that the Assyrian, as he always calls the king of Babylon, was gone into Lydia, carrying with him many talents of gold and silver, with treasure and rich ornaments of every description. Some suspected that he was already flying with his treasures to a place of security, but Cyrus wisely concluded that the king designed to purchase alliances, and to collect a military force, which he immediately prepared himself to oppose. The sequel shows the nature of this visit to the king of Lydia, while the importance of the projects he was now led to entertain would naturally incline him to ask the counsel, and to hope for the sanction of oracular wisdom. As the king of Lydia stands prominent on the pages of heathen antiquity, among the venerated and the dupes of oracular pretensions, we shall here abridge the narrative of Herodotus (i. 46—56).

Cyrus
consults the
oracles
oracles.

He sent messengers to Delphi, the Phocian Abas, Dodone, Amphiarhus, Trophonius, and the Milesian Branchidae, in Greece; and to the Libyan Ammon. He directed his messengers that each should consult the oracle to which he was sent, on the hundredth day of his departure from Sardis; asking about what Croesus, the son of Alyattes, was then engaged; and communicating to this king whatever answer he received. The answers in general have not been preserved, and were unsatisfactory to the king; but the Lydians had no sooner entered the temple of Delphi, and proposed their question, than the Pythia answered thus, in heroic verse:

I count the sand, I measure out the sea;
The silent and the dumb are heeded by me;
Even now the oceans to my voice that rise,
A torpine boiling with a fume of sulphur,
Where brass below and brass above it lies.

When Croesus was informed of the reply of the Pythia, he exclaimed, that there was no true oracle but at Delphi; for on the day appointed for consulting the several oracles, determining to do what it would be equally difficult to discover or explain, he had cut in pieces a tortoise and a lamb, and boiled them together in a covered vessel of brass. He now determined to propitiate that divinity by a magnificent sacrifice, previous to his more important inquiries. Three thousand chosen victims, a great number of couches, decorated with gold and silver, many goblets of gold, and vests of purple; all these he consumed together upon an immense pile, to which he persuaded his subjects to make costly additions. As thus a great quantity of gold was melted into a mass, he formed of it a number of large tiles, and a lion, weighing ten talents, which was placed on the tiles, and presented to the Delphian temple. He also sent to Delphi cisterns and basins of gold and silver.

The Lydians, who were entrusted with these presents, were directed to inquire whether Croesus might auspiciously undertake an expedition against the Persians, and whether he should procure any alliances? The answer assured the king, that if he prosecuted a war with Persia he should overthrow a great empire; and recommended to him an alliance with the most powerful of the Grecian states.

Croesus was now elated with the expectation of becoming the conqueror of Cyrus. He, however, consulted the oracle a third time, anxious to learn whether his power would be perpetual; the Pythia answered,

When e'er the Medes a mole shall sit on high,
O'er pebbly Herosus then, soft Lydian, fly—
Fly with all haste; for safety near thy fate,
Not scruple to deserve a coward's name.

Croesus was now more delighted than ever, confident that a mole would never be sovereign of the Medes, and that he could have nothing to fear for himself or his posterity. Such, according to Herodotus, were the transactions of Croesus with the famous oracle of Delphi, and the delusive confidence which the crafty Pythia inspired: Tertullian, in his Apology (ch. xxii.), has referred to this vain curiosity of Croesus, and remarked the dexterity of the oracles in tempering their responses with an ambiguity which would justify the most opposite conclusions. It may be added, that Oenomaus, a cynic philosopher, has also ridiculed this ambiguity of the Pythia. He is quoted from Eusebius, by Vandale, in his learned History of Oracles (ch. vii.) The orator Demosthenes did not hesitate to accuse her of bribery by Philip, and said, "the Pythonesse Philip paid."

Croesus now directed his attention to the situation and comparative importance of the Grecian states, that he might determine with whom to propose an alliance. Thus he at length concluded with the Lacedæmonians, to whom he had formerly rendered some kindness, and who having heard of the oracular declaration to Croesus, which they also misinterpreted, were rejoiced to avail themselves of his distinction in their favour.

Xenophon, in describing this second and fatal contention of the king of Lydia with Cyrus, has enumerated among his allies, besides the Lacedæmonians, the kingdoms in his immediate neighbourhood, with the Ionians, Æolians, and the Greek colonies, and especially the prince of Babylon. But that historian has entirely omitted all the military transactions of Croesus beyond the river Halys, till his return into Lydia, which brought on the battle of Thymbra. These we thus learn from Herodotus.

Deluded by the promise of the oracle, that if he passed the river Halys he should overturn a mighty empire, Croesus prepared to march an army into Cappadocia, anticipating the conquest of Cyrus, and the Medo-Persian power. While the king was thus employed, Sardanis, a Lydian, renowned among his countrymen for his sagacity, thus addressed him:—"You meditate, O king! an attack upon men who are clothed with the skins of animals; who, inhabiting a country but little cultivated, subsist on what they can procure, not on what they desire; strangers to the taste of wine, they drink only water; even figs are a delicacy with which they are unacquainted, and all our luxuries are entirely unknown to them. If you conquer them, what can you take from such as have nothing? But should you be defeated, it becomes you to consider of what you will be deprived. When they have tasted our delicacies, we shall never be able to dispossess them. I, indeed, thank the Gods for not inspiring the Persians with the desire of invading Lydia." Croesus, despising this salutary counsel, advanced towards Cappadocia, instigated, according to Herodotus,

Biography. tus, not only by the delusive encouragement of the oracle, but by the desire of revenging on Cyrus the wrongs which his brother-in-law, Astyages, who, as already mentioned, had married his sister Argenis, was suffering from the Persian princes, by whom he had now been conquered, and was detained in captivity. This account, however, is utterly inconsistent with the previous narrative; and it is difficult to believe that Cressus could have been at once the contemporary of Cyrus and the brother-in-law of his grandfather, Astyages. When the king of Lydia arrived at the river Halys, he passed over his forces on bridges, according to one account; though others have related that Thales the Milesian, contrived to divide the river into two branches, which thus became shallow and easily fordable.

Having passed the Halys, Cressus came into that part of Cappadocia then called Pteria, the best situated in point of strength of all the district. Herodotus adds, that it was near the city of Sinope, on the Euxine. That city, however, now the Sinop of the Turks, is on the hither side of the Halys. Cressus, after wasting the Syrian lands, besieged and took the principal city of the Pterians, which was afterwards so completely razed by Cyrus, that every vestige of its ruins has been long obliterated. Cressus destroyed also the neighbouring towns, and almost exterminated the Syrians, a barbarous policy, as from thence he had received no injury.

It appears to have been narrated by one of the ancient Jews, and believed by some of the early Christian fathers, that Cyrus, intimidated by the threats of Cressus, would have now retired to India. But his wife, Bardane, inspired him with new courage, and advised him to consult Daniel, who, on more than one occasion, had predicted future events both to her and Darius the Mede. Cyrus, having consulted the prophet, received from him an assurance of victory. Such is the story, on which Josephus is entirely silent, and which M. Larher, the learned French translator of Herodotus, has justly ranked among fabulous history.

It is more worthy of credit that Cyrus now collected his forces; and to this period we should probably assign the measure which Xenophon ascribes to him of sending spies into Lydia. In one instance, he employed some Indians, and in another, Araspes, the young courier, whose self-confidence had betrayed him to violate his trust when Cyrus had committed Panthea, the interesting wife of Abradates, to his protection. These spies returned with formidable accounts of the preparations of Cressus.

Battle. Cyrus, accompanied by those nations which lay betwixt himself and the king of Lydia, advanced to meet him. After a vain attempt to detach the Ionians from the Lydian alliance, he moved forward, and attacked Cressus in his camp. The battle was fought on the plains of Pteria, with equal violence and loss, till night parted the combatants, leaving the victory undecided.

Cyrus, slaying on disposition to renew the battle, the king of Lydia, whose army was inferior in numbers, determined on returning to Sardis, that he might collect the aids for which he had engaged with the kings of Egypt and Babylon, and the Lacedæmonians. These he appointed to assemble at Sardis within five months, having dismissed the mercenary forces which he had led across the Halys.

Cressus little suspected that Cyrus would bring the war home to him; yet he presently found, to his astonishment, that these allies would arrive too late; for Cyrus conducted his army instantly into Lydia, so that, says Herodotus, he was himself the messenger of his arrival. Cressus, though distressed by an event so unexpected, immediately prepared the Lydians for battle. At that time, adds the historian, no nation of Asia was more hardy or valiant. They fought principally on horseback, armed with long spears, and formed a very expert body of cavalry.

Of the battle of Thyndra, which we are now to describe, it is not very easy to give any correct account, especially as to the forces which composed the army of Cressus. It has been computed, from the various particulars mentioned by Xenophon, that the army of Cyrus amounted to 196,000 men, and that of Cressus to 420,000. But this account cannot be reconciled with the unprepared condition of the king of Lydia, as described by Herodotus, who may, indeed, be most worthy of credit on this occasion, as having no apparent purpose to serve, while Xenophon had evidently proposed to describe the Elder Cyrus as the model of a consummate hero. Yet, as the battle of Thyndra was the first pitched battle of which any particulars are preserved in the annals of the ancient world, and as its result opened to Cyrus the undisputed dominion of Asia, the interesting, but probably exaggerated description of Xenophon has been generally preferred. We shall here, however, copy the succinct account of Herodotus, as most likely to be authentic, and as most intelligible, especially to an unimpaired reader. Those who would see the diffuse description of Xenophon connected in the most advantageous form, may consult a learned Frenchman, M. Freret, in the *Memoirs of the Academy*, vol. vi. which Rollin, in his *History of Cyrus*, professes to have largely followed. According to the account given by Herodotus of the decisive conflict at Thyndra—

The field of battle was a spacious and open plain, in the vicinity of Sardis, intersected by many streams. Here Cyrus found the Lydians prepared for the encounter; and, as he greatly feared the impression of their cavalry, by the advice of Harnagus the Mede, he took the following method to obviate the danger: he collected all the camels which followed his camp, and taking off their burdens, placed on their backs horsemen in military accoutrements. These he ordered to advance against the Lydian horse; his infantry were appointed to follow the camels, and his own cavalry to close the order of attack. Having thus arranged his forces, he commanded that no quarter should be granted to the Lydians, but that whoever resisted should be put to death, Cressus himself excepted, who, whatever opposition he might make, should, at all events, be taken alive.

Herodotus describes this employment of camels as a stratagem of Cyrus to disorder and render useless the cavalry of Cressus, from the supposed antipathy between the horse and the camel. This the moderns dispute: while it has also been remarked, that the horses of Cressus might be alarmed, as they had never seen a camel. Herodotus, however, thus proceeds:

The engagement had no sooner commenced, than the horses, seeing and smelling the camels, threw their

Battle of
Thyndra.

Biography. ow ranks into disorder, to the total discomfiture of Cræsus. Yet the Lydians did not immediately yield the battle; they discovered the stratagem, and, quitting their now unmanageable horses, engaged the Persians on foot. A great number of men fell on both sides, but the Lydians were finally compelled to fly.

From A. M. 3407. **R. C.** 597. **to** A. M. 3456. **B. C.** 548. Cræsus, with the remains of his army, retreated within the walls of Sardis. He now sent messengers to his allies, imploring their immediate assistance; but before any could arrive, the king was become a captive, and Lydia a province of the Persian empire. The manner in which Cyrus acquired the possession of this famous city, Sardis, has been variously related.

Sardis taken. According to Polyænus, a Greek writer, in the second century, on the Stratagems of War, Cyrus availed himself of a trace which he had concluded with Cræsus, to advance his forces, and, making his approach by night, took the city by surprise. Cræsus still remained in possession of the citadel, expecting the arrival of his Grecian succours; when Cyrus putting in iron the relations and friends of those who defended it, presented them in that condition before the besieged, to whom he offered the alternative of the immediate execution of their friends, or their own unconditional surrender. The besieged preferred the latter, and Cyrus became master of Cræsus and the citadel.

If Herodotus may be credited, Sardis was thus taken: on the fourteenth day of the siege, Cyrus sent some horsemen round his camp, promising a reward to him who should first scale the wall. The attempts were unsuccessful, till a Mardian soldier observed an unguarded part opposite to Mount Tmolus, where he had seen a Lydian descend to recover his helmet. He revolved the incident in his mind, attempted to scale the wall in that undefended part, was seconded by other Persians, and the army followed. Thus, according to Herodotus, with whom, substantially, Xenophon agrees, was the citadel of Sardis taken; and it is remarkable, that, according to Polybius, the army of Antiochus, some ages later, reduced this citadel of Sardis by a similar stratagem.

The conduct and condition of Cræsus upon this occasion, and the manner in which the city was treated by the conqueror, have been also variously related. According to Herodotus, Sardis was stormed, and given up to plunder. And here that historian relates a very improbable story, which has, however, furnished a fine allusion in a modern Essay on History, and which must always find a place in any account of Cræsus.

The dumb son of Cræsus. He had a son, who, though accomplished in other respects, was unfortunately dumb. Cræsus, in his former days of prosperity, had made every attempt possible for the cure of his defect. Amongst others, he sent to inquire of the Delphic oracle. The Pythian answered,

Wide-ruling Lydian, in thy wishes wild,
Ask not to hear the accents of thy child;
Far better were his silence for thy peace;
And sad will be the day when that shall cease.

During the storming of the city, a Persian, meeting Cræsus, was, through ignorance of his person, about to kill him. The king, overwhelmed by his calamity, took no care to avoid the blow, or escape death; but his dumb son, overcome with terror, exclaimed, "Oh, man, do not kill Cræsus!" This, adds Herodotus, was

the first time he had articulated, and he retained the faculty of speech ever after.

The same historian proceeds to relate the interesting circumstances connected with a barbarous revenge of Cyrus on a vanquished foe, who was also his relation. It was a cruel insult, which the manners of those times render highly probable, but which Xenophon, who has omitted every thing disparaging to his hero, was not likely to record. Cræsus being taken prisoner, was conducted to the presence of Cyrus, who ordered him to be placed in chains upon the summit of an immense pile of wood, with fourteen Lydian youths around him. The unhappy monarch stood erect upon the pile: he remembered the saying of the *son of Athens*, and, rousing himself from the silence of that profound affliction in which he had been wholly absorbed, thrice pronounced aloud the name of Solon. Cyrus desired to know who (or probably what deity) he invoked. The interpreters approached him, but he continued silent. At length, being urged to explain himself, he said, "I named a man with whom I had rather that all kings should converse than be master of the greatest riches." Pressed still further on the subject, he related, that Solon, an Athenian, had formerly visited him; a man who, when he had seen all his immense riches, treated them with disdain, but whose sayings were at that moment verified in his fate.

While Cræsus was thus speaking, the pile was lighted and the flame began to ascend. Cyrus now felt compunction for his unworthy treatment of a man formerly not inferior to himself; he commanded the fire to be instantly extinguished, and the unfortunate prince, as well as his companions, to be saved. Herodotus, who could not be expected to conclude such a story without an addition of the marvellous, asserts, that the Persians could not, by all their efforts, extinguish the flames till Apollo, on the supplication of Cræsus, interposed by a seasonable deluge of rain; conscious, no doubt, that he owed some regard, in this extremity, to a deluded votary whom he had so often plundered under false pretences. Such were the lying vanities of the pagan adoration!

Cyrus, causing his prisoner to be taken down from the pile, thus addressed him—"What could induce you, Cræsus, to invade my territories?" "O king," replied Cræsus, "it was the prevalence of your good, and my evil fortune which prompted my attempt. I attacked your dominions, impelled and deluded by the deity of the Greeks; for none can be so infatuated as not to prefer tranquillity to war. In peace," continued Cræsus, "children utter their parents; while war violates the order of nature, and imposes on parents the painful duty of burying their children." Thus reasoned, as taught by the salutary discipline of adversity, this once haughty monarch.

From this moment Cræsus was received by Cyrus into his familiarity and confidence. The advice of the captive king immediately to stop the further plunder of Sardis, was well received, and that city remained for ages a splendid prize to successive conquerors. He next easily obtained leave from Cyrus to send the fetters by which he had been confined to the god of Delphi, as the first fruits of his splendid promises. The god explained the story of the mule as designing Cyrus born of a Persian and a Mede, the kingdom to be overturned was that of Lydia, and the whole dis-

Cræsus exposed to death.

Released by Cyrus.

Admitted into his confidence.

Biography. appointment of the king's expectations was charged upon the fates, to whom Apollo himself was equally subject. Such was the value of oracular counsel!

The kingdom which Croesus had been thus constrained to abandon to the ascendancy of Cyrus, was a conquest of no inconsiderable importance. Xenophon (lib. vi.), makes a Persian describe Lydia as a country "where wine, and figs, and oil abound; a land whose shores the sea washes, and by means of which valuable commodities are conveyed, such as before no one ever saw." It is, indeed, probable that maritime commerce was the chief source of the prosperity of that kingdom; for Herodotus remarks (i. 93), that "if we except the gold dust which descends from Mount Tmolus, Lydia can exhibit no curiosity which may vie with those of other countries." He goes on to describe them "as the first people on record who coined gold and silver into money, and traded by retail;" also as the inventors "of certain games (of chance), since practised among the Grecians." They also were distinguished by an infamous custom, too familiar to the ancients, but carried by this people to an unparalleled extent—all the young women of Lydia prostituted

themselves for hire (in some temple), and thus procured their marriage portion.

Cyrus appears to have left to his captive all the accommodations of life which can be enjoyed in a private condition. He lived in the society of his wife and daughters, and had his friends, servants, and table, at his command. Indeed, if Xenophon does not indulge his invention (lib. vi.), Croesus enjoyed, rather than merely supported this exchange of public cares and the pomp of royalty for the agreeable society of his wife and children. He had ceased to be a king, only to become a philosopher; yet he was permitted to retain the title of majesty. Xenophon adds, that Cyrus earned Croesus with him wherever he went, either to employ or to secure him—a hint which sufficiently estimates the professed friendship between a conqueror and his captive.

It appears, from a passage in the same historian, that the king of Lydia was in the train of Cyrus at the capture of Babylon, and he probably survived his conqueror. His country was governed by Persian satraps, of whom Chrysanthus was the first. The further history of Lydia will appear in the successive fortunes of the Persian empire.

CYRUS.

FLOURISHED FROM A. M. 3405, B. C. 599; TO A. M. 3475, B. C. 529.

Biography. THE history of Cyrus, in addition to that obscurity which belongs to remote records, and which especially overshadows the lives of heroes, to whom fabulous events were imputed in order to increase the splendour of their real transactions, is peculiarly complicated and perplexed, because of the very opposite accounts furnished by those historians who have professedly undertaken to write the life of this illustrious prince. The lessons furnished by ambition seem always to come too late for any practical and beneficial result. It is seldom that the individual derives any advantage from his own experience: chagrin and disappointment may cause a momentary suspension of his purposes, but renewed success re-assures him; and he presses forward along his dangerous path, until he finds himself engaged in that warfare "from which there is no discharge," and is compelled to yield, in the midst of his victories achieved, his extending fame, and his promising dreams of future aggrandisement, to the arm of a more restless conqueror than himself, who dismises him from his warlike toils for ever: he is placed out of the reach of the salutary instruction, which his successor, either by force, fraud, or descent, regards with indifference. If such men as Nebuchadnezzar and Cyrus could be called from their graves, it would be some mortification, supposing the same ambitious temper to remain with them, for the one to learn that his conquest of Egypt made so little lasting impression, as to leave it doubtful to posterity at what period of his life and reign it took place; and for the other to be informed, that the historians who contended for the honour of transmitting his renown to future ages, so widely differed in the most simple as

well as the most momentous facts, that neither his birth, his principal achievements, nor his death, are known with certainty. Both of them owed the renown they possess to a people whom neither of them knew, except as conquerors; whom both of them despised; whom the one enslaved, and the other, after long captivity, but partially restored; and to actions, in which they were unconscious instruments of the will of an Unknown God.

In the account already given of Croesus, no inconsiderable portion of the life of Cyrus, and of his victories, has appeared. These have been deduced from the joint testimonies of Xenophon and Herodotus. It does not seem possible to acquire the little we think we know of this distinguished hero, except by extracting facts from both these writers, and sometimes inferring truth from their collision. Xenophon was represented by Plato as having given in his work his own conceptions of what should constitute a just prince rather than a true account of Cyrus; and Diogenes Laertius has inferred from his expressions, that he regarded the *Cyropædia* altogether as a fable. But it ought not to be forgotten, that Plato and Xenophon, disciples of the same master, were rivals; and, in more instances than one, discovered towards each other all the petulance and deterioration of competition; nor is it impossible, that a feeling of this order may, in some measure, have influenced the opinion of Plato in the present case. Cicero, probably upon this authority, asserts, that the *Cyrus* of Xenophon was drawn up expressly as a model of government, and was not even intended as a true history. This conclusion is expressly contradictory, however, of the pretensions of Xenophon himself, who distinctly

avens, that he had diligently set himself to obtain the most accurate information relative to the education, achievements, and character of his hero. He had opportunities of effecting this better than any other historian who undertook the task subsequently (among others, Herodotus), because of his station in the court of the Younger Cyrus; because of his acknowledged penetration and judgment, to which the ancients bore a concurrent testimony; and because of the undivided attention which he paid to his subject, as unmixt with any other countries or events, except in so far as they were brought into contact with the exploits of his principal personage. Scaliger admits no other events in the *Cyropædia* as authentic than those which are also recorded by Herodotus. Erasmus denies him even the merit of having produced a moral fiction, and impugns the character of the prince, while he agrees with others in regarding it as imaginary. Thus Xenophon has been stripped, by the merciless hands of ancients and moderns, of all his laurels, as a philosopher as well as an historian. In these respects, palpable injustice has been done him.

Herodotus relates more surprising, and therefore more improbable, events of Cyrus than Xenophon: so far presumption is on the side of the latter; and it is not unlikely that those extraordinary transactions, narrated by the former, and which were peculiarly adapted to the taste of the age in which he wrote, so captivated his readers, as to induce the preference shown to his narrative over that of Xenophon. It is not intended to deny that the structure of the *Cyropædia* is such as most writers have represented—a picture of government as it existed in the idea of Xenophon, both regarding war and policy, and blended with the character of his hero. But an historical novel is not, therefore, necessarily destitute of truth: it is, on the contrary (and this is its charm), built upon acknowledged facts, over which the writer throws the rich colouring of his own imagination. It is not necessary, probably it is not just, to consider the production of Xenophon as a mere fable, constructed out of a few general facts attached to a real character; we are disposed to go further, and to consider his work as authentic in all its prominent details, although mixed with his own sentiments, and the speeches, especially, of the respective parties in it, supplied by his own hand—in a method adopted by Josephus, and by all the ancient historians. The inferences appear to us rather in favour of Xenophon than Herodotus, as well from the superior advantages of the former over the latter (who is nevertheless an excellent historian, and in most cases to be relied on) in the information regarding this particular subject, as from the greater simplicity of his narrative of the events connected with his hero. But we have evidence beyond conjecture, when we turn again to revelation, as to the polar star of this night of history, and find the record of Xenophon, in some leading particulars, agreeing more distinctly with the facts related in the Scriptures, than the history of Herodotus, which has been so generally followed.

Advantages of Xenophon.

Mistakes of Herodotus.

Herodotus founds the Persian empire upon the destruction of the Medes; Xenophon unites the Medes and Persians in the conquest of Babylon: the last accords precisely with the prophecies and the records of the Bible on these facts: the former is entirely incompatible with them. At the same time it may not

be impossible that some of the discrepancies between these historians, and which are wholly irreconcilable, relate to different persons of the same name, who may have been originally confounded by different writers, the perplexity naturally increasing as time caused them to recede from the era of their history: and thus, not only the different actions, but the different deaths, imputed to the great Cyrus, may all have been true, partially at least, of some heroes of a similar name, all whose individual distinctions may have been absorbed in the first illustrations personage. Such things have happened in relation to other distinguished persons, and are at least possible in this case. We shall, therefore, as before, present a brief sketch of the narratives of Xenophon and Herodotus respectively, making the Scripture narrative our umpire in all cases of disagreement, and drawing our conclusions from it in such as are doubtful.

According to Herodotus, Cyrus was the son of *Haradates* the Mede, and of *Cambyses*, a Persian of ancient family, but of inferior rank and circumstances. The inducement of the king to marry his daughter so far below her royal dignity, and to a foreigner, is stated to have been the apprehension of the loss of his kingdom by the issue of her marriage. Two dreams, which he had related to the magi—the one, that a vine springing from his daughter's womb overshadowed his empire; the other, that water issuing from her overflowed all Asia—were interpreted by them to portend the subversion of his own throne, and the subjugation of all Asia, by his grandchild. Alarmed by these prognostications, he first selected *Cambyses*, as a man whose inferior circumstances were not likely to inspire ambition, and as possessed also of a mild disposition, little suited to war and enterprise. But as the latter dream did not take place until twelve months after his marriage, and seemed to signify a similar result with the former, he became still more terrified; and sending for his daughter, then pregnant, he shut her up until after her confinement, resolving to destroy her offspring, should it prove a son. Under these circumstances *Cyrus* was born, and delivered to *Harpagus*, one of the courtiers, to be put to death. Unwilling himself to be the executioner of infant innocence, he transferred the cruel order to *Mitradates*, one of the king's herdsmen, enjoining him, upon pain of death, to expose the child to perish by hunger, or wild beasts, among the most perilous recesses of the mountains. The wife of the herdsman having been delivered of a still-born son, prevailed upon her husband to put the dead child in the place of *Cyrus*, and to rear the royal infant as their own. This expedient being adopted, the herdsman's still-born babe was dressed in the robes of the grandson of *Astages*, placed in the same coffin, and exposed three days on the mountains: at the end of which, *Mitradates* summoned *Harpagus* to bear witness that the king's mandate was executed; who sending some friends to ascertain the fact, supposing the dead child to have been the royal infant, they reported accordingly, and the babe was interred as such, while *Cyrus* was educated as the herdsman's son.

In this obscurity the prince remained until he reached the age of ten years, when some sparks of his native greatness discovered themselves. He was one day

He is
brought be-
fore Asty-
ages.

playing with companions of his own age, of whom, it would appear, one at least was the son of a man of superior rank. Cyrus had been elected king, for the superiority of his genius and agility. In conformity with his imaginary dignity, he distributed his little subjects into several ranks and degrees, and enforced his orders by punishments and rewards. The nobleman's son refusing to obey his prescriptions, he caused him to be so severely chastised, that the boy complained to his father; who, incensed beyond measure at the presumption of the supposed son of a herdsman, brought the matter before the king. Astyages commanded him to be sent for, and, upon reproving him for his insolence in striking the son of a man of rank, was astonished at the spirit and eloquence with which Cyrus defended himself, in asserting the right inseparable from the dignity conferred upon him to punish the disobedient. These were circumstances which he deemed so much above the rank and education of the young offender, that he began to examine his features, in which he fancied he traced a resemblance to his own, and to inquire his age, which agreed with the date of the exposure of his daughter's infant, and finally concluded that this was his own grandson. The herdsman was now summoned to the court, who at first denied the fact, which afterwards, intimidated at the threats of the king, he confessed unreservedly. Astyages sent instantly for Harpagus, who, confronted with the herdsman, could not deny the fact, but affirmed truly that he had himself been deceived. The king, concealing his resentment, directed Harpagus to sup with him that night, in honour of the discovery of Cyrus, and in the mean while to send his own son to the palace as his companion. The young man had no sooner arrived than the tyrant caused him to be murdered, and the body prepared as food, under different disguises. A splendid banquet was served to the king and the nobility, but the table of Harpagus was furnished only with this horrible flesh, dressed in the most attractive and delicate manner. The miserable father had no suspicion that he had fed upon his only child, until the royal monster presented him the head, hands, and feet, in a basket. He dissembled his rage and horror, that he might have opportunity to execute a deeper revenge, which from that moment he meditated, and returned home, feigning resignation to the absolute will of the sovereign. Astyages, meanwhile, again consulted the magi, informing them that his grandson was alive, and of the circumstances under which he had discovered him. They persuaded him that the destiny predicted by the dreams had been accomplished already, in the sportive election of him by the boys as sovereign; and that he might therefore dismiss all apprehension. Accordingly he resolved to send Cyrus to his real parents, Cambyses and Mandane, in Persia; by whom he was received with transports of tenderness, and to whom he related the occurrences of his infancy and childhood to that hour.

In this country, and with his parents, Cyrus grew up to manhood; but years could not efface from the bosom of Harpagus the barbarous and irreparable injury inflicted upon him by Astyages. He secretly planned, with the principal nobility of the Medes, a conspiracy against the tyrant; and judging Cyrus the fittest person to whom to commit the execution of it,

by the dethronement of his grandfather, as well from his transcendent talents, so early developed, as on account of the cruelty he had himself experienced from his unnatural relative, conveyed a letter to him in the belly of a hare, sent by a trusty domestic in the habit of a hunter, which unfolded the plot, and earnestly pressed him without delay to hasten it to its execution.

The Persians were then subject to the Medes, and subjection opens an easy door to revolt. By a forged letter from his grandfather, Cyrus first enjoined the severest labours upon the Persian forces one day; and the next, as at his own instance, banquetted them with the choicest dainties. He then asked them, whether they would prefer living the laborious life of the day preceding, or in the plenty and ease of that moment in which he was addressing them. It was not difficult to anticipate their decision; and he explained to them, that to live under the government of the Medes was to wear the yoke, but that to follow him would be to secure liberty and peace. After this, finding in them the impatience to emancipate themselves from their oppressors which he desired, he detailed to them the particulars of the conspiracy, and was placed at their head with acclamations.

So serious a revolt as that of Persia could not be long concealed from the king of the Medes: accordingly, Astyages receiving information of the transactions with which Cyrus had connected himself there, commanded the young hero to repair to his court without delay. Cyrus answered, that he would be there sooner than his grandfather wished. The king accordingly called out his forces to resist the invasion with which he was threatened, and committed the command of them to Harpagus, who, with the principal officers of the army, in the first general onset, went over to the Persians, and the Medes were consequently defeated with great slaughter. The tyrant, enraged to find that the treason had made its way into his army, first caused the magi to be impaled, who had interpreted his dreams in a way that lulled him into security, and then assembling all the Medes capable of bearing arms, put himself at their head. Another general engagement ensued, in which the Persians were again victorious, and Astyages taken prisoner. It was now the turn of Harpagus to insult his tyrant, which he did not fail to do; but his circumstances did not so despise Astyages as to withhold him, notwithstanding the danger he incurred, from reproaching this officer with his treachery. Cyrus kept his grandfather a prisoner until he died; but without seeking any further revenge than securing his person, and rendering the Medes subservient to the Persians, transferring the empire thither. From this period commenced the victories of Cyrus over the Assyrians, the Lydians, and finally the Babylonians, with other distinguished empires. In his march to Babylon, one of his sacred horses was drowned in the Gyndes; upon which he caused the river to be divided into three hundred and sixty channels, a work which employed his whole army the entire summer, and compelled him to defer the siege of Babylon until the following spring. Finally, he invaded the Massagetes; and by a feigned flight, in the first conflict, abandoned the field covered with booty, and a considerable quantity of wine, which his enemies seized, indulging to an excess that rendered them an easy prey to his soldiers, when return-

ing, he surprised them in a state of intoxication, defeated them, and took many prisoners, among whom was Spargapises, the son of queen Tomyris. The royal mother sent heralds desiring the ransom of her child; and when the conqueror refused, the high-spirited young prince, preferring death to slavery, committed suicide. Tomyris, incensed at this fatal catastrophe, and animated with the desire of revenge, assembled her forces, and headed them against the Persians; over whom, after a sanguinary and obstinate conflict, in which Cyrus fell, the Massagetes obtained a complete victory.

The body of Cyrus was found in the field after the engagement, upon which Tomyris took a cruel but impotent revenge. The queen caused his head to be cut off, and cast into a vessel filled with blood, with this bitter taunt—"Satisfy thyself with that after which thou hast always thirsted, and with which thou hast never been satisfied?"

Such are the principal occurrences of the life of Cyrus, as recorded by Herodotus, and adopted, with little variation, and that chiefly relating to the manner of his death, by Trogus Pompeius, as appears from Justo, who abridged his history, and by other ancient writers. Besides the exception already taken to this narrative at its onset, and which appears to us to be fatal (namely, that it supposes the extermination of the empire of the Medes by the Persians before the conquest of the Assyrians—whereas the Scriptures represent these powers as united in the investment and capture of Babylon), there are other improbable and incongruous circumstances. It is not probable that Astyages should commit the command of his army to Harpagus, after the cruel injury which he had inflicted upon him, and which it required no great depth of acquaintance with human nature to know, was of a kind that could never be forgotten, and not likely to be forgiven. It is incredible that Cyrus, so persevering, so prudent, so moderate, so experienced, as a commander, as he has always been considered (and Herodotus himself joins in the representation), should have wasted a year, and exhausted the strength and spirits of his troops in the fruitless labour imputed to him, in revenge upon the river Gyndes. The death of Cyrus we shall see hereafter to be a point that cannot be absolutely determined; nor does Herodotus seem to have any sufficient authority for his account of it.

The history furnished by Xenophon is much more probable, simple, and dignified. He says that Cyrus was the son of Cambyses, king of Persia, by Mandane, the daughter of Astyages, king of the Medes. He was educated after the Persian manner, whose mode of instruction was calculated to form a character of heroism; as it comprised to hardships, constant and laborious exercise; with the most simple habits and diet. Twelve years of his life were passed in this salutary discipline; at the close of which he accompanied his mother to the court of his grandfather, Astyages, where every thing was the reverse of the plain and natural scenes in which he had been educated; every thing was luxurious, splendid, deceitful, and enervating. He remained, if we are to credit his historian, unseduced by these temptations, a model of temperance, generosity, and affability, in the midst of a proud, selfish, and voluptu-

tuous circle. He won the admiration of his grandfather, and of the principal nobles of Media, by his unassuming and dignified deportment; and their confidence in his talents and virtues was soon increased by an unexpected irruption of the Babylonians upon the empire. It was a wanton and unprovoked invasion by Evil-Merodach, the son of Nebuchadnezzar, and, as it should seem, during the interval of the suspension of his father's reascend, and while the regency of that mighty state devolved upon him. Cyrus was at this time about sixteen years of age, and accompanied his grandfather to the war, where he reaped his first military laurels, and discovered a wisdom and valour that rendered it, it is said, the decisive victory gained by the Medes over the Babylonians, on that occasion, principally his own. After this exploit he returned to Persia, and remained with his father until he was forty years of age, when he was recalled into Media to the assistance of his uncle Cyaxares (by his mother's side), who was one year older than himself.

Nerigassar, king of Babylon, determined to invade Media, of whose rising power he was jealous. Babylon had scarcely touched the zenith of its glory, under Nebuchadnezzar, before it began to decline under the short and violent reigns of his unworthy successors, until it was finally overthrown by the victorious arms of Cyrus. The monarch of Babylon, aware that he fought for no light stake, and with no formidable enemy, addressed himself to the conflict with all his force, and called in the energies of surrounding nations, whose alliance he courted. Ambassadors had been dispatched into Phrygia, Cappadocia, Paphlagonia, Caria, Lydia, Cilicia, and to the Indies themselves, to ferment hostility against the Medes, as aspiring to universal monarchy. How well this pretext became the king of Babylon, whose ancestor had affected this beyond all other men, and achieved it more than most; and against the Medes, who had been the first to resist his exorbitant demands, and to break his yoke of slavery from their necks!

To meet this formidable armament, Cyaxares recalled Astyages, his nephew Cyrus from his paternal home into Media, which he entered at the head of 30,000 Persians, to his assistance. The most formidable of the king of Babylon's allies was the king of Lydia, whose contest with Cyrus, and defeat, with all the various circumstances attending them have already been given under the article CROISUS.

The king of Armenia was the first to revolt against the dependent provinces of Media. Cyrus, under the feint of hunting on the hills of Armenia, took with him a chosen body of horse, entered the country by surprise, crushed the rebellion, compelled the monarch to pay his wonted tribute, restored to him his kingdom, and returned triumphant to his uncle.

After a preparation of not less than three years both parties took the field: the king of Babylon and his allies, the aggressors—the combined forces of the Medes and Persians, acting on the defensive. After some days, the Babylonians and Lydians quitted their intrenchments, and the engagement became general. Nerigassar was defeated and slain in the battle. Croisus, who assumed the command, as the next in dignity among the allies, was so hotly pursued in his retreat, that many prisoners were made, and a large booty taken. The prisoners, with his usual magnani-

mity, Cyrus set at liberty, after exacting a promise that they should no more serve against him and his allies in the war; and the spoils he appropriated to his uncle Cyaxares.

Laborosoarchod, who succeeded Nerighassar, was as savage and effeminate as his predecessor had been warlike and politic. By acts of the most wanton cruelty, he drove two of his most distinguished officers, Gobius and Gadates, to revolt; and they placed in the hands of Cyrus their respective provinces.—Learning that the tyranny of the Babylonian monarch had alienated the hearts of his subjects, while he was engaged in every species of debauchery, the Persian hero established himself in Assyria, defeated Laborosoarchod, ravaged the country, twice shewed himself before the walls of Babylon itself, and reduced some fortresses upon the frontiers on his return into Media. At length the tyranny of Laborosoarchod became insupportable, and he died by assassination, in the ninth month of his sanguinary reign.

Nabonadius, who was the principal conspirator, was elevated to the throne. This is the Labynitus of Herodotus, and the Belshazzar of the Scriptures. His character was not at all better than that ascribed to his predecessor; whose reign, because it did not complete the year, is not entered upon Ptolemy's canon. Bot Nitocris, his mother, was as distinguished for talent, as her son was infamous for debauchery. She had the honour of completing, so far as they were ever finished, the works carried on by Nebuchadnezzar, on so magnificent a scale, in fortifying and adorning Babylon. To her that city was indebted for the stupendous work of walls on each side the river, and brazen gates of the same strength and magnitude with those which surrounded the city, and a vault of communication beneath the bed of the river, leading from the old to the new palace. To her counsels it must be imputed that the shaking fortunes of the empire held together so long as they were maintained; for her son had shunned himself wholly to sensuality, as unmindful of the safety of his people, as careless of his own glory. Cyaxares and Cyrus resolved upon a more effectual mode of warfare; and to direct their force to the reduction of the principal towns of the Babylonians, until it might be practicable to take Babylon itself. For some time they advanced towards the completion of their design, and had reduced considerable provinces to subjection, until even Nabonadius felt it necessary to adopt some measures to divert or crush the increasing influence of his opponent, who now even menaced his capital. He applied in person to Croesus, who, by flatteries and presents, was induced to make common cause with him. The assistance and interest of the king of Lydia brought over to his arms the Greeks, Thracians, Egyptians, and the nations of the Lesser Asia. Immediately upon receiving intelligence of this armament, Cyrus advanced to give the allied powers battle, with an army of 196,000 horse and foot, three hundred chariots of war armed with scythes, with others still larger, as carriages of towers about twenty feet high, each capable of containing as many archers. The battle of Thybris followed; into the detail of which we do not enter, as it has already been substantially given, both as to its circumstances and consequences. After a desperate resistance on the part of the Egyptians, Cyrus obtained a complete victory. Croesus re-

treated into Sardis, which city Cyrus invested, took its citadel, and with it Croesus, whose life he spared, and constantly retained him about his person. He proceeded to prosecute his victories in Lesser Asia, until he subdued the several nations from the Aegean sea to the Euphrates; after these, Syria and Arabia; and having reduced almost all Asia, he repassed the great river, invaded the Assyrians, and marched directly against Babylon. It was here that one of the boldest projects that ever occurred to the mind of man employed this mighty hero, who, in undertaking the siege of the last city in the east that held out against him, was in danger of wrecking all his military glory upon this final enterprise, from the improbability of this untried capital. An immense lake having been excavated to receive the waters of the neighboring mountains, in the event of any inundation, by Nebuchadnezzar (or, as others think, Nitocris), Cyrus meditated the plan of turning the river into the lake, as Nebuchadnezzar is said to have done when he constructed its banks, and entering the city through its channel. He effected his purpose, and drained the river during a night of profanity and dissipation in Babylon, the interior scenes of which are described by a greater historian than either Herodotus or Xenophon—the prophet Daniel, from whose stores we shall derive the certain record of this great event.

The king of Babylon, whom we shall now call by Belshazzar's scripture name, Belshazzar, presuming upon the impregnable strength of the city, and upon the magazine of provisions, which, without any fresh supplies, less than a twenty years' siege could not exhaust, derided the efforts of his powerful adversary. In the mean time the invaders encompassed the city with a deep trench, keeping their purposes a profound secret; and Cyrus was informed of the feast which was about to be held in Babylon. Upon this night he determined to suspend the fates of his army, and of the empire for which he fought. On this occasion of festivity, Belshazzar, with a bold impetuosity, at which his predecessors, proud and daring as they were, would have shuddered, profaned the vessels of the temple of Jehovah. The apparition of a hand, writing on the wall of the palace, in unknown characters, first excited the apprehensions of the king. In vain he called the astrologers and the magicians; in vain he alternately threatened and entreated them; they could neither read the writing, nor make known the interpretation. The sentence was written in Samaritan characters, which the Chaldeans did not understand; and could they have deciphered these, they could not have explained them. The words literally rendered are, "He hath numbered, he hath numbered, he hath weighed, and they divide." Daniel was sent for, and announced from them the immediate fall of his empire. While this was the state of things Babylon at the palace, Cyrus had drained the river into his moat, till it was fordable. Informed of the confusion which reigned in the city, he issued orders to his troops to enter it that very night, at north and south, by marching up the channel. They were commanded by two eminent officers, and advanced towards each other, without any impediment, till they met in the centre of the river. God, who had promised to open before him the gates of brass, preceded them,

Babylon taken.

* Mene, Mene, Tekel, Upharsin.

Biography. otherwise this singular and adventurous expedition must have failed. Had the gates which closed the avenues leading to the river been shut, which was always the custom at night, the whole scheme had been defeated. But so was it ordered by Providence, that on this night of general riot and confusion, with unparalleled negligence, *they were left open*! so that these troops penetrated into the very heart of the city without opposition, and reached the palace before any alarm was given. The guards were immediately put to the sword—Belsazzar slain—and the city taken almost without resistance!

Thus fell the Babylonish empire, which had risen to such a pitch of glory, and enslaved so many nations; and up to this eventful period, such is the general history of Cyrus, when stripped of its ornamental circumstances as given by Xenophon; and which accords with Herodotus in respect to the names of his father, mother, and grandfather, the union of the Medes and Persians in a common cause, and the conquests of this prince with the particulars of his subjection of Babylon; and these are important points of agreement. It is still more important, that they are substantially ratified by the Scriptures, which also supply us with many interesting additional circumstances.

Agreement between Xenophon and Herodotus.

Mixed descent of Cyrus. The descent of Cyrus from a Mede and a Persian occasioned his being designated a *male* in several oracular descriptions, and, among others, that said to have been delivered by Nebuchadnezzar before his death, and preserved in the fragments of Megasthenes.

The name of *Cyrus* had been foretold one hundred and twenty years before his birth, and in connection with his greatest achievement—the conquest of Babylon; and that victory again as associated with the deliverance of the Jews from their captivity. It is also stated, that the hero was prepared for this grand exploit, by previous successes, and that he came to destroy the Babylonian power from the subjugation of other mighty empires. It was further intimated in what way he should enter the city, and promised that the gates of brass leading to the river should be left open. “I am the Lord that saith to the deep, Be dry—and I will dry up thy rivers: that saith of Cyrus, He is my shepherd, and shall perform all my pleasure: even saying to Jerusalem, Thou shalt be built; and to the temple, Thy foundation shall be laid. Thus saith the Lord to his anointed, to Cyrus, whose right hand I have holden, to subdue nations before him; and I will loose the loins of kings; to open before him the two-leaved gates, and the gates shall not be shut; I will go before thee, and make the crooked paths straight: I will break in pieces the gates of brass, and cut in sunder the bars of iron: and I will give thee the treasures of darkness, and hidden riches of secret places, that thou mayest know that I the Lord, which call thee by thy name, am the God of Israel. For Jacob my servant’s sake, and Israel mine elect, I have even called thee by thy name: I have surnamed thee, though thou hast not known me.” Is. xlv. 24, 27, 28. xlv. 1—4. Accordingly, the spoils found in Babylon were immense: those accumulated alone in the temple of Belus, “the treasures of darkness,” were almost incredible: besides that laid up in “the secret places” of the old and new palaces. The profane historians have informed us of the marriage of Cyrus with the daughter of Cyaxares, his uncle, which took place after the reduction of Babylon. Thus the union between the

Predictions respecting him.

Marries the daughter of Cyaxares.

Persians and Medes became again cemented by the ties of blood. That they should jointly besiege Babylon is hinted in a very obscure prophecy, and was justified by the event. In Isaiah, chapter xxi. which describes so accurately the events connected with that memorable night of the taking of Babylon—the debauchery of Belsazzar, the terror succeeding the vision of the hand-writing on the wall, with other, even the most minute circumstances—a watchman is represented as looking from the walls of Babylon, “and he saw a chariot, with a couple of horsemen; a chariot of asses, and a chariot of camels:” or, as Bishop Lowth more accurately translates the passage, “a rider upon an ass, and a rider upon a camel;” a prophetic symbol of the alliance of two nations in the invasion; and we know that the Persians used camels in warfare, since we have seen their effect upon the army of Croesus. But, at the opening of the chapter, it is distinctly said, “Go up, O Elam” (the name of a part of Persia); “besiege, O Media.”

Babylon being taken, Cyrus, who shared the empire with his uncle, yielded him the first rank in it; and Cyaxares—called, in Daniel, Darius the Mede—ascended the throne of Babylon, while Cyrus retired into Persia to his father and mother. Having returned thence, in conjunction with his uncle, now also his father-in-law, he divided the empire into one hundred and twenty provinces; reviewed its forces, which he found amounted to 120,000 horse, 2,000 chariots armed with scythes, and 600,000 foot; set three presidents over the princes of the provinces; invested Daniel with the supreme authority over these, and, leaving Cyaxares on the throne alone, again departed to push his conquests still farther. While he was absent on this expedition, Daniel was cast into the den of lions, and delivered, as has been related. He reduced all the nations to submission, from Syria to the Red sea and the confines of Ethiopia. The death of Cyaxares recalled him to Babylon, and upon him devolved the crown of Media, Persia, and Babylon. The first he held in virtue of his marriage with the daughter of Cyaxares, who being his only child, his kingdom was her dowry; the second descended to him from his father: the last was his own by conquest.

He lived in tranquillity seven years after acquiring this united empire, bounded on the east by the river Indus, on the north by the Caspian and Euxine seas, on the west by the Egean, and on the south by Ethiopia and the sea of Arabia. This extensive dominion is hinted at in the opening of his decree in favour of the Jews, which he passed, doubtless by the persuasion of Daniel, the first year after he had seated himself upon the throne of Babylon, after the death of Cyaxares. “Now in the first year of Cyrus, king of Persia (that the word of the Lord, by the mouth of Jeremiah, might be fulfilled), the Lord stirred up the spirit of Cyrus, king of Persia, that he made a proclamation throughout all his kingdom, and put it also in writing, saying, Thus saith Cyrus, king of Persia, the Lord God of heaven hath given me all the kingdoms of the earth; and he hath charged me to build him an house at Jerusalem, which is in Judah: Who is there among you of all his people? The Lord his God be with him, and let him go up.” 2 Chron. xxxvi. 22, 23. “Also Cyrus the king brought forth the vessels of the house of the Lord, which Nebuchadnezzar had brought forth out of Jerusalem, and

His proclamation in favour of the Jews.

Biography. had put them in the house of his gods: even those did Cyrus, king of Persia, bring forth by the hand of Mithredath, the treasurer, and numbered them unto Sheshbazzar, the prince of Judah." Ezra i. 7, 8. He further enjoined, that in whatever provinces the Jews were scattered, they should be assisted in furtherance of this great design of restoring their temple and city. This decree was not so effective as had been expected, through the stratagems of the Samaritans, who obstructed, by bribes and misrepresentations, what they could not annul. The work proceeded so slowly, that it remained unfinished at the death of Cyrus; and it is supposed that the fasting and mourning of Daniel, mentioned as occurring in the third year of the reign of Cyrus, arose from this cause. Dan. x. 1—3. Cyrus divided his time between the three capitals of his newly-erected empire—the warmth of the climate induced him to spend the seven cold months at Babylon, the three months of spring he resided at Susa, and two months, during the summer's heat, he lived at Ecbatana. If we calculate from the time of his first assuming the command of the Persian and Median armies, he reigned thirty years, and died, beloved and lamented, in the seventieth year of his age. The manner of his death has been differently stated by different writers, nor can we arrive at any certainty respecting it. We have already seen the account of it by Herodotus; but it

does not comport with the wise and prudent character of the hero to undertake so rash an expedition as that against Scythia is represented to be, at his advanced time of life. Diodorus Siculus, agreeing with Herodotus as to the expedition against the Massagets, and its event, differs as to the circumstances of his death, and says, that he was taken prisoner by Tomyris, and hanged, or crucified, by her directions. Ctesius narrates, that he was wounded in the thigh by an Indian, in a battle against the Derbicans, a people bordering upon Hyrcania, and died three days after. John Melele, of Antioch, cites a forged writing, ascribed to Pythagoras, which declares him to have been slain in a sea-fight by the Samians. Xenophon's account is by far the most probable close of such a life, and represents him as dying in his own country, covered with glory, surrounded by his friends, and leaving his vast empire to his son Cambyses. In evidence of this fact, he asserts that he was buried in Parsagada, in Persia (in which place Xenophon says he died), and that his monument was to be seen there in the time of Alexander the Great—a circumstance totally irreconcilable with the account of Herodotus and others, who ascribe to him a violent and ignominious death in a foreign country. The assertion relative to the monument is confirmed by Plutarch, by Quintus Curtius, by Arrian, and by Aristobulus, an eye-witness, cited by Strabo.

Biography. WHEN the tumult occasioned by the mysterious manner of the death of Romulus had subsided, a new case of contention arose: not, indeed, as was the former one, between the people and their senators, but between the Romans and the Sabines, who, though united into one nation, could not entirely forget their different extractions and their different interests. Romulus had died without issue; the throne was thus left without a legal claimant, and became the object of dispute between the two people. The Romans, having been so long and prosperously governed by a Roman monarch, were unwilling, as may naturally be imagined, to submit to the rule of a Sabine; and the Sabines, urging that a considerable portion of the augmented wealth and increased population of the city originated with them, thought it but fair that the election of the second king of Rome should become their privilege, especially as they had so long and so cheerfully obeyed and supported Romulus. In this unsettled state of the country, the senate assumed the sovereignty. The numerous pretenders to the throne were kept in awe by the boldness of this measure, and although the authority exercised arose only from the necessity of the occasion, it carried the laws into effect, by the prudence and vigour with which the executive power was dispensed under this temporary administration.

The supreme rule was distributed amongst the whole body of the senate with much equiponderance and jus-

tice. The two hundred Sabine and Roman fathers divided themselves into small bodies of decuries or tens; and these decuries then drew lots who should govern first. It was agreed also that the decury to whom the fortune of the sovereignty fell should hold the power only for five days; and, at once to concentrate and to limit that power, one person alone out of the chosen decury bore the badges and distinctions of the kingly office. At the expiration of the five days, another decury succeeded to the government, held it in like manner, and thus each senator, in his turn, exercised the powers, enjoyed the privileges, and assumed the pomp of royalty. This mode of government they called an interregnum; the individual who exercised for a time the regal authority they nominated interrex; and the empire was governed in this manner during a whole year. The people then becoming wearied by so continual a change of rulers, asserted that their slavery was but multiplied, and that they were subjected to the will of two hundred masters; they preferred the government of one man, and loudly demanded of the senate to elect a king over Rome. The patricians, however unwilling to submit to a monarch after having themselves tasted the sweets of power, complied with the general requisition. The interrex convoked an assembly of the people, and addressed them thus: "O, Romans, we hope your determination and your choice may be advantageous to the empire. Name yourselves a king to reign over

Numa
Pompilius.

you, and the senate are ready to confirm your choice, if it be one fit to succeed our great Romulus." Won by this condescension, the people, with equal generosity, remitted the right of election to the senate; and thus the old difficulty recurred, whether the king of Rome should be of Roman or of Sabine extraction. A long debate ensued on this subject; it was, however, at length determined, with much justice and equanimity, that the Roman part of the senate should choose the sovereign, but that he should be a Sabine.

At this time, in a town called Cures, in the Sabine territory, lived Numa Pompilius, a man of respectable station, whom certain domestic afflictions had softened into a meditative and religious philosopher. He passed the greater part of his time in study, and was supposed to be eminently favoured by the conversation and inspiration of the goddess Egeria. He was, besides, particularly skilled in a science, which was then held in the greatest reverence, that of augury and of religious ceremonies. On this unassuming individual the senate fixed their choice as king of Rome, and their determination appears to have been wise and fortunate. Romulus, their former monarch, taught the kingdom war, and had extended it by means of arms and violence; Numa was now selected to strengthen the city by the arts of peace, and at once to soften and to fortify the minds of the Romans by philosophy and religion. But besides the will of the people, Numa had still other claims on the possession of the throne; for the wife whom he had recently lost, was Tatia, the daughter of Tatius, the former Sabine king of Rome, and co-partner in the empire with Romulus. So great, therefore, was his reputation, and so sensible were the Romans of his superior pretensions to the regal power, that both the senate and the people unanimously called him to govern; and not a single murmur of discontent was heard throughout Rome at his nomination. Two senators of distinction, Julius Proculus and Valerius Volusus, were sent to invite him to accept the empire. The unambitious philosopher at first rejected the offer, but, at the entreaties of the deputies, and in compliance with the wishes of his more aspiring relations, he obeyed the general call; with a reservation, nevertheless, that if, on a celebration of their religious rites, the gods sent inauspicious auguries, he should still be at liberty to decline the proposal. To this mysterious trial, therefore, Numa, and an augur selected for the purpose, proceeded. They ascended an eminence, and the augur, having placed Numa on his left hand, seated him on a stone, and turned his face to the south, but covered it with a mantle. He then took a view of the city and country round, and marked out with his rod the different divisions of the air, from the east to the west, having the north to his left, and his right hand to the south. After this he placed his right hand upon the head of the king elect, and uttered the following prayer: "If, O powerful father, Jove! thou deemest it right that this Numa Pompilius, whose head I now touch, should be king of Rome, I pray thee to show certain and manifest omens of thy consent, within that part of the heavens which I have marked out with my sacred rod." The augur then cast his eyes upwards, observed the skies with eagerness and attention, and ultimately declared

the auspicious tokens of consent to have appeared. Other mystic ceremonies were afterwards performed; and Numa, being consecrated with due form, was ultimately brought into the city by the augurs. There he was nominated king, and invested with the civil power by the interrex before the curies of the people, who had been assembled for that purpose; and his title was confirmed with one voice by a decree of the senate.

The new king entered with earnestness on the task of ameliorating the minds and manners of his subjects, hitherto accustomed to little else but violence and rapine. Determined to hold his authority only by their affections, one of his first steps was to dismiss the royal guard of the three hundred Celeres; deeming it unwise, as he alleged, to suspect a people who voluntarily submitted themselves to his rule, and unjust to continue that rule by force after it had become irksome to those who gave it. His next object was to allay the internal dissensions, and the discordant parties of the city. For the accomplishment of this purpose, and of his general plans of civilization, he addressed the most powerful motives of which the human mind is susceptible, and to which he was himself professedly attached—the institution of the offices and the celebration of the rites of religion. Some historians are of opinion, that the philosophic king possessed secretly greater knowledge and juster notions on this subject, than he yet ventured to inculcate on his uneducated and superstitious subjects; and that he had attained an idea, however indistinct and imperfect, of the one great First Cause. Be that, however, as it may, he certainly fostered the grossest superstitions of the age, and encouraged both the Alban and the Sabine mythology, restricting only the solemnization of their different mysteries to the rules of order and decency, and forbidding the worship of any beast or its images. He named and established a regular priesthood in Rome, whom he called pontifices; and either appointed his relation Numa Marcius, or accepted himself the office of their superior, by the title of pontifex maximus. The preservation of the bridges across the Tiber was allotted to the pontifices, from which circumstance it is supposed their name was derived (from *pons*, a bridge, and *facere*, to make or act). The privileges and the powers of the pontifex maximus were various and extensive: he sat in judgment upon all the causes relating to religion; inquired into the manners and the morals of all inferior priests, and censured or punished them as occasion required. The persons who administered the offices of religion, and the manner of the rites themselves, were alike subject to his legislation. He regulated at will the public feasts, the sacrifices, and all other sacred institutions; and to his superior knowledge was it referred to determine the legality or illegality of different works and employments on festival days.

Besides the pontifex maximus, Numa in part created, and generally regulated various other religious offices, whom he divided into seven different classes; namely, the Curiones, the Flamines, the Celeres, the Angures, the Vestals, or Vestal Virgins, the Salii, and the Feciales. The curiales were the particular priests attached to each curia; the flamines, so named from the colour

and make of their caps, were the officers or priests belonging to some particular god, whose name they assumed in addition to their title, as the Flamen Dialis, or the Flamen Martialis; the flamen of Jupiter being adorned with a richer robe than others, seated in a magnificent chair of state, and enjoined to offer daily sacrifices to his peculiar deity. The *celeres* were inferior to, and under the direction of the tribunes, and their duty consisted in managing the sacrifices generally; they were the officers who had been formerly commanded by the tribunes when they formed the guards of Romulus. The augurs were priests, whose title sufficiently explains their peculiar function to have been that of superintending the auguries, which were declared by the flights of birds, the instincts of sacrificed animals, and many similar superstitious and uncertain modes of divination. The *vestals* were priestesses, who vowed perpetual virginity, and whose duty it was to preserve the fire unextinguished and perpetual in the temple of the goddess Vesta, to these virgins high honours and distinguished privileges were allowed; and, on the contrary, the severest punishment was inflicted upon them, in case of any infringement of their vows, or neglect of their duties. The *salii*, in number twelve, were devoted to Mars, and were the guardians of the twelve sacred shields, or *ancilia*, suspended on the walls of the temple of that god; they took their name as being *dancers* in the annual celebration of a festival in honour of a shield which Numa pretended had fallen down in a miraculous manner from heaven: in their solemn dance the *salii* wore a richly painted coat, a brazen breast-plate, and carried with them the *ancilia*, which were the peculiar badges of their office. It was the office of the *feriales* to demand satisfaction from the enemies of Rome for the injuries done to the city; to proclaim war, with all due solemnity, should reparation be denied; and to enforce the observance of all treaties by their own countrymen with their allies, or with the neighbouring nations.

Temple of
Janus.

In order to win the Romans to the love of tranquillity, and more effectually to divert those turbulent and ambitious passions, which had led them into so many bloody wars, and often on such slight provocations, the politic Numa built and consecrated a temple to Janus, the symbol of prudence, and the encourager of peace. This temple was decreed to stand open in time of war, and in peace the gates were to remain closed. Janus himself was represented with a double face, looking in two opposite directions; the apparent signification of which was, that prudence consisted in examining circumstances that had passed, and thus being enabled to foresee those which were to come. The worship of the goddess *Bona Fides*, or Good Faith, was adopted by Numa with a view to inculcate principles of honour in the Romans, not only in the observation of their public treaties, but also in their private contracts between man and man. The solemnities attendant upon the worship of this goddess were celebrated with great pomp: he ordered the priests to be carried to her sacrifices in a chariot, covered with a rich canopy, and drawn by two horses. The sacrifices themselves were performed by the priests, with their arms covered as low as their fingers, to signify that good faith and common honesty are sacred,

and extend to the hand that ratifies, as well as to the heart that dictates, the stipulation. To promote the same love of equity, Numa introduced several new deities, under the title of termini, or boundaries. These he caused to be placed, not only on the borders of the Roman territories, to repress the ambitious desire of his subjects for the enlargement of the empire; but so as to mark and circumscribe the bounds of each individual's private estate. The removal of these gods was decreed to be an heinous offence—a sacrilege which subjected the transgressor to instant death by the hand of any man who might be disposed to inflict it. A solemn festival was instituted to their honour, called *terminalia*, which was annually celebrated on the 23d or 24d day of the month of February. All these institutions being sustained with due pomp, solemnity, and perseverance, made a gradual but lasting impression on the minds and manners of the Romans; so that the effect not only became apparent in the city itself, where honour and good faith began to take place of fraud and violence even in the most trivial of their transactions; but the neighbouring nations, who had been accustomed to look upon Rome rather as a tumultuous and hostile camp, than a stable and civilized state, were now compelled to admire the wisdom of its laws, and regarded it, according to the aspiration of the age, as the solemn abode even of the gods themselves. The king was not unwilling to countenance this latter notion. There was a stream which ran through the city, the banks of which were covered by a dark grove, in the innermost part of which Numa consecrated a certain grotto to his favourite goddess Egeria. Often retiring thither himself alone, for the purpose of study and meditation, he encouraged the popular opinion that the nymph in person conversed with him in this sacred solitude, and consecrated the place to the Camene, or Muses, the companions of Egeria. Juvenal has given another interpretation to this retirement, and his midnight visits, insinuating that they were of a character less honourable to the monarch than he wished it to be supposed. (*Juv. Sat. iii. v. 12.*)

Upon this foundation of religion, Numa erected his civil laws for the government of Rome; and, indeed, it is not easy always to discriminate the line which divided his religious institutions from his legal decrees. Generally speaking, the former were such as have been described, and his civil institutions remain to be stated. He had a particular respect for the female character, and softened many of the laws of Romulus relating to marriage. It cannot, however, be denied that much of barbarism remained. Thus he still permitted husbands to lend their wives to others after they had borne children; and this custom continued in Rome even in the zenith of its splendour and civilization, being practised by the wisest and the most enlightened of its citizens. It was regarded as a temporary kind of divorce, in which the husbands did not resign their power over the wives, but could recall them, either to transfer them to others or to resume them as their own. Numa further altered and amended the laws of Romulus respecting the power of parents over their children before and after marriage. He decreed it unjust that a woman who had married a free citizen should, from circumstances not within his or her control, be after-

wards obliged to live with a slave; and a father was therefore restricted from selling his son to slavery after the marriage of that son.

To agricultural improvements Numa was not less attentive. Having divided all the land which Romulus had attained by his numerous conquests amongst those of the citizens who had no employment, he stimulated them to the cultivation of it by wise and prudent regulations. The territory thus granted was divided into pagi, or villages, and to each of these he appointed an officer, who was chief or superintendent over his particular district. It was the duty of this officer to watch with an attentive eye the labours of the agriculturist, to reward the diligent, to punish the negligent, and to report from time to time to the king the progress of agriculture. By these salutary regulations the waste lands were improved; and those disorderly and dangerous members of the community, the idle and disbanded soldiers, the number of whom had, under Romulus, increased to an alarming amount, were not only furnished with employment, but the occupation itself was rendered especially subservient to the use of the state.

His great master-stroke of policy, however, was that division of the citizens by which he broke up amongst them all distinction of the Roman and Sabine extraction, and thereby crushed those restless factions which, from the time of the junction of the two nations, had constantly disturbed the quiet of Rome. Numa, to effect this purpose, classed his subjects together according to their different trades and occupations, appointing to each profession a particular rank, and making it a separate company or society, with courts, officers, and privileges of its own. In these divisions the musicians held the first rank, their employment being chiefly in the ceremonies of religion: then followed the goldsmiths, the carpenters, carriers, dyers, tailors, and others, each division making bye-laws amongst themselves, celebrating its own particular festivals, and possessing its characteristic sacrifices and religious ceremonies. Thus the Sabines and the Romans, who had hitherto been one people in little else than in name, became completely united; and not only in time of war, but in peace also, forgot their animosities and party distinctions in the absolute and indissoluble concord which connected their personal interests.

The final task which Numa undertook, was one in which his science perhaps was still more requisite and more displayed than his philosophy; and from the accomplishment of which a correct judgment may be formed of the depth of this monarch's learning and the strength of his mind. The principles of ancient philosophy are concealed in much obscurity, and were they more accurately known by us, we should probably find them little better than a more refined and more poetic version of the superstitions of the vulgar. But Numa's division of the calendar bears with it, as transmitted to us, an evident proof of considerable science, and no small accuracy of observation. Romulus had rudely and unequally divided the year into ten months, and these months were still more confused in their duration, consisting, some of twenty, some of thirty-five, and others of a still larger number of days. Macrobius, indeed, tells us of a more accurate division of the year

VOL. IX.

by Romulus; but it is universally allowed, that the order of time was still unequal to the motion of the heavenly bodies, and that only ten months had been fixed to comprise the annual revolution of the sun by the first Roman king, whose calendar contained 304 days. Numa, from a more correct knowledge of the movements of the celestial orbs, added January and February to the calendar, making the whole number of months twelve, and the year to consist of 365 days and six hours. To compose the two additional months, he added fifty days to the old year of 304 days; he then deducted six days from the six months that were even in days, one from each month, and allowed one day more than he ought to have done, from the superstitious notion of making the number fortunate. He further named an interstitial month after February, which Plutarch in one place calls Mercedinus, and in another Mercedonius; derived, perhaps, from the days appointed in this month for the payment of the wages (*"merces"*) of the domestics and workmen. This interstitial month, that it might complete the 365 days and six hours, assigned to the year, was made to consist of twenty-three days after every four years; intercalations which, being afterwards left solely to the priests, they omitted or inserted when and as often as their superstition decided it to be fortunate or unfortunate so to do. From this negligent and absurd practice, so much confusion in process of time ensued, that the religious ceremonies and solemn days were kept on seasons quite contrary to those on which they were at first appointed to be held, and thus many of them lost the propriety of their original institution.

Numa thus reigned over Rome in peace during the long period of forty-three years; a circumstance, not only remarkably in contrast with the reign of his predecessor, but having scarcely a parallel in ancient history. In the eighty-second year of his age, whilst the vigour of his mind was still unimpaired, a distemper seized the venerable monarch, which brought him by slow degrees to the grave. In his long reign he had so far succeeded in his plans, that his subjects, whom he found little better than lawless plunderers to surrounding countries, and unprincipled ruffians amongst themselves, became peaceable neighbours and honest citizens. They remained free from wars abroad; nor, during the time of his government, do we hear of a single public commotion of consequence at home. His death was an universal sorrow. The citizens felt as if each one had lost a personal friend; and when the intelligence spread into the surrounding countries, many of their most distinguished inhabitants came to Rome to assist at his funeral solemnities, bringing with them rich presents and offerings. Numa had forbidden his body to be burnt; a stone coffin was therefore prepared, and his remains were enclosed within this sarcophagus, and buried, with those ceremonies which he himself had dictated, at the foot of the hill Janiculum. By the same authority, many of his books were likewise deposited in this place. Four hundred years after his death, these books are said to have been dug up, and burnt by order of the senate; they contained the reasons which induced Numa to institute many of his religious ceremonies, and the worship of many of the Roman gods. These were thought, upon examination, to be either extremely trivial, or

Death of
Numa.Regulation
of the calendar.

Biography. dangerous to be promulgated, and the records which contained them were therefore destroyed. The body of Numa was borne to the grave on the shoulders of the senators, followed by an immense concourse of the Romans of all ranks, and multitudes of strangers. This second king of Rome left behind him only one child, a daughter, named Pompilia; although some writers assert, without any apparent foundation, that he left four sons, to whom they attribute the origin of four several illustrious Roman families. Pompilia was born to Numa by his second wife, Lucretia, a lady

whom he had married shortly after his elevation to the government. Numa Marcius was the husband of this daughter of the deceased sovereign; and a boy, Ancus Marcius, was the fruit of their marriage.

This grandchild of Numa, being, at the time of the venerated king's death, only five years old, was considered as too tender an age to be invested with the sovereignty; and his claim to the crown was therefore passed by on the next election to the monarchy; although he afterwards ascended the throne as the fourth king of Rome.

THE PISISTRATIDÆ.

FROM A. M. 3444, B. C. 560; TO A. M. 3478, B. C. 526.

Biography. NOTWITHSTANDING the wise laws and prudent administration of Solon, the Athenian government was too democratic in its tendency long to retain its strength. The republic was divided into three distinct factions, each of which, alike unswayed by the voice of authority, became every moment more violent, clamorous, and dangerous. At the head of those Athenians who dwelt without the walls of the city, and composed the country people, was an Athenian, Lycurgus; a more powerful party, who inhabited the sea coast, had chosen Megacles for their chief; and the renowned Pisistratus was the leader of the third party, consisting of the lowest order of the Athenian citizens. Each of these chiefs, indeed, stood in some dread of the superior wisdom, the unshaken honesty, and the general popularity of Solon; each was alike anxious to win this illustrious lawgiver and philosopher to his own interest; and with this view they all appeared earnestly to unite in calling him to the resumption of the supreme authority. Solon, however, declined the invitation; his advanced age was incompatible with the activity necessary to the proper execution of the office; and though he clearly foresaw, and even predicted, the fall of Athenian liberty, he yet contented himself with watching the conduct of each party, and applying, as occasion offered, such assuages as he judged best adapted to temper the ambition, or allay the animosity of the contending chiefs.

Division of Athens.

In the struggles for mastery which ensued, the superior strength of those under Pisistratus soon made itself felt and acknowledged; and whilst this party subdued the rival factions, their own liberty, and the liberties of the country, yielded to the artful demeanour, the splendid talents, and the restless ambition of their leader and favourite. This celebrated Athenian was admirably qualified for the demagogue of a democratic faction. He was the descendant of a good family, possessed of an ample estate, and his talents, acquired and natural, were not only more brilliant and powerful than those of Lycurgus and Megacles, but were said even to rival those of Solon himself. He had shown his valour abroad in the field of Salamis, and had acquired much reputation by that part he had taken with Solon in the recovery of that island. At home he began his career of distinc-

tion by assuming every appearance of patriotism. He scattered abroad his riches with an unsparring hand, and practised courtesies and affability to the lowest of the citizens in a degree unknown before. In public, Pisistratus was always attended by slaves carrying bags of silver coin; and on meeting in the streets any of the sickly or distressed citizens, although personally unacquainted with them, he would immediately bestow on them a sum sufficient for their comfort and relief. The gardens and orchards of this pretended patriot, and even those private walks which had descended to him from his ancestors, were thrown indiscriminately open to the public, and became as much the property of his countrymen as of himself. He every where advocated, with affected zeal, the cause of equality and complete republicanism, and eagerly seized every occasion to express his attachment to the constitution, and his particular admiration of the character and laws of Solon. His relationship to, and apparent intimacy with, that eminent and honourable man, afforded a still closer cover to his real thoughts; and though Solon himself was not deceived by the artifice, he yet found himself unable to suppress the ambition of the dissembler, or finally to prevent the attainment of his object. "Pisistratus," repeated Solon, "would be the best citizen in Athens, were it not for his ambition; but in vain was this warning addressed to the citizens in public; and still less was it regarded when bestowed upon the pretended patriot himself in private; that caution, which would, in all probability, have delayed, if not prevented the impending slavery of Athens, was lulled to repose, or utterly extinguished by the splendour of those talents from which alone resulted the danger. The looks and whole behaviour of Pisistratus were calm, placid, and sedate; and the character of his ever-ready oratory, mild, smooth, and persuasive. These artifices soon produced the intended effect upon the people, and when Pisistratus perceived that he had acquired a sufficient degree of their partiality and confidence, he practised a stratagem which procured him additional power, and was the first step towards annihilating that liberty which the Athenians knew neither how to use nor to preserve. On a sudden, the artful chieftain appeared in the market-place of

Affects the
monarchy.

Pisistratus.

Biography. Athens, himself, and the cattle which drew his chariot, covered with wounds and blood; and when the citizens assembled around him, Pisistratus appealed for protection. He declared that he had been assailed by a ferocious band of his enemies, in consequence of his devotion to them, and his love for his country. The popular outcry on behalf of the dismemberer was loud and vehement, and a general assembly of the people was instantly convened. Ariston, an Athenian citizen, especially devoted to his interest, now proposed to the assembly that Pisistratus should be allowed a body-guard of fifty men armed with clubs; and the motion was clamorously seconded by the voice of the common

Opposed by Solon.

people. Solon was the only orator who spoke in opposition to this dangerous proposal: "Son of Hippocrates," said he to Pisistratus, "you act not well the part of Homer's Ulysses, for you deceive your fellow-citizens; but that hero, when he had wounded himself, practised only on the enemies of his country." He afterwards addressed the assembly, and told them, that if misfortune should befall the commonwealth, they must not consider it as the consequence of accident, nor charge the gods as the authors of their calamities, but would have to blame their own credulity in their crafty favourite as the exclusive cause of their sufferings: he ended by denouncing the proposition of Ariston as a direct innovation of the constitution. But these arguments were of no avail against the popular voice; and the eloquent reply of Pisistratus, which followed the speech of Solon, decided a question that before could scarcely be said to have been doubtful. The motion passed into a law; and the higher order of the citizens only daring to withhold their assent by a disapproving silence, Solon, at the head of these few retired, exclaiming, in allusion to the speech of Pisistratus, "You doat upon his words and soothing speech." Thus was the first wound to the liberties of the Athenians inflicted by themselves; and their constitution fell by their own decree.

Receives a guard.

The number of the guard assigned to Pisistratus has been variously stated: some authors having affirmed that he was attended by four hundred men, whilst Plutarch mentions only fifty. But whatever might have been its strength, it proved sufficient for the purpose to which Pisistratus designed it; he immediately seized the citadel of Athens, and assumed the honours of the sovereignty. Shortly after, a jealousy of the still-remaining strength of the citizens induced this unauthorized master of Athens to practise another artifice upon the people. He summoned a meeting of the citizens to be held near the temple of the Anacium, and directed that all persons should repair to the spot with arms. When the assembly was collected, he began to entertain them, as usual, with an oration; but artfully uttered his harangue in so low an accent, that the people soon complained of not being able to hear him. The orator, in answer, asserted, that the clangor of their arms overcame and stifled his voice, and advised them to deposit their weapons in the portico of the adjoining temple. The multitude, it is said, immediately complied with his proposition, and Pisistratus continued to amuse them with a long and eloquent oration, whilst his guard, according to the previous orders of their master, secured the arms which had been deposited without. Thus were the Athenians

Dismiss the Athenians.

deprived of their last means of defence, and found themselves entirely at the mercy of their seducer. We are told, indeed, that after this notorious event, a fruitless attempt was made to resent the insult and to regain their liberty: an assembly of the people was held, and the intrepid and patriotic Solon stood foremost as the advocate of the constitution. He strongly inveighed against the duplicity of Pisistratus, and, by every possible argument, urged the Athenians to rise in their own defence: but all his efforts proved unsuccessful; the majority of his countrymen were deaf to the call of freedom: he retired, with the self-consciousness of having acted rightly, though ineffectually, and testified, as he withdrew, that, to the utmost of his power he had striven for his country and her laws. Pisistratus is said to have sent to Solon, requiring to know what inspired him with this audacity which had prompted such disrespectful treatment of his successful kinsman; one who was the avenger like of his and of the Athenian fate? "My old age," replied the venerable patriot; repressing insolence with dignity, and passing over his menaces with contempt.

But Pisistratus, although he had possessed himself of the supreme power by unlawful means, is said to have directed it to the ends of justice. The laws of Solon were not only respected by him, but enforced with all possible vigour; the legislator himself was treated with veneration; and some historians assert that this celebrated philosopher ended his days in Athens under the protection of that ruler whom he at first opposed with all his influence, and to the last laboured to displace. But, if it be true that Solon, on the assumption of the supreme authority by his kinsman, withdrew from Athens, it is on all sides agreed that his person was protected during the time of his abode in his country; and Pisistratus is said to have written to him repeatedly, earnestly soliciting his return.

No sooner was the sovereignty vested in Pisistratus, than his rivals, Megacles and Lycurgus, fled with their respective families and friends; but, fully aware of the unsteady nature of the Athenian democracy, and still retaining an influence in the city, the two chiefs, rendered wise by misfortune, combined together, and redoubled their efforts to effect their return. It was not long before the wishes of the confederates were accomplished; the giddy populace, incited by the artifices of Megacles and Lycurgus, disgusted with their choice, and provoked at their own credulity, revolted from their new master, and obliged him to seek, as his rivals had done, shelter and protection in a foreign country. To mark their resentment more strongly, his effects were publicly offered to sale; but, whether from the personal respect still retained for him, or from an apprehension of his speedy restoration, only one person, it is said, named Callias, could be found who would venture to become a purchaser. His triumphant enemies now entered Athens without opposition.

Scarcely, however, had the confederated factions attained the power they desired, before fresh jealousies arose between them, and the tottering republic again felt the radical evils of its democratic constitution. Megacles, disgusted with Lycurgus, made overtures to the banished Pisistratus, who readily accepted the proposed alliance. On the part of Megacles it was stipulated, that he would restore Pisistratus to the sovereignty.

His rivals.

Pisistratus banished.

Factions.

Biography. reigny; and Pisistratus engaged to marry the daughter of Megacles; thus cementing the new connection, and elevating the family of his former rival into a participation of his honours and his power. These newly-compacted chiefs were well acquainted with the disposition of the people whom they undertook to govern: they were aware how little force could avail against an indignant and alarmed democracy, but they were also fully sensible how easily their ferocity might be softened by artifice into credulity, and even into admiration. They fixed upon a favourable moment, when the desire of change was strong upon this mutable people; and the better to effect their object, they selected, as the agent in their absurd, but successful fraud, a woman from a mean and almost unknown family. This woman, named Phya, the daughter of one Socrates, they seated by the side of Pisistratus, in a superb chariot, dressed in armour, and in all the appropriate accoutrements of the goddess Minerva, whom she was designed to represent. The appearance of the actress whom they had chosen to perform this part was well adapted to delude the multitude; she was tall and graceful in her person, and her features were warlike and commanding. Every thing being duly concerted between the chiefs, the chariot moved slowly towards the city, while heralds ran before it, exclaiming to the people, "Give a kind reception, Athenians, to your citizen Pisistratus, who is so highly honoured by the goddess Minerva, that she herself deigns to restore him to your wishes." By this ridiculous project was the sovereignty of Athens restored to Pisistratus, leaving us in doubt whether more to detest the faithlessness and instability of this weak and impetuous people, or to despise their egregious folly.

Family connections. Pisistratus, reinstated in his power, first showed his gratitude to Phya, the fortunate representative of Minerva, by giving her in marriage to Hipparchus, his son, and afterwards his successor in the government; he then fulfilled his contract with Megacles, by nominally espousing the daughter of that chief; and seems to have conceived himself bound no further by his promise. Fixed in this resolution, either by partiality to the children of his former marriage, or by the sense of disgrace attached to his new connection (for the family of Megacles had been made execrable by the Athenian law), it was not long before Pisistratus again incurred the warm opposition of Megacles, who determined to resent this insult. He set on foot a negotiation with some discontented citizens, and took his measures so effectually, that Pisistratus, perceiving the rising tumult, again betook himself to a voluntary exile from Attica, and found an asylum in Eretria.

Pisistratus again expelled. But the sweets of power are not to be forgotten by those who have once possessed it. In his banishment the expelled ruler busied himself solely in forming alliances with the surrounding states, and at length thought himself strong enough to determine on reducing Athens by force of arms; a resolution in which he was confirmed by his sons Hippias and Hipparchus, the former of whom was most forward and confident in the proposed expedition. The strength of the Pisistratide was rendered formidable by the assistance of the neighbouring cities; several troops were levied by the Argives, who joined their party; Lycdamis, a

Naxian, advanced a large sum in the cause, and came forward with his personal services and a considerable body of soldiers who followed his fortunes. But the Theban troops composed by far the greatest part of the invading army. Thus supported, in the eleventh year of their banishment, the Pisistratide marched from Eretria into Attica; and possessed themselves of the village of Marathon, which stood only ten miles from the city of Athens, without a struggle. Here they were encouraged by the junction of many Athenian citizens, who now affected to prefer the just and equal rule of Pisistratus to the tumultuous and unsteady scenes of a democracy. The rulers of Athens, although they could scarcely have been ignorant of the large preparations of the invader, which had been some years in agitation, and had been conducted without any attempts at privacy, were yet unprepared to receive, or effectually to resist him; the force of the city was hastily assembled, and, without discipline, marched forward to meet their opponents. Pisistratus in the mean time having advanced from Marathon, and halted his army before the temple of the Palladian Mercury, one Amphilytus, a prophet of Acarnania, inspired, as was pretended, by the impulse of the presiding god, addressed to the chieftain, an oracle in hexameter verse, which mysteriously alluded to the unguarded and open state of the Athenian camp. With a characteristic quickness and presence of mind, Pisistratus instantly comprehended the allusion of the oracle, and declaring aloud that he accepted the omen, pushed his army immediately forward. He reached the camp in an auspicious hour—the army had dined, and they were all either asleep, or amusing themselves with dice, according to the manner of the Athenians when at peace within their walls. In this unguarded and defenceless state they were easily routed, and the genius of Pisistratus manifested itself still more in the flight which succeeded than in the conflict itself. He forbade all slaughter, and caused his sons Hippias and Hipparchus to ride swiftly before and amongst the fugitives, loudly calling to them that they had nothing to fear from their citizen Pisistratus, and that every man might repair in peace and in safety to his own home.

After this, which may rather be called a rout than a battle, Pisistratus became a third time master of the town, Athenian state, and by the wisdom and lenity of his measures, so firmly established himself in the government, that he never more was materially disturbed in it. During the whole of his administration he continued to enforce the laws of Solon exactly; to which he added some important regulations of his own against idleness, and for the encouragement of agricultural pursuits. By these measures, and the close occupation of all the different classes of the rising state, those tumultuous assemblies were prevented, which had been so frequent in the city, and were the cause of such repeated changes. The people in general soon began to feel the immense advantages of this domestic discipline; and the cultivation of the Athenian territories proceeded with great rapidity. Attica became fruitful in corn, an essential of life which the people had been accustomed to buy at a dear rate from other nations; and the beautiful and productive olive-tree sprang up around the city, adorning and

His taxes.

rendering useful the site of their former quarrels. Pisistratus even regulated the dress of the Athenians, giving them a vest of sheep-skin which reached only to the knees; and so impatient were the people of subordination, that this very habit became, in after-times, proverbially the badge of slavery, merely because it was enjoyed by the edicts of Pisistratus. From the same spirit of independence arose the subsequent use of the term *tyrant*, now applied to Pisistratus; not that he could with any truth be accused of cruelty or injustice in the execution of his office, but that the officiousness which he exercised had been obtained unlawfully, without the full consent of the people, and even without the pretext of a right derived to him from his ancestors. To a people so unmanageable, the revenue which Pisistratus, as prince of Athens, established, appeared doubly oppressive and unjust, although expended freely and judiciously for the service of the state. One-tenth part of every man's rents, and of the produce of his grounds, was extorted with difficulty.—That this tax, however, was by no means rigidly enforced, is proved by an anecdote, which, at the same time, affords an instance of the generosity and clemency of the monarch himself. Pisistratus, whilst riding across the country, perceived an aged rustic busied in gathering some herbs amongst the rocks; with his accustomed affability, he accosted the labourer, and to an inquiry concerning the nature of his employment, received the surly and uncouth answer, "that he was gathering wild herbs and sage-leaves, but that of those even Pisistratus was to be paid the tenth part." The ruler smiled, and pursued his journey in silence; but, when returned to the city, he remitted the imposed duty to the labourer.

His conduct.

Thus firmly seated on the throne of Athens, Pisistratus aimed at exhibiting the princely virtues of his station, and, maintaining due order amongst others, exhibited frequently, even in his own person, the most rigid observance of the laws. He presents one of those rare, but real instances, which are to be found in the history both of ancient and modern times, of men, who, having much of the love of power for its own sake, wish to reconcile all other men to their exercise of it. His sense of justice was made instrumental to his ambition. His knowledge of mankind showed him something of the hold of virtue on the heart, and its inseparable connection with the permanent interests of a government; and he seems to have been anxious that all men should submit to its full dominion but himself. Hearing that he was to be accused in the court of the Areopagus of murder, he appeared there without attendants, as a private person, ready to submit to the judgment of the people, and succeeded in convincing the court that the accusation was groundless. Several of the principal citizens of Athens having taken offence at some unguarded incidents in his conduct, had no sooner quitted the city in disgust, than the prince followed them, offering every possible atonement: he even appeared before them under the walls of the castle of Phyle well provided with food, and declared that he came resolved "either to stay with them, or to bring them back to the city." His tardiness to resent any personal injury was likewise remarkable; for although parti-

cularly cautious of his own manners, and even anxious to exhibit to the Athenians, in himself, a model on which they might form their temper and deportment, some young men, overcome with wine, having behaved rudely to his wife, when they appeared before him, on the succeeding day, to confess their offence, he calmly replied, "As for my wife, she was not abroad yesterday; but I advise you to be more cautious and modest in your behaviour for the future." To these merits he added every appearance of moderation, when he could scarcely be said to practise the reality, for although every office of honour and trust was held by his own family and dependants, yet he was especially careful that none of the ancient magistracies of the city should, under his administration, be abolished; and we find the nominally high office of archon continued in the person of his grandson, the younger Pisistratus, the son of Hippias. His love of the arts and of literature, induced him to adorn the city with some elegant public buildings; he built and well-furnished a library for public use; and it was Pisistratus who claims the honour of having digested the poems of Homer into the form under which they now appear. In other respects, he proved himself a great patron of learning and the arts; he was the intimate friend of Crotonatus, the epic poet, who wrote the adventures of the Argonauts; and there is good reason to suppose, that the celebrated fabulist, Æsop, was his friend and favourite. The famous temple of the Pythian Apollo was founded by this magnificent prince, nor was he destitute of military talent; for besides the active part he took in the capture of Salamis, which has before been stated, we have the authority of Herodotus for his having subjugated the island of Naxos, which he afterwards gave up to Lygdamis as its sovereign, in gratitude for the services rendered by that chief to him in his last restoration. He besides reduced to the Athenian control the city of Sigeum, and greatly improved the sacred island of Delos. In a word, he wanted only a lawful title to the sovereignty which he exercised to have left his name to posterity as one of the most splendid examples of princely virtue. Over his fierce and discontented, yet not unfrequently admiring subjects, Pisistratus reigned in Athens, from his first usurpation of authority, including his exiles, to the time of his death, thirty years. Herodotus says, that his second exile lasted eleven years; and as Aristotle mentions sixteen years as the period which included his first and second exile, five years must be given to the first, and fourteen years of sovereignty will remain; at the expiration of which he died peacefully at Athens, leaving his sons Hipparchus and Hippias to succeed him in the government.

Of Hipparchus and Hippias, the two sons of Pisistratus, it is uncertain which was entitled to the claim arising from priority of birth. It, however, appears clear that the sovereignty of Athens was equally enjoyed by both, although there are not wanting historians to advocate the primogeniture of either party; and some affirm that Thesealus, a third son of Pisistratus, partook in the government with his two brothers. Of Hipparchus and Hippias we possess, however, records sufficiently full to enable us to judge of their character and conduct. As they reigned con-

Hipparchus.

Biography. jointly, claiming the throne as derived to them from their father, so they followed, in all respects, the principles and maxims of his government. Hipparchus was particularly distinguished by his evenness of temper and his suavity of manners. He was not only a great encourager of literature, but himself a considerable scholar. Simonides, the elegiac poet of Ceos, almost constantly near his person, was a peculiar favourite; and he dispatched a galley on purpose to bring the celebrated Anacreon to Athens. At the Panathenæa, the great festival of Minerva, the patroness of the city, Hipparchus caused the bards, called the rhapsodists, to sing all the poems of Homer, that the Athenians might be generally instructed and entertained by them. But his love of learning and of learned men did not hurry him into injustice or impety; for when he understood that the oracles of Musæus, which were held sacred, had been interpolated by Onomacritus, he immediately banished that poet from Athens. In order to impress upon the citizens certain principles of morality and rules of behaviour, he caused to be erected in the city many statues of Mercury, and inscribed them with sentiments, laconic in their expression, but in their import full of truth and virtue. "*Decree not thy friend,*" was found upon one statue; and the words, "*Be thou strictly just,*" upon another.

Joint sovereignty. In the exercise of these virtues, the reign of Hipparchus and Hippias continued for some time in peace, and afforded every prospect of permanence. But an unforeseen event suddenly cut off the former prince, and menaced the reign and life of the latter. A conspiracy was formed against both sovereigns; and although the causes which induced it are differently related, the event itself is incontrovertible. Harmodius and Aristogiton, names held sacred by the Athenians in after-times, were young men of singular beauty, and sincerely attached to each other. Some historians relate, that Hipparchus, enamoured with Harmodius, offered to his person a brutal outrage, which called forth the joint revenge of himself and his friend Aristogiton. Others state, that the sister of Harmodius having been first seduced by Hipparchus, that prince afterwards refused her the honour of officiating in the sacrifices to Minerva, perhaps for the very reason which his own immoral and lawless conduct had occasioned. But whatever might be the cause, it is certain that these youths were the chief agitators of the plot, and relying upon the assistance of the Athenian people generally in its execution, admitted only a comparatively small number of immediate confederates. The day arrived for accomplishing their design, when Harmodius and Aristogiton perceived, at a distance, one of the conspirators talking familiarly with Hippias. Alarmed at this circumstance, and naturally suspecting that their scheme was betrayed, they prematurely attacked Hipparchus alone, who was near them: the people, however, did not join the conspirators, and Hippias arrived with his guards too late indeed to rescue, but sufficiently prompt to revenge the assassination of his brother. Harmodius was killed on the spot, and Aristogiton taken prisoner. Hippias secured the rest of the conspirators, who were detected by their concealed weapons, or by other suspicious circumstances, and dispersed, without further severity, the collected multitude.

Whether Hippias, when he felt himself possessed of the sole sovereignty, gave a loose to a disposition which had before been restrained and softened by his coadjutor in the empire; or that the assassination of the laient and gracious Hipparchus effected a deep and important change in the disposition of his surviving brother, cannot be now determined; but, from the time of his assumption of the authority singly, he completely altered the conduct and character of his government. Treating the Athenians with a severity unknown to them in the times of his father or his brother, from the remembrance of that very lenity he became still more intolerable to his subjects; those who were before discontented were rendered ungovernable, and the rude were exacerbated to natableable ferocity. Hippias first wreaked his vengeance upon the captive Aristogiton, who bore every species of torture with the fortitude of a hero. In the midst of his agonies he accused several persons of being joined with him in the late conspiracy, and their names had every appearance of being forced from him by the excess of pain; but these persons were instantly executed, in consequence of his information, though afterwards discovered to have been amongst the best and firmest supporters of the Pisistratide. Aristogiton being interrogated concerning other individuals, is said to have died replying, "that he knew no other person deserving death, excepting Hippias himself." Another extraordinary instance of heroism was found in the person of one Leona, a mistress of Aristogiton, who bore the tortures inflicted upon her by the command of the tyrant for a considerable time, and at last bit off her tongue lest it should betray, in the excess of her agony, any thing to the prejudice of him she loved. The conspiracy being fully defeated, and its authors punished, Hippias, no longer confiding in the love of his subjects, sought foreign assistance, and endeavoured to establish his authority by the most coercive measures. He increased his revenue by every possible exaction; and, not satisfied with the twentieth part of every man's income, which he had hitherto required, he compelled the citizens to bring into his treasury all their silver money, which he sent into circulation, much diminished in weight and in value, in the shape of a new coinage. He took also especial care to provide against the reverses of fortune, by forming alliances with foreign states, and thus securing to himself an asylum in the event of the deprivation of his kingdom.

In the mean time Megacles and his family, who, on account of their descent from Alcmaeon, were called the Alcmaeonidae, being banished from Athens on the restoration of Pisistratus, had established themselves at Lipsydrum, in Peronia. Here they gave refuge to all those who fled from Attica discontented with the government of Hippias, the number of whom increased daily. Every opportunity of increasing the disturbances in Attica was readily embraced by these exiles; nor were the Alcmaeonidae wanting in means to effect the purpose, for they had carried away with them from Athens a considerable treasure. It so happened that the Amphictyons, or general council of Greece, had contracted, about this time, with the Alcmaeonidae for the rebuilding of the temple of Apollo, at Delphi. This contract they performed in a manner

Tyranny of Hippias.

Assassination of Hipparchus.

Biography. exceedingly sumptuous; and, besides accomplishing what they had promised, they constructed the façade with Parian marble, instead of common stone. By this display of their generosity they gained considerable reputation; but their treasures were employed still more advantageously for themselves, when, by presents of various kinds, they had corrupted the Pythian priestess of the temple, who delivered the sacred oracle. To all the Lacedæmonians who repaired to the temple, the Pythia incessantly denounced the government of Hippias as tyrannical and cruel; and that people, then the most powerful of the Grecian states, stimulated at length into action, raised an army, under the command of Archimolus, to invade Attica. Hippias, on the information of these proceedings, sent to the Thessalians, one of the people with whom he had formed an alliance, and who immediately answered the application by supplying him with a thousand horse, commanded by Cinesa a Thessalian prince. The army of Archimolus, which had been transported by sea, had scarcely landed on the Attic territories before Hippias and his confederate Thessalian troops suddenly attacked and routed them: their general himself was slain in the contest; and so complete was the victory, that the shattered remains of his army with difficulty escaped the slaughter by reaching their ships. Thus ended the first invasion of the territories of Hippias by the Lacedæmonians; and it is creditable to the generosity of that prince, that, amidst the barbarity of the times and the peculiar ferocity produced by the contest, he nevertheless caused the body of the Lacedæmonian general, Archimolus, to be interred, with every mark of honour, near the Cynosargian temple of Hercules, the tutelar god of the Spartans.

Division by the Lacedæmonians.

This defeat, however, only irritated the enemies of Hippias, and Cleomenes, king of Sparta, commanding another Lacedæmonian army, soon appeared in Attica. Defeating with ease the Thessalian horse on the frontiers of the country, he pursued his march unopposed, and laid siege to the Pelasgian fortress, within which the Athenian tyrant had taken refuge. Here, however, the prospect of success on the part of Cleomenes appeared doubtful at least. Hippias and his garrison were strongly fortified, and amply supplied with provision, whilst the besieging force were nearly destitute of every thing. It is, therefore, probable that, but for one of those accidents which sometimes decide the fate of kingdoms, Cleomenes would have been obliged to measure back his steps to Sparta with disgrace, if not overtaken by destruction; and the Athenian prince would have been reinstated on his throne. But the menace which Hippias took for his greater safety proved his total ruin. The better to secure his children, as well as to disencumber the garrison, he attempted to send them out of Attica; and they had no sooner left the fortress than they fell into the hands of the Lacedæmonians. This was a rich prize to the captors, who were well aware of the high value which the Pisistratidæ set upon their children, and demanded, as the only terms of their ransom, that Hippias, his family, and adherents, should, in five days, quit the territories of Athens. These conditions were accepted by the besieged, and at this juncture the Pisistratidæ felt the benefit of those

alliances which they had formerly contracted. The king of Macedonia offered them a refuge in his dominions; and their active allies, the Thessalians, pressed upon the exiles a like proposal. But Hippias and his family retired to the city of Sigeum, preferring that place, as more certainly devoted to their interest; for it had been first conquered by Pisistratus, and had been bequeathed by that prince to Hippias, his natural son, who still possessed it. Thus ended the sovereignty of the Pisistratidæ over Athens; the reign of Hippias, after the death of Hipparchus, continuing only three years. On the expulsion of its master, the spirit of liberty, which had been so long with difficulty repressed, diffused itself throughout Athens, exhibiting every where the most inextinguishable rancour against the fallen family, and the highest admiration of their opponents. To the slaughtered conspirators, Harmodius and Aristogiton, although their enmity to the late sovereigns was excited by personal motives, and even those by no means, perhaps, of an honourable kind, the Athenians nevertheless decreed immortal honours. They employed the most exquisite of their sculptors, Praxiteles, to erect brazen statues of these heroes in the forum; they caused verses in their praise to be sung at the sacred festivals of the Panathenæa; they forbade any slave to be called after either of their names, and they granted several immunities and honourable privileges to their descendants. But their aversion to the late dynasty carried them into still further extravagance; for although it was held indecent to erect a statue to any woman of immodest character, the figure of a lioness without a tongue was set up in a public place at Athens, with an inscription on it, in honour of Leana, the mistress of Aristogiton, and in allusion to her name as well as to her heroism in biting off her tongue when under the torture. From this time forward, not only were the Pisistratidæ universally known by the name of tyrants, but the term of monarch, or king, was always used synonymously with that of tyrant; so that the virtues of a sovereign, or even his lawful right to his power, did not shield him from the stigmatising appellation. Lastly, the bad effects of this excess was occasionally felt as long as the repulsive stood; for so jealous were the Athenians of every eminent person in the state, lest by his talents he might usurp the sovereignty, that the sentence of banishment was repeatedly pronounced against their most meritorious citizens; and on some, as in the case of Aristides, on account of their being conspicuous for their justice, and their love of the constitution itself.

Uncontrolled public liberty was now established in Athens, but internal union and peace amongst the citizens were by no means its consequences. Two different factions quickly disturbed and divided Attica; the Alcmeonidæ, a popular party led by Clisthenes, were opposed to the party of the nobles of Athens, at the head of which appeared Isagoras, the son of Tirander, a man of noble family and connections. The former leader possessing great talent, and encouraged by the lower orders of the people, succeeded in his attempts to alter many things in the form of government established by Solon. He introduced the mode of popular condemnation by ostracism, augmented the number of the tribes of the people from four to ten, and increased the senate to

Deposition of Hippias.

From A. M. 3444. — B. C. 560. to A. M. 3478. — B. C. 526.

Biography. five hundred. These measures gave an additional strength to the democratic part of the constitution, and nearly extinguished the rights of the aristocracy of Athens: Isagoras was obliged to quit the city, and to seek refuge in Sparta. The Lacedæmonians readily listened to the proposals which he made to them, for it seems to have been the policy of that people, at this time, to force an aristocracy, or even kingly form of government, upon all the states with which they were connected, from the little confidence they could place in an unsteady democracy. Isagoras too had formed a strict friendship with the Spartan king, Cleomenes, who now dispatched a herald to Athens, demanding the restoration of his friend, and the instant banishment of Clisthenes and the Alcmeonidæ; or denouncing war in case of a refusal. The unexpected compliance of the Athenians, which was occasioned by their dread of the Lacedæmonian power, now obliged Cleomenes to avow his real object to be that of establishing another form of government in Athens, to effect which he at once marched his army to the city, and banished seven hundred Athenians from Attica, besides those who had before been exiled with the Alcmeonidæ. He afterwards proceeded to invest Isagoras, with three hundred chosen senators, in the honours and authorities of the government, until these measures roused the Athenians once more to arms. Cleomenes and Isagoras, with their invading force, were now obliged, in their turn, to give way to their adversaries; and they took refuge in the citadel of Athens, where, for two days, they were closely besieged. On the third day they agreed upon conditions of surrender, which were, that all the followers of Cleomenes and Isagoras should give up the fort, renounce their pretensions to the Athenian government, and, in consequence, be permitted to retire unmolested from Attica. The Spartans now quitted the fort, and the breach of treaty which followed on the part of their antagonists, fully exemplified the truth of the principle on which those had acted who endeavoured to overturn the democracy: for the Athenians, regardless of their public faith, fell on all such of the Spartan army as they could reach, and sacrificed many to their indiscriminating fury, amongst whom Timotheus, the brother of Cleomenes himself, was a victim.

The Alcmeonidæ. The Athenian people now unrestrained in their choice of government, immediately decreed the recall of their favourites, the Alcmeonidæ, and of the seven hundred people who had been forced into banishment by the Spartans; and collected all their force, in order to meet the war which they anticipated from the resentment of Cleomenes and Isagoras. On the other side, the exiled chief and the Spartan king were not idle; they prepared the whole disposable troops of their own city, and made alliances throughout all Peloponnesus, with the intention of again invading Athens. The Boeotians, accounted the most barbarous people of Greece, engaged to enter Attica on the one side, and the Chalcidians on the other; whilst, at the same time, Cleomenes and Isagoras, with a powerful army, were to march direct through the country of Elisis. The Athenian plan of defence was to resist the main attack, led by Cleomenes, with their whole strength, and to give up all thoughts of protecting those parts of their country which lay adjacent to Boeotia and Chalcidonia. But the main army, commanded by Cleomenes, was composed of too many

nations, and influenced by too various interests to retain their energy. The Corinthian force first proved themselves cold in the general cause, and retired from Cleomenes. Next Demaratus, the son of Ariston, the other king of Sparta, who had never before acted but in unison with his colleague, retreated in disgust with the expedition, leading his army back to Sparta. By these defections, Cleomenes and Isagoras found themselves so much weakened, that they also retired, obliged thus to abandon their allies, the Boeotians and Chalcidians, to the unequal contest. An easy victory was achieved over these people, who were obliged to redeem the prisoners of their nation taken in battle from the chains of the Athenians, at the rate of two mine for each man. The Boeotians, however, again collected their forces, and forming an alliance with the people of Ægina, ravaged the sea coast of Attica, and whilst the Athenians were preparing to avenge this outrage, their whole attention was suddenly occupied by a more formidable enemy.

The various disappointments of Cleomenes, and the death of his brother, through their perfidy, served but the more to kindle his resentment against the Athenians. During his stay at Athens, in the late expedition, he had become possessed of certain oracles which predicted that *that city should in time become the rival of Sparta*. He had discovered too, at the same time, the corruption of the Delphic oracles by Clisthenes against Hippas, whom he yet esteemed the lawful king of Athens. The purport of these prophecies and discoveries he industriously circulated amongst his countrymen to excite their jealousy against the common enemy; and the effect was answerable to his wishes. Hippas, who, in the mean time, was not destitute of friends in Sparta, nor unoccupied by intrigues with that country, was now sent for, in all haste, from Sigeum, and readily obeyed the summons. On his arrival he found the Lacedæmonian kings, and the deputies of the states in alliance with them, in consultation upon the proposal of restoring him to the sovereignty of Athens; but the Corinthian ambassador, Sosicles, took so decided a part against the project as fully to persuade the other confederates of the Spartans to reject it, and thus Cleomenes and his party, finding themselves without adequate support, were obliged reluctantly to abandon the cause of Hippas, which they had so warmly advocated. The disappointed prince himself again retired to Sigeum, still occupying himself with schemes for the future, and encouraging himself with hopes of one day regaining the dominion he had lost. Meanwhile, the war between the Æginians, the confederates of the Boeotians, and the Athenians continued with varied success. Darius, the Persian king, having demanded earth and water, as tokens of submission from the different states of Greece, the Æginians alone complied with the requisition, hoping for the protection of that monarch against Athens. This submission was represented by the Athenians to the other states of Greece as a gross instance of treachery, and the Lacedæmonians sent their king, Cleomenes, to Ægina, with orders to bring back as prisoners those persons who were the principal advisers in this disgraceful measure. But a disturbance which occurred in Sparta during his absence, at the head of which was Demaratus, the other king, induced Cleomenes to

Defeat of Cleomenes.

Disappointment of Hippas.

Biography. return thither without having effected his object.

From A. M. 3444. — E. C. 560. to A. M. 3478. — E. C. 526. These tumults were, however, soon quelled by the de-thronement of Demaratus, and the elevation of Leotychides, the kinsman of Cleomenes, to the honour of acting as his colleague. Both the Spartan kings now marched to Ægiois, and brought away Crisus, the son of Polycrius, and two other Æginians as prisoners, whom, in pursuance of the former arrangement, they sent to Athens. Shortly after this Cleomenes died, and the Lacedæmonians, repenting of their hostile conduct to the Æginians, delivered up Leotychides, the surviving author of the measure, to that people, who only required of him to procure from the Athenians the release of Crisus and their other prisoners. Upon this office Leotychides entered with great good faith, and even energy; but the most earnest applications which he made to the Athenians were utterly unavailing, so that the war between Athens and the people of Ægiois continued unabated. An Athenian galley, which was annually sent to Delphos, lay at anchor at Sunium, where the Æginians seized it with many of the Athenian nobility on board: the Athenians, in their turn, requested their allies, the Corinthians, to furnish them with a squadron of ships now otherwise dispersed. This was at a critical moment for the Æginians: Nicodromus, an eminent man of that nation, having offered to betray his country to its enemies, and to appear in arms in their favour as soon as the Athenian fleet should appear off the coast. The treason was accepted, and the Athenians appointed a day on which they were to anchor off the Ægean shore. But the treaty with the Corinthians, whose laws forbade them to lend their ships, and who at last only evaded them by selling to their allies, the Athenians, five gallees, caused a delay in the expedition, which defeated its object; and Nicodromus, having risen in arms against his country at the appointed time, looked in vain for the promised succour, and found himself compelled to fly to Athens for refuge. No other events of this contest are recorded, for it was interrupted in its course by one of infinitely more importance, and in which all the minor dissensions of the Grecian states were necessarily forgotten.

Some time before the last-mentioned events, the Athenians had imprudently listened to the eloquence of one Aristagoras, a Milesian, who, having fled from Ionia, where he had in vain endeavoured to excite an insurrection, and having failed in his attempts to obtain the assistance of the Lacedæmonians, came, as his last resource, to Attica, soliciting help. The Athenians granted him twenty ships, and placed them under the command of Mesotheus, one of their nobles. This force, united with the followers of Aristagoras, made considerable ravages on the surrounding country, and, amongst other places, took and sacked the town of Sardis. These outrages on the Ionian territories, then under the dominion of Persia, particularly the pillage of Sardis, much incensed Darius, the Persian monarch, against the Athenians, and hastened the war with Persia against Athens; this in turn producing that tremendous conflict of the Persian monarch with all the states of Greece which so long agitated that part of the world, and ended in nearly destroying the Persian power. But these were not the only excitements to the war with Persia. The exiled Hippias, al-

though little personally concerned in these affairs, had yet unceasingly viewed Athens with a watchful eye, and endeavoured at this juncture to heighten the displeasure of Darius by every possible means; hoping, in a favourable moment, to recover, by the force of the Persian arms, his former authority in Athens. He had now attained to an advanced age, but the recollections of his youthful days, passed in the bewitching pomp of power, had not forsaken him. After his return from Lacedæmon, in consequence of his disappointment from the rejected projects of Cleomenes in his favour, he applied to Artaphernes, the Persian governor of the adjacent provinces, and endeavoured to provoke him to make war upon Attica. In order to influence this minister still further in his favour, he distinctly promised, that should he be reinstated on the throne of Athens by the means of Persia, he would hold his kingdom subservient to the power of Darius, and be ever ready to second the designs of "the great king." To these overtures of Hippias, the Persians lent a favourable ear, although the Athenians, aware of the intrigues of their late usurper, immediately despatched ambassadors to Artaphernes, entreating him to beware of the proposals of an exiled tyrant, and to suffer the Athenian people to remain at peace. The Persian officer, conceiving that more reliance might be placed on the friendship of a monarch than on a fierce but unstable democracy, answered, in haughty terms, "that if the Athenians would have peace with the great king, they must consent to receive Hippias as their sovereign." This reply irritated the Athenians to open expressions of hostility, and, with a view of engrossing the attention of Darius to enemies nearer home, they immediately resolved to render every assistance in their power to the revolted Ionians under Aristagoras, as before related; and thus, through various co-operating causes, the pretensions and the intrigues of Hippias produced the Ionian, and that again the great Persian war with Athens and the other states of Greece.

The first attempt of the Persian monarch against Greece was made by a force under the command of Mardonius; but the fleet in which it sailed was dispersed and disabled by a storm as it doubled the promontory of Attos; while the Athenians obtained a salutary respite from a conflict for which, at that time, they were ill prepared. Another and a more considerable army soon appeared under the command of Datis and Artaphernes the younger, the son of the governor of that name. These commanders, learning caution from the misfortunes of the former general, Mardonius, led their troops by land through the plains of Cilicia, and, passing thence by the Cyclades to Eubœa, appeared in full and undiminished force before the city of Eretria. As the commission of the Persian commanders was utterly to destroy the cities of Eretria and Athens, and bring away the inhabitants of both places as slaves to the Persian king, the Athenians hoped that their own cause and that of the Eretrians would have been considered but one, and that their utmost and joint efforts would have been exerted against the invaders. Under these impressions, they, without hesitation, ordered a body of 4,000 men, which had been left in the Chalcidian territories, to march to the aid of their besieged allies; but at this crisis of affairs, the unsteady

Policy of Hippias.

Biography. nature of its government, proved at once fatal to the city of Eretria itself, and highly dangerous to the other states of Greece. The people of that city were dissuaded in their sentiments respecting the Persian king. One party amongst the besieged advised the abandonment of the city, and the inhabitants to retire to the mountains for their defence; another advocated its surrender, unconditionally, to the Persian force; while a third, though by far the smallest party, were for admitting the Athenian succours within their walls, and resisting the Persians to the utmost. During the confusion produced by these disputes, one Nothon, the son of Eschines, generously and wisely informed the Athenian army of the internal intrigues and disturbances at Eretria, and urged them to return for the protection of their own country, as the preservation of his was hopeless. It was, probably, in consequence of the adoption of this measure that the Athenians escaped the destruction which soon overtook their dastardly and perfidious allies. The Athenian army retreated to Oropus, a town of Boeotia, near the borders of Attica; and Eretria, betrayed by its own citizens, was sacked and burnt to the ground by the Persians.

The Persian victory. The victorious forces of Darius now continued their march into Greece unopposed. The exiled Hippias was their guide and encourager; actuated at once by the hopes of regaining his former power, and by the prospect of being revenged on the revolted Athenians. By his advice the invading army encamped on the extensive plains of Marathon, with a view of offering battle to the Grecians on a spot where the Persian light troops and their numerous bodies of horse might act with advantage. This choice of their ground they carried into effect unmolested—the result forms one of the proudest tales of Grecian story.

Although the news of the destruction of Eretria had spread considerable alarm throughout Greece, the Persian army was, nevertheless, permitted to advance into the country unopposed, and with the avowed object of enslaving those whom it should conquer. The Athenians, of all others, had most cause of dread from the resentment of Darius; and as his troops penetrated into the interior, all disturbances amongst themselves were quelled, and no effort was left untried to raise a force capable of repelling them. They sent deputies to the different states of Greece around, but with little success. To the Lacedæmonians they dispatched Pheidippides, an especial messenger, who, in two days, performed the journey from Athens to Sparta, a distance of one hundred and fifty miles. He addressed the Spartans in an energetic speech, recapitulating the successful events which had attended the march of the invaders, and strongly representing their common danger. The Spartans appeared to be roused, and prepared to march to the assistance of that state which they had heretofore considered as their rival; but whether from any latent jealousy, or really for the reason assigned, they delayed their expedition for five days, in allured veneration of a law, which forbade them to march but on the full of the moon; and thus bore no part in the ensuing conflict. The journey of Pheidippides is remarkable not only for its celerity, but for one of those events which, in the prolific ages of superposition, the ready credulity of man has so often created,

or his ingenuity invented and applied as auspicious to his hopes. The courier affirmed that, as he ran by mount Parnithen, in Arcadia, he heard his name loudly repeated by an unknown voice; and, upon directing his eyes to the place whence it came, he was favoured with a vision of the god Pan. The deity complained to Pheidippides of the neglect with which the Athenians treated his solemnities; but assured him of his divine protection in their future plans, if this friendly admonition were duly respected. The Athenians regarded this circumstance as a most auspicious omen; it encouraged their hopes, and redoubled their efforts for success. They were, nevertheless, left nearly alone in the contest, for the glory of the field of Marathon was wholly divided between themselves and the Plataeans, their ancient and faithful allies, who, in gratitude for former protection, added a body of 1,000 men to the army. Their united strength consisted only of 10,000 men. On the other side, some have reckoned the invading army at 600,000 men, and the least computation is that of 100,000, still decuple the number of the little opposing band of patriots.

The organization of the allied Grecian army appears to have been dictated by the same jealousy of absolute power which breathed in the constitution of their republics. The supreme command was distributed amongst ten officers, each of equal rank, and each of whom commanded the army for a single day; whilst, at the same time, one of their highest civil magistrates, an archon, accompanied them, and decided all differences which might occur, under the title and authority of a polemarch. It was fortunate for Athens that, at this important juncture, she had entrusted her defence to men not only of superior talent, but of unimpeachable honesty. Callimachus of Aphidia was the polemarch; and MILTIAGES, ARIANTIDES, and THEMISTOCLES, names renowned in history, were amongst the commanders. A difference of opinion arose, as might have been expected, amongst the generals. On one side a defensive warfare was recommended: it was urged that, in the smallness and disproportion of their force, it were little less than desperation to attack in the open field the overwhelming army opposed to them; that if the fastnesses of their country were defended as the invaders advanced, the Greeks would combat to advantage from a superior knowledge of the country; their invaders would waste their strength by degrees, and, at all events, time would be given to collect the Spartan, and other states of Greece, who might yet be expected to assist the general cause. On the contrary; Miltiades, in his speech to the polemarch, eloquently enforced the arguments of those who recommended immediate battle: "You alone, O Callimachus," exclaimed this zealous chieftain, "must now determine either to see the Athenians reduced to the condition of slaves, or, by preserving the liberty of your country, raise an eternal monument to your own fame, surpassing the glory even of Harmodius and Aristogiton. Never were the Athenians, your countrymen, in so imminent a danger of destruction from the time when they first began to be reckoned as a people. If they fall under the power of the Medes and Persians, what direful usage may not they anticipate from the tyrant Hippias, the conductor of their enemy? but if, thus almost unassisted, they conquer,

Enslavement of Pheidippides.

Biography. Athens shall reap the principal glory, and she will become the chief city of Greece. To convince you at once of the means whereby either of these things may be effected, and from what cause the fate of Athens is now in your hands, observe that we are at this very instant divided in opinion respecting an immediate battle. If we decline a battle, I foresee some great dissension will shake the fidelity of the army, and induce them to a compliance with the Persian commands; but if we fight before the corrupting gold of the Persian tyrant steals into the hearts of our soldiers, from the favour of the gods and the justice of our cause, we may confidently anticipate a victory. The event is in your choice, and entirely depends upon your decision. Support my opinion with your power and influence; you will see your country free, and Athens elevated to the most illustrious place in Greece; but if you join with those who would dissuade you from a battle, you can expect no other consequences than the very contrary to these hopes."

This eloquent appeal to his patriotism decided the polemarch, Callimachus, who instantly pronounced in favour of an immediate battle; where Aristides, fearing the weakness of a divided command, was the first who resigned his authority to Miltiades; the other generals instantly followed his example. Miltiades himself, although he nominally accepted their offers, wisely declined to engage until the return of his regular day of command; fearful that some latent sparks of jealousy or envy might yet retard the general operations on so important an occasion.

The day at length arrived on which the fate of Athens was to be decided. Miltiades had well considered the kind of enemy with whom he had to contend. To the Persian cavalry, the javelin-men, and the light-armed archers, famed for the rapidity of their attack and the celerity of their retreat, he was careful to oppose every possible obstacle. He had drawn the armies to the most confined place of combat, on the vast Marathonian plain. A morass skirted the ground on the one side, and a mountain on the other. To add to these natural obstacles, large trees had been felled and thrown across the roads, and trenches cut in every direction; obstructions which, while they were well calculated to distress the movements of the enemy, were easily surmounted by the steadiness and strength of the Grecian phalanx. Considerable difficulties, however, were yet to be overcome. The long line of the Persian army was to have some opposing force presented to it in its whole extent; for although the two wings of the Grecians were rendered formidable by the heavy phalanx, and thus fronted the Persian wings in no unequal strength, the centre of their adversaries was left unopposed, except by the Athenian light troops, joined by a number of slaves who had been hastily armed for the purpose, and on whose strength and fidelity Miltiades could scarcely rely. The Grecian general was thus reduced to the dilemma either of leaving the Persian centre totally unresisted, or of opposing to it his weakest and most inefficient troops. As the least of the two evils he chose the latter, and the event was answerable to his expectations. The two wings of the Athenian army advanced slowly but firmly to the attack. To the missile weapons of the Persians they returned not a single dart, but pressed onward in one

heavy and compact body. Availing themselves now of their weapons for close attack, they soon obliged the Persians on the right and left to abandon the field, and seek for shelter in their ships; many of which even were destroyed by the Greeks. But though the greater part of the Persians were thus routed and dispersed, much was yet to be achieved to make the victory complete. The centre of the Greeks had given way to their adversaries, and a large body of the Persians yet remained on the field, not only unconquered, but in their turn victorious. As he had foreseen, so Miltiades had prepared for this event. The Grecian wings now closed, by a skilful evolution from both sides of the field, upon the remaining body of the Persians, whom, after a desperate conflict, they utterly annihilated. Thus was this great battle won, by a mere handful of men animated with the hopes and the consciousness of fighting for liberty, against an immense multitude of mercenary troops, scarcely any of whom possessed the least degree of self-interest in the combat beyond their common thirst for plunder. Indeed the pillage which the Persians had already been loaded from the conquest of Eretria, appears to have been no light cause of their easy defeat; for when they were more seriously opposed by the Greek phalanx than they expected to have been, many of them immediately gave up all thoughts of further conquest, and retreated at once to their ships, to secure their ill-gotten treasure.

But although the Persians had thus lost the field of Marathon, those who escaped in the ships were in sufficient force to have taken and plundered the unprotected city of Athens. With this intention, and invited, as some represent, by the faction of the Alcmeonids, their fleet now doubled the cape of Sunium, and sailed towards the city. Miltiades, however, no less vigilant than valiant, apprehending their design, left his colleague Aristides with 1,000 men, to guard the prisoners at Marathon, and, with the other part of the allied forces, hastening homewards, appeared before the gates of the temple of Hercules at Cynosarges, very near to Athens, some time before the Persian fleet could by any possibility reach the Attic shore. Thus disappointed in their ultimate project, the Persians, with the shattered remains of their army, sailed direct for Asia, closing the first unfortunate attempt of the "great king" upon the liberty of the states of Greece.

The number of the slain in this battle does not appear at all proportionate to that of the force engaged. On the side of the Persians we read of 6,300 having fallen, and of the Athenians and Plataeans only one hundred and ninety-two. The importance of the battle consisted, not in the direct defeat alone of the invaders, in the amount of their loss, or the deliverance of the allies from their immediate danger; but was rather found, in convincing the Athenians of their strength, untried before to any such extent. It was the commencement of that bright career of glory in which Athens afterwards shone so conspicuous amongst the Grecian states, and which excited, and must ever excite, the astonishment of mankind. Two of the Athenian commanders were slain; Callimachus, the polemarch, fell, after having displayed all the skill and valour required from his exalted rank; and Stasieus, the son of Tharsylus, one of the ten co-generals of the army. Some other

Biography.

Athenians likewise greatly distinguished themselves in the battle. Cynegetus, the son of Euphorion, having pursued the Persians to their ships, seized on one of them, in which the enemy were about to sail, with both his hands, which were immediately struck off by the blow of an axe, and he gave up his hold only with his life. Others relate this story more marvellously: they say that this Cynegetus having performed extraordinary feats of valour in the battle, pursued the flying enemy to the shore, and seized on a ship which was ready to sail, with his right hand; that this being instantly hewed off, he detained the vessel for some time with his left hand; and being at last deprived of both, he made use of his teeth to keep his hold, until he sunk, covered with wounds, by mere exhaustion.

The Athenians (besides this fame, their immediate deliverance, and the excitement of their valour) pursued

another important advantage from their victory; for, on the field of Marathon, the hopes, and the very family of their abhorred tyrants, the Pisistratides, were utterly extinguished. At Marathon the exiled Hippias, the last of his family, the instigator and conductor, if not the first and immediate cause of the invasion, fell; and with him fell the fears of the Athenian people, ever alive to his threatened tyranny. After this battle, too, gained by Athens almost unsupported, that city was regarded amongst the states of Greece, as equal, if not superior, in patriotism, valour, and general importance even to Sparta herself; and although we have no particular instances recorded of the behaviour of the Plataeans, yet the Athenians were so well satisfied with their brave and faithful allies, that a decree was immediately passed, making that people free of the city of Athens.

FLOURISHED ABOUT A. M. 3444. B. C. 560.

Biography.

THE use of allegory or fable, as a means of instruction, appears to have been one of the earliest dictates of enlightened reason; and has been resorted to in a greater or less degree, by the moralists and philosophers of all ages and countries. Hence it is, that throughout the classical historians, we meet so often with the name of Æsop, perpetuated for no other reason than that he was the most famous of ancient fabulists; or, as some writers have alleged, the very inventor of this mode of instruction. His life is totally unconnected with any public events of importance; his family were utterly obscure; no kingdoms were conquered by him, or settled in legislation; on the contrary, human nature appears in complete degradation in his person and circumstances: is condition a slave, and deformed, it is said, in person, even to the excitement of disgust in those who beheld him, he yet sustains a high rank amongst the sages of ancient times, and certainly more for his method of teaching than for any thing extraordinary which he communicates. Indeed, what were his particular sentiments as a philosopher, can now be very faintly traced; his fables, in which all his precepts appear to have been covered, are considerably mutilated; and the majority of those which bear his name, are the fabrication of a later period. In those which can with any degree of certainty be traced to Æsop as their author, his exact meaning is not always obvious; and the occasion of their composition, which must have given a much greater propriety to their application, is, for the most part, unknown. The celebrity of Æsop is, perhaps, still more remarkable, as it appears to have been originally unconnected with any recommendation from the form of his compositions, or the mode of publishing them: they were not adorned by the graces of poetry, nor do they appear to have been delivered with eloquence. Their novelty, their liveliness, and their strict analogy to real life, appear to have been their only attraction; features of the genuine fable which, under

every form of its development, are a tribute to the imperishable charms of truth.

Several countries dispute the honour of giving birth to Æsop; he is sometimes called a Thracian, and by other writers a Samian; but the more commonly received opinion is, that he was born in the town of Ammonia, in the Greater Phrygia. Perhaps those indications of the uncertainty, serve only to prove the meanness, of his origin: if the names of his parents we hear nothing. His person, as we have already noticed, was deformed in the highest degree; an immense protuberance of the back threw his head forward, and appears from early life to have utterly stopped his growth: his complexion is said to have been swarthy; and hence some writers have supposed the name of Æsop to be a corruption of Æthiop. In addition to these disadvantages, he had so serious an imperfection in his speech, that for a considerable period of his life he was unable to articulate any sounds distinctly. Cæsararius, a learned German critic, to whose researches we shall be much indebted in this paper, mentions a tradition, to which, however, he refuses credit, that Æsop had the good fortune in his youth to relieve certain travelling priests of his country who were exhausted with hunger and had lost their way; when, in requital of his kind offices, by virtue of their prayers to the gods, they first brought him to the use of his tongue. This is all we hear of his early life. And we next meet with him at the period of his being offered as a slave to his third master, Xanthus (or, as Herodotus calls him, Jadmon), of the island of Samos. He was carried by a factor to Ephesus, together with some other slaves, for the chance of sale, or on business for his master. As our future sage was feeble in his body, his companions allowed him his choice as to which of their different packages he would undertake to carry, and he, to their astonishment, selected the largest and

hewiest, containing the provisions of the party; an instance of what they deemed his folly, which excited no little merriment. In the morning Æsop bore their ridicule and his own burden with patience. At noon, however, the basket of provender was considerably lightened, by the hearty meal which the slaves then made, and Æsop was, of course, considerably relieved from the weight of his charge. In a few hours more, another meal completely consumed the food, and left the provident weakling entirely at his ease for the remainder of the journey. Upon his arrival at Ephesus with his slaves, the merchant soon disposed of them all by private bargain, excepting three, stated to have been a musician, an orator, and one poor neglected fabulist, of no apparent accomplishments, and of no profession. These he took to the open market, as the only place in which he was likely to dispose of them; the two former accounted with the implements of their profession, and the latter making little better appearance than that of a deformed idiot; when Xanthus, a Samian philosopher, entering the area, was attracted by the appearance of Æsop's companions, and inquired of the merchant his price for them. Objecting to this as exorbitant, the philosopher was on the point of quitting the market, when some of the pupils, by whom he was attended, pointed out Æsop to his notice. At their solicitation, and jocularly, more than with any serious intention, he put the accustomed question to the despised captive, of "What he could do?" "Nothing at all," replied Æsop; "for I have just overheard my companions answer your question, by affirming that they could do every thing; therefore there is nothing left for me to do." Xanthus, delighted with this answer, now entered into conversation with this unattractive wit, and became fully sensible of his superior powers. In answer to a question respecting the deformity of his person, Æsop boldly remarked, "that a philosopher like Xanthus should appreciate a man according to the vigour of his mind, and not to the appearance of his body;" an observation upon which that philosopher immediately neded. The factor being asked the price of his deformed slave, declared, that could he obtain from the purchaser a proper sum for the other two, he would cheerfully part with Æsop for nothing. This offer was accepted; Xanthus at once paid the price to which he had first objected for the musician and the orator, and returned home with all three of the slaves. Æsop here found his master in more hopeless bondage than himself, to a wife of a most furious and jealous temper. On his first appearance amongst the domestics, as her husband's slave, she asked, in scorn, of Xanthus, "whether it were a beast or a man that he had now brought home?" when Æsop, unable to repress a similar disposition, is said to have exclaimed, "From the mercies of fire, water, and a wicked woman, great gods deliver us!" This of course evoked the vehement temper of his mistress, and Æsop, with difficulty, brought himself through this awkward reception, by pretending that he only recited some lines of the poet Euripides, and observing, how practicable it was for her whom he addressed to make herself "as glorious in the rank of good women." This story, however, cannot be correct in its entire details, for the murder of Æsop, in Delphos, occurred at least eighty years before the Greek tragedian was born. It is stated,

however, that the aptness of Æsop's reply on this occasion conciliated the frown of the incensed lady.

Æsop had not been long in the service of the Samian philosopher, when the latter took his newly-acquired slave to a gardener for the purpose of purchasing some herbs; the agriculturalist, observing Xanthus in the habit of a philosopher, inquired the reason why those plants which grew of themselves, and without any artificial aid, should come up so fast and thrive so well, whilst others, though never so carefully cultivated, could scarcely be preserved from perishing. "Now," continued the gardener, "you who are a philosopher, pray disclose to me the meaning of this." Xanthus was, however, utterly at a loss for a satisfactory answer, and was obliged to content himself with saying, "That so Providence had ordered it to be." Here Æsop interferred; and, after a sarcasm upon the imperfection of the school of philosophy in which Xanthus was bred, requested to be permitted to give the solution. "For what," said the slave, "signifies a general answer to a general question, but an acknowledgment of complete ignorance on the subject proposed?" To this Xanthus readily consented, observing to the gardener, that it was beneath the dignity of a philosopher to answer minutely such a trivial question. "The earth, then," said Æsop, "may be considered as in the nature of a real mother to that which she brings forth out of her own bowels; but she is only a step-dame in the production of those plants that are cultivated and assisted, nay, sometimes even forced under her care, by means of the sheer industry of another. It is natural for her to withdraw her nourishment from the one, and to lavish her powers upon the other kind of plants." This solution of the gardener's question is said to have so delighted him, that he not only refused to take money for the herbs that had been bought, but welcomed Æsop to the produce of his garden in future.

Æsop had to bear with all the oppressions of slavery; and many anecdotes, of dubious authority, are told of this part of his life. He is said to have interpreted his obscure inscription, which had utterly foiled his master; and, emboldened by his success, to have demanded of him what reward he would offer, if he were to point out to him a considerable hidden treasure? "One half of it, and your liberty," said Xanthus. Possessed of the property, however, the faithless Samian conveniently forgot the conditions upon which he acquired it, and returned to the defenceless Æsop menaces and blows; though he is said to have been fearful lest he should betray the matter to King Dionysius, who was entitled to the advantage of the discovery. On another occasion, the wife of Xanthus having eloped from her husband, notwithstanding the acerbity of her disposition, he was desirous of recalling her, and Æsop undertook the task of fulfilling his wishes. He prepared a plentiful feast, and gave it publicly abroad, that his master's first wife having separated from him, this entertainment was prepared for a second marriage. The effect was as he had imagined, the lady immediately ordered her chariot to be prepared, and returned to the house of her husband. At another time Xanthus, in a moment of inebriety, had made a considerable wager that "he would drink the sea dry," and, on becoming sober, applied to Æsop to extricate him from the difficulty into which he had involved himself. "Sir,"

Anecdotes.

On his first appearance amongst the domestics, as her husband's slave, she asked, in scorn, of Xanthus, "whether it were a beast or a man that he had now brought home?" when Æsop, unable to repress a similar disposition, is said to have exclaimed, "From the mercies of fire, water, and a wicked woman, great gods deliver us!" This of course evoked the vehement temper of his mistress, and Æsop, with difficulty, brought himself through this awkward reception, by pretending that he only recited some lines of the poet Euripides, and observing, how practicable it was for her whom he addressed to make herself "as glorious in the rank of good women." This story, however, cannot be correct in its entire details, for the murder of Æsop, in Delphos, occurred at least eighty years before the Greek tragedian was born. It is stated,

Æsop's Biography. said the slave, "be careful of Bacchus, it is the humour of this god first to make men cheerful, then to make them drunk, and lastly to make them mad." He exhorted him, however, to take courage, and pursue his advice. Xanthus, accordingly, appeared next day on the sea shore, attended by the man with whom he had made the ridiculous agreement; "And now," said he, "am I ready to drink the sea dry, but it is you who must first stop all the rivers which run into it."

Æsop's Lib-
eration.

A circumstance, however, at last occurred, which not only liberated *Æsop* from his undeserved degradation, but so attracted the attention of the Samians as to elevate him highly in the public esteem. He appears, in this instance, to have been a little more wary in his communications for the benefit of others, and determined to assert that station in society for which his acute and comprehensive mind so admirably qualified him. In common with all the surrounding states in this semi-barbarous age, these people were strongly addicted to the practice of augury. On a day of peculiar solemnity amongst them, an eagle had snatched away a ring upon which the arms of the town was engraven, and, after having carried it to a considerable distance, dropped it at last into the bosom of a slave. To explain this mysterious omen the philosophers of Samos were consulted, and, amongst others, Xanthus, the master of *Æsop*, who immediately applied to him for assistance. When all the sages of the island had been completely perplexed, Xanthus arose, at the instigation of *Æsop*, in an assembly of his countrymen, confessing his ignorance, and recommending them to his long-trying slave, as a man peculiarly gifted by the gods with wisdom, for a solution of the augury. *Æsop* was accordingly summoned to the assembly, but declined to enter upon the subject. He alleged the unworthiness of his condition, and the serious effects of his master's permanent displeasure against him, should the interpretation of the augury interfere with any of his designs. This objection was of course overruled, by his immediate manumission through the interference of the assembly, on which he is reported to have addressed them as follows: "The eagle," said *Æsop*, "is a royal bird, and signifies a great king; the dropping of your signet into the bosom of a slave, or one who has no power over himself, denotes the loss of your liberties: if you are not particularly vigilant in the conducting your affairs, this omen will but too shortly be realized." The event was answerable to *Æsop's* solution of the augury: for shortly after, Cræsus, king of Lydia, commissioned ambassadors to demand a tribute, as a token of submission to him, from the Samians; and the successful interpreter of the oracle was called to the debate, which such a demand naturally produced. "The path of liberty," observed the now honoured sage, "is narrow and rugged at the entrance; but the further you advance on it the plainer and the smoother it shall be found." This noble sentiment decided the Samians: a defiance was pronounced against the Lydian monarch, and his embassy dismissed with contempt. When Cræsus learnt these circumstances, and that one man, recently a slave, had, by a few words only, induced the boldness of this measure, he sent to the Samians, offering them peace and independence, on condition of their delivering up *Æsop*, the instigator to the threatened war. To this the sage himself offered his instant acquiescence,

And ho-
mours.

but first admonished the Samians on the improvidence of purchasing peace by sending away those counsellors in whom consisted their chief defence; and on this, it is said, he first introduced the well-known fable of the Wolves and the Sheep who gave up their only defenders, the Dogs. This apology, so well applied, determined the people again to resist the demands of Cræsus; a tribute of regard for *Æsop* which emboldened him to a patriotic step for the future stability of their state, which is not exceeded in personal courage or address in all history. He suddenly departed from Samos, and presented himself at the Lydian camp. "I come not here, great king," said he to Cræsus, "in the condition of a man abandoned or given up by his country, but of my own will appear before you, with this only request, that you will vouchsafe me the honour of your royal ear before you condemn me." He then addressed the monarch in the elegant fable of the Captive Grasshopper, who begged for life upon this simple plea: "that all her business was her song, and that her death could bring no possible advantage to her possessor." The generous monarch felt the force of the appeal, and not only pardoned the petitioner, but desired him to ask any further favour within his wishes. *Æsop* was not forgetful of those who had been his deliverers from slavery, and might almost be called his countrymen; he implored the king's goodwill toward the Samians, and obtained them a grant of permanent peace and favour under the royal signet. *Æsop* hastened to Samos with the welcome news, and a statue was decreed to his honour in return for his important services. He then returned to the court of Lydia, and entered upon a still more extensive career of fame; he became a public counsellor of the state, and the distinguished and permanent favourite of Cræsus; under whose patronage, and for whose instruction and amusement, he composed many of those apologies that have been handed down, under his name, from age to age, and through the languages of all civilized countries, to the present day.

Æsop now, easy in his circumstances, thirsted for new opportunities of observation, and obtained leave to travel. His ultimate and principal object was to visit the famous city of Babylon, then in its meridian splendour, and to the king of which he had procured a recommendation from Cræsus, who was in alliance with him. In the way to Babylon, *Æsop* traversed the rising states of Greece, and called forth the admiration of several of the cities where he abode. At the villa of Periander, near Corinth, he met the Seven Sages, whose fame was at that time at its zenith, and contended with them on the question of the best form of government, *Æsop* alone preferring a monarchy to that of any other. With Solon he appears to have been previously acquainted, upon the visit of that legislator to the court of Cræsus, when he is said to have advised him (on his being neglected at court) "to make his visits to kings as pleasant, or as seldom as possible," to which the more rigid Grecian philosopher replied, "or, rather as seldom, or as profitable as possible." When he visited Athens, then under the dominion of Pisistratus, he admonished the discontented citizens that they should rather bear the slight evils of which they complained, than seek an unknown and perhaps an intolerable change; and on this occasion was it that he related the famous tale of the *Frog*

wasting a King, and who, discontented with their harmless log-sovereign, were punished by Jupiter for their oscillatory disposition by the tyranny of the direful stork.

Æsop at last reached the dominions of Labynetus, king of Babylon, where his talent at solving enigmas and auguries produced him ample rewards and reputation. Secure of a comfortable subsistence, he next sought for an equivalent to the natural affections of life, by the substitution of an artificial connection, not uncommon in those days. He adopted as his son and heir a promising youth of the name of Ennus, who appears, however, to have treated him with peculiar ingratitude. Ennus forged his adopted father's name and seal to a paper containing the plan of a plot against the king of Babylon, who, giving way instantly to his rage, and not imagining the falsehood of the accuser, immediately ordered the execution of Æsop. From death, however, the sage was rescued by some noble friends, who yet were obliged to conceal him from the public vengeance by a close confinement. Labynetus soon had reason to repent his rashness in depriving himself of so useful a counsellor, without having given him the chance of acquittal by a hearing: for Amasis, king of Egypt, having sent to Babylon requesting to be supplied with an architect "who could build a tower which should hang in the air, and with a philosopher who could resolve all difficult questions" (this kind of practice forming at that time one of the principal amusements of a court), Labynetus was immediately reminded of the qualifications of Æsop, whom he esteemed capable of performing all the wishes of his Egyptian ally. On expressing sorrow for his unknown fate, the friends of the sage produced him to the joyful and repentant monarch in the rags and squalid appearance of a prison, and Æsop quickly cleared himself from all suspicion of guilt. Labynetus, in just revenge, would now have sacrificed his treacherous accuser, but Æsop procured his pardon, and even again restored him to his own wonted favour. Æsop then departed for Egypt with the ambassadors of Amasis; but although he seems ready to have undertaken the obscure offices required, in which way he performed them we are not told; he appears to have soon returned to Babylon, where he was much occupied in the education of Ennus. Amongst his precepts we find the following fragments of no common mind: "Worship God, my son!" said he, "with care, with reverence, and with a sincerity of heart, void of all hypocrisy or ostentation; for know that he is omnipotent as he is true. Have a care even of your most private actions and thoughts; for God always sees you, and against you your conscience is always ready to bear witness. Prudence, as well as nature dictates, that while you do all the good in your power to all persons whatever, you should pay the same honour to your parents which you expect your children should pay to you; and prefer your relations before strangers in the exercise of your good offices. Nevertheless, where you cannot be beneficial be not ruinous to any one. Words signify actions and thoughts; there must be no impurity in either. Be careful of children or impotent affections; but follow the dictates of your reason, and you are safe. Be still assiduous to learn, as long as any thing is left unknown to you; and value wisdom before money. The human mind requires cultivation as do

the plants of the field; the improvement of our reason assimilates us to angels; the neglect of it changes us into beasts. Wisdom and virtue are the only permanent and inviolable good; but the study of these, without the practice, is nothing. Think not, however, that asperity of aspect necessarily designates wisdom; for wisdom makes us serious, but not severe. It is one degree of virtue not to be vicious. Keep thy faith with all men; and avoid a lie to man, for that is an offence to God. Measure your words; for great talkers have no respect for either honesty or truth. Frequent the society of good men, for the sake of their manners, as well as their virtues. Be careful of the worldly maxim that there is sometimes good in evil; for profitable knavery and starving honesty is a mistake; virtue and justice are ever eventually productive of good and profit. Admit not that restless passion, curiosity for the affairs of others, but attend to your own business. Speak ill of no one; and no more indulge in the hearing of calumnies than be the instrument of reporting them; for those who love the one, commonly practise the other. Intend honestly, and leave the event to God. Despair not in adversity, and exult not in prosperity, for every thing is changeable. There are three things of which you will never repent—being early and industrious at your business; learning good things; and obliging good men. Remember that is done best which is done in season; watch therefore for opportunities of doing good. Love and honour kings, princes, and magistrates; for they who punish the guilty and protect the innocent form the hand which holds society together." Such are the lessons of morality and wisdom which are attributed to Æsop in his adopted character as a parent; but the object of his anxious cares appears to have ill requited them: his life was a scene of rebellion and debauchery, although he is said to have been at last a penitent, and to have died in all the bitterness of remorse for his ingratitude to Æsop.

In well-earned prosperity, a favourite with the monarch, and loved and respected by his private connections, Æsop now appears to have passed many years at Babylon; and when he at last obtained a forced permission to revisit Greece, it was only on the express condition of an early return to that city. As he again passed through the various cities of the peninsula, he resumed his former habit of delivering his sentiments by way of fable, until he is said to have been barbarously assassinated by the inhabitants of Delphi.

The object of the Phrygian sage in visiting this city in his last journey is related differently by different historians. Some have stated, that, satisfied with his travels, he arrived at length at the court of his first patron and protector, Cræsus, intending to make Lydia his future home; and that when resettled there, and under the accustomed favour of the king, he was deputed by him to consult the oracle at Delphi on some important occasion, a circumstance according with the well-known fact of the unusual partiality and liberality of Cræsus to this famous oracle. Others report, that his own curiosity and thirst for general knowledge led our fabulist thither, and a desire to consult the oracle on some personal affairs. But, whatever were his objects, his disappointment at the barbarous manners of the people, and at the

oracle itself; his consequent sarcasms, and his death, are uniformly related. On his arrival at Delphi, then a place held sacred throughout Greece, he found the inhabitants, whom he had expected to see deserving of the reputation they had acquired for pride, wisdom, and learning, deeply immersed in pride, avarice, and barbarism. Unfortunately for himself, he did not conceal his sentiments concerning them, but allowed his contempt and aversion to become publicly apparent, although clothed in his usual allegory. "I find," said he, "the curiosity that brought me hither to be exactly similar to the expectation of those who, whilst standing on the shore, see something at a distance which the wind and the waves are floating towards them; they imagine it to be of considerable bulk or value; but upon its approaching nearer, they discover it at last to be nothing more than a heap of floating sticks, weeds, and rubbish." This censure, it should seem, was levelled not at the lower class of the Delphian people only, but likewise at the magistracy, and perhaps at the juggles of the famous oracle itself; the cheats and extortions attendant upon which, cannot be supposed altogether to have escaped the penetrating intellect of *Æsop*.

Jealous of their reputation, and well knowing the credit with which the fabulist was received by princes and states of the first importance, and those by whom the Delphian oracle was, until then, highly revered, the magistracy of the city, and perhaps the priests of the temple, resolved to silence the censures of *Æsop*, by depriving him of life. It was necessary, however, that he should appear to the public eye to deserve the ignominious death they meant to inflict on him, and the philosophic traveller had already quitted Delphi to depart, when he was seized only a few miles from the town, on a charge of sacrilege. *Æsop* at first ridiculed the accusation, but the conspirators had laid their plot too sure. They had secreted amongst his baggage, for no benevolent design, a golden cup which belonged to the temple, and there, on inspection, it was found. This apparent proof of *Æsop*'s guilt was not exhibited to the people in vain; they were much enraged; and the court at which he was afterwards regularly tried, condemned him to be thrown headlong from a rock. *Æsop*, to whom kings, states, and cities of the greatest celebrity had listened with admiration, could now with considerable difficulty obtain a hearing for the few words in which he endeavoured to expose the artifice under which his character was for the first time impeached. But in vain: he was hurried to execution. On the road, however, he is said to have succeeded in diverting their attention for awhile from its immediate object; and, evading those who held him, to have escaped to a neighbouring altar. From hence, however, he was dragged, with the remark, that those who robbed their sanctuaries were not entitled to protection from them;

when he made another and final attempt to move their compassion or awaken their justice, in the fable of the Eagle, the Hare, and the Beetle; and to prove to them that injustice always meets with its due punishment, though practised by the strong upon the weakest of creatures. "Not are you," continued the unhappy sage, "to flatter yourselves that the propitiators of the holy altars, and the oppressors of the guiltless, can ever ultimately avoid the vengeance of the gods." All this served but the more to enrage his already exasperated judges, and the furious and unthinking multitude. They dragged him forward to the fatal spot, and the last words he uttered were characteristic of his history. He likened his miserable lot to that of an old man who had fallen into a pit, together with some asses; both he and the beasts having been beaten out of their road by the violence of a tempest, the animals, when they found themselves precipitated into this cavern, and confined to its narrow boundaries, began to kick the aged traveller, and gave him his death wounds. "Unhappy wretch that I am," exclaimed *Æsop*, in the person of this old man, "since die I must, it is doubly hard to die my means of, and surrounded by, these asses, the most senseless of beasts! to suffer death unjustly were enough calamitous, but for it to be inflicted by the hands of a barbarous and ignorant people, alike devoid of humanity, honour, hospitality, or justice;—ye gods, permit not my innocent death to pass unavenged!" In the midst of this hurraage, the impatient multitude precipitated him from the rock, and he fell lifeless at his death, its base. Thus perished, as he had lived, the sage and celebrated *Æsop*, mixing wisdom with wit, entertainment with instruction.

The veneration with which the character of *Æsop* has been generally regarded by the historians of his time, cannot perhaps, be more strongly exemplified than in their ascribing a dreadful plague, with which the Delphians were shortly afterwards visited, to the outrage thus committed on the hospitality peculiarly due to great men, and their impiety to the Gods. This the Pythoness herself declared to be but justice upon them for their crime, and directed a public atonement to be made for it. Accordingly we find that this clamorous and capricious people, soon after his death, erected a pyramid to the memory of *Æsop*. It was also a tradition of the best times of Greece, that the conspirators by whose wicked contrivance he fell, so severely suffered the stings of conscience, that they slew themselves in remorse;—a circumstance which is reported to have given pleasure to the more civilized nations of the Greeks around. Socrates is said to have amused and consoled himself, in several of the serious hours he spent in prison, shortly before he suffered, by rendering several of the compositions of *Æsop* into familiar verse.

BIOGRAPHY.

JEREMIAH.

FROM A. M. 3362, B. C. 642, TO A. M. 3418, B. C. 586.

Biography.

THE life and character of the Jewish Prophet Daniel were so evidently associated with the changes of the Assyrian Empire, that we slightly anticipated the regular order of events in placing our record of them in this Work immediately after the Life of Nebuchadnezzar. We now return to the contemplation of one of the last among the series of Prophetic lights that adorned the darkest Ages of the Jewish Commonwealth, in the character and predictions of JEREMIAH, who was also the earliest Prophet of the Babylonian captivity itself, and connected with the several stages of its completion.

It was the fate of this Prophet, like that which the Poets have assigned to Cassandra, always to speak the truth, and over to be believed; and, in the clearest exhibitions of impending judgment, to find that, according to the ancient adage, "whom God will destroy, he first deprives of understanding." One could be ready to conclude, that the Poets of antiquity had copied the character of their celebrated Prophets from that of this illustrious man, so entirely do they agree in temper and in circumstances. In both we find an inflexible integrity, never yielding to threatenings and penalties: in both a high spirit of patriotism, pouring out its illimitable griefs—

Cry, Trojans, cry! lend me ten thousand eyes,
And I will fill them with prophetic tears!

In both a participation of the sufferings which they foresaw, but could not ward off; and a large personal share in the miseries of a captivity, ever before their own eyes, but never to be impressed upon others. In whatever sense the Ancients might have used their adage, it is employed here only to illustrate the position, that the obstinate unbelief of the Jews, relative to their approaching destruction, undoubtedly accelerated its accomplishment, and rendered its consequences loathable. A melancholy illustration of this position will appear as we detail the leading features of the life of this Prophet; which will also furnish some additional circumstances accompanying the fall of the Empire of Judah.

Jeremiah was the son of Hilkiah, one of the Priests of Anathoth, in Benjamin. He affirms himself to have been set apart from his birth to his difficult and glorious office, and his pretensions are well supported by the fact that he began to prophesy in the thirteenth year of the reign of Josiah, when he could have been

only about fourteen years old. Terrified at so awful and hazardous a commission, at an age so immature, in times so dangerous, he would have excused himself from his arduous task; but his appointment was ratified by osw charges, and, sustained by correspondent promises, he entered upon his office, which he exercised until the destruction of Jerusalem by the Chaldeans, through a period of more than forty years. It is generally thought that he died in Egypt, about two years after the captivity. Of his private history little can be ascertained as apart from the public affairs of his Country; and that which is blended with them presents us only a series of privations and persecutions.

The privations of the Prophets extended over all their circumstances, and reached to the most endearing relations of human life. They were obliged to conform in their diet and manner of living to such severities as might best prefigure the horrors of famine, the strictness of a siege, and the miseries of war—of all of which they were appointed as tokens—and they were often required to sacrifice to their Prophetic duties and station their domestic and social ties and comforts. Thus Jeremiah not only shared the horrors of war and captivity with his People, but yielded many indulgencies yet within his power, as a type of impending judgment, and was even forbidden to marry. We have already seen, in the account of Hosea, that Prophet's choice directed by the circumstances to be symbolized rather than by his inclinations; when that which was allowed by his Country was strictly enjoined upon him—a temporary marriage with a woman of loose character. And we shall hereafter see Ezekiel suffering the severest domestic loss—a wife of his choice, "the delight of his eyes, taken away at a stroke"—as a sign of the sudden disruption of all social ties, about to be produced by the calamities hanging over the Jewish nation. These, and similar circumstances, rendered the Prophetic office not an enviable distinction; and fully account for the reluctance with which it was generally undertaken, of which Jeremiah is an example. A post of so much difficulty and danger, and the distinctions of which, purely of a spiritual kind, were hidden in the midst of so much peril, could have no fascinations for an ambitious spirit, and would effectually repress every attempt at deception, since no impostor could be willing to hazard so much for an uncertain renown. Some men can

Persecutions.

better encounter perils than endure privations—they will have danger, but cannot practise self-denial. The Prophets were injured to both; they were prepared for persecution by habitual poverty, restraint, and resignation; they had been taught, by repeated and painful trials, to submit their will wholly to the will of God, to relinquish, without murmuring, their dearest interests, and to sacrifice private feeling to the public welfare. These privations were followed by persecutions as bitter as they were unmerited. Jeremiah was premolesed as to the character of his glorious but painful career, and encouraged to meet its severest afflictions. He who called him to the field girded him for the fight, but did not conceal from him the sharpness of the conflict. "Behold, I have made thee, this day, a fenced city, and an iron pillar, and a brazen wall against the whole land"—and they shall fight against thee, but they shall not prevail against thee; for I am with thee, saith the Lord, to deliver thee." After such a premonition, we are prepared for a life of suffering and sorrow on the part of the individual to whom it is addressed; we expect to find great mental qualities and distinguished virtues developing themselves in situations of unequalled peril, and finally triumphing over calamity and calamity. Such conclusions are fully justified in the chequered life of this eminent servant of God.

Predictions.

The Prophecies of Jeremiah turn upon two points—the rise of Judah, and its captivity by Nebuchadnezzar. These are the great incidents, presented in a variety of forms and an amazing amplitude of detail; the other subjects of his predictions are incidental and collateral. They were conveyed partly by preaching, and partly in writing; before the captivity, he himself delivered them, from his own lips, at different times, before all ranks in various places—after that event, they were propagated by writing exclusively.

Vision of the almond-tree.

His commission opened with a vision of "a rod of an almond-tree"—the rod, a symbol of punishment—the tree of which it was made, a signal of its near approach; the almond-tree, being the most forward of all trees, is called, in Hebrew, the *hasty tree*, and became a proper and impressive sign of impending and swift destruction.* This was instantly followed by the vision of "a seething-pot," with its aspect "toward the north;" the boiling vessel prefiguring the internal commotions which should arise in the State, or the circumstances under which the Jewish nation should be melted and consumed; and the direction of the face of the pot towards the north, distinctively pointing out from what quarter the affliction should come. Thence he proceeded, as he was inspired by Prophetic impulses, to reprove the inhabitants of his Country for their idolatry; and to show them that they not only had broken the tie of gratitude arising out of their peculiar relation to the Deity, but that they had committed an outrage unknown to the heathen world, by an act of religious infidelity never practised among the nations towards their idols. "For, pass over the isles of Chittim, and see; and send unto Kedar, and consider diligently, and see if there be such a thing; hath a nation changed their gods, which yet are no gods? but my People have changed their glory for that which doth not profit! Be astonished, O ye heavens, at this, and be horribly afraid, be ye very desolate, saith the Lord!" This short, but

Of the seething-pot.

Reproves idolatry.

glowing passage, will serve to show the mingled ardour and tenderness, fidelity and compassion, which characterize the predictions of this writer. Among other things, he threatens them that they should be ashamed of Egypt, in which they had hitherto placed so much confidence, as they had before been disappointed in Assyria. The power of Chaldean was collecting itself gradually to overwhelm that once proud and flourishing Empire with a blow from which it has never since recovered. He describes the idolatry of Israel, under the strong image of whoredom; and warns Judah, that as she had partaken of the crime, she must share the punishment; yet the penalty is pronounced with reluctance and infinite pity, and is qualified by many unexpected mitigations. The Father of the families of the whole Earth, when He rises to punish His guilty children, never forgets His paternal character; and teaches His Prophets to make paternal promises with threatenings, mercy with judgment, and lamentations with accusations. This is a spirit pervading Scripture Prophecy, but never more conspicuous than in the predictions of Jeremiah.

While the Prophet was pleading with his apostate and profligate Country, foretelling its dangers, urging it to repentance, and blending all the affections of a patriot with the fidelity of a Prophet, that ungrateful Country was plotting his destruction; his very relatives were engaged in the conspiracy; and, in his native place, the town of Anathoth, one of the possessions of the Priesthood, they threatened to make him the victim of the universal resentment. He was unaware of this perfidious purpose, until it was divinely revealed to him; and his enemies were, at the same time, threatened, that in consequence, they themselves should be utterly destroyed when the day of visitation should come.

These predictions having been delivered in words only, were followed by fresh symbols. The Prophet was commanded to gird his loins with a linen girdle; then to direct himself of it, and to hide it "in a hole of the rock" by the river Euphrates, where, when the tide flowed, it would be wet, and when it ebbed, would be left dry, and by this alternation would more speedily decay. After many days, he was commanded to take it out of the place in which it was concealed, and display it before the People. He found it utterly spoiled. The girdle, being an ornamental part of oriental dress, was chosen as the symbol of the glory of the Jews, and its decay became, therefore, the image of the destruction of their prosperity. "Thus saith the Lord: after this manner will I mar the pride of Judah, and the great pride of Jerusalem." Further, by the figure of bottles filled with wine, either chosen as a proverbial expression of plenty, or as a reproof for their debauchery, he was commanded to forewarn the excess of their approaching misery.

These indications of divine displeasure were followed by a grievous famine, described with fearful accuracy, yet in language truly poetical. "Judah mourneth, and the gates thereof languish; they are black unto the ground; and the cry of Jerusalem is gone up. And their Nobles have rent their little ones to the waters; they came to the pits, and found no water; they returned with the vessels empty: they were ashamed and confounded, and covered their heads. Because the ground is chapt, for there was no rain in the earth, the ploughmen were sated; they covered their heads. Yea, the hind also calved in the field, and forsook it,

Command-

ed not to

marry.

because there was no grass. And the wild asses did stand in the high places, they snuffed up the wind like dragons; their eyes did fail, because there was no grass." About this time also, Jeremiah received the command that he should not marry, which seems, in this instance, to have been to him a merciful prohibition, while it was a signal to his Countrymen that this terrible death under which they languished was but the beginning of sorrows. "Thou shalt not take thee a wife, neither shalt thou have sons and daughters in this place. For thus saith the Lord concerning the sons, and concerning the daughters, that are born in this place, and concerning their mothers that have them, and concerning their fathers that begot them in this land; they shall die of grievous deaths; they shall not be lamented, neither shall they be buried; but they shall be as dung upon the face of the earth; and they shall be consumed by the sword, and by famine; and their carcases shall be meat for the fowls of heaven, and for the beasts of the earth." The repetitions in the opening of this prediction, which sound so unnecessary to an English ear, are consistent with the genius of Hebrew Poetry, which should be judged by its own character, and not condemned because of the apparent languor of reiteration in a mere prose translation. The painful circumstances which demanded this relinquishment of conjugal charity are further enforced by a strict injunction that no one should bemoan or lament the dead—a prohibition the more striking because of the loud and public mournings which characterized oriental nations, and the Jews among others; but the reason was as affecting as it was apparent, the impending calamities of the Jews would be so multiplied as to leave no time, nor opportunity, nor inclination, for such external tokens of sorrow—even when their greatest men felt—so common would affliction become, and so nearly would it touch every individual. "Both the great and the small shall die in this land; they shall not be buried, neither shall men lament for them." On the same principle, all festivity and hilarity are forbidden to the Prophet. Those who rejoiced were instruments of their danger; but he, the messenger of evil tidings, before whom futurity was unveiled in all its appalling features, could have but little inclination to join in assemblies of mirth; indeed they were absolutely proscribed, so far as related to himself. The reason for this privation is also given: "For thus saith the Lord of hosts, the God of Israel: Behold, I will cause in cease out of this place in your eyes, and in your days, the voice of mirth, and the voice of gladness, the voice of the bridegroom, and the voice of the bride."

Shallum, or

Jehoshaz,

These predictions and others, contained in the first seventeen chapters of this Prophet, were delivered in the reign of Josiah, King of Judah; those which immediately follow, it has been thought, were given in the reign of his successor, Shallum, as he is called by Jeremiah and in the Chronicles, but the name by which he is better known is Jehoshaz. Josiah having died in battle against the King of Egypt, Archbishop Usher thinks he was chosen by the people in haste, lest Pharaoh-necho should surprise them before they had made their election; but that they first changed his name, considering that of Shallum unfortunate, the only King of Israel of that name having been slain in the first month of his reign. Jehoshaz reigned, however, no

more than three months, when he was deposed by the Egyptian conqueror. In this short period, some important predictions were communicated by the Prophet. They also opened with a type. He was commanded to go down to the potter's house, and watch the process of his work. As the Prophet looked on, one of the clay vessels became broken before he had completed it, and he re-moulded it. Jeremiah was instructed to employ this image in explaining to the House of Israel the absolute sovereignty of God over them; at whose entire and exclusive disposal they were as clay in the hands of the potter; and further, that the breaking of the vessel, and the formation of another of the same clay, was a signal of the rejection of the Jews, because of their iniquities, and the substitution of another People for them. To render the figure the more impressive, and to give it due publicity, he was commanded to take an earthen vessel, and having assembled the Priests, Elders, and People, in the valley of Hinnon, to declare the impending destruction of the nation, and to dash the vessel in pieces, as a sign thereof, before their faces. Having discharged this commission, he returned to the Temple, to confirm yet more publicly what he had just predicted. It appears that a new plot had been formed against his life; and this renewed testimony against the vices of his Countrymen, together with the unwelcome repetition of their danger, added fiercer fury to their displeasure, and furnished occasion to Pashur, the Governor of the Temple, to gratify his malice, by striking the Prophet and confining him in the stocks. In an evil hour he obeyed the impulse of his passions! When he came the next day to release the persecuted Seer, he received the fearful tidings that he should witness the death of all his dearest friends by the sword; that he himself should go into captivity with all his family, never more to return; that he should die in Babylon, and be buried there—in token of which he was named, by Jeremiah, *Magor-misbad—a terror round about*; "For thus saith the Lord, Behold, I will make thee a terror to thyself and to all thy friends."

Pharaoh-necho, now returning from his successful expedition against Carchemish, imposed a tribute upon the Jews, and deposed Jehoshaz, placing upon the throne Eliakim, his brother, whose name he changed to Jehoiakim; and taking with him the dispossessed monarch into Egypt. Early in the reign of the new Sovereign, Jeremiah took occasion to exhort his Countrymen and their Nobles to repentance, and to remind them of the alternative. These admonitions had no influence over the youthful monarch or his degenerate Court. The Prophet then proceeded to declare, that the lot of the dethroned Prince, his brother, was more to be lamented than that of his ancestors, who had been carried to the grave, or even of his father, who died almost in battle; for that his captivity should end only with his life, and that he should see his native land no more. Jehoshaz accordingly died in Egypt. Jehoiakim himself was threatened for his oppression, luxury, and unbelief, with an unattended death; and the sentence was extended beyond him to his successor, Jehoiachin, called by the Prophet also Jeconiah, or Coniah, (a word of the same signification, and Hebrew names were all significant), whose captivity by the Chaldeans was foretold. It was also further declared, that no Prince of his family should inherit the throne; a series of solemn and severe predictions which is closed

Danger of
Jeremiah.

It was about this time that the occurrence took place to which allusion has been made in the Historical Chapter including the captivity of Judah, in speaking of the character of Micah. Jeremiah, declaring these unwelcome truths publicly in the Temple, was seized, and by the Priests and time-serving Prophets sentenced to die. Happily their power did not reach so far as to an execution of their decision, otherwise the Prophet had undoubtedly perished at this time. But it was necessary to consult the Princes of the Empire; when after patiently and impartially listening to the accusation, and in the various circumstances upon which it was founded, agreed with the People that the sentence was unjust and unmerited, and revoked it accordingly. This righteous decision was further ennobled by some of the Elders, who explained to the assembly that Micah had prophesied distinctly to the same purport. The indignation of Jehoiakim was, however, roused; and as it was not prudent, in his situation, and in defiance of such a just and public determination, to wreak it upon Jeremiah, he selected another victim, and persecuted Urijah, the son of Shemaiah, of Kirjath-Jearim, whose predictions accorded with those of Jeremiah, and who fled into Egypt upon the first intimation of his danger. Thither the implacable malice and the political influence of the Jewish monarch resented him; and lest these should fail, by a ruffian stratagem, not unknown to modern times, he sent a chosen band to surprise the Seer in his retreat, and to bring him by force from his foreign asylum into the Royal presence, where he was basely slain. In the midst of tumults and factions, and at the moment when this outrage upon justice and honour was committed, Jeremiah found a friend in Ahikam, the son of Shaphan, whose powerful influence protected him alike from popular and princely fury.

Predictions
respecting
Nebuchadnezzar.

Before the fourth year of the reign of Jehoiakim, the Prophet had foretold the subjugation of other nations besides Judah to the power of the Chaldeans, and the astonishing victories of Nebuchadnezzar. These predictions are contained in that portion of the Book bearing his name, which comprises the 46th chapter up to the 49th, both inclusive, and is directed against the Egyptians (a plain proof that they were not subdued before Nebuchadnezzar came to the throne of Babylon, as we have intimated in his Life), also against the Philistines, Tyrians, Phœnicians, Edomites, Ammonites, Moabites; against Damascus, Kedar, Hæz, and other States and cities. The auxiliaries of this devoted Empire are described by their characteristic warlike qualities, while their defeat is distinctly foretold; and the pride of Egypt itself is represented under the fine image of the overflow of its own Nile.—"Who is this that cometh up as a flood, whose waters are moved as the rivers? Egypt riseth up like a flood, and her waters are moved like the rivers; and he saith, I will go up, and will cover the Earth; I will destroy the city, and the inhabitants thereof. Come up, ye horses; and rage, ye chariots; and let the mighty men come forth; the Ethiopians and the Libyans, that handle the shield; and the Lydians, that handle and bend the bow. For this is the day of the Lord God of hosts, a day of vengeance, that He may avenge Him of His

adversaries; and the sword shall devour, and it shall be satiate and made drunk with their blood; for the Lord of hosts hath a sacrifice in the north country" (plainly the Chaldeans were to be conquerors of this people, and the instruments of divine indignation), "by the river Euphrates."

It was in the fourth year of Jehoiakim that the event so long threatened, so clearly predicted, and so pathetically described, commenced, and Nebuchadnezzar besieged and plundered Jerusalem, taking away with him Daniel and his companions, but generously giving liberty to the monarch whom he had in his power; the reign of Jehoiakim was extended three years further; but nothing could open the eyes or soften the heart of this infatuated Prince. The forbearance exercised towards him produced no reformation in his conduct; and the important predictions and admonitions by the mouth of Jeremiah, with which this short interval was crowded, served but to exasperate him whom they might have saved. To render permanent the Prophecies that had been delivered from the thirteenth year of his reign of Josiah, up to this period, the fourth of Jehoiakim, Jeremiah was instructed to commit them to writing; but not merely to answer the end of perpetuity, important as it was; the intention was, also, that they should be before the eyes of the Sovereign and his People constantly; and the only reason assigned is an benevolent and so characteristic of all that is revealed of Deity in the Scriptures, that we cannot withhold it. "It may be that the House of Judah will hear all the evil which I purpose to do unto them; that they may return every man from his evil way; that I may forgive their iniquity and their sin." The predictions were accordingly dictated by Jeremiah to Baruch. It seems that the Prophet was at this time in prison; yet, anxious that the benefit should not be withheld from the People, he commissioned Baruch to take the earliest and fittest opportunity of giving them publicity, by reading them in his Countrymen at their first solemn convocation. On the Day of Expiation, in the fifth year of Jehoiakim, the Roll of this injunction was carried into effect—the Roll was publicly read; tidings of this circumstance were carried instantly to Court, and Baruch was summoned before the assembled Princes to read the Book a second time. His illustrious audience appears to have been much struck and affected by those awful admonitions; and they thought it behoved them to lay the whole before the King. At the same time, aware of the cruel disposition of Jehoiakim, and rightly judging that he would be deeply incensed, they took the precaution of commanding the Prophet and his amanuensis to conceal themselves, and then presented themselves with the important writing before the monarch, who was sitting in the winter-palace, with a fire burning before him. He commanded Jehudi to read the writing; but had scarcely patience to listen to three or four columns of it, when he cut it with a penknife, and notwithstanding the entreaties of Elnathan, Delaiah, and Gemariah, burned by consumed it in the fire. It is mentioned, as an instance of the general insensibility of those who surrounded the rash Prince, that they appeared to be totally unaffected by this bold and atrocious act. At the same time, orders were issued for the apprehension of Jeremiah and Baruch; but they were already concealed, and so effectually, that they escaped the present danger. After this occurrence, the Prophet was enjoined to take

Biography. another Roll yet larger, and to dictate to Baruch the whole of the former writing, together with many additional predictions, closing with a severe sentence against Jehoiakim, threatening him that he himself should be cut off, and deprived of burial: and that his posterity should be disinherited of the throne of David.

At the close of these three years, Jehoiakim rebelled against his formidable conqueror, who, when he spared him, had rendered him tributary; and the enraged King of Babylon returned with irresistible force against Jerusalem. The Rechabites, who had been bound by their father Josiah, the son of Rechab, to some singular abstinence—among which were these, that they should neither drink wine, nor dwell in houses, but in tents, to signify that they were but strangers in the land—were compelled, by the extremity of the circumstances consequent upon this invasion, so far to relinquish this latter stipulation, as to retreat into the city, and dwell within the walls of Jerusalem, to escape the fury of the Chaldeans, who overspread the Country. Jeremiah availed himself of this occurrence, which, from its singularity, could not but be generally known, once more to admonish the King and the people by the example of these Rechabites. In order to do this the more effectually, he collected all the House of Rechab, and, in presence of many witnesses, in the house of the Lord, set before them wine, inviting them to drink; but they resolutely refused, assigning their father's injunction as a reason, and not deeming their constrained shodiment of one part of their vow a reason for the voluntary neglect of that which was within their power. The Prophet took this occasion to reprove the Israelites for their breach of God's commandments, to whom they owed such infinite obligations, while these Rechabites held so sacred the precept of their father. To mark this admonition yet more strongly, while a wicked King was threatened with the extermination of his family, and a rebellious nation were about to be carried into captivity, the obedience of the Rechabites was rewarded with this promise—"Josiah, the son of Rechab, shall not want a man to stand before me for ever." Immediately afterwards occurred the death of Jehoiakim, who was slain by the Chaldeans, and his body cast into a common sewer. Jehoiachin, who is also called Jeconiah and Coniah, succeeded the throne, but kept his seat only three months, at the close of which period he was taken away captive by the Chaldeans; and with him the Princes, Nobles, officers, and principal population of Jerusalem, besides its treasures—no mean spoil, frequently before as it had been plundered. The King of Babylon did not, however, utterly destroy the place, but thought proper to place Mattaniah, the uncle of the last monarch and brother of the preceding, by the more commonly-known name of Zedekiah, upon the throne, who was suffered to reign eleven years.

Zedekiah.

Zedekiah, unmoved by the mingled judgment and severity of the measures which resulted in this event, which plundered, without wholly impoverishing him, and, while it retrenched his resources, spared him his life and his royalty; unawed by all the predictions of impending indignation which he had heard, and by the calamities, which he had partially shared; continued the ruinous career of evil which had distinguished and successively destroyed his predecessors. In the beginning of his reign, Jeremiah was shown two baskets

of figs; the one ripe and good, the other utterly worthless. By the first were intended those of the captivity, whose heart should be softened by affliction, and in whom the promise of restoration to their Country was given. By the latter the inhabitants of Jerusalem who remained; the King, the Princes, and the general population, who were unchanged and unaffected by the judgments which they had witnessed, and were threatened that by sword, and pestilence, and famine, they should be driven out, and "consumed from off the land." Soon afterwards he was instructed to make yokes and bonds, and, after putting them upon his own person, to send them to the respective Sovereigns of Edom, Moab, Ammon, Tyre, and Zidon, by the hand of their ambassadors then at Jeru-salem; and to tell them that, unless they submitted to the King of Babylon, they should be subdued by force. The same unwelcome message he himself carried to his own Sovereign, assuring him that no way remained to save himself and his People but by submission. To enforce this injunction the more strongly, and to keep it in constant remembrance, the Prophet continued to wear upon his own person these badges of slavery, until Hananiah, a false Prophet, taking the yoke from his neck, broke it in the Temple, in the presence of the Priests, and of all the People, affirming, that within the period of two full years, the prisoners who had been carried into Babylon should be restored, together with their captive Prince Jeconiah, and all the spoil. Jeremiah was, in consequence, commanded to say to Hananiah, that in place of the yoke of wood which he had broken, Nebuchadnezzar should impose upon the nations a yoke of iron; and that as a punishment for having deceived the people and by a lying Prophecy, he should die that very year, which happened accordingly, in the seventh month.

In the fourth year of Zedekiah, Seraiah having been sent to Babylon on the part of that Prince, or having accompanied him, to negotiate some political measure with Nebuchadnezzar, Jeremiah wrote his Prophecies against Babylon, which form a considerable part of this Book bearing his name, and which testified that the cup of blood which that Empire had put into the hands of all other nations, she should herself drink in turn, even to its dregs. These he now gave to Seraiah, charging him first to read them to the captive Jews, to animate them with the prospect, although distant, of their restoration to their Country, and then to bind them to a stone, and sink them in the river Euphrates; at the same time apprising them, that by this act was typified the fall of Babylon, never to rise again. It is possible that besides the sanguine temperament of Man, which induces him, unless hope be wholly extinguished, to anticipate the termination of his calamities, that these predictions operated powerfully upon the minds of those Israelites to induce them to expect a speedier deliverance than was intended; especially as these anticipations were encouraged and strengthened by the false Prophets, who, like Hananiah, flattered their wiles, and who had been carried away with them into captivity. However this might be, Jeremiah found it necessary to write to them a letter by the hands of Elishah and Gemariah, sent by the King of Judah on some mission to Nebuchadnezzar, to show them that they must not cherish the hope of a speedy deliverance, and that all the viols of wrath were not yet emptied upon his devoted Country. He advised them to marry and

His letter to
the captives.

Biography. settle in the land of their captivity, that "they might be increased, and not diminished," in the interval that must elapse before their restoration. He had before declared that their state of subjection should last during the reign of "Nebuchadnezzar, of his son, and of his son's son," and he now precisely fixes the term "seventy years." Of the two false Prophets, "Ahab, the son of Koldiah, and Zedekiah, the son of Maaseiah," he predicted that they should be the victims of their own deception, and that it would become a proverbial form of malediction, "The Lord make thee like Zedekiah, and like Ahab, whom the King of Babylon trusted in the fire." In answer to this letter, Semeiah, who was at Babylon, wrote to Zephaniah, who was the Chief Priest remaining at Jerusalem, reproving him for suffering Jeremiah to proceed without punishment, and this letter the Priest read to the Prophet. In consequence, he was ordered again to send to them of the captivity, and to pronounce sentence against Semeiah, that neither he, nor any of his family, should be restored to their native Country.

Thus Jeremiah continued to prophesy, with inflexible fidelity, in defiance of dangers and privations, sometimes announcing the approaching completion of the woes of his Country, and at others its eventual deliverance, until the ninth year of Zedekiah, in the tenth month of which Nebuchadnezzar came up against Jerusalem to besiege it. Struck by a momentary remorse, the King of Judah sent to entreat the Prophet to pray for them. This emotion did not long continue; and Zedekiah having found means to prevail upon the King of Egypt to make a diversion in his favour, the Chaldeans drew off from the siege of Jerusalem to attack the Egyptians. The Prophet was enjoined to represent to Zedekiah and his Countrymen, that this stroke of policy would prove no more than a temporary expedient, and the message was delivered in the characteristic language of Prophecy. "Deceive not yourselves, saying the Chaldeans shall surely depart from us, for they shall not depart: for though ye had smitten the whole army of the Chaldeans that fight against you, and there remained but wounded men among them, yet should they rise up every man in his tent, and burn this city with fire." Yet wearied of always prophesying without "his report being believed," and feeling his own exposure to the calamities which hung over his devoted Country, he availed himself of the temporary absence of the Chaldeans, when they marched against the King of Egypt, and attempted to withdraw from the city, and to retire to Anathoth, the place of his nativity. He was arrested, however, by Irijah, a captain of the guard, at the gate of Benjamin, as a deserter to the Chaldeans, and brought as such before the Princes, who struck him, and, after treating him with great indignity, imprisoned him "in the house of Jonathan the Scribe." After a considerable time, the King sent for him privately, to inquire if there were any Prophecy touching him; when Jeremiah, answering in the affirmative, assured him that he should be certainly "delivered into the hands of the King of Babylon." He availed himself of this opportunity to point out to Zedekiah the futility of those Prophecies who had prophesied that the Chaldeans should not come against the city, implying, from this failure of their predictions, the truth of his own, which had always pointed to this event; he complained of the

injustice and cruelty of the treatment which he had received; he pleaded his perfect innocence of any crime against the monarch or the State, and entreated that he might not be remanded to his former prison, stating that it would be at the peril of his life to continue there. The King was so far either touched with remorse for the oppression which he had permitted, or melted by the affecting representation of the Prophet, that, although he did not think proper to give him his liberty, he softened the rigour of his confinement, and commanded "that they should commit him into the court of the prison," and afford him a daily allowance of food until the bread in the city failed.

While he was thus incarcerated, a legal occurrence demanded his attention, and his conduct in it marked the implicit confidence which he himself placed in the revelations made to him respecting the restoration of the Jews to their own land. His cousin Hananiah visited him, apprizing him that he wished to sell his field, and that, according to the provision of the Mosaic law in similar cases, the right of redemption and of inheritance was with the Prophet; who did not scruple, notwithstanding the unpromising aspect of public affairs, and his own predictions of the entire subjugation of the Country to the Chaldeans, to purchase this land, fully assured that the inheritance should return to himself or his family, in the restoration of his People to their rights after the Babylonian captivity; but he took the precaution to have witnesses of the whole transaction, and to deliver the writings, properly signed and sealed, to Baruch, charging him to envelop them in an earthen vessel, which might preserve them from injury, and to keep them carefully, until the time of restitution should arrive, when they would be evidence of the right of his family to the possession.

A transaction had also occurred during the siege, Sabbathal which strongly marks the character of the People with whom he had to do, evincing their total dereliction of principle, and which called forth the severest censures of the faithful and unimpaired Prophet. The sabbatical year having arrived, at the instance of Jeremiah, who urged upon them the command of God in the Law, the King, Princes, Nobles, and People, liberated their slaves; but in this interval, while the Chaldeans were withdrawn, and pursuing the Egyptians, they recalled their emancipated brethren, and reduced them to their former state of servitude.

Nebuchadnezzar, having shut up the Egyptians within their own boundaries, and rendered them tributary, returned to the investment of Jerusalem; and Jeremiah, continuing his Prophecies against his Countrymen, was demanded of the King by the Princes, as a seditious man, and a traitor to the State, who discouraged the people by his predictions, and merited death. Zedekiah gave him over to their power, to dispose of him as they thought proper; and, in virtue of this authority, they cast him into a dungeon, or well, without Jeremiah water, but the bottom of which was mire, in which he was must have been suffocated but for the good offices of Ebed-melech, one of the King's attendants, who, having apprized him of the perilous situation of the Prophet, was authorized by the monarch to draw him out of this pit, and remanded him to the court of the prison-house. After this deliverance, Zedekiah sent again for him to a private audience; when Jeremiah urged the necessity of his opposing the wrath of Nebuchadnezzar by an

Biography. unqualified submission, in order to the preservation of himself and his Country from the destruction which awaited both, in terms so solemn and so convincing, that the King confessed himself almost persuaded to do as he recommended, but expressed his apprehensions both of his Nobles and of the People, and strictly enjoined Jeremiah, in the event of their interrogating him, not to reveal the subject of this interview.

The time now came when repentance on the part of the nation and of the monarch was as unavailing as the remonstrances of the Prophet had hitherto been. Jerusalem was taken on the 9th day of the fourth month of the eleventh year of the reign of Zedekiah; and with it that miserable monarch, who was first permitted to witness the slaughter of his children, and then deprived of sight, bound in fetters, and carried into Babylon.

Amidst the dreadful slaughter that ensued, Nebuchadnezzar gave particular charge that no injury should be inflicted upon Jeremiah; and the day of the slavery of his Country was that of his personal deliverance.

He was carried, with other captives, to Ramoth; but when he arrived at that place, he had his choice given him, whether he would go into Babylon, or return to his native land, or prefer any other place, since he was at liberty to go wherever he pleased. He preferred

staying at Judah, and went to Mizpeh, to Gedaliah, a Jewish Prince, whom Nebuchadnezzar had constituted Governor of the cities of Judah, and from whom, in former instances, the Prophet had received protection. Here he resided in peace, with the remnant of the Jews, for some time. But a conspiracy was forming against Gedaliah, which disturbed this tranquillity, and terminated the life of the Governor. One of the unworthy Princes of Judah, Ishmael by name, had escaped the general destruction by flying to the King of Ammon; and after the settlement of the Jewish remnant under the just administration of Gedaliah, either moved by

envy of his station, or instigated by the monarch with whom he had found protection, he resolved to compass the death of this good Governor. Gedaliah had received notice of this conspiracy from Johanan, and others of the dispersed captains, who came in to him after the establishment of his government, and repeatedly urged that they might prevent the meditated evil by cutting off the traitor. The Governor was too just to allow this measure; and, as the event proved, too secure to take the proper precautions against his insidious adversary. Unwilling to think ill of a man upon whom he had conferred distinguished kindness, he suffered Ishmael to have constant access to him; availing himself of which, he found occasion to assassinate Gedaliah, and the friends who surrounded him.

This cruel piece of treachery and rebellion was followed by another. Two days after this nefarious transaction, fourscore men approaching this desolated sanctuary, in habiliments of mourning, with incense and offerings, to lament the ruin of their Country, the City, and the Temple, were intercepted by the hypocritical murderer, who, mingling his tears with theirs, offered to conduct them to Gedaliah; and, after leading them into the midst of the city, brought them to a pit, or subterraneous excavation, which had been made by Asa, King of Judah, as a hiding-place, when he was threatened by Baasha, King of Israel, and killed them there, filling up the cavern with the carcasses

of those who had fallen by his treachery. He then compelled the remnant of the People, among whom were some Princesses who had escaped the captivity, to follow him, and was returning to Basin, the King of the Ammonites, with whom this infamous plot seems to have originated, when Johanan, and other officers, who had in vain attempted to awaken the suspicions of the too-confiding Gedaliah, having received information of these acts of violence on the part of Ishmael, pursued, and overtook him in Gibben, rescued his prisoners, and compelled him to flee for his life, with only eight men who escaped with him.

Notwithstanding this atrocious murder of Gedaliah was an act of treason unsanctioned by the remnant of the Jews, and so promptly revenged by Johanan, that Chief, his companions in arms, and the People, did not judge it prudent to return to the heart of their Country, until they could ascertain what representations on the subject might be made to Nebuchadnezzar, and how that monarch might be disposed to receive them.

They turned, therefore, aside to the borders of Egypt, and dwelt on the confines of Judah, near Bethelium. They had greater cause for apprehension, because not only the deputy appointed by the King of Babylon had fallen, but the Chaldeans also, who remained with him had been put to the sword; and their fears so far prevailed, that they began to think of seeking shelter in Egypt. This step, however, they would not take without consulting Jeremiah, and, through him seeking counsel at the hand of God; at the same time promising that they would abide by whatever decision he should make by inspiration. The Prophet accordingly received, ten days afterwards, an answer to their solemn appeal to him; and assured them, in the name of Jehovah, that if they continued in their Country, he would give them favour in the sight of Nebuchadnezzar, and deliver them from their fears of the Chaldeans; but that if they persisted in going down into Egypt, they should there perish by the sword, by famine, and by pestilence. At the same time, he added, that they had dissembled before him, in sending to inquire after his will, for that they had already made up their minds, and would disobey his injunctions. So it proved; for Jeremiah had no sooner delivered his message, than they accused him of conspiring with Baruch to betray them into the hands of the Chaldeans, and of thinking so to intimidate them by this prediction, which they pronounced false, as to bend them to his purpose. They, therefore, gathered the People, and took them into Egypt, compelling Jeremiah and Baruch to accompany them. They had no sooner come to Tahapanes, or, as some write it, Taphnes, than the Prophet was commanded to "take great stones, and hide them in the clay in the brick-kilo, which is at the entry of Pharaoh's house in Tahapanes, in the sight of the men of Judah; and say unto them, thus saith the Lord of hosts, the God of Israel; behold, I will send and take Nebuchadnezzar, the King of Babylon, my servant, and will set his throne upon these stones that I have hid; and he shall spread his royal pavilion over them." He then proceeded to state his entire conquest of Egypt, and the destruction of those Jews who had fled thither, contrary to his express command, for protection. In this constrained sojournment in Egypt, Jeremiah wrote several distinguished Prophecies, principally against the Jews and the Egyptians; and if, as is the

Biography. best-founded opinion, his Book of Lamentations were composed on occasion of the ruin of his Country by the Chaldeans, that Work also was probably written here. Some have conjectured that they were framed on occasion of the death of Josiah: it is certain that he wrote some elegiac piece or pieces then; but the character of this Book seems best to suit the melancholy extinction of the national glory and even existence. They are the longest specimens remaining of that kind of Hebrew Poetry, and are pre-eminent for beauty and pathos. They justify the judgment of those who have pronounced the characteristic style of Jeremiah to have been tenderness. No man could so have written, who did not deeply feel; and no man could so have felt, who was not involved in the calamities which he describes. Of his style Bishop Lowth says, "Jeremiah, though deficient neither in elegance nor sublimity, must give place in both to Isaiah. Jerome seems to object against him a sort of rustiness of language, no vestige of which, I must however confess, I have been able to discover. His sentiments, it is true, are not always the most elevated, nor are his periods always neat and compact; but these are faults common to those writers, whose principal aim is to excite the gentler affections, and to call forth the tear of sympathy or sorrow. This observation is very strongly exemplified in the Lamentations, where these are the prevailing passions; it is, however, frequently instanced in the Prophecies of this author, and most of all in the beginning of the Book, which is chiefly poetical. The middle of it is almost entirely historical. The latter part, again, consisting of the last six chapters, is altogether poetical; it contains several different predictions, which are distinctly marked, and in these the Prophet approaches very near the sublimity of Isaiah. On the whole, however, I can scarcely pronounce above half the Book of Jeremiah to be poetical." He conjectures that the 53rd chapter belongs properly to the Lamentations, to which it serves as an exordium

Jeremiah has been said to be the author of the 137th Psalm; and to him, with Ezekiel, has been also ascribed Psalm 65th. Some have supposed that the Prophet terminated his days in this involuntary exile, and that he was put to death by the Jews, irritated by the threatenings and reproaches at Tahpanes. They have even conjectured that he was stoned, and supposed that he was one of those to whom the author of the Epistle to the Hebrews alludes (chap. xi. 37). Others affirm that he died in Babylon. Some Rabbins assert that he returned to Judea: but the time, manner, and place of his death, are altogether uncertain. Other circumstances have been added, as little to be depended upon. The apocryphal writer (2 Macc. xv. 13.) affirms, that he appeared in company with Onias, after his death, to Judas Maccabæus, gave him a sword, and encouraged him to fight for his Country. The Alexandrian Chronicle speaks of predictions which he delivered to the Egyptian Priests, foretelling the overthrow of their idols by an earthquake at the birth of our Saviour; and that Alexander, visiting his tomb, and learning the Prophecies which he had delivered concerning his person and conquests, caused his body to be removed to Alexandria, and a magnificent mausoleum to be erected over him. The apocryphal writer before alluded to (2 Macc. ii. 4, 5, 6.) states, that he took the holy fire and concealed it in a cistern; that the Jews, upon their return, found in this receptacle only muddy water, which became, however, inflamed when poured upon the altar. He also tells us, that Jeremiah removed the Tabernacle and the Ark to mount Nabo, and concealed them in a cavern, where they remain to this day. Some of these things are palpably fables, and all of them uncertain. The only authentic account of this illustrious Prophet is that which we have given, collected principally from his own writings, and from other parts of the Sacred Scriptures.

B. C.
595.

THIS Prophet Ezekiel, the third of those who have acquired the greatest distinction amongst the Jews, was a descendant of Aaron, of the Tribe of Levi, consequently of the Sacerdotal Order. His father's name was Buzi; and he is said to have been a native of Sarera. With regard to other particulars generally deemed interesting in the early history of distinguished men, Scripture has left no record, because they are of minor consideration compared with his great character as a Prophet, and because they have no immediate connection with his predictions.

The time of his appearance and the drift of his writings evince a marked and most merciful interference of Providence on behalf of the Jewish nation. They were now in a state of depression and captivity; and the Prophet, who was destined to console them amidst their sorrows, was himself a participator of them, being carried away captive to Babylon with Jeconiah, or Jehoiachin, King of Judah, about A. M. 3103, B. C. 599. In this condition, he dwelt with his Countrymen on the banks of the river Chebar, in Mesopotamia, which flows into the Eastern side of the Euphrates, at Ctesiphon, the modern Carhemish, two hundred miles, or thereabouts, to the North of Babylon. It is called by Piny (lib. i. c. 26.) Cobaris; by Ptolemy and Strabo, Chaboras, or Aboras. There is no account of Ezekiel's having prophesied at any earlier period of his life; but upon his going into Mesopotamia, he was favoured with the spirit of inspiration, and became the appointed minister of consolation to his afflicted compatriots. They had entertained the idea, so natural to those in a state of bondage, that those who remained in Judea were much more happily circumstanced than themselves, in which supposition they were confirmed by the studied misrepresentations of false Prophets. They were, however, now undeceived, by being informed of the calamities which were about to overprend their Country, and the ultimate destruction which awaited Jerusalem itself with its celebrated and beloved Temple, in consequence of the universal apostasy that would occur.

The commencement of his Prophetic office is to be dated in the fifth year of the Captivity, about eight or ten years after Daniel, and in the thirtieth year of his age; so, at least, it has been usually calculated; but Usher, Prideaux, Calmet, and several other chronologists, consider the thirty years mentioned in the beginning of the first chapter of his writings ("Now it came to pass in the thirtieth year, in the fourth month," &c.) as rather to be referred to the covenant made with God in the reign of Josiah; others again maintain it to signify the thirtieth year of his age, or of Nebuchadnezzar's reign; and others the thirtieth year from the Jubilee. We follow the more received opinion, by assigning his assumption of the Prophetic character and office to B. C. 595. This was about four and thirty

years subsequently to the epoch at which Jeremiah was first favoured with the revelations of the divine will; consequently, the last eight years of Jeremiah correspond with the first eight years of Ezekiel.

The name given to our Prophet was indicative of his future character, as a person eminent for his fortitude and trust in God. These noble qualities were displayed in the temper which he evinced during seasons of adversity, and in the unhesitating firmness and resolution with which he reproved the idolatries of Israel. It is derived from the Hebrew word *ḥazak* "fortitudo Dei."

The Book which contains the Prophecies of Ezekiel, State of his and to which his name is universally attached, seems to Works.

be unquestionably of his production; such is his own statement at the very commencement of it, and no other person has advanced, or been supported by any plausible pretence, in a claim upon its composition. It has been frivolously maintained, that as the connective particle is used at the beginning of the Book, it constitutes only a fragment of some other and, perhaps, larger Work; but this is a very common style with the Historical writers of Scripture, and the form of expression does not, in fact, require a translation that should imply a reference to any previous publication. "Now" is, therefore, the word properly used in this and other parts of Scripture in our English translation. Josephus, indeed, affirms (*Antiq. lib. x. c. 6.*) that Ezekiel left two Books on the subject of the Captivity of Babylon; and the opinion seems to have been entertained by others; but as no intimation of this kind occurs in any part of the inspired volume, and as, moreover, the prevalent notion appears to have rested upon the sole authority of Josephus, who has given no evidence of its truth, and left no trace of whence he derived the information, it may fairly be rejected as groundless. The Talmudists assert that some of the Rabbis were desirous of rejecting the writings of Ezekiel from the Sacred Canon, as containing certain passages heterodox and contradictory to the Law of Moses; particularly the statement in the eighteenth chapter, that the son should not bear the iniquity of his father, whereas the Jewish legislator himself declares, in the thirty-fourth chapter of Exodus, the sins of the fathers are visited on the children to the third and fourth generation. This, together with some objections arising out of the extreme obscurity of many parts of his Prophecies, induced the Sanhedrim to deliberate long and gravely upon their total suppression; but Ananias succeeded in removing the difficulty, and in convincing them of their mistakes. It may be proper to say, in passing, that the passages in question are, in fact, by no means contradictory, except in the view of those who are unwilling to take the trouble of investigating the drift of the Prophet, and of admitting into the account the intention of the legislator. The letter intimates a general fact in the history of the divine government, under the

Mosaic economy, the former speaks of a principle of that government in estimating personal character. It was the evident and frequent fact, that the children bore the iniquity of their fathers; in certain cases, this consequence still obtains from the natural result of Sin and the peculiar constitution of Man: and it cannot be otherwise, where privations and sorrows follow from imprudence and folly through a long and mournful succession. But, in reality, the people referred to by Ezekiel suffered for their personal transgressions: the captivity they endured was unquestionably deserved by their persistence in wickedness, and because their own character had become so notorious, that "the son could not be said to bear the iniquity of the father;" their peculiar sufferings were not, nor could they be made appear to be hereditary and entailed, for they had enough of responsibility on their individual accounts, and enough of misery entailed for their own delinquency. The Prophet himself distinctly specifies and obviates the alleged difficulty, declaring that, according to the general practice of the divine government, though it were true that the son bore the iniquity of the father, it was nevertheless equally true that repentance would frequently avert the threatened calamity, and that "while the son hath done that which is lawful and right, and hath kept all God's statutes, and hath done them, he shall surely live."

Contents of the Book of Ezekiel.

The first three chapters of the Book of Ezekiel contain God's appearance to the Prophet, and instructions for his conduct in the discharge of his Prophetic office. The wickedness and future punishment of the Jews are then described in parables and visions, as far as the twenty-fifth chapter. Thence, to the thirty-second, the Prophet treats of those nations who had insulted the Jews in their captivity. He predicts, in particular, the destruction of the Ammonites, Moabites, and Philistines, which was effected by Nebuchadnezzar, and describes the ruin of Tyre and Sidon, the fall of Egypt, and the degeneracy of its people. Between the thirty-second and the fortieth chapters he censures the discontented disposition and hypocrisy of the Jews, and adduces various considerations calculated to incite them to patience and resignation. In the thirty-ninth and fortieth chapters he foretells the final return of the Jews from their dispersion, under the type of the victories to be obtained over Gog and Magog. The last nine chapters contain a vision, representing a new Temple and city; a new Religion and government, typical of a Universal Church, which is commonly believed to be the description of a Temple of corresponding construction with the celebrated Temple of Solomon; but it is most obvious that the Prophet has also some further reference, and really delineates a spiritual edifice, which shall be filled, as he expresses it, with "the glory of the Lord."

The circumstances recorded in the fourth chapter of the Prophecy have furnished occasion to infidelity to proclaim a premature triumph. The Prophet, having been commanded to shut himself up in his house, was to take a tile and delineate upon it the city of Jerusalem as in a state of siege, with all the appropriate engines of attack—to set up an iron pan to represent a wall between him and the city, and to continue for the space of three hundred and ninety days to lie upon his left side, signifying the iniquity of Israel; and forty days on his right side, signifying the iniquity of Judah.

The accomplishment of this sign is to be looked for in the siege of Jerusalem by Nebuchadnezzar, and the period of the Captivity of the Ten Tribes. After this, Ezekiel was commanded to take wheat, barley, bean, lentils, millet, and fitches, and to make as many loaves with them as should correspond to the number of days in which he was lying on his right side, and to bake them with human excrements. Having expressed some reluctance to the latter part of the requisition, he was allowed to substitute cow-dung. This act was, like the preceding, emblematical, and designed to prefigure the melancholy and reduced condition of the Israelites during the siege of their Capital. It has furnished, as

we before intimated, an occasion of objection to the enemies of Revelation, which is thus briefly stated and refuted by the judicious Harmer: "M. Voltaire seems to be extremely scandalized at this circumstance, for he has repeated the objection over and over again in his writings. He supposes somewhere, that denying the providence of God is extreme impiety; yet, in other places, he supposes the Prophetic intimation to Ezekiel—that he should prepare his bread with human dung, as expressive of the hardships Israel were about to undergo, could not come from God, being incompatible with his majesty. God, then, it naturally follows, never did reduce by his providence any poor mortals into such a state as to be obliged to use human dung in preparing their bread; never could do it; but those that are acquainted with the calamities of human life will not be so positive upon this point as this lively Frenchman. To make the objection as strong as possible, by raising the disgust of the elegant part of the world to the greatest height, he, with his usual ingenueness, supposes the dung was to be eaten with the bread prepared after this manner, which would form an admirable confession. Comme il n'est point d'usage de manger des telles confitures sur son pain, la plupart des hommes trouvent ces commandemens indignes de la Majesté Divine. (La Raison par Alphabet. Art. Ezekiel.) The eating bread baked by being covered up under such embers, would most certainly be great misery, though the ashes were swept and blown off with care; but they could hardly be said to eat a composition of bread and human excrements. With the same kind of liberty he tells us, that cow-dung is sometimes eaten through all Deserts Arabia (*Lettre du Traducteur du Cantique des Cantiques*), which is only true as explained to mean nothing more than that their bread is not unfrequently baked under the embers of cow-dung; but is eating bread so baked eating cow-dung?"

The testimony of enlightened travellers is very important and illustrative upon this subject. They assure us that the dung of asses and camels is very commonly used for fuel in Eastern Countries, and that, being collected and mixed with cut straw, it is formed into cakes, which are suspended in some sunny situation to dry. Tournefort particularly says, respecting Georgia in the Persian dominions, that all that fine Country yields not one single tree, and they are forced to burn cow-dung. "Oxen are very common here, and they breed them as well for their dung as for their flesh; they will yoke fourteen or fifteen pair to one plough, to turn up the ground; each pair has its man to drive it, mounted like a postilion; all these postillions, who yawl and roar like sailors in a storm, make together a most intolerable canker; we had been accustomed to

Objection by Infidels.

Answered.

Biography. this noise ever since we left Erzeron." Of the latter place he states, that, "besides the sharpness of the winters, that makes Erzeron very unpleasant, in the scarcity and dearth of wood, nothing but pine-wood is known there; and that, too, they fetch two or three days' journey from the town; all the rest of the country is quite naked—you see neither tree nor bush, and their common fuel is cow's dung, which they make into turf. But they are not comparable to those our tanners use at Paris, much less to those prepared in Provence of the husks of the olive. I do not doubt better fuel might be found, for the Country is not wanting in minerals; but the people are used to their cow-dung, and will not give themselves the trouble to dig for it. It is almost inconceivable what a horrid perfume this dung makes in the houses, which can be compared to nothing but fox-holes, especially the country-houses; every thing they eat has a stench of this vapour; their cream would be admirable but for this putridity, and one might eat very well among them, if they had wood for the dressing their butcher's meat, which is very good." Tournefort, vol. iii. p. 95 and 137.

Daily observation in our own Country corresponds with the above statement of the celebrated traveller. It is by no means uncommon to see the peasantry of Britain collecting the same materials for their winter fuel, and exposing them to dry and harden in the air and sun in a similar manner. Another traveller is still more express upon the point: "Wood is very dear in this Country (Persia), and sold by weight; they give you but twelve pounds of it for fourpence or fivepence, and the same it is with regard to coals. Whence it is they are obliged to make use of turf made of camel's dung, cow-dung, sheep's dung, horse-dung, and ass-dung. The chief Armenians of Julia do so as well as the rest, or else the fire would cost more than the victuals, whereas they give but thirty pence for two hundred and twenty or two hundred and thirty pounds weight of this turf. They use it more particularly for heating of ovens, in which they bake most of their meats in this Country, without trouble and at a small expense. *They even apply human dung this way.*" (Le Bruyn.) According to the preceding statements, the command issued to the Prophet to prepare food in the manner specified would not be likely to excite the surprise which is apt to be felt upon reading the account of the requisition, in Countries generally unaccustomed to such practices. However unintelligible elsewhere, in the times and places referred to it would be perfectly natural and consonant to common use. The Prophet, indeed, expresses some dislike of the preparation with human excrements, as he probably had not been accustomed to it, and as it certainly betokened the extremity of wretchedness and misery; but his request, and the permission to make the exchange recorded, perhaps were intended to represent the feelings of the Jewish nation whom he typified, and the alleviation which would be granted of their severest calamities.

Next to the allusions to the particular affairs of the Jews, the predictions which relate to the fall and desolation of Tyre and Sidon, and the war conducted by Nebuchadnezzar against Egypt, are the most remarkable. These subjects are exhibited in the clearest and most forcible manner, with great strength of colouring, much minute delineation, and with an accuracy which

the subsequent pages of History enables us fully to appreciate. Isaiah, upwards of one hundred and twenty years previously to the threatened destruction, had intimated, in general terms, that the city was to be captured and overthrown by the Chaldeans; but Ezekiel enters into greater particularity, and affirms distinctly that Nebuchadnezzar, King of Babylon, was to be the very person employed by Providence to execute this vengeance, that he should slay the people, and level the fortifications to the dust. Even the hardships to be endured in consequence of the protracted period of the siege are noticed in the expression, "every head was made bald, and every shoulder was peeled." Both the Prophets alluded to also predicted the flight of the inhabitants across the Mediterranean into the adjoining Islands and Countries, where they were still unable to obtain a secure and peaceful retreat. As the Phœnicians were the best navigators of antiquity, and had spread themselves in different directions by planting various colonies, they would naturally repair to their friends in the season of danger; and accordingly Jerome testifies, on the authority of the Assyrian Histories, that when the Tyrians were besieged, after they saw no hope of escaping, they went on board their ships and fled to Carthage, or to some Islands of the Ionian and Ægean sea, carrying with them all the precious things in gold, silver, clothes, and articles of furniture which they could collect, so that the conqueror found little else than bare walls to repay his toils. In consequence of this disappointment, Ezekiel was directed to promise him the conquest of Egypt for a reward, where he was to obtain the spoil and the prey as the wages of his army. (Ezek. xiv. 18, 19.) It is further predicted of Tyre, that the city should be restored after seventy years, and return to her again and merchandise—should be again taken and again destroyed—the people, forsaking their idolatry, should embrace the true Religion—and at length the city should be finally destroyed, and its subversion so complete, that its ancient site should be occupied only by the tents of fishermen. These particulars were literally fulfilled in the subversion of the Babylonian Empire, by Cyrus, at the end of seventy years, when the conquered nations were restored to their liberties, or, according to Newton, the seventy years in question may be computed thus: Tyre was taken by Nebuchadnezzar, in the thirty-second year of his reign, and in the year before Christ 573. Seventy years from that period will bring us to the year 503 before Christ, and the nineteenth year of Darius Hystaspes. At that time the Ionians had rebelled against Darius, and the Phœnicians assisted him with their fleet; it is, therefore, reasonable to infer they were now restored to their privileges. In the succeeding reign, they, in conjunction with the Sidonians, furnished Xerxes with several ships for his expedition into Greece; and by the time of Alexander, the Tyrians were advanced to such a pitch of greatness, that they stopped his progress longer than any other part of the Persian Empire. This relates to Insular Tyre, which flourished long after the old city, and subsequently to the time of Nebuchadnezzar; but was destroyed by Alexander after a siege of seven months. It recovered, however, from this disaster in a few years, and afterwards withstood a siege of fifteen months, before the

Prophecies relating to Tyre and Sidon.

Biography. fleets and armies of Antigonus could subdue it. The conversion of the city from idolatrous worship to that of the true God was effected by the residence of some Jews and proselytes among them. This happy change is recorded in the Old Testament, and the Tyrians afterwards furnished some illustrious martyrs to Christianity. This celebrated town received a severe blow from the conquest of Alexander, who not only demolished its edifices, but transferred a considerable portion of its trade to his new city of Alexandria, in Egypt. More recently, it changed its masters several times, sometimes being in the hands of the Ptolemies, and sometimes of the Seleucids, Kings of Syria, till at last it fell under the all-subduing Romans. It was taken by the Saracens, A. C. 639; retaken by the Christians in the time of the Holy War, A. M. 1124; taken again by the Mameluks of Egypt, in 1249; and again retaken by the Turkish Emperor Selim, in 1516, under which dominion it continues, such as it is, a heap of ruins and a picture of desolation! Nothing can be finer or more affecting than the description contained in the twenty-seventh chapter of Ezekiel's Prophecy of the original glory and subsequent downfall of this noted city; and modern travellers have illustrated the Prophetic statements by the recital of melancholy facts.

We quote the language of Maundrell: "This city, standing in the sea, upon a peninsula, promises, at a distance, something very magnificent. But when you come to it, you find no similitude of that glory for which it was so renowned in ancient times, and which the Prophet Ezekiel describes, ch. xvi. xlvii. xlviii. On the north side it has an old Turkish ungarrisoned castle; besides which, you see nothing here but a mere Babel of broken walls, pillars, vaults, &c., there being not so much as one entire house left; its present inhabitants are only a few poor wretches harbouring themselves in the vaults, and subsisting chiefly upon fishing, who seem to be preserved in this place by Divine Providence, as a visible argument how God has fulfilled His word concerning Tyre, namely, that it should be 'as the top of a rock, a place for fishers to dry their nets on.'"

To Egypt.

The predictions of Ezekiel, and of the two other principal Prophets, who uttered their inspirations on the subject of the Kingdom of Egypt, are distinctly verified by the profane Historians. Nebuchadnezzar is expressly named as the agent of this mighty overthrow, who was "to make the multitude of Egypt to cease," and with his people were "to draw their swords against Egypt, and fill the land with their slain." Two Heathen Historians, Megasthenes and Berossus, testify to the fact; the former by saying, in direct terms, that Nebuchadnezzar conquered the greatest part of Africa; and the other by alluding to the captives whom he had taken, and the effluvia which he arranged after the decease of his father. Josephus also corroborates this statement. The representations of both Jeremiah and Ezekiel, with regard to Pharaoh-hophni, the King of Egypt, are fully illustrated by the History of Herodotus, who has given him the name of Apries; and, in his *Euterpe*, has recited a number of particulars respecting his misfortunes. The character of this Prince, as pre-eminently for arrogance, is alluded to in remarkably striking terms by our Prophet: "Thus saith the Lord God, Behold I am against thee, Pharaoh, King of Egypt,

the great dragon that lieth in the midst of his rivers, which hath said, My river is mine own, and I have made it for myself;" (Ezek. xxix. 3.) upon which the Historian furnishes a striking comment by representing Apries as most presumptuously boasting, that he was so firmly established, it was not in the power of any god to dispossess him of his Kingdom. The words are, *Ἀπρίου ἐπὶ δέγωντος αὐτοῦ ὅτι ἡ δαυατα αὐτοῦ ἐστὶν ὅρα μὴ μείζων ἐδουλοῖται πρὸς τὴν βασιλείαν αὐτοῦ ἀποβλέπων δαυτῶν ἱερθεῖν ἰδέσθαι.* (ch. 169.) Herodotus goes on to say, that, notwithstanding this boast, he was conquered (by Amasis, one of his officers who rebelled against him, and ultimately succeeded to the sovereignty) and taken prisoner; after his captivity he was conducted to Sam, to what was formerly his own, but then the palace of Amasis, where he was confined for some time, and treated with much kindness and attention. But the Egyptians soon began to reproach Amasis for preserving a person who was their common enemy, which induced him to deliver up Apries to their power. They strangled, and afterwards buried him in the tomb of his ancestors, which stands in the Temple of Minerva.

The Prophecies concerning Gog and Magog, in the Gog and thirty-eighth and thirty-ninth chapters, have excited considerable attention, and have not a little perplexed learned commentators and theologians. Calmet remarks, that Gog is the name applied to the King of the Country which is denominated Magog. Pliny informs us that Scythopolis and Hieropolis were always called by the name of Magog, after their capture by the Scythians; and the Ancients have commonly represented Magog as the father of the Scythians, or Tartars, which has furnished occasion for numerous writers to trace these names in the Provinces and Cities of Great Tartary. Some imagine that the Persians descended from Magog, and affirm that this is the name under which they continue to pass to their own Country; while others represent the Goths as the descendants of Gog and Magog; believing that the war which the Prophet Ezekiel describes as undertaken by the former against the Saints, were those carried on by the Goths, in the Vth Century, against the Roman Empire. Similar descriptions are to be found in the other Prophets, and in the twentieth chapter of the Book of the Revelations distinct mention is made of Gog and Magog. Some interpreters, among whom is Mede, consider these two inspired writers as having different allusions, while they employ the same descriptive terms; and that the Prophecies of John in particular, have a distant reference to some of the unconquered Heathens, who, it is supposed, will manifest a vehement opposition to the true Church, at the closing part of that illustrious period which is designated the Millennium. Calmet, however, in a Dissertation prefixed to the Prophecies of Ezekiel, advocates the opinion that Gog is Cambyzes, the monarch of Persia. The safest, and perhaps the truest method of interpretation, is to conceive that Gog and Magog, both in the Prophecy of Ezekiel and in the Revelations of John, are allegorical personages, designed to indicate generally those potentates who should hereafter prove the most formidable opponents both of the Jewish and the Christian Church. The predicted victories over these foes point to the future restoration and return of the Jews from that dispersion which is in its character so unique, in

Coincidence of
Jeremiah
with Eze-
kiel.

its duration so protracted, and in its consequences so disastrous. Both Jews and Gentiles are looking forward with eager anticipation to this movement of Providence; the former regarding it as the most splendid era of its existence as a nation, the latter as the completion of the triumph of Christianity, and the consummation of human felicity.

Josephus relates that Zedekiah, King of Judah, thought the Prophecy of Ezekiel at variance with the prediction of Jeremiah, importing that "Zedekiah should behold the King of Babylon, and go to Babylon." Ezekiel declared that "Zedekiah should not see Babylon, though he should die there." Each of these Prophecies was, however, accomplished; for Zedekiah saw the Babylonish monarch at Riblah, where his eyes were put out, and whence he was conveyed to Babylon, the place of his death. Jeremiah's Prophecies were sent to his Countrymen who resided in Babylon, as appears from his own writings (chap. xlii. 1): it is probable, also, that Ezekiel's Prophetic denunciations were transmitted to Jerusalem. The Talmudists suppose, from this intercourse and communication between Babylon and Judea, that the Prophecies of Ezekiel were arranged in their present form, and placed by the Elders of the great Synagogue in the Canon of Scripture.

Style of
Ezekiel.

With regard to the style of Ezekiel, Bishop Lowth, in his Lectures on the Sacred Poetry of the Hebrews, thus observes: (*Est atrox, vehemens, tragicus; totus in sensibus, in sensibus elatus, feruens, acerbus, indignandus; in imaginibus secundis, truculentus, et nonnunquam parè deformis, in dictione grandiloquus, gravis, austerus, horridus, et interdum incultus; frequens in repetitionibus, non decoris aut gratia causâ, sed ex indignatione et violentiâ. Quicquid suaverit tractandum id rudè persequitur; in eo unum heret defixus, a proposito raro deflectens, ut terram aridem et juncturam rix unquam requirit. In cæteris, a plerisque vultibus fortasse superatus; sed in eo genere, ad quod videtur a naturâ unum comparatus, nimirum, vi, pondere, impetu, granditate nemo unquam eum superavit*): i. e.

"His is deep, vehement, tragic; the only sensation he affects to excite is the terrible: his sentiments are elevated, fervid, full of fire, indignant; his imagery is crowded, magnificent, terrific, sometimes almost disgusting; his language is pompous, solemn, austere, rough, and at times unpolished: he employs frequent repetitions, not for the sake of grace or elegance, but from the vehemence of passion and indignation. Whatever subject he treats of, that he sedulously pursues, from that he rarely departs, but, elevates, as it were, to it; whence the connection is, in general, evident and well preserved. In many respects he is, perhaps, excelled by the other Prophets; but in that species of enposition to which he seems by nature adapted, the forcible, the impetuous, the great and solemn, not one of the sacred writers is superior to him." "His diction is sufficiently perspicuous," Dr. Lowth continues; "all his obscurity consists in the nature of the subject. Visions (as for instance, among others, those of Hosea, Amos, and Jeremiah) are necessarily dark and confused. The greater part of Ezekiel, towards the middle of the Book especially, is poetical, whether we regard the matter or the diction. His periods, however, are frequently so rude and incompetent, that I am often at a loss how to

pronounce concerning his performance in this respect. Isaiah, Jeremiah, and Ezekiel, as far as relates to style, may be said to hold the same rank among the Hebrews, as Homer, Simonides, and Æschylus among the Greeks. There are some Elegies in Ezekiel, which are actually distinguished by the title of Lamentations, and which may, with the utmost propriety, be referred to the class of Elegies. Among these, are the two Lamentations concerning Tyre, and the King of Tyre." Dr. Blair, in his Lectures, observes of Ezekiel, "in poetical grace and elegance, he is much inferior to them both (Isaiah and Jeremiah); but he is distinguished by a character of uncommon force and ardour." Another writer remarks that Ezekiel "may be compared to the Grecian Æschylus: he displays a rough but majestic dignity; an unpolished though noble simplicity; inferior, perhaps, in originality and elegance to others of the Prophets, but unequalled in that force and grandeur for which he is particularly celebrated. He sometimes emphatically and indigently repeats his sentiments; fully dilates his pictures; and describes the adulterous manners of his Countrymen under the strongest and most exaggerated representations that the licence of the Eastern style would admit." It has been said, also, "that his style is generally very bold and majestic. It is a peculiar species of the sublime, to which some have given the name of the terrible. From the nature of his visions, however, more than from his language, he is often obscure, especially towards the beginning and end of his Book." On this subject the celebrated German, Michaelis, is entitled to be heard, though it may be premised that, however great as a general critic, he has few pretensions to that peculiar talent which, in judging of the merits of Poetry, consists in the possession of an inspiration somewhat analogous to the spirit that dictated the original composition itself. In a sentence preceding the paragraph from Lowth already cited, the Bishop has said that Ezekiel is much inferior to Jeremiah in elegance; in sublimity he is not even excelled by Isaiah; but his sublimity is of a different kind, upon which Michaelis remarks: "I must confess that I feel not perfectly satisfied with myself, when, in a matter entirely dependent upon taste, I can by no means bring myself to agree with our author. So far from esteeming Ezekiel equal to Isaiah in sublimity, I am inclined rather to think that he displays more art and luxuriance in amplifying and decorating his subject than is consistent with the poetical fervour, or indeed with true sublimity. He is, in general, an imitator, and yet he has the art of giving an air of novelty and ingenuity, but not of grandeur and sublimity, to all his compositions. The imagery which is familiar to the Hebrew Poetry he constantly makes use of, and those figures which were invented by others, but were only glanced at, or partially displayed by those who first used them, he dwells upon and depletes with so much accuracy and copiousness, that he leaves nothing to be added to them, nothing to be supplied by the reader's imagination. On this score his ingenuity is to be commended, and he is therefore of use to his readers, because he enables them better to understand the ancient Poets; but he certainly does not strike with admiration or display any trait of sublimity. Of this I will propose only one example; many of the same kind may be found in looking over the writings of this Prophet. In describing

Ezekiel.

—*ἄνθρωποι τῶνδε οὐρανὸν αἰετὸς*

ὧν τὸν λῆμα, νηδύοντο, ἐν τῇ γαστρὶ;

Devouring dogs and hungry vultures torn. Pors.

Thus it is the language of boasting in the Historical part of Scripture: 'I will give thy flesh unto the fowls of the air, and unto the beasts of the field.' 1 Sam. xvii. 44. Aaph also, in Ps. lxxviii. 48: 'He gave their cattle to the hail, and their flocks to the birds.' Moses is still more sublime, Deut. xxxii. 23, 24:

I will spend mine arrows upon them;

They shall be eaten up with hunger, a prey unto birds,

And to bitter destruction;

I will also send the teeth of beasts upon them,

With the poison of the reptiles of the earth.

But Habakkuk is more excellent than either of the former (chap. iii. 5), speaking of the victory of Jehovah over his enemies:

Before him went the pestilence,

And his footsteps were traced by the birds.

Doubtless the *birds of prey*. Isaiah is somewhat more copious, chap. xxxiv. 6, 7:

For Jehovah will send a sacrifice in Bozrah,

And a great slaughter in the land of Edom;

And the wild goats shall fall down with them;

And the bullocks together with the bulls;

And their own land shall be drunken with their blood,

And their dust shall be enriched with fat.

These and other images Ezekiel has adopted, and has studiously amplified with singular ingenuity; and by exhausting all this imagery applicable to the subject, has in a manner made them his own. In the first prediction of the slaughter of Magog, the whole chapter consists of a most magnificent amplification of all the circumstances and apparatus of war, so that scarcely any part of the subject is left untouched: he adds afterwards, in a bold and unusual style: 'Thus saith the Lord, Jehovah, speak unto every feathered fowl, and to every beast of the field: Assemble yourselves and come, gather yourselves on every side to the banquet which I prepare for you, a great banquet on the mountains of Israel. Ye shall eat flesh, and ye shall drink blood; ye shall eat the flesh of the mighty, and drink the blood of the Princes of the Earth, of rams, of lambs, and of goats, of bullocks, all of them fallings of Bashan. Ye shall eat fat till ye be satiated, and drink blood till ye be drunken, in the banquet which I have prepared for you. Ye shall be filled at my table with horses and chariots, with mighty men, and with Men of valour, such the Lord Jehovah.' (Ezek. xxxix. 17—20.) In this I seem to read a Poet who is unwilling to omit any thing of the figurative kind which presents itself to his mind, and would think his Poem deficient if he did not adorn it with every probable fiction which could be added; and for this very reason I cannot help placing him rather in the middle than superior class. Observe how the author of the Apocalypse, who is in general an imitator, but endowed with

a sublime genius, and in whose Poem all the splendour of Poetry may be discerned, has conducted these sentiments of Ezekiel: 'I saw an angel standing in the sun; and he cried with a loud voice unto the fowls that fly in the midst of heaven, Come and gather yourselves together unto the supper of the great God; that ye may eat of the flesh of Kings and of Captains, and the flesh of mighty men, and the flesh of horses and of them that sit upon them, and the flesh of all men, both free and bond, both small and great.' Rev. xix. 17, 18.

"But Ezekiel goes yet further, so delighted is he with this image, so intent is he upon the by-paths of the Muses, that he gives even the trees, taking them for Empires, to the birds, and their shades, or ghosts, be consigned to the infernal regions. Thus, chap. xxxi. 13—15: 'Upon his trunk shall all the fowls of heaven remain, and all the beasts of the field shall be upon his branches. To the end that none of all the trees by the water shall exalt themselves for their height, nor shoot up their top among the thick boughs; neither their trees stand up in their height, all that drink water: for they are all delivered unto death to the nether parts of the earth in the midst of the children of men, with them that go down to the pit,' &c. In this we find novelty and variety, great fertility of genius, but no sublimity.

"I had almost forgotten to mention that Ezekiel lived at a period when the Hebrew language was visibly on the decline. And when we compare him with the Latin Poets who succeeded the Augustan Age, we may find some resemblance in the style, something that indicates the old age of Poetry."

Pythagoras is supposed to have acquired his knowledge concerning the Mosaic Law from Ezekiel; and some have even believed him to have been the same person with Nazarius, under whom the Grecian Philosopher is reported to have studied. If, as is commonly said, Pythagoras were born nine years after the Babylonish Captivity, he might have visited Babylon when very young, and have become acquainted with the Prophet in the decline of life: certain it is, that he did travel to Babylon, and, according to some calculations, was contemporary with the Prophet.

Some writers represented Ezekiel as the President of the Tribes of God and Dan, in Assyria, and as having introduced serpents among them for their idolatry. Hieronymus reports that he was put to death by his Countrymen for his invectives against their vices, which a just estimate of the temper of mankind will render by no means improbable. Epiphanius mentions a popular belief in his day, that Ezekiel's remains were deposited in the same tomb with those of Shem and Arphaxad, in the land of Maur. His sepulchre was revered by the Jews, Medes, and Persians. Tudela says, that a roof was built to it by Jewish and thirty thousand Jews, containing the statues of Jeremiah and Ezekiel. A Synagogue and Library were also formed, in which were preserved the Manuscript of Ezekiel's Prophecies. A tomb is still shown as the tomb of this Prophet, about fifteen leagues from Bagdad.

THE first of the eminent persons whose names we have placed at the head of this section was a Jewish Priest, and, according to his own testimony, in the seventh chapter of his writings, the son of Seriah, a High-priest who was slain by Nebuchadnezzar, at the reduction of Jerusalem, B. C. 587. The term *son* may, however, be taken, in the large sense of the Hebrew language, to signify descendant, for, in all probability, he was his grandson or great-grandson. This is shown by Prideaux, in a chronological argument, to which considerable attention, to say the least, is due. If he were not born in Assyria during the Captivity, which, however, is likely, he must have been one of the Babylonish captives. Ezra represents himself as a ready Scribe; and as he diligently devoted himself to the study of the laws and judgments of heaven, he obtained a very distinguished respect among the Jews for his learning, pious zeal, and knowledge of the Scriptures.

In the seventh year of the reign of Artaxerxes Longimanus, according to the ordinary computation, about B. C. 457, Ezra was permitted to return with the Jews to Jerusalem, for the purpose of restoring the State and reforming the Church. It is scarcely to be questioned that this act of Royal favour ought to be attributed to the influence of Esther, the Queen, who had been an orphan Jewess under the guardianship of Mordecai, a captive Jew, and who has been justly characterised as "one of the very few that resist the allurements of splendour; that cherish kindness for their poorer relatives; and remember with gratitude the guardians of their youth."

It was on the first day of the first month, called Nisan, or about the middle of March, that Ezra, together with his Countrymen, left Babylon for Jerusalem, and, halting at the Abana, a river of Assyria, he instituted a solemn fast. On the twelfth day, they went forward towards Jerusalem, which they reached on the first day of the fifth month, called Ab, or about the middle of July, having devoted four months to the journey. No sooner were they arrived than the Scribe delivered into the Temple the presents of the Persian King and his Nobles, and those of the people of Israel left behind, amounting to 100 talents of gold, 20 basins of gold, worth 1,000 drachms, and two of copper; and 650 talents of silver, with silver vessels of 100 talents weight. He lost no time in stating the nature of his commission to the King's Lieutenants and Governors of Syria and Palestine, which intimated that he was empowered to settle the Church and State of the Jews according to the Law of Moses; to appoint Magistrates and Judges, with full powers of imprisonment and confiscation of goods, and even with those of banishment and death.

Ezra soon found abundant occasion for the exercise both of his talents and his virtues, which were of no ordinary description. Almost every class of the people had apostatized into idolatrous connections, having

taken wives of other nations in direct violation of the law of God. Upon the discovery of this sad defection, he rent his clothes—that is, his inner and outer garments, and pulled off the hair of his head and beard, as the deepest token of mourning; and, after convening the people by public proclamation, he endeavoured to impress them with a just sense of their impiety, and engaged them by oath to repudiate their wives and dismiss their children; thus retracing their false and illegitimate steps. Commissioners were appointed fully to investigate the affair, which was by this means effectually settled.

Ezra succeeded Zerubbabel in the government of Judea, and in the administration both of Civil and Ecclesiastical affairs, and executed this commission during thirteen years, when, in the twentieth year of Artaxerxes, he was superseded by Nehemiah, who was appointed for the same purpose by the Persian Court. We shall have immediate occasion to notice this eminent individual. Ezra was encouraged to proceed with the reformation of the Church and State by the protection and patronage of Esther; and, in the second year of Nehemiah's government, he was employed from morning to evening, during the Feast of Tabernacles, to read the Book of the Law, of which he is generally reputed to have been the compiler and corrector; but more of this subject presently. The next day he expounded this sacred volume, and continued the practice of reading it in the Temple eighty days, which at length was succeeded by a solemn renewal of the covenant. Whether he retired into a private station in his own Country or returned to Babylon is not certain. According to Josephus, he died and was buried at Jerusalem, in the hundred and twentieth year of his age. Other traditions report, and it is the received opinion among the Jews, that he died in Persia, and was buried on the banks of the river Samarra; where Benjamin Tudela states that his tomb is shown in the city of Zamusa.

The Book which passes under the name of Ezra was The Book doubtless his own composition. In the last four chapters of Ezra, he speaks in the first person: "And hath extended mercy unto me before the King and his counsellors, and before all the King's mighty Princes. And I was strengthened, as the hand of the Lord my God was upon me; and I gathered out of Israel chief men to go up with me." (ch. vii. 28.) Some have pretended that the first six chapters were given, not by Ezra, but by some preceding writer; but their reasons are sufficiently futile, while the authenticity of the whole may be considered as fully established from the most ancient testimonies.

This valuable Book is a continuation of the Jewish History, from the period at which the Chronicles come to a close, and the connection of the two Histories is obvious by the commencing verses of the Book of Ezra,

Ezra.

Civil Governor
thirteen
years.

Ezra proceeds to Jerusalem.

Biography. which contain a repetition of the concluding part of the Chronicles. Passing over the sad season of the Captivity, the Book begins with declaring that God had already begun his design of ennobling the city and Temple of Jerusalem to be rebuilt, by disposing Cyrus to promote that great event. It relates the fulfilment of several Prophecies, in the release which Cyrus granted in the first year of his dominion in Babylon, and in the return of the people, now first called Jews, after a captivity of seventy years. A list is then furnished of the leaders of numbers of the captives who returned under Zerubbabel. Ezra says, that the whole number amounted to 42,360, but the separate numbers which he mentions are only 29,518 persons; a discrepancy which, perhaps, may be sufficiently accounted for by supposing that he omits some individuals who are viewed collectively, as those of the Ten Tribes, or those who had lost their register. It is not unlikely, moreover, that the text has, in some instances, been corrupted. This list in question evinces the great diminution which the Jewish nation had suffered by war and captivity; so that the Jewish writers persist in affirming, that it was only the dregs of the people that returned. The narration proceeds to notice the erection of a temporary altar and service, and the laying of the foundation of their holy Temple; and the lamentations of those who recollected the magnificence of Solomon's Temple are forcibly depicted; also the opposition of the Samaritans and others, whose proffered services were refused, the final completion and dedication of the Temple, A. M. 3489, and the celebration of the Passover.

A passage found in Justin Martyr.

Justin Martyr, in his Dialogue with Trypho, distinctly asserts that the ancient Hebrew copies contained the following passage, which the Jews expunged: "Ezra said to the people, this Passover is our Saviour and our refuge; and if you will be persuaded of it, and let it into your hearts, that we are to humble Him in a sign, and afterwards shall believe in Him, this place shall not be destroyed for ever, with the God of hosts; but if you will not believe in him, neither hearken to His preaching, ye shall be a laughing-stock to the Gentiles."

Ezra proceeds, in his seventh chapter, to relate his own return with the Jews to Jerusalem; describes the impiety of the people; his earnest supplications; their repentance, and separation from their Assyrian wives and offspring; enumerating the names of the transgressors, and even the Priests and rulers who had broken the law respecting marriage, with an impartiality which alike evinces the faithful Historian and the determined reformer.

The Book of Ezra, from the eighth verse of the fourth chapter, to the twenty-seventh verse of the seventh chapter, is written chiefly in the Chaldee dialect, which was at that period the prevalent language throughout Assyria, Babylonia, and Persia. As this part of the History contains Letters and Decrees originally produced in that language, there was an evident propriety in retaining it, because the Jews, having recently returned from captivity, were probably as much, or even more familiar with the Chaldee than with the Hebrew. Nehemiah has been supposed to intimate, by certain expressions in his eighth chapter (ch. viii. v. 2, 8), that the Law was not universally understood; the meaning of which might be, that some of them had forgotten the Hebrew language during the Captivity.

Ezra has always been held in the highest estimation by his own Countrymen, both as a Priest and as a Prophet; and many have been of opinion, that he is the same person as the Prophet Malachi of the Canon, the common appellation by which he is distinguished being his proper name, and the latter, which signifies an angel, or messenger, being assigned him, with reference to his peculiar office as the restorer of the Jewish Religion to its primitive purity. To him, both Jews and Christians, by a uniform and united tradition, have attributed the honour of collecting, arranging, and publishing the Sacred Code, which has been called the Canon of Scripture, comprising such writings as we are bound to receive as authentic and inspired. He himself is believed to have composed in addition, the greatest part, if not the whole, of the Book which passes under his name, the two Books of Chronicles, and the Book of Esther. These, together with those of Nehemiah and Malachi, were elapsed with the other Sacred writings only fifty years afterwards, when, subsequently to the suspension of the Prophetic spirit, the Books of Scripture were finally closed by Simon the Just and the great Synagogue.

This subject has often been discussed, and the importance of it being abundantly obvious, the present section appears the proper place to enter a little further into the consideration of it. We may therefore state that some of the Christian Fathers have strenuously maintained that the Scriptures were entirely lost during the Babylonish Captivity, and that Ezra consequently re-wrote them by an express revelation. Such were the sentiments of Irenaeus, Tertullian, Clemens Alexandrianus, and Basil. But this is grossly fabulous, and was clearly derived from the fourteenth chapter of the second apocryphal Book of Esdras, a composition which has been falsely imputed to Ezra. It is moreover dangerous, since he who is thus affirmed to have restored them, might be much sooner suspected of forgery than a host of independent writers. It is certain that King Josiah and Hilkiah caused copies to be taken of the Law, which they found in the Temple, in the Schools of the Prophets, or in other places. Hence, though copies of the Law had become excessively scarce, the people of God were then favoured with the opportunity of obtaining them for their use. Although the original of the Law was burned at the destruction of the Temple, within a few years, there must have been many copies still remaining in private hands, from the preceding circulation of them. We are certain that Daniel possessed a copy in Babylon, because he has given a quotation from the Law, and refers to the Prophecies of Jeremiah, which, had he never seen them, must of course have been impossible. "In the first year of his reign, I Daniel understood by Books the number of the years whereof the word of the Lord came to Jeremiah the Prophet, that he would accomplish seventy years in the desolations of Jerusalem. Yes, all Israel have transgressed thy law, even by departing, that they might not obey thy voice; therefore the curse is poured upon us, and the oath that is written in the Law of Moses, the servant of God, because we have sinned against him. As it is written in the Law of Moses, all this evil is come upon us: yet made we not our prayer before the Lord our God, that we might turn from our iniquities, and understand thy truth." Daniel ix. 2, 11, 13.

Ezra's labours on the Canon.

Opinions of the Fathers respecting it.

Biography. The existence of the Sacred Code is further obvious, from the expression in the eighteenth verse of the sixth chapter of *Ezra*, where it is stated, that the Priests and Levites were settled in their office, according as it is written in the *Book of Moses*; and in the eighth chapter of *Nehemiah*, at the first verse, the people called upon *Ezra to bring the Book of the laws of Moses, which the Lord had commanded to Israel*; expressions which sufficiently indicate their being extant at the time. In addition to these citations, let it be recollected, that the Jews have always been notorious for their extreme jealousy upon the subject of their inspired writings; never admitting as sacred, till after the most scrupulous and rigid examination, a book, a sentence, or a line: to imagine, therefore, that any Priest, as *Ezra*, could, by his single authority and influence, palm upon the nation as divine, or as the ancient and long-written Law, what was simply his own invention, or, to say the best, his own recollection, or even the fruit of his direct inspiration, without our hearing more of such an important claim; or to say that such a person, so naturally qualified to write in the various modes of History, Poetry, and Prophecy, and occupying so important a station in the Jewish Church, yet could at the same moment be so morally disqualified as actually to impose fabrications as facts, attaching other and ancient names to his own,—that is, that he could produce the compositions of a great and good, and even inspired man, through a bad one,—each, or any of these, were too manifestly absurd to be a tenable position.

Actual task of Ezra.

The question, therefore, is, what did *Ezra* actually accomplish? and the reply is, as we have before intimated, he collected, arranged, and published the Books which constituted the Sacred Code. By comparing together the different copies which he would be able to obtain from both private and public repositories, upon his return from Jerusalem, he would detect the discrepancies which had arisen from the ignorance or carelessness of transcribers, and, disposing the several Books in their proper order, he would issue a correct edition up to the Age to which he lived. It would naturally become a part of the labour which, under the influence of a divine inspiration, he accomplished, to exchange certain obsolete phrases for such as were in current use; and, in a few necessary cases, to furnish some additions to the original text, either to elucidate or complete the History, and finally to substitute the Chaldee letters for the Hebrew.

That *Ezra* was the principal agent in thus settling the Scripture Canon (for *Nehemiah* and *Malachi*, if the latter were another person, may be supposed to have rendered him considerable assistance), we have not only the concurrent testimony of the ancient Jews and the earliest Christians, but the corroborating consideration that had he not been able to obtain copies, he could not have executed the commission of the Persian King, as recorded in the *Book of Ezra*, ch. vii. 25, 26,—“And thou, *Ezra*, after the wisdom of thy God that is in thine hand, set Magistrates and Judges, which may judge all the people that are beyond the river, all such as know the laws of thy God; and teach ye them that know them not. And whosoever will not do the Law of thy God, and the Law of the King, let judgment be executed speedily upon him, whether it be unto death, or unto banishment, or to confiscation of goods, or to imprisonment.”

With regard to the vowel-points now found in our VOL. IX.

Hebrew Bibles (and this question is one of considerable interest in Hebrew literature), whether they were the invention of *Ezra* or of some more recent Jew, has been very much debated among learned men.

The following are some of the principal arguments adopted by those learned persons who maintain that the Hebrew vowel-points are of equal authority with the sacred text; *Ezra*, as they believe, having introduced them with a view of determining the genuine sense. With whatever facility the Hebrew language might have been understood previously to the Babylonish Captivity, when it became, in a manner, a dead language, after that period, no precision could attend the reading of it without the vowel-points, but these insertions at once render the word definite, and the sense unambiguous. Hence it is, at least, highly probable, if not certain, that they existed in *Ezra's* time, and were constantly used afterwards. The Masorites of Tiberias were not likely to be the inventors of Hebrew punctuation as some have alleged, because at that period (five hundred years after Christ) all the Jewish Schools were suppressed in Judea, and there was not a sufficient remnant among them of literary capacity to accomplish such an undertaking. There are, moreover, two Works, called *Bahir* and *Zohar*, written, the one just previously to the time of Christ, and the other a short time afterwards, in which several references are made to the vowel-points. And the supposition that they are not of equal authority with the sacred text, is calculated directly to diminish its authority, since every one will be left at liberty to bend the language of Scripture to his own purpose or prepossessions. The advocates of the opposite opinion—or, that the points are of later origin than the time of *Ezra*—say, that the Jews never have made use of copies of the Scripture in their Synagogues which were written with the points, assigning this reason, that when the public reading of the Scriptures was introduced at the constituting of the Canon by *Ezra*, there were no vowel-points in existence. By a comparison of the present pointed Hebrew Bibles with the Septuagint, the Chaldee paraphrases, or the Latin version of *Jerome*, it will be seen that the latter have a different reading of the text from what the Hebrew punctuation requires; proving that the points were not attached to the text in their time, or were little, if at all, regarded. Not a syllable occurs in the writings of the most ancient Jewish authors, or in those of the ancient Christians, for a long period after the commencement of the Christian era, respecting the points in question; although there are various places where the subject might naturally have been expected to be introduced. Hence they affirm, the books of *Bahir* and *Zohar*, before alluded to, are by no means so ancient as many have contended; especially since no mention is made of them for more than a thousand years after they are said to have been written, a circumstance which is, at least, calculated to excite the suspicion of a fictitious date having been imputed to them, to subvert some fraudulent design. The Masorites of Tiberias were men of learning, and long known in Judea; for *Jerome* states, that he made use of them, and whatever difficulty may occur in reading without points, it is to be considered that the Samaritans read the Hebrew text to this day in the Samaritan character without points; and they cannot be supposed to understand Hebrew better than the Jews. With regard to the difficulty of obtaining a consistent, or genuine sense to the words, without a guidance of a fixed

punctuation, no language whatever is devoid of ambiguities, and the general drift of the discourse will, if not in all cases unequivocally, yet in the far greater proportion, determine the meaning; and after all, the strictest punctuation cannot preclude the errors arising from careless transcription, and other inevitable sources of mistake.

It may still be said of this controversy, *sub judice lit est*—although, perhaps, the predominant opinion of the learned is hostile to the divine authority of the vowel-points. Into whichever scale we throw our individual opinion, this is, at least may be, and probably will be, admitted on all hands, that the vowel-points must have been in use at, or immediately subsequent to, the Age of Ezra; and that consequently, from their antiquity, and from their indication of at least the sense in which the ancient Jews understood the oracles of inspiration, they have a considerable claim upon our notice. As a human invention, they may be deemed ingenious and useful, however they may appear to be discarded as authoritative by the omission of their use in the Synagogue worship. It has been justly said, "When every child learned the Hebrew Tongue from his cradle, it was no hard matter for those, who thus understood it by rote, to learn to read it by the letters only, without the vowels; but when it became a dead language, the case was altered (Prideaux's *Connection*, anno 446); for then, instead of understanding it first in order to read it, they were first to read it in order to understand it; and therefore, having not the previous knowledge of the language to direct them herein, they must necessarily have had some other helps, in order to know with what vowel each syllable was to be pronounced; and to give them this help, the vowel-points seem certainly to have been invented; not therefore the time when this invention cannot be placed later than the time when it became necessary, i.e. when the Hebrew became a dead language, and so was acquirable no other way than by study and instruction.

"From this necessity of instruction, and probably not long after Ezra's edition of the Holy Scripture, there sprung up a set of men among the Jews, whose profession it was to write out copies of the Hebrew text, and to preserve and teach the true reading of it. What they did of this kind is called by the Jews the *masorah*, i.e. the *tradition*; because they pretend to have the true reading (as the Talmudists pretend to have the true interpretation) of the Scriptures handed down to them from generation to generation. However, as their whole business was to study the true reading of the Hebrew text, to preserve it from being corrupted, and to teach it to others, it is highly probable that they were the first inventors of vowel-points, because the whole use of these points was to be subservient to this purpose.

"But though these points might be invented by the Hebrew Grammarians, whom we call Masorites, much earlier than some will allow, yet, from their late appearance in the world, it seems very probable, that as at first they might invent them only for their private use, so for some time they might reserve them to themselves, and teach them only to their scholars. For the Jews, we must know, had anciently two sorts of Schools, those of the Masorites and those of the Rabbins. The former taught only the Hebrew language, and to read the Scriptures in it; but the others taught their pupils to understand the word of God, and all the interpretations of it. These were the great Doctors of Divinity among them,

to whom the Masorites were as much inferior as the Teachers of Grammar-schools among us are to the Professors of Divinity in our Universities.

"As long, therefore, as these vowel-points went no higher than the Schools of the Masorites, they were not much regarded among their learned men; and this is the reason why we find no mention made of them either in the Talmud or in the writings of some ancient Fathers, from whom it might have been expected. But after the publication of the Talmud, the Jewish Doctors thought it advisable, in order to preserve the right reading of the text (as the Mishna and Gemara were supposed to preserve the right interpretation), to take this punctuation of the Masorites into their Divinity Schools; and having reviewed and corrected it with great care, they added it to the text, and so gave it all the venerable aspect that it now bears.

"But though these vowel-points were added to the text by such persons as understood the language perfectly, and having since undergone the review and correction of many Ages, may be justly accounted a work as complete in its kind as can be done by human art; yet, since it was only done by human art, it is no authentic part of the Scriptures: and therefore, these points are not so unalterably fixed to the text, but that a change may be made in them, when the nature of the context, the analogy of Grammar, or the style of the language, shall give a sufficient reason for it, especially considering, that notwithstanding their exact fixation at first, they are still liable to the mistakes of transcribers and printers, and, by reason of their number, the smallness of their figures, and their position under the letters, are more liable to suffer by them than any other sort of writing whatever.

"So that, upon the whole, it appears, that though these vowel-points were not affixed to the Hebrew text by Ezra himself, yet were they of early date after his edition of the Holy Scriptures: that though they did not immediately appear to the world, nor are taken notice of by any writer of repute for many Ages after; yet this was occasioned by their being confined to the School of the Masorites, who, to all probability, were the first inventors of them: and though, being of human invention only, they cannot be supposed of equal authority with the text itself; yet are they of excellent use for the preservation of its right reading, and for the prevention of innumerable perplexities and ambiguities that would otherwise be incident to it."

The Canonical Scriptures were anciently divided into three parts, comprising the *Law*, the *Prophets*, and the *Hagiographa*. The last division comprehends the Psalms, the Proverbs, the Book of Ecclesiastes, and the Song of Solomon.

According to this arrangement, the Old Testament consisted of twenty-two Books, corresponding to the letters of the alphabet, to which were added Ezra and Nehemiah.

The five Books of the Law are divided by the Jews into fifty-four sections; and they believe that this division was conformable to the divine intimation to Moses upon Mount Sinai. It is, however, with more probability, attributed to Ezra, who is also supposed to have subdivided the sections into verses called *pesukim*. The most received opinion is, that this invention was intended for the convenience of the Chaldean interpreters.

Final state
of the He-
brew Ca-
non.

Biography. To this period many have assigned the origin of the Jewish Synagogues. Ezra, after issuing an edition of the Law and the Prophets, which he had with so much pains rendered correct, appointed the Levites and other Scribes most distinguished for their acquaintance with these invaluable records, to read and expound them to the people, who were at first collected together, as at the time when Ezra read the Law, in some capacious street or opening of the city. The inconvenience of such an attendance at all seasons of the year, naturally suggested the propriety of erecting temporary sheds or tabernacles, and, at length, more substantial edifices for public service. In the midst of them was placed a desk or pulpit, for the purpose of reading and expounding, in imitation of that which Ezra is stated to have used; and, at the upper end, or opposite the door, was a chest containing the Book of the Law, wrapped in an embroidered cloth. Probable, however, in this statement may be considered, some have thought it not unlikely that the Jewish Synagogues existed previously to the Captivity, while others, particularly Basnage (ib. v. ch. 4), have referred them to the more recent date of the Asmonæan dominion.

Nehemiah. NEHEMIAH, who succeeded Ezra in the administration, in the twentieth year of the reign of Artaxerxes, was the son of Hachabiah, and a person of great excellence and exalted piety. Babylon is represented as the place of his birth, and tradition assigns his descent to the Tribe of Judah. It is believed, and apparently with good reason, that he was not the same person who is mentioned by Ezra as having returned with Zerubbabel from the Babylonish Captivity; since no less than ninety-two years intervened between the first year of Cyrus and the twelfth of Artaxerxes Longimanus, and consequently, if they were the same persons, Nehemiah must have been, at least, one hundred years old, a supposition wholly incompatible with his long journey from Shushan to Jerusalem, and with his great exertions and activity during a government of twelve years. His admirable qualities and distinguished family recommended him to the office of Cup-bearer to the King, which was not only a situation of great honour, but of extraordinary emolument; for it appears that Nehemiah acquired so much wealth as to be enabled to live in his government in expensive splendour by means of his own private purse. The *tirshatha* (Ezra ii. 63. and Neh. vii. 65.) was the general term, in the Persian and Chaldean languages, appropriated to the Royal Deputies and Governors.

The office of Cup-bearer gave Nehemiah an intimate and daily access to the King, which afforded the opportunity of conciliating his favour, and of course of obtaining any purpose which he might have at heart. That he would not improperly, or for any unjustifiable ends, avail himself of this privilege, is plainly deducible from his character; and on the other hand it cannot be questioned that there is a legitimate use of station and of influence which does not derogate from the dignity of real worth, and which, in certain cases, may essentially conduce to the welfare of individuals or the happiness of mankind. Such was precisely the fact in the present instance. When it became his turn to wait, in the regular discharge of his office, the King noticed a very considerable alteration in his general appearance; he remarked that his countenance seemed to be remarkably beclouded, as if with anxious care, and that all his habitual cheerfulness had suddenly forsaken him. This led to those inquiries

through which the King learned the deplorable condition of Nehemiah's native Country, and especially of its metropolis, which affected him with the deepest grief. He took occasion, therefore, to request the Royal permission to revisit the land of his ancestors, and to undertake the rebuilding of the city. This request, seconded by the intercession of the Queen, was favourably accepted, and he received a commission, as Governor of the Province of Judea, to repair the walls of the place, and restore it to the same condition in which it was previously to the Babylonish incursion. Royal Letters were, at the same time, despatched to the Governors beyond the Euphrates to afford every requisite assistance. Asaph, the keeper of the forests, was to furnish whatever timber might be found necessary to accomplish the work, and a guard of horse was appointed to accompany him on his journey.

Having reached the place of his destination, Nehemiah continued three days among the people without communicating to them any information with regard to the design of his visit: and it was not until the fourth day, after going privately round the walls in the preceding night, that he summoned the principal people together, produced his commission, and solicited their concurrence in the laborious undertaking. To this proposal they instantly gave a unanimous and most joyful assent. The plan adopted for the execution of the project was to divide the people into companies, assigning to each his proper district and portion of labour, while Nehemiah himself superintended the whole.

Great and good works are seldom suffered to advance far without opposition. A misunderstanding of their design, or an envy of the parties engaged in them, often sets a thousand engines in motion to obstruct or counteract the proceedings. Such is human nature, and such will ever be the sad development of its deformity. Sanballat, a Monbith officer, and Tobiah, an Ammonite, both equally inimical to the prosperity of the Jews, soon began to use the frequent and ready-made weapons of hostility, scoffing and ridicule. As the persons who had undertaken the business, however, were not acting without being duly authorized, and were out to be easily shaken in their purpose or counteracted in their plan, these wretched confederates sent to some of the neighbouring nations to induce them to unite in attempting the demolition of the works and the destruction of the people engaged in their execution. But the Governor, having discovered the plot, took care to watch their motions, and to form a proper guard to defend the workmen, ordering each one for himself to provide arms in case of attack. He moreover poured out earnest supplications to Heaven, the necessity for which he did not suppose was superseded even by the best preparations for defence, and urged the people to proceed by every encouraging address and argument.

These measures completely overawed their enemies, who now tried other expedients, and pretending to adjust their differences amicably, several times invited Nehemiah to a conference in one of the villages in the plain of Ono, in the Tribe of Benjamin; but he, aware, no doubt, of their treacherous intentions, absolutely declined the interview. Sanballat next resorted to the stratagem of sending a Letter with the following statement: "It is reported among the Heathen, and Gashmu saith it, that thou and the Jews think to rebel: for which cause thou buldest the wall, that thou mayest be their King, according to these words. And thou hast also appointed

Biography.

Prophets to preach of thee at Jerusalem, saying, There is a King in Judah: and now shall it be reported to the King, according to these words. Come now therefore, and let us take counsel together." (Nehem. vi. 6, 7) To these allegations a reply was sent, consisting of a manly and positive denial, and charging Sanballat as their contriver. He had now only one last resource, the bribing to his interest Shemshai, the son of Delaiah the Priest, a friend of his enemy. Nehemiah, going one day to the house of Shemshai, he pretended to prophecy that his enemies would that night make an attempt upon his life, and advised him to seek security by accompanying him into the inner part of the Temple, or Sanctuary, which was, indeed, a place of great safety, being guarded by the Levites; and, on account of its holiness, could not be hostilely entertained. The design of this was twofold—to dishearten the people, by convincing them of their Governor's apprehensions; and to facilitate the capture and destruction of the place, by depriving them of their general. It also had a tendency to give countenance to the report of his departure from his allegiance to the King, since he would thus have fled when the report was put in circulation; and, besides, he might, by this means, have been secured by some priestly confederates, till the season of action was passed. The contrivance, however, did not avail, since Nehemiah refused the advice that was given him, on the ground of its being inconsistent with Honour and Religion. He, moreover, soon perceived the true origin of this insidious suggestion.

The wall's
finished.

In the space of fifty-two days the whole work was completed, such was the extraordinary zeal of the Governor, and such the indefatigable industry of the people. A dedication of the walls and gates of Jerusalem was then solemnly observed, to appropriate the whole to the service of God, and to perpetuate the remembrance of the divine goodness, as well as to serve the purpose of a public celebration. Sacrifices and offerings were presented in the Temple, and the great Feast of Tabernacles was religiously observed. Nehemiah's conclusion and testimony at this happy termination of his labours are interesting. "And it came to pass," says he, "that when all our enemies heard thereof, and all the Heathen, that were about us saw these things, they were much cast down in their own eyes: for they perceived that this work was wrought of our God."

Nehemiah
returns to
Persia.

With the view, probably, of returning to Shushan, to inform the King of the present aspect of his affairs in Judæa, and perhaps to counteract the reports which his inveterate enemies might have put in circulation to a wide extent, Nehemiah appointed his brother Hanani (who had proved his zeal by going from Jerusalem to Shushan, first to communicate information of the state of his Country) to the charge of the gates; and Hananiah, another person of unquestionable principle, to the direction of his house or palace; and to both in conjunction, the general superintendence of the affairs of the city. He afterwards arranged for the chief men of the State to fix their abodes at Jerusalem, on account of the present diminished condition of the population, which required to be recruited, while the remainder were to eat lots, by which a tenth part of all the people of Judah and Benjamin were obliged to reside in the city. These were the two Tribes that anciently possessed Jerusalem, which was situated partly in one Tribe, and partly in the other; but the precise divisions have never been accurately ascertained.

Immediately before Nehemiah's return to Shushan, Ezra produced the Sacred Code, which he had been zealously engaged in completing, and, assisted by thirteen other Priests, publicly read and expounded it to the assembled multitude from a raised platform or pulpit, which was erected for the purpose of rendering him the more conspicuous and the more easily heard.* To this circumstance we have already adverted in our preceding account of this celebrated Scribe.

Notwithstanding the precautions taken by Nehemiah, especially in the appointment of the solemn reading of the Law, and the public renewal of their attachment to it, he had not left the Capital long before the people became exceedingly corrupt, which may be chiefly attributed to Eliashib, the High-priest, who was allied by marriage to Tobiah, one of the great enemies of the Jews, but who had, in consequence of this connection, obtained apartments in the Temple. Upon his return, therefore, Nehemiah resolved to correct this shameful abuse; but so much had Tobiah insinuated himself into the affections of the people, that he was compelled to proceed most cautiously. He accordingly caused the Book of the Law to be read, and when a passage in Deuteronomy was recited, which states that an Ammonite or Moabite should not come into the congregation of the Lord, even to the tenth generation for ever (Deut. xiii. 8.), they were instantly convinced of their error, and, under the Governor's directions, who availed himself of the favourable moment, Tobiah's furniture was cast out of the sacred chambers, and they were again purified and restored to their legitimate use. Nehemiah zealously proceeded with the work of reformation, restoring to its holy design the Sabbath, which had been profaned by secular employments, dissolving irregular associations in marriage which had been unlawfully formed with strangers, and re-organizing other parts of the State which had fallen into decay and corruption. This last act of salutary government took place about the fifteenth year of the reign of Darius.

It is not known how many years Nehemiah lived after his return from Persia; it seems probable that he attained a great age, and was the last Governor of the Province, delegated by the Persian Kings, who, it is thought, afterwards left its general superintendence to the Jewish High-priest, till Alexander the Great subjugated the Empire. Nehemiah is believed to have continued in his government till his death, notwithstanding all the revolutions in the Persian Court, which were by no means few or trifling; for Xerxes his son succeeded Artaxerxes, or the Artaxerxes of Profane History, and was followed by Sogdianus, who slew him, after he had reigned only forty-five days. Sogdianus was, in his turn, put to a violent death, after six months and fifteen days, by his successor Ochus; who seized him by a stratagem, and cast him headlong into ashes. Ochus assumed the name of Darius, and after murdering his brother Arsites, and suppressing several insurrections, ruled over Persia nineteen years, during which period Nehemiah was living, and whether he or his Prince paid the debt of nature first is uncertain. (Vide Prideaux's Connection, en. 425.) It will be useful to

* "We are not to think," says Patrick, in his Commentary on the Book of Nehemiah, "that this pulpit was made in the fashion of ours, which will hold no more than ten persons, for (as we may observe by the very next words) it was made large and long enough to contain fourteen people at once."

MALACHI, AND THE LATTER MINOR PROPHETS.

FLOURISHED FROM ABOUT A. M. 3416. B. C. 568. TO A. M. 3607, B. C. 597.

Biography.

To this latter period of History belongs the Prophet MALACHI, who maintains the singular and interesting position of the last individual of the Jewish Church to whom the Prophetic inspiration was communicated. Justin Martyr, indeed, has maintained that this inspiration did not cease till the Christian era, but this idea is wholly unsupported by evidence. We have before alluded to the notion that the name assigned to this Prophet was merely a term descriptive of the character of Ezra, as the messenger of the Lord, commissioned to execute an important business on behalf of his nation, and that, consequently, these supposed different persons ought to be regarded as one and the same individual. The contrary, however, is by far more probable; for, in addition to the general consideration that the names of the Prophets were frequently given to designate their office, his Writings have always held a distinct situation in the Hebrew Canon, and there is no sufficient reason for displacing them.

Previously, however, to the mention of further particulars of Malachi, we must not wholly omit three others, who have been classified under the general appellation of *Minor Prophets*, and who stand in immediate connection. We have already spoken, in the proper place, of JOSHUA, AMOS, HOSEA, MICAH, NAHUM, JOEL, ZEPHANIAH, and HABAKKUK. (Vid. HISTORY, ch. iv.) It now remains to furnish a brief notice of those who succeed in chronological order; premising, what should not be forgotten with regard to the common, and perhaps improper epithet applied to these illustrious men, that they are not called *Minor Prophets* with reference to any inferiority in their Writings, either in respect of the composition, the diction, or the subjects of their Prophecies, but solely on account of their small extent in point of quantity. In the Hebrew Canon their Writings are comprised in a single volume, and were, probably, collected into that form by EZRA, or some other member of the Great Synagogue.

ORADIAH is to be placed next in chronological order to HABAKKUK. His name signifies "servant of the Lord;" but he himself has furnished us with no account of his origin, nor of the period when he was honoured with revelations from heaven, nor, indeed, with a single particular of his own life. Certain traditionary accounts represent him as a native of Bethsamar, and of the Tribe of Ephraim. It is also said that he died in Samaria; but neither the mode of his life nor death are, in fact, ascertained with the least degree of certainty. The most probable opinions with regard to the time of his Prophecies, refer them to a little after the destruction of Jerusalem by Nebuchadnezzar. He represents the cruel character of the Edomites, and declares that, whatever might be their fancied security, they should certainly be "cut off;" but he assures the Jews of their future restoration, and of the establishment of the spiritual Kingdom of God. Short as the book is, there

is, nevertheless, great beauty in the composition, and great importance in the events to which it refers.

The next in succession is HAGGAI, said to have been of sacerdotal extraction, and the first of the three Prophets who flourished after the Jews returned from their Captivity. He was raised up for the evident purpose of stimulating Zerubbabel, and Josiah the High-priest, to resume the building of the Temple, after the interruption of fourteen years, occasioned chiefly by the intrigues of the Samaritans. His Work commences with a remonstrance with the people for being so solicitous about the completion and adornment of their own houses, and neglectful of the house of God, declaring that the scarcity they experienced was to be attributed to this cause. The glory of the latter Temple, he affirms, should very much surpass that of the former—not, indeed, in external splendour, but in spiritual and inward magnificence; for, in the latter, the incarnate Messiah was to supply the place of the symbolical and prefigurative Shekinah. The people are then appealed to avert upon the subject of their offences and transgressions, and consoled by the promise of future blessings; after which the Prophet proceeds to represent the commotions and revolutions that should precede the great advent of the Messiah typified by Zerubbabel, and which seem to have received their accomplishment in the state of the Babylonian affairs under Darius, the Macedonian wars, those between the successors of Alexander, or those which followed the death of Caesar in the Roman Empire. Bishop Lowth characterises Haggai as "the most obscure of the Prophetic writers." He has some fine poetical passages, though, in general, his Work may be considered as a prose composition. He is said, by Epiphanius, to have been buried among the Priests at Jerusalem.

ZECHARIAH was the son of Berechiah, but no certain information can be obtained of the precise period or place of his birth. It is probable that he was of the sacerdotal race, and consecrated to the priestly office. He was evidently contemporary with Haggai, and was, like him, sent to urge the Jews to proceed with the building of the Temple; and to which admonitions and appeals they paid attention. He continued to prophesy more than two years, and probably lived to witness the completion, in about six years, of the undertaking. Our Saviour describes the Jews as being guilty of the sin of Zechariah, the son of Berechiah, whom they slew between the Temple and the altar; but, as it is believed that the Prophet died in peace, it is supposed that Zechariah, the son of Jehoids, is intended, who was slain in the court of the Lord's house, at the command of Joash. (2 Chron. xxiv. 21.) If this be the case, the copyists might have inserted Berechiah from a mistaken supposition of the reference being to the Prophet; and it is observable that in the parallel passage of Luke, Berechiah is not mentioned. (Mat. xxiii. 35. Luke xi. 5.)

Biography. Jerome, moreover, states, that in a manuscript copy of the Gospel of Matthew, used by the Nazarenes, which he had permission to copy, it was written the son of Jehoida. The Prophecies of Zechariah contain several splendid passages; and he was so remarkable for several excellences, as to have obtained the characteristic epitaph of the Sun among the lesser Prophets. His Poetry is chiefly to be found towards the latter part of his volume, the rest being in Prose. The whole is constructed in the most beautiful manner, and bears a striking resemblance to the style of Jeremiah; so much so, indeed, that the Jews were accustomed to say that the spirit of Jeremiah had passed into him. He foretold the siege of Babylon by Darius the son of Hystaspes; and the Jews are believed to have taken warning by his premonitions, to withdraw into a place of security. The coming of Christ, also, is represented by him in very express terms, and the lowliness of His condition particularly specified.—“Rejoice greatly, O daughter of Zion; shout, O daughter of Jerusalem: behold thy King cometh unto thee; He is just and having salvation; lowly and riding upon an ass, and upon a colt the foal of an ass.” Nor must we here omit to notice, that as the 13th verse of the eleventh chapter of this Prophet, relating to some of the circumstances of our Saviour’s crucifixion, is quoted by St. Matthew as spoken by Jeremiah, many learned men have assigned this and the two preceding chapters to the latter Prophet, and suppose them to have been accidentally inserted amongst those of Zechariah. Others have also regarded the twelfth, thirteenth, and fourteenth chapters of Zechariah as belonging to some earlier Prophet. For the latter conjecture there appears to be no foundation, and the inspiration of these portions of the Canon is placed beyond a question, by the distinct quotations of them in the New Testament. The former incongruity has been thought to be removed by supposing the Evangelist to allude to some traditional Prophecy of Jeremiah, and more probably by the supposed mistake of some copyist of the Gospel, who transcribed the name of Jeremiah for that of Zechariah.*

MALACHI is represented by the author of the *Lives of the Prophets*, under the name of Epiphanius Dorotheus, and by the *Chronicon Alexandrinum* to have been of the Tribe of Zebulun, and a native of Sephas, where it is reported he was buried, having died at an early age; but not before he had rendered some effective assistance to the Great Synagogue, who were engaged in restoring order and prosperity to their Country. As the light of Prophecy terminated with his ministry, it may be considered as coinciding with the accomplishment of the first seven weeks of the Prophecy of Daniel, according to Pridenax, (A. M. 3395,) but, as others suppose, a few years later. That he prophesied after Haggai and Zechariah is certain, for the worship of the Temple, now restored, was regularly conducted, and his ministry probably succeeded that of Nehemiah. His style is described by Lowth as of the middle kind, seeming to indicate that the Hebrew Poetry, from the time of the Babylonian Captivity, was in a declining state, and being

poor its prime and vigour, fast verging towards the debility of age.

After beginning his Prophetic testimony with a representation of the extraordinary affection of God for the people whom he had chosen, in preference to all other nations, and to whom he had communicated the blessings of his peculiar covenant, Malachi charges them, in the name of heaven, with base ingratitude, flagrant disobedience, and impious profanation. Both Priests and people are described as infected with a similar spirit of transgression, and are threatened with the most exemplary punishment. It is obvious that the Prophet refers to offences of a similar kind with those which had excited the indignation of Nehemiah, which corroborates the supposition of the coincidence or near succession of his ministry to the period of that illustrious Governor. He represents the Priests as mercenary and profane, and the people as multiplying divorces and intermarriages with idolaters; and, after denouncing the wrath of God, and declaring His weariness at their iniquities, and animating His intention to bestow His mercies upon the Heathen, where His name should be highly revered and celebrated, he passes on to announce the sudden manifestation of the Lord in His Temple, after preparing His way by “the Messenger of the Covenant.” Alluding to the operations of a refiner’s fire and of fuller’s soap, he states that, at His appearance, he would purify the sons of Levi, that the offerings they were accustomed to present should no longer be corrupt, but acceptable, as done “in righteousness,” and should thus partake of the spiritual character of those of their distinguished ancestors in “the days of old,” and be equally “pleasant unto the Lord.” In the same spirit, and with similar methods, he declares his resolution to testify against all their transgressions, and utterly to exterminate them; appealing, as a proof of the impossibility of allowing these bad practices to proceed to any greater extent without a proper chastisement, to the unchangeableness of his nature, as the God of Holiness. This is followed by an exhortation to repentance, accompanied with a remonstrance with them for those strange and rebellious sentiments they had cherished, and even unblushingly expressed, and promises of abundant pardon and blessing.

The conclusion of this volume of Prophecy points to the advent of the great Messiah, under the magnificent image of the “Sun of Righteousness, arising with healing in his wings,” till which period they were directed to keep the Law of Moses with its corresponding ceremonies and services, which would still be adapted to the obscure period of the prefigurative dispensation up to the era of the breaking of the evangelical morning upon the long-beighted world. Elijah is also named as the precursor of the new economy, whose office it would be to reform the principles and enlighten the minds of the people, and thus to avert the impending and merited judgments of the Almighty. Under the name of the ancient and self-mortifying prophet was couched a prediction of John the Baptist, our Saviour’s illustrious precursor, of whom it is expressly recorded, “This (John) is Elias, which was for to come.” (Mat. xi. 14.)

Having thus reached a remarkable period when the

General re-
fections on
the Prophe-
tic testi-
mony.

stream of inspired communications suddenly ceased to flow, and a season of four hundred years, unbrightened by Prophecy illumination, followed, it may not be improper, before dismissing the subject, to offer a few cursory observations on that singular order of men whose biography has so long engaged our attention.

Calculating from Moses to Malachi, the Prophets occupied a period of more than a thousand years, continually directing the Jewish nation to the covenant of God and the grand development of its blessings in the future but hastening era of our Saviour's manifestation. It was their invariable reference to this great circumstance of human History that diffused a splendour over those of their minor predictions which contained an allusion to it, and impressed an importance and a glory upon each Prophetic scroll as it opened in succession before the eyes of Israel. Their appointment to the office they assumed was evinced in the miraculous attestations which they were enabled to give to their testimony, of which several instances are recorded in the Sacred History, and in the instant completion of many predictions which are also the subjects of History. We have still further evidence in the daily fulfilment of their Prophecies in the latter times, and, in addition to these considerations, their high claims to notice were sustained by an unimpeachable integrity, as well as by the very nature and tendency of their communications. The Jews held this as an axiom, that the spirit of Prophecy never rested upon any but a wise and holy man, one whose passions were allayed; and it must be seen, that, during the long and glorious succession to which we have alluded, the name of no Prophet occurs who is not entitled to the highest respect and reverence on account of his personal excellences. The zeal which they displayed was of no ordinary kind, both as it regards its intensity and its purity. It does not appear to be blended with the unhallowed fire of human passions, however fiercely it rages against the impieties of mankind, but equally delights in expressing its condescending benevolence and inviting forbearance of the Most High, as in representing His displeasure. Their mode of life was generally retired and austere when not immediately occupied in the duties of their office; these required their frequent attendance at Courts and camps, and in the public assemblies of the people. In their common deportment they resembled the Great Teacher whom they were inspired to predict, and of whom they have been considered as, in some degree, the living prototypes.

"In general," to quote some recent remarks on this subject, "the Prophets chose to live in the plainest manner; they built their houses with their own hands, and wore a coarseness of a dark brown colour. Instead of availing themselves of the opportunities with which they were often presented, of acquiring riches, or of frequenting the luxurious tables of the great, they sometimes refused the most valuable presents. Of this we have a remarkable specimen, when Elisha declined the gifts of Naaman, and inflicted a dreadful punishment upon Gehazi for his contrivance to secure

them. If the mean attire and mode of living, which distinguished the ancient Prophets, cannot be viewed in the light of an authoritative example to future Ages, and if something may be reasonably conceded to the practices of different nations, this may be received as an axiom, that those whom Providence has appointed to the sacred office ought to avoid all unnecessary show in their appearance, and all ambitious aspiring after the vain splendours of life; for 'the fashion of this world passeth away.' On the other hand, it is the duty (the allusion is to the story of the Shunammite) and should be considered as the principle of pious individuals, to whom Providence has dispensed riches or competence, to minister to the necessities of the poor servants of God; who, while devoting their lives to promote their spiritual comfort and that of their families, have neither time nor means to rescue themselves from a state of dependence and poverty."^a

The Prophets were accustomed to deliver their predictions aloud in some place of public resort, or otherwise affixed them in the gates of the Temple. Sometimes they assumed a clothing of sackcloth, particularly to denote their humiliation and sorrow for the disobedience of the people, or on account of any judgments they were taught to anticipate; and in other cases they employed various external signs of distress or degradation—as when Isaiah walked naked, or but partially clothed, and barefoot. Many writers, however, maintain that these things merely passed in vision to the Prophets, and were not real transactions; and to this opinion some considerable probability at least may be attached.

With regard to the peculiar nature of Prophetic inspiration, it would be unsuitable here to enter upon those controversies which have arisen from this subject. The Prophet's understanding seems in general to have been influenced, rather than his fancy or passions, though, in some instances, doubtless, all were engaged. That he himself was sensible of a divine control is obvious, and fully capable of appreciating its reality, by the distinctness and grandeur of the impressions; but what might have been the peculiar mode of its communication cannot always be ascertained: probably sometimes by one method, sometimes by another—in dreams, and visions, and voices, and angelic messengers, and secret, but infallible impulses. By these means they were enabled to record accurately what they had seen, what was past, or what was yet to come. Generally, it is probable, the sense, or matter, rather than the precise words was conveyed, a supposition which is justified by noticing that our Saviour wholly quotes the Prophecies in this manner, and not with verbal accuracy; but, in many cases of express supernatural communication, the very words themselves were doubtless inscribed upon the Prophet's memory, and conveyed by his pen to his page. While in no case were they permitted to err, this statement of the nature of the inspiration admits of that diversity of style which is observable in their Writings, as comporting entirely with the uniformity of Truth.

Tragedy was continually multiplying: the great virtues and great vices that exerted themselves were first portrayed and then stimulated by the true Poet, and formed the most prominent features in the moral landscape; while the lighter shades of human character, the peculiar levities, the characteristic traits of frivolity, upon which the whole structure of Comedy is so dependent, were not observed, because they had not yet been elicited by circumstances, and exist but in a more artificial state of Society. Neither Comedy nor Satire could have found originals to copy nor feelings to work upon in the early Ages of the world: the whole inhabitants of a district were divided mainly into two classes—those of the artisan and the soldier; and the simplicity and necessities of the one, and the bullying insolence of the other, were almost the only topics upon which the old Comedy could descant. There was little subdivision of labour, and no subdivisions of character; the grave professions, which have always furnished in their unworthy members the most ample scope for Satire, were unknown at this period. Cervantes might have looked in vain for the archetype of the Knight of La Mancha, or Le Sage for the original of his Sangrado; character was generic, not specific, and what might be predicated of the genus might be justly applied to the species. It is only in the higher state of polish which Society was for Ages reaching after, that we can find the diversified personages, the Proteus characters of modern Comedy; and it would be as absurd to look for the "Dramatis Personæ" of Molière and Sheridan in the Comic writings of Greece or of Rome, as to expect to find the portrait-painting of Shakspeare in the rude outline of Æschylus. Hence, and with great justice, the rude or perfect state in which the Art of Comic writing exists, has been considered by various writers as the great criterion by which the civilization or barbarism of a people may be appreciated. It was only in the elegant Court of Augustus that the kindred Art of Satire, which had been first rudely essayed by Lucilius, received its last polish from the hands of Horace; and the coarse jests and coarser language of Plautus were finally discarded for the more elegant and harmonious strains of Terence.

*At nostri pravi Plautinus et noster et
Lucilius solus, noster patrister strampus,
Ne dessem stultis, miris; in modo ego et vos
Sonus carbo nem lepide argueris dictis,
Legitimusque sonus, digna collatus, et aure.*

Hon. *Ans. Port.*

Our ancestors praised both the wit and numbers of Plautus, and admired him, I will not say foolishly, but certainly in too reasonable a manner; that is, if you and I knew the difference between rustic and elegant diction, and are skilled to discern harmony and melody of verse both by our ears and fingers.

Amongst the Athenians, too, it is evident that the improvement of Comedy kept pace with the refinement of the national manners and the delicacy of the national taste. The Old Comedy of Greece permitted the illustrious Statesmen, Generals, and public characters of the Commonwealth to be brought forward on the stage by name, and held up to ridicule, even personally, before an applauding audience; until it was deservedly superseded by what is termed the Middle Comedy, which abolished the Chorus, and compelled the Poet to substitute for any real personages or characters, in whom he attempted to satirize the vices and follies of the times, disguised or fictitious names. This

improvement paved the way, and, in fact, may be considered as the stepping-stone to the introduction of the New Comedy, under the auspices of Menander and Philemon; a form of the Attic Drama which finally introduced the Comedy of the Moderns. As it remains, indeed, in the Works of Terence, the *domidatus Menander* of Rome, it may be considered as affording the entire foundation of this branch of the Dramatic Art, with the exception of the passion of love, and so have had the same general cast of character which pervades these productions to the present day. The increasing civilization, and the consequent delicacy of manners, has happily been correcting the worst features of Comedy to a very recent period in this Country; and the obscenity of such early dramatists as Æschylus and Ælin would not be tolerated by the audiences who are capable of appreciating the chaste beauties of Cumberland and the sparkling elegance of Sheridan. In the satirical Writings of this Country, too, we may observe a similar improvement in the national feeling, corroborative of our preceding remarks. The coarse Satires of Donne and the gross ribaldry of Swift slumber on the shelves, to which they are still admitted, with the compositions of Rabelais; there to shield from dust the chaster efforts of the modern Muse; to be admired and quoted, but rarely read. The Spiritual Comedies, which were so much admired by the Italians in the infancy of their Dramatic literature, shared a similar fate at its maturity, and were universally scouted as the production of a semi-barbarous Age. On a comparison, then, between the progress and perfection of the ancient Tragedy and Comedy, respectively, it appears that the former, almost with its first efforts, reached the summit of a still unrivalled perfection, and sprang, like Pallas, from the brain of Jove, mature in infancy; while the Comic Muse languished from her birth in obscurity and deformity, and required the fostering hand of care, and of nature as well as artificial support, to attain any thing like a stately excellence.

We have already observed that Aristotle, in his Poetics, ascribes the first written Comedy to EPICARMUS. Both the Stagiste and Horace call him a Sicilian, but the exact place of his birth is disputed; some writers contend that he was a Syracusan, some that he was a native of Crastum, others of Megara, in Sicily; Diomedes the Grammarian states that he was born in the island of Cos, and, in fact, derives the word Comedy from the name of that island, a circumstance which in no way strengthens his authority. The father of Epicarmus, according to Stobæus, was named Chimaros, or, according to others, Tityrus; his mother's name was Sicida. Cleero, in his Tusculan Disputations, calls Epicarmus *oculus nec insitum hominem*, "an acute and clever man;" and Demetrius Phalereus commends him for the elegant and apposite choice of his epithets, on account of which the Greeks gave the name of "Epicarmion" to his style, making it proverbial for its beauty and purity.

Among the Epigrams of Theocritus, published by Henry Stephens in 1579, there are some verses that appear to have been inscribed to Epicarmus upon the pedestal of a brazen statue, which the Syracusans had erected to his honour. As far as this testimony goes it would settle the point of his birth, by expressly stating that he was a native of Syracuse, while it

ἄν τις τὴν ἀντιφρόν
ἔργῳ ἐκείνῳ.

The man who invented Comedy, Epicharmus.

Again:

Τὴν ἀντιφρόνῃς ἡλικίαν
τοῦ ἀντιφρόνῃς.

Which status they have erected at Syracuse in honour of their fellow-citizens.

It celebrates him, in conclusion, for the many useful maxims which he gave for the instruction of youth. Of the life of this early Comic Poet little is known, and of his Writings still less. Diogenes Laertius, in his Lives of the ancient Greek philosophers, represents him to have been a Pythagorean in his Philosophical tenets; and states that he first introduced Comedy at Syracuse during the reign of Hiero; of whom Plutarch says, that he severely fined the Poet, and doomed him to heavy manual labour, for certain obscene jests which he introduced in the hearing of his Queen. Some writers assert, that Epicharmus was a schoolmaster, and that he instructed pupils about four years before the Persian invasion, a circumstance that has been thought to be corroborated by the concluding part of the Epigram of Theocritus, to which we have before alluded. Diogenes Laertius further states, that he composed several Treatises upon Medicine and Philosophy; but of these scientific Works, as well as of his Comic productions, nothing has come down entire to modern times. According to the testimony of Horace, however, we may catch the likeness of the Sicilian Poet from the imitative sketches of Plautus.

Plautus ad exemplum Siculi praeceptorum Epicharmi.

Plautus took the Sicilian Grammarian for his model.

Hon. 2. Ep. l. 1. &

He is said, by Aristotle and Pliny, to have added two letters to the Greek alphabet, (χ and θ); and, according to Diogenes Laertius and Stobaeus, he attained to the advanced age of ninety years. Epicharmus appears to have been a liberal contributor to that branch of literature in which he led the way. Porphyry says, that Apollodorus the Grammarian made a collection of his Works in ten volumes; Suidas reckons fifty-two Plays; Lycon only thirty-five; but Hertelius and other critics have given the names of forty, with the authorities by which they are ascertained. It were useless to load our pages with these titles of tales no more; the most accurate list of them will be found in Stobaeus. We shall conclude our account of this Poet by presenting the English reader with the translation of a fragment of one of his Comedies, preserved by Stobaeus, and in the more modern collection of Hertelius. It is a retort upon the pride of ancestry from a person of obscure birth, to one who was boasting of her high descent.

Good gossip, if you love me, praise no more:
What are your pedigrees to me?
Away to those who have more need of them!
Let the degenerate wretches, if they can,
Dig up dead honour from their fathers' tombs,
And boast it for their own—Vain, empty boast!
When every common fellow that they meet,
If accident hath not cut off the scroll,
Can show a list of ancestry no long;
You call the Scythians barbarous, and despise them;

Yet Anachars was a Scythian born;
And every man of a like noble nature.
Tho' he were moulded from an Æthiops's loins,
Is nobler than your pedigree can make him.

CUMBERLAND.

OF PHORMIS AND CRATES, who are mentioned by Aristotle as the contemporaries of Epicharmus, we know scarcely any thing but their names. The former appears to have flourished in the time of Gelon, the Tyrant of Syracuse, and was in great favour at the Court of that Prince; but not a single line of his compositions remains. Of Crates we glean a few particulars from the Works of Stobaeus. He was by birth an Athenian, first an actor, and afterwards a writer of the "Old Comedy;" he is said to have performed the principal characters in the Plays of Cratinus, and was the great rival of Aristophanes' favourite actors, Callistratus and Philonides. We have the titles of twenty Comedies, and four small fragments of this author: the former are said to have been of a cheerful and facetious cast; and the author of the *Prolegomena* to Aristophanes assigns to him the merit of being the first who introduced intoxication on the Athenian stage. It is very evident that this experiment fully succeeded, for even the Tragedians exhibited characters in this situation in subsequent times. Aristotle, in his Treatise *Περὶ Παιδείας*, ascribes to Crates an important improvement in the Iambic metre of the Old Comedy, which he is said to have delivered from its former trammels and to have made more suitable to familiar dialogue: ἀφαιρέσει τὴν ἰσχυρὰν ἔξω, καθύπευθε λέγει ἢ μέθυ.—"He discarded the strict Iambic form, and constructed his plots in a plain and simple manner," sect. 11. Of the remains of this Poet we shall quote the last fragment of the four which survive, containing a short but affecting picture of old age.

These shrivell'd sinews, and this bending frame,
The workmanship of Time's strong hand proclaim;
Skill'd to choose whatever the gods create,
And make that crook'd which they fashion straight.
Hard choice for man, to do—or sin to be
That tottering, writhed, writhed thing you see:
Age then we all prefer; for age we pray,
And tread on to life's last lingering day.
Thus sinking slowly down, from worse to worse,
Find heaven's extorted boon our greatest curse.

CUMBERLAND.

CRATINUS, the son of Callimedes, an Athenian, was a Cratinus. Comic writer of Athens, who was the contemporary, although the senior, of Aristophanes. He flourished about a. c. 440. None of the entire compositions of this Poet have come down to us; and a few fragments alone remain of those Comedies which elicited the applauses of an admiring audience, and received the warm praises of Horace and Quintilian. Of the private life of Cratinus little or nothing is known; it would seem only to have been distinguished for its irregularities;—a fact which we may gather from the seditious mob of Athens erecting a monument to his memory, which, omitting all mention of his fine talents, stated only that he was a notorious drunkard: this also is said to have procured him the name of Φαίλας, "the wine-bibber." Horace also bears testimony to this feature of his character.

Prius tu credis, Mæcenas doctæ, Cratino,
Nulla pleræque dei nec vitæ crimine posuit,
Quæ scribitur aqua potioribus. Epist. lib. 1. l. 13

Ulysses.

O! learn! Meceas, hear Cratinus speak,
And take this maxim from the gay old Greek;
No rene shall please, or lasting honours gain,
Which eddies flow from water-dropper's brain.

FRANCIS.

We are told that Quintilian that when he died, about B. C. 431, he was no less than ninety-seven years of age. Within a short period of his death, Cratinus is said to have composed a Comedy, aptly enough termed the *Flaggon*, as a reply to Aristophanes, who had ridiculed the infirmities under which he laboured, and which were attributed to his intemperance and debauchery. The vivid imagination of the Poet was never more conspicuously successful than upon this occasion: he entered the lists with his more youthful opponent, obtained the laurel crown and a complete triumph at the Dionysia, and shortly afterwards expired in the arms of victory. He seems to have been a Poet of considerable energy and fancy, and to have commanded a copious florid style; but his sense of decorum did not prevent him from attacking Homer himself, in his *Ulysses*, in which he parodied and ridiculed the *Odyssey*. Scarcely a single line of his numerous Comedies has reached us; one spark of his genius (*ex pede Herculeum*) will be seen in the following epigrammatic turn of thought upon the loss of a statue, which, being the workmanship of Dedalos, he supposes to have used its privilege of wings, and escaped from his pedestal:

My statue's gone! by Dedalos 'twas made:
It is not stolen therefore; it has strayed!

CUTWELLAND.

If, however, the moral character of the Athenian Poet was thus largely blemished, he is commended by Horace for his public spirit in lashing the vices and immoralities of the times, in that poetical triumphant which the Roman Poet so highly praises:

*Eupolis, styge Cratinus, Aristophanesque porce,
Aspeo ubi, quarem. Guardas! Præce venient sat,
Si quis erat dignus describe, quid malus, ut ferat;
Quod merces feret, ad siccum, et alioque
Fame-que, malis cum liberate volabat.*

HOR. b. l. Sat. 4.

The Comic Poets, in its outland age,
Who form'd the manners of the Grecian stage,
Was there a villain, who might justly claim
A better right of being damn'd to fame;
Rake, cut-throat, thief, whatever was his crime?
They fly'd stigma's darts the wretch in rhyme.

FRANCIS.

Persius, also, in his Satires, thus speaks of the three contemporaneous writers of Comedy at Athens:

*Auden quoscunque offendi Cratibus,
Iratum Eupolidem prægrands cum ore pollicis,
Aspeo et hæc.*

Whosoever thou art who growest pale at the satire of the bold Cratibus, or at the indignant Eupolis, or the grave and dignified Aristophanes,—look also at these things.

Suilius reckons but twenty-one Comedies to have been left by Cratinus; but we have the titles of at least thirty of his pieces, of which nine received the crown of victory at the Dionysia. Father Brumoy says of him, though we cannot see upon what authority, *Il étoit aussi timide guerrier que hardi Comédien*; "he was as cowardly a soldier as he was a bold Comedian."

Eupolis.

Eupolis was the more immediate contemporary of Aristophanes, and became a very popular author some years before the death of Cratinus. He is said to have composed no less than seventeen Dramatic pieces, at the early age of twenty. Of these, and other Comedies

which he doubtless wrote, for we have the titles of upwards of twenty Plays of his composition, we have only a few fragments. The manner of his death has been variously related. Some authors affirm that Alcibiades caused him to be assassinated for exposing him to ridicule in a Comedy, written against the obscene worship of the goddess Cottyto and the Bapte, who were her Priests; others contend that he was drowned; and Suidas, in particular, asserts that he perished in an engagement which took place in the Hellespont, between the Athenian and Lacedæmonian fleets. This Lexicographer further states, that his Countrymen, deploring his fate, passed a decree, that henceforth no Poet should engage in military enterprises. Cicero, however, in his first Epistle of the sixth book to Atticus, attacks a similar account of the Poet's death as a vulgar error, and quotes Eratosthenes for the fact of Eupolis having written certain Comedies after the time when the event of his fall was dated:—*Redarguit Eratosthenes; offert enim quas ille post id tempus fabulas docerit.* "Eratosthenes has already refuted this statement, for he brings forward the very Plays which Eupolis composed after the time." There is found in *Ælian's Natural History* an interesting story of the devoted attachment of a dog to Eupolis. The animal is said to have been once upon the point of killing a slave for attempting to steal some of the Comedies of his master, and to have died through hunger and sorrow watching upon Eupolis's tomb. This, according to Pausanias, was erected upon the banks of the *Ægospus*, in Sicynia. Some authors, however, assert that the Poet was buried at *Ægina*, but the year in which he died, his precise age, and the number of his Comedies, are alike unknown.

It appears from the Works of Eupolis which remain, and from the opinions of ancient writers, that the bold and unsparring character of his Satire recommended him to the people of Athens more than the beauties of his style, which, it seems, he was not very solicitous to polish. While, in common with his contemporaries, he stooped continually to the degrading expedient of flattery the intellect, and even the vices of the populace, he occasionally attacked the most powerful prodigals of the Republic, regardless of their personal interest, the terrors of the magistracy, and the mysticisms of superstition. In his celebrated Comedy of the *Bapte*, before Theophrastus alluded to, he bitterly inveighs against the effeminacy of his Countrymen, and holds them up to deserved contempt as the lascivious Priests of Cottyto, in the dresses and fashion of female mists.

*Tela secreti celarentur argis telli
Cœcurnum salvi Bapte lauro Cottyto.*

Juv. Sat. ii, 91.

The Bapte, who were wont to wear the Cœmpian Cottyto, celebrated similar orgies with the mid-light torch.

He also wrote two Comedies expressly against Autolycus the Areopagite, whose conduct in the Chersonesian war had rendered him unpopular and infamous. The first and second *Autolyceus*.

In his Comedy of the *People* he complains loudly of the general state of the public affairs, and satirizes the Athenian fickleness, in the choice of the most incompetent public men to conduct the government of the Commonwealth.

The *Lacedæmonians* severely attacks both the Lacedæmonian public and private character of Cimon, the son of Mil-
nians.

Biography. tiades; so that Plutarch, in his life of that Statesman, declares it to have been the principal means of exciting the Athenian populace against him.

From A. M. 3554. Epœnia also wrote another successful Comedy, called *Marica*, against Hyltebulus, shortly after which, according to Thucydides, that Orator was sent into banishment by the sentence of ostracism.

The following fragment is from the *Flatterers*, composed about two years after the decease of Cratinus, and during the Archonship of Alcæus. It is the speech of a parasite enumerating a few of those arts usually practised by adventurers on the wealthy. Ben Jonson introduces a fine imitation of this character in a speech of Moses, in the *Play of the Fox*.

Marica. The Flatterers.

Mask now, and learn of me the thriving arts
By which we parasites contrive to live:
First rigues we are, my friends, (if that be sure,)
And dexterity we gull mankind.—Observe;
First, I provide myself a nimble thing
To be my page, a variety of all crafts;
Next, two new suits for feasts and gull days,
Which I promote by turns, when I walk forth
To son myself upon the public square:
These, if perchance I spy some rich, dull knave,
Straight I accost him, do him reverence;
And, sunning up and down, with idle chat
Hold him awhile in play; if every morn
Which his wife worship stiers, I stop short,
And bless myself for wonder; if he ventures
On some vile joke, I blow it to the skies,
And hold my sides for laughter.—Then to supper
With others of our brotherhood to meet
In some night-cellar on our barley cakes,
And club invitations for the next day's shift.

CURRICULUM.

Horne, in his *Art of Poetry*, describes the Old Comedy of Greece as immediately succeeding the Tragic triumphs of Eschylus; and we now proceed to give some account of the only author whose Works have remained, to afford us a fair idea of its peculiarities; and who has been justly called the Prince of the Comic Poets.

Successus Petrus his Comœdia, non sine multa
Laudis; and in vitium libertas excidit et viam
Dignum lege regi: lex est accepta, Chorusque
Turpiter oblectat, subditi jure nocendi.

Ar. Portius.

The Old Comedy succeeded them, and was deserving of considerable praise; but its freedom too often degenerated into licentiousness, which the laws were under the necessity of curbing; when, a wholesome restraint being imposed, and the Chorus abolished, all power of doing mischief was effectually removed.

Aristophanes.

ARISTOPHANES presents us, in his own Works, with the few fragments of his personal history upon which any reliance can be placed. Once admired and courted by all Attica, almost as little is now known of this Poet as of the humblest ministers to his fame who "strutted and fretted" their transitory bourn upon the stage. An enumeration of the Works of literary men, and the incidents attending them, is, generally, perhaps, the best and most accurate history of their lives. But of these incidents, few remain respectlog the literati of antiquity, and still fewer of those private anecdotes, which, in modern Biography, take the mask of the author from the man, and so decidedly illustrate the whole structure of his Works. The *Memorabilia* of Xenophon, and the Dialogues of Plato, may convince us, however, of the manner in which this desideratum was estimated in the "olden time," and of the talent that was occasionally engaged in the task;—such a memorial of Aristophanes had doubtless contained an inexhaustible fund of humour, and of that species of comparative instruction which the

wise and virtuous can draw from every diversity of human character. But this Poet was never made the subject of biography amongst the Ancients, and his name is particularly mentioned only by Plutarch, Quintilian, Ælian, and Horace.

Aristophanes was a Rhodian by birth, the son of Philip of Rhodes, according to some writers, and was born about a. c. 460. Others state, that he was a native of Ægina, a small island opposite to Athens; and all agree that he was not born in Athens, though domiciliated there in early life. The Poet calls himself of Cyathene, a borough of Attica, the son of Philip, but states, that he possessed some patrimony at Ægina; while Plutarch informs us, that his rights as an Athenian citizen being called in question by Cleon, a commission was appointed to try the question, and gave a solemn judgment in his favour. Plutarch, however, does not state the grounds of this decision; and it is more than probable, from the well-known vanity of the Athenians, that they were proud to enrol this celebrated Poet amongst their citizens, regardless altogether of the origin of his claims. Father Brumby, in his *Thésure des Grecs*, relates, from Plutarch, a characteristic anecdote of Aristophanes on this occasion, which attributes his success to a bon-mot. Parodying two simple lines of Homer, he addressed the judges with great gravity—

*Je suis fils de Philippe, à ce que dit mon père;
Père que je n'ai pas rien. Qui peut quel est son père?
I am the son of Philip; at least, so says my good mother.
Who is the name of heaven ever knew his father?*

—a witticism, says Brumby, worth as much to Aristophanes as the siliquent harangue of Cicero in favour of the Poet Archias, upon a similar occasion. Aristophanes is represented as having been very tall in his person, of a muscular, robust make, and, we have his own authority, in one of his Comedies, the *Peace*, for his boldness. There cannot exist a doubt, but that our author was a man of considerable influence and political consequence amongst his Countrymen; and the peculiarly fustian and feeble temperament of the Republic under which he lived, afforded him but too many opportunities of indulging the malevolence of his Muse. He is said, however, to have been of a frank, free, and convivial temper in private life; and his company was sought after by Plato and the most illustrious characters of the Age. His popularity was so considerable amongst the Athenians, according to Plutarch, that he not only was publicly crowned with olive as a testimony to his intellectual greatness, but they decreed him pecuniary confiscations and fines from those who attacked him with suits and prosecutions. Nor was his fame confined within the precincts of Athens, but, even in the Poet's life-time, spread throughout Greece and Sicily and to the Persian Court:

**Ovra Valerius xpi eis xilous lla xilou alon lau
*Ovra val Valerius, Aristophanem in xpietibus lantolau,
*Hædæus xpietis xpietis, xpietis xpietis xpietis;
Eras li xpietis eis xpietis, xpietis lau xpietis xpietis;
Touros xpietis xpietis xpietis xpietis xpietis xpietis;
Kai eis xpietis xpietis xpietis xpietis xpietis xpietis.*

ARISTOPH. *Achar.* l. 646.

The same report of his boldness have extended far and wide; so that the Persian monarch, when questioning the Lacedæmonian ambassadors, first asked them, whether they were masters of the sea; and then immediately interrogated them respecting this our poet. "Which of the two powers does he cease?" said the king;

455.

Dionysius, the Tyrant of Syracuse, made the most flattering overtures to Aristophanes to reside in Sicily, but in vain, and at the very time, too, when the Socratic Philosophers, Æschines, Aristippus, and even Plato, were the inmates of his Court. But the Poet, though almost an object of adoration at home, and enjoying a brilliant reputation abroad, was not exempt from either the shafts of envy, or of just retaliation; the men whose biting satire and cruel invective were levelled against citizens so powerful as Socrates, Euripides, and Cleon, (the last named of whom the political influence of Aristophanes ultimately brought to deserved disgrace and punishment,) was not likely to remain free from the most hostile and vigilant attacks of his opponents. His Works exhibit sufficient proofs of their industry; for we there find, that the Chorus, so far from assisting the general action of the Play, is principally occupied in defending the Poet from the attacks of his adversaries, in justifying his general political conduct, and in retorting and heaping up fresh invective upon those who differed from him in opinion. We refer our learned readers particularly to the speech of the Chorus in the *Acharnæ* of our author, verse 626, Brooke's edition.

Aristophanes does not seem to have been personally addicted to the gross immoralities and unnatural passions he so forcibly describes, but, in common with Cratinus, he was a decided votary of Bacchus. Atheismus, in the *Deipnosophiste*, indeed, asserts, that, as Sophocles insinuates of Æschylus, he was always in a state of intoxication when he composed. He seems to have been unhappy in his family circumstances, for in one of his Comedies he frankly declares, *Τὴν γυναῖκα δ' αἰσχύνομαι*, "I am ashamed of my wife;" and his two sons, Philippos and Ararotes, were notoriously undutiful and profligate characters. Our Poet himself lived to the advanced period of seventy years of age; eleven of his Comedies, written in the Attic dialect, still remain in a perfect state, and we have the titles of no fewer than fifty, of which some fragments only have survived the general wreck.

It will not be irrelevant to advert in this place to the opinions of some of the most illustrious critics, both of ancient and modern times, respecting the productions of Aristophanes. To Plato, the disciple and friend of Socrates, is ascribed the following beautiful epigram on our Poet:

*Ἄν' ἁλάρου πλάσις ἐν λελύσιν, ἔργα δὲν σπουδαῖα
βελτίον φέρειν ἂν ἄριστον.*

The Graces, in search of a Temple which could never fall, found thy tuneful breast, Aristophanes!

And Olympiodorus, in his life of that Philosopher, mentions his enthusiastic attachment to Aristophanes and Sophron. Cicero speaks of him as *facellimus Poeta Plerisq; Comædiarum*, "the most skillful Poet of the Old Comedy." Longinus also, in his Treatise *Περὶ Ὑψέως*, quotes Aristophanes as an instance of the sublime, but confines this praise, according to the theory of the eulogist, to the structure of his sentences, and the collocation of his words.

Quintilian speaks of the Ancient Comedy as alike remarkable for the pure Attic graces of its style, and the flowing eloquence that breathes through it. "Although its principal excellency," he says, "consists in the censure of vice, nevertheless it possesses considerable merit in

other respects. It is at once dignified and elegant, and I know not, with the single exception of Homer, who, like his own Achilles, is always beyond comparison, of any compositions more resembling the speeches of Orators, or better adapted to make men public speakers, than the Works of its principal authors, Aristophanes, Eupolis, and Cratinus."

Aristophanes has also found an able and eloquent advocate in the celebrated John of Antioch, St. Chrysostom. *Emilius Porus*, in an Epistle to Bietus, one of the scholiasts, on Aristophanes, thus expresses at once his own admiration of the Poet, and the attachment of St. Chrysostom to his Writings:—*Fecundum, et in dicendo vastatam incredibilem habet. Hæc Johannem illum Antiochenum, summorum Theologorum lumen, qui, propter aurum eloquentie flumen, Chrysostomi cognomen obtinuit, ad hujus poetæ quotidianam lecturam impulerunt, ex quâ maximam tum fœcundiam, tum vehementiam in corripendis vitia hausisse fertur. Ut Alexander Homeri poemata, sic etiam præstantissimus ille Theologus Aristophanem pulvisculo subdere solebat.*

"He possesses an incredible degree of eloquence and suavity of style. These excellencies induced John of Antioch (the pride and ornament of Theologians, who obtained the surname of Chrysostom for his golden strain of rhetoric) daily to peruse his Writings, from whence he is reported to have drawn his eloquence and vehemence in lashing the vices of his Age. This excellent divine, in imitation of Alexander's conduct with respect to Homer, was in the habit of placing the Plays of Aristophanes under his pillow." We cannot help considering these rather questionable comparisons; but to this Father of the Church has often been attributed the preservation of the Writings of our Poet.

Plutarch, in his comparison between Aristophanes and Menander, expresses a very different opinion from that of St. Chrysostom. Aristophanes, according to this celebrated Biographer, outrages nature in his Comedies; he addresses the populace rather than the people; his style is at once licentious and obscure; sometimes high and glowing, at other times low and colloquial; always onequal and ill sustained. He reproaches him too with great want of discrimination in character, and says that it is impossible to distinguish the son from the father, the citizen from the peasant, the hero from the tradesman, or the god from the vauet. The cruel and bitter invectives of Aristophanes excite a similar spirit in his commentator: he reproaches him for his puns, and his play upon words; and concludes with affirming, that the audience who could have tolerated these exhibitions must have been lost in gross debauchery and sensuality. This picture is probably too highly coloured; and the true character of Aristophanes, as is generally the case, will be found by the reader in a medium between the panegyric of Plato and the censure of Plutarch. It is supported by Father Bruney, and with some plausibility, that the Biographer, on this occasion, laboured under considerable prejudices against the Atheistic Poet, from considering him as the instrument of the death of Socrates; a fact which that acute Jesuit altogether denies. However this may be, Plutarch speaks in terms of rapture of the superior wit and elegance of Menander, and is certainly anxious in every point to exalt his merits at the expense of Aristophanes. Father Bruney appears to us to have triumphantly proved that there is little ground for the serious charge against our Poet above

Critical
opinions
respecting
Aristo-
phanes.

Biography alluded to, and that, so far was the Comedy of the *Clouds* from being the immediate cause of the death of Socrates, that Play was performed full twenty-three years before that iniquitous event took place. In this opinion he has been followed by Professor Rollin, by Dr. Blair in his *Belles Lettres*, and by Mr. Cumberland in his *Observer*, &c.

Among modern critics, Aristophanes has been severely handled by Père Hapin, Voltaire, and Laharpe, while he has been ably defended by Madame Dacier and Père Brumoy. Rapin, who implicitly follows the judgment of Plutarch respecting his merits, closes his critique by comparing his Muse—à une femme offrande, et celle de *Méandre* à une honnête femme—"to a bold and shameless woman, and that of *Méandre* to a modest matron." Voltaire, who furnished the Article Aristophanes in the French *Encyclopédie*, characterises him as *ce Poète Comique, qui n'est ni Comique ni Poète, n'aurait pas été admis parmi nous à donner ses farces à la foire St. Laurent*—"That Comic Poet, who is neither Comic nor Poet, and who would not be suffered to exhibit his farces at St. Lawrence's fair." And Laharpe speaks of him in similar terms in his *Cours de Littérature*, warmly defending Plutarch's opinion. Madame Dacier, on the other hand, in the preface to her translation of the *Clouds* and *Plutus* of our author, highly extols the Attic wit and graces of his style, and declares that she read the *Clouds* two hundred times over for the pleasure its humour afforded her. She concludes by affirming, *Que l'on ait étudié tout ce qui nous reste de l'ancienne Grèce, si l'on n'a pas lu Aristophane on ne connaît pas encore tous les charmes et toutes les beautés du Grec*—"Supposing a person had carefully studied all that remains to us of the compositions of ancient Greece, but was unacquainted with the Writings of Aristophanes, he could not be said to have a perfect knowledge of the charms and beauties of the Greek language." Mr. Cumberland, in one of his Papers in the *Observer*, makes a similar remark: "If any man would wish to know the language as it was spoken by Pericles, he must seek it in the scenes of Aristophanes." We have no room to enter upon other able criticisms on the Works of this celebrated Athenian, but these may suffice to prepare the reader for a slight review of his Writings.

It will be difficult to convey to the English reader any just sense of the merits and defects of Aristophanes in comparison with the Comic Poets of modern times. His Writings, in fact, are not Comedies, nor even Farces, in the modern sense of the word, but a mass of miscellaneous Poetry on Criticism, Ethics, and Politics. They have no intricacy of plot, no gradual development of character, no leading story interwoven with a subordinate one which shall, at the same time, help forward the general plot, and form a kind of *relief* to its various incidents. The characters, it is true, are marked, if not with delicate wit, at least with strong humour, but at the same time they exhibit but few lights and shades, and are rather to be considered as successful caricatures than faithful likenesses of individuals: while of the passion which generally predominates over every other, both in Tragedy and Comedy, on the modern stage, little or nothing will be found. In his Works but of the most coarse and unqualified description. In truth, love, as considered by the juster taste of modern times rather in the light of a sentiment than a passion, was of their seclusion of their women, and the semi-barbarism of their

manners, utterly unknown to the ancient classic writers. Thus, only, indeed, can we account for the extreme grossness of the Old Greek Comedy, as exhibited in the scenes of Aristophanes. It is well known that the Philosophers and Writers of character never attended the Comic Theatre, an example which the respectable part of the citizens would be likely to follow; in this case, as the audience must have consisted of the profligate part of the female sex, and a turbulent and ferocious rabble, it ceases to be matter of astonishment that the Poet should have indulged in ribaldry and buffoonery, (curiously mixed up with the factious politics of the day,) and that to a degree of coarseness which would now scarcely be tolerated at the Fauxbourg St. Antoine, or St. Bartholomew's fair. But although Aristophanes is thus exposed to the charge of gross indelicacy in his Writings, it is in some measure counterbalanced by a strong vein of rich and original humour; there is also in his *Dramatis personæ* a certain bon-homme, a mixture of good nature and drollery, of shrewdness and *naïveté*, which have been the perpetual objects of imitation amongst the writers of modern Comedy. Strepsides in the *Clouds* of Aristophanes, in the opinion of Foutenelle, is the undoubted archetype of the Monsieur Jourdain, in the *Bourgeois Gentilhomme* of Molière, and exhibits, in no small degree, the simplicity, ignorance, and credulity which alike excite our compassion and contempt. Ben Jonson and Molière have, indeed, most freely copied from the Plays of the Comic Poet of Athens; and there can be no doubt but that the Carions and Parasites of the Greek are the prototypes of the Moseus and the Sganarelles of later times. But of all modern writers, the facetious Dean of St. Patrick's has imbibed most of the peculiar genius of Aristophanes, and the resemblance is so strong that it most strike even the most superficial reader of their respective Works. Swift, it is true, was not a writer of Comedy, and from a sense of professional decorum did not turn his attention to the stage, but his Writings abound with the same bitter satire, the same love for coarse but powerful humour, and the same fondness for indulging in filth and venom: they both had a strong turn for the ludicrous; their sense of it was exquisite even to a fault; and their satirical strokes were sharp and pointed; but the modern Poet possessed a malignity peculiar to himself, and a revolting misanthropic contempt for his species, unknown to the Attic bard. The Athenian somewhat resembles the busy gnat, who, having drawn our blood, flies into the air and disappears; but the English Wit strikes like an assassin with a poisoned dagger, and watches with a malignant satisfaction over the agonies which his thrusts have excited. Those of our readers who are acquainted with Swift's humorous History of John Bull, in particular, will see many points of resemblance between the two Satirists; and, in fact, the Demos of the *Knights* of Aristophanes may be considered as the original whence Swift drew his portrait of the English populace; though the sketch of the Greek has been justly thought to be far more spirited of the two. To Foote, in this Country, was once universally given the title of the "English Aristophanes;" for ourselves, after an intimate acquaintance with his Works, we cannot discover the resemblance. True it is, that his Comedies and Farces are distinguished for broad humour, personal satire, and coarse, bitter invective; but here comparison ceases: Ephraim Sinks, Pulpiton, Winking, and Mother Cole, have nothing in common

Aristophanes.

General estimate of his Works.

Biography. with the Aristophanic personages; and to the bursts of true poetic feeling, the flights of imagination, or the elegant and sparkling diction which abound in the Athenian Poet, the English Comedian can make no pretensions whatever: he is deficient even in the varied humour and delightful whim of the ancient. The French Satirist, Rubelais, may perhaps be regarded as the most acknowledged and successful imitator of Aristophanes. His portraits of Pantagruel, Dandin, and some other whimsical characters, are sketched with much of the spirit and truth of his original; the wit of both writers, in some measure, qualifies their indelicacy, and their raciness of style is often successfully employed to conceal the homeliness and even coarseness of their sentiments. They are alike remarkable for their low buffooneries, immoralities, and puns; but there is, after all, a redeeming spirit of true taste about them which well rewards us for the perusal of their Writings. In the elegance and occasional sublimity of his style, Aristophanes has no successful rival amongst his imitators; in that vein of genuine Poetry which runs through strata of all descriptions, that frequent magic of diction which distinguishes his Writings, and forms so admirable a contrast to the homeliness and rusticity of his dialogue. Indeed we have ever considered the perfect melody of his versification as an insuperable bar to his appearing like himself in an English dress. Some of the choral parts, as our learned readers well know, would not suffer by a comparison with the wild sublimities of *Æschylus*, or the magnificence of *Sophocles*; and the light, graceful varieties of the metre surpass, perhaps, in harmony, the Chorususes of these mighty masters of the Tragic Drama. With these recommendations, however, the original of Aristophanes has never been a favourite study in this Country; he has been more admired than read by critics, and more occasionally culled for amusement than correctly understood. The difficulties which present themselves to the proper appreciation of his beauties may partly account for this. Independent of the obscurities of his style and the perpetual allusions to obsolete manners and customs, the continual play upon words, and the constant reference to the politics of the day; the state of parties, and private anecdotes, frequently give the whole point and sting to the snap-snap of the dialogue. The reader must not only be intimately connected with the principal events of the Peloponnesian war, but be equally familiar with the Tragedies of *Æschylus*, *Sophocles*, and *Euripides*, or it is impossible to perceive the point of his satire, or the appropriate introduction of the passages which he so facetiously parodies. These difficulties, however, have not deterred the scholars of the continent from considerable attention to our Poet.

*Accur-
dence.*

The Comedy of the *Acharnians*, or *Acharnians*, which stands the first of the Works of Aristophanes in order of time, was written during the calamitous period of the Peloponnesian war, and represented in the third year of the eighty-eighth Olympiad, during the Archonship of Euthyricus. It is altogether a political piece, abounding in allusions to the state of parties, and seems to have been written for the express purpose of persuading his Countrymen to an amicable accommodation of their differences with the Lacedæmonians and the other States of Greece. The plot, if it can be called one, is simple and improbable enough; and turns upon a separate Treaty of Peace, which one of the characters of the Drama makes exclusively for himself with the Lacedæ-

monians, and the indignation which is excited among his townsmen by this pusillanimous conduct. *Dicæopolis*, the principal personage of the Play, is of the same stamp of character with *Strepsiades*, a strange compound of knavery and honesty, of credulity and shrewdness, and by his numerous mistakes and blunders contributes much to the general effect of the piece. In this Play the Poet boldly ascribes the origin of the Peloponnesian war to the ambition of the famous *Pericles*, and his resentment of an insult which was offered to his beautiful and accomplished mistress *Aspasia*. *Euripides*, who seems to have been the pillow on which Aristophanes reposed his resentment and his wit, is not forgotten; *Dicæopolis* is humorously introduced as requesting that *Tragædian* to lend him the beggarly dress of *Telephus*, in order that he might plead his cause with more effect, and excite the compassion of his Judges the *Acharnians*. The addresses of the Chorus to the audience are written in an animated and patriotic strain; they portray with much force and humour the factions disposition of the public assemblies of the Athenians, and lash with no sparing hand the prevailing vices and follies of the "sovereign people." The Play concludes by the discomfiture of *Lamachus*, the Athenian General, who is represented by name on the stage, as being adverse to a general pacification, and the complete triumph of *Dicæopolis*. This piece is written throughout with strong farcical humour; some of the situations are very ludicrous, and the parables, or addresses of the Chorus, are replete with sentiments of public virtue, and adorned with great splendour of diction.

The Play of the *Knights* was performed in the seventh year of the Peloponnesian war, in the fourth year of the eighty-eighth Olympiad, during the Archonship of *Stratocles*. This Comedy was avowedly written against the demagogue *Cleon*, one of the Athenian Generals, who, by his factious eloquence, had made himself a great favourite with the populace of Athens. It is generally stated that *Cleon* was fined five talents after the representation of this Play, and that Aristophanes boasts of his victory in the *Acharnians*; whereas the latter Play was performed in the preceding year. There can be no doubt, however, but that this performance was completely successful in overturning the undue influence which *Cleon* enjoyed in the Republic; it pointed in vivid colours the character of that dangerous and obnoxious demagogue. But the Poet is not content with a single object; he proceeds to depict, in an unrivalled strain of force and humour, the follies of the Athenian people. In the composition of this Comedy Aristophanes may certainly claim to have exhibited some traces of the most glowing patriotism; but at the same time he had conceived a strong antipathy against *Cleon* for having endeavoured to curb the license of the Comic Theatre, and for having interfered with his rights of citizenship. The representation of this Play was attended with a curious and interesting circumstance: *Callistratus*, the favourite actor of Aristophanes, dreading the resentment of *Cleon*, declined undertaking to personate that powerful demagogue. In this dilemma the Poet himself appeared upon the stage as a performer, and sustained his arduous task with ease and spirit. The character of *Cleon*, of course, is the most prominent one of this Drama; the whole Athenian people are personified under the appellation of *Demos*.

The *Clouds*, exhibited, for the first time, in the Ar-

*Aristo-
phanes.*

Biography. chonship of Isarchus, in the ninth year of the Peloponnesian war, and in the first of the eighty-ninth Olympiad, underwent several alterations and improvements in this following year, Aminias being at that time Archon. The chief notoriety of this piece is derived from its being considered by Plutarch as the immediate cause of the trial and death of Socrates; an event, as we have stated, which did not take place until several years afterwards. From the most authentic records (the Greek Preface and the Scholiasts) the date of the popularity of this Play is clear, and, taking the death of Socrates to have happened at the earliest possible period, it will not fall till the first year of the ninety-fifth Olympiad, during the Archonship of Laches, twenty-four years after the period of the popularity of this piece. Plutarch was followed in this charge against the Athenian Poet by Ælian, in his Various History, who adds, that Aristophanes was bribed by Anytus and Melitus thus to expose Socrates to the ridicule and resentment of the people; but the objection of the date of the Play is fatal to both accounts. The plot of this piece is simple, clear, and unaccountably interesting. Strepsiades is represented as a father, oppressed by debts and expenses brought upon him by an extravagant and prodigal son, who flies to any resources, however evil, for extricating himself from his embarrassments. These resources he pretends to have discovered in the School of Chærephon and Socrates, who is introduced by name upon the stage throughout the whole progress of the Play, and is placed in every ridiculous point of view, as a sophist and an atheist, by his witty and malicious persecutor. Of the other characters, that of Strepsiades is the most prominent; and ingeniously contrived to reflect the greatest possible ridicule upon the pedantry and chicanery of the sophists, by the contrast of his rusticity and credulity. Nothing indeed can exceed the ludicrous figure which Socrates exhibits in this Play; the Poet at one time introduces him hoisted up (as Ben Jonson expresses it) "with a pulley, and made to play the Philosopher in a basket; to measure how many feet a flea could skip geometrically by a just scale, and edify the people from the engine." Socrates himself, according to Ælian, was present in the Theatre during the whole of the performance, and boldly stood up in view of the audience during the representation. Notwithstanding this magnanimous conduct, the Theatre rang with plaudits at the piece, and the Philosopher was but the more conspicuous object of the insults of an infuriated rabble. One can hardly account for the cause of the enmity which Aristophanes bore against the Grecian Sage, but it has been conjectured that it arose from the circumstance of his disapproving of the undisguised licentiousness and bitter personalities of the Greek Comic Theatre, and exhorting the respectable part of the Athenian citizens from frequenting such immoral exhibitions.

Wasps. The Comedy of the *Wasps* appeared in the ninth year of the Peloponnesian war, and the second of the eighty-ninth Olympiad. It was designed to ridicule the extreme fondness of the Athenians for litigation, and their practice of constantly attending the Courts of Law; from which neither private nor political engagements, nor the amusements of the stage, could detach them. The personal satire of the piece, however, seems to be principally directed against Laches, an Athenian General, who, according to Justin, had commanded the first expedition against Sicily, and had become rich by the

bribes of the enemy. The committal and trial of the dog Laebus was obviously intended to be applied to this commander, and nothing can be more truly Comic than the formal accusation of the dog for various corrupt practices, and his final acquittal by mistake. Racine has chosen this Comedy as the model of his *Les Plaideurs*, the only Comic drama which he ever composed; he has successfully transplanted many of the whimsies of the Attic Poet, and has substituted the law-terms of the French Bar for those of the Athenian with admirable skill and felicity. Still, however, the copy wants the energy of the prototype. Racine has happily enough parodied, in the Aristophanic style, some of Molière's verses; and the scene between Chicanneu and the Countess may be considered as equal to any thing which can be found in the Comedies of Molière or Voltaire; but there is an air of carelessness and ease about the address of the Greek for which we look in vain in the brocade and gain suit of the Frenchman; and the characters, considered generally, are as essentially different as the manners and customs of Athens and of Paris. Ben Jonson also has imitated this production of the Grecian Poet, in his facetious Play of the Staple of News, in which the legal process against the dog is managed with much spirit and humour.

The *Peace* was performed at the Dionysia, under Pæan, the Archonship of Astyphilus, in the thirteenth year of the Peloponnesian war. This Play is purely political, and the same object is pursued throughout as in the *Acharnians*, but with considerably more dramatic effect. Aristophanes seems to have been utterly averse from the continuance of the war; and the whole of the plot turns upon a plan for an universal peace. The laxity of our Poet's opinions with regard to the Religion of his Country is here very evident,—or rather the utter contempt and disbelief in which he held the duties of the Pagan Mythology. Tyræus, the principal character of the piece, is a citizen of Athens, discontented with the duration of the war and the miseries it produced, and determined to go to Olympus to expostulate with the gods upon the subject. For this purpose the Poet furnishes him with an enormous black beetle, on whose back he can proceed earthward or heavenward; and thus conveyed to the sacred abodes, he inquires of Mercury for Jupiter, who rather reluctantly informs him, that Jove and the rest of the celestial Court are abroad, but that their chambers were occupied by the god Polemos, who had thrown the good lady Peace into a well, the mouth of which was covered with huge stones. Upon the receipt of this intelligence, Tyræus is much disconcerted, and begins to think that his handsome present of butcher's meat, for this information, to Mercury, will be thrown away. Two allegorical personages, resembling the Strength and Necessity of Æschylus, and whose names are War and Tumult, are then brought upon the stage with an immense mortar, in which they are represented as pounding all the cities and States which had unfortunately become their victims. During the absence of one of them, who departs in quest of a pestle, the Athenian citizens collect together a body of labourers and rustics, in order to assist him to draw up from her prison-house the goddess Peace, and, succeeding in their efforts, Tyræus forthwith descends from heaven, bearing off the goddess, and proclaiming, with heartfelt joy, her return to Earth. The Play concludes with the rapturous exultation which is expressed by the Chorus at the restoration and the blessings of Peace, and with

Aristophanes.

Birds.

The *Birds* follows next in chronological order. This Comedy was acted in the eighteenth year of the Peloponnesian war, and the second of the ninety-first Olympiad, under the Archonship of Chabrias, at the Dionysia. It is supposed to have been composed in order to rouse the Athenians to exertion, and to divert their attention from the Sicilian war to the projects of the Lacedæmonians for fortifying Decelia, a town of Attica. Much obscurity, however, is attached to the origin of this piece; it is, perhaps, the most insipid and uninteresting of the Poet's compositions; and the want of plot and the barrenness of incidents are scarcely redeemed by the breaks of Poetry which we occasionally meet with, and the variety and elegance of the language in which they are clothed. The choral odes, in particular, amidst the low buffooneries and the revolting obscenities with which they are surrounded, seem, like the chrysalis, to start from filth and deformity into instant beauty and splendour, and sometimes take a flight which the bard of Pella or the Theban swan might not be ashamed to follow.

Thesmophoriazusæ.

The *Thesmophoriazusæ*, or *Festivals of Ceres*, was exhibited at the Dionysia, in the twenty-first year of the Peloponnesian war, during the Archonship of Callias. In this Play Aristophanes is exceedingly satirical against the fair sex, and abounds with the bitterest reflections on their reigning vices. But he does not forget the former object of his hatred, Euripides; in fact, the whole Comedy was avowedly written for the purpose of ridiculing the occasional languor and affectation of that Poet's style, his insipid and injudicious prologues, his pedantic expressions, and perverse morality. Aristophanes, perhaps, hated Euripides as the friend and pupil of Socrates, and the severe censurer of the indecorum of the Old Comedy; but, in a literary point of view, we can hardly join in the clamour which has been raised against him for his severe attack upon the great Tragedian, whose unrivalled pathos has certainly been acknowledged and felt by every reader, but whose defects as a writer laid him open to the attacks of criticism. The Thesmophoria were festivals held in honour of Ceres and Proserpine, at which none but free-born Athenian women were suffered to be present.

In the opening of the Play it is announced to Euripides, who was known by the epithet of *ædipodes*, (the woman-hater,) that the ladies, enraged at his unjust and ill-considered reflections upon them, intended in consideration, during this festival, what revenge they should inflict upon him for his conduct. The Poet, alarmed at the intelligence, and aware that their resentment was not to be despised, flies in a great fright to Agatho, a brother Poet, to know what must be done in this juncture. There is no regular plot in the Play; but the author contrives to laugh at Euripides throughout, and constantly to place him in several whimsical situations, that may give the palm of victory to his female opponents.

Lysistrata.

The *Lysistrata* was represented in the twenty-first year of the Peloponnesian war, in the first year of the ninety-second Olympiad, and during the Archonship of Callias. The plot of this Play is to the last degree gross and disgusting; but its general intent, in common with many other of the Plays of this Poet, was to promote the restoration of Peace. Lysistrata, and other Athenian females, are brought forward upon the stage in deep con-

sultation upon what measures they should pursue to obtain that desirable event.

The *Frogs* was also exhibited in the Archonship of Callias, in the twenty-sixth year of the Peloponnesian war, and third of the ninety-third Olympiad. This is another of the Comedies of Aristophanes directed against the literary merits and personal character of Euripides. The *Thesmophoriazusæ* was performed during that Poet's life-time, although at the time of its representation he had attained to an advanced age; but the *Frogs* was not exhibited upon the stage until about two years after his decease. Frischlinus, one of the commentators upon Aristophanes, asserts, that it was composed with the view of averting the popular hatred which had been drawn down upon the head of our author by the Tragedy of Palamedes, in which Euripides had tacitly reproached the Athenians with the unjust murder of Socrates. It is, perhaps, the most diverting of his performances; and the contest between Euripides and Æschylus for the Tragic chair is laughable in the extreme: the witty paradox of course assigns the pre-eminence to Æschylus, and the Play finishes with the award in his favour.

The *Ecclesiazusæ*, or the *Female Orators*, was Ecclesiastical in the last year of the ninety-sixth Olympiad, *ædipodes*.

during the Archonship of Demostrius. This drama contains a violent and undignified satire against the female sex, as a body, and a vehement attack upon the polity of Athens. But in the midst of political reflections and personalities, Aristophanes engages in a facetious and malicious parody of the style of Euripides, and laughs at his Tragedy of *Menippus*, a Play which is now lost. Upon the whole, this indelicate and singular performance may be considered as a burlesque upon all Utopian forms of government, and those crude and undigested plans of reform of which the turbulent innovators of Athens, in common with more modern patriots, were professed admirers. The Play turns upon a project concerted by Praxagora and other discontented Athenian matrons, to array themselves in the garments of their husbands, and then proceeding in this masquerade dress to the Ecclesia, or public assembly, there to vote that the guidance of the affairs of the Commonwealth should be committed to their hands. This is the general scope of the Play; but there is much conceits in the execution.

The *Plutus*, or *Riches*, was introduced upon Riches.

the stage in the fourth year of the ninety-seventh Olympiad, and according to the Greek preface and scholiast, under the Archonship of Antipater. It is the last, in point of time, of the Comedies of Aristophanes, and we are told by the Greek scholiast, that it is the second of this name which was composed by the Poet. It is remarkable for belonging rather to the Middle than the Old Comedy, and clearly shows that the licence indulged in by the Comic writers had been much curtailed in the days of Lysanther and the Thirty Tyrants. No real characters are here introduced upon the stage; it is still caustic enough in all conscience; nor are the indelicate and immoral sentiments which, unfortunately, too deeply tincture the dialogues of Aristophanes, so predominant in this piece as in the preceding Comedies. The Dramatic Art appears in an evident state of improvement with regard to decency and *bravado*, and was receiving that polish which it finally and happily attained in the Works of Plato, Menander, and Philémon. Frogs.

Biography. argument or plot of this Play is probably familiar to the generality of our readers, and is admirably detailed by Mr. Aldison, in the 46th number of the *Spectator*. It is a satire upon the rich, and institutes an able comparison between the relative advantages of wealth and poverty.

We have now only to speak of the translations and editions of Aristophanes, as we have already noticed the various imitations of his style and manner. Of the latter, however, we would first give the mere English reader some idea, although we are well aware of the difficulty of a faithful and spirited translation of any portion of his Works. In the Play of the *Clouds*, he thus introduces Socrates solemnly addressing and invoking them, and afterwards follows the Chorus of Clouds themselves.

INVOCATION OF SOCRATES.

Oh, sovereign lord, immeasurable air,
Circling the pendant globe! Oh, holy light!
And ye dread shades, that heaven's loud thunder bear,
Arise, ye Clouds, and barest upon my sight!
Come, sister goddesses, come, triform powers,
That on Olympus' snow-clad brow recline,
Or in old father Ocean's secret bowers
With sea-born nymphs the mystic dance combine,
Or fill your golden urns from distant Nile,
Or on Maenads' placid breast repose,
Oh! hear my prayer! upon your suppliant smile,
And to my gaze your heavenly forms disclose.

CHORUS.

Appear, immortal Clouds! I appear
Light shadows, haste away
From father Ocean's echoing side,
And groves that shade the mountain side,
O'er watch-towers high, that far and wide
The outstretch'd globe survey;
The fruits and fields that drink the dew,
And fountains gushing to the view,
And the wild waste of waters blue
That break upon the ear;
Throw your dark shewery mantles by,
Your sacred forms unfold,
And now, white heaven's unwearied eye
In mid day lustre flames on high,
The subject world behold!

ANTISTOPHES.

See, virgin rulers of the storm,
Thou Pallas' holy ground,
Fair regions of the green and wine;
Behold the mystic domes arise,
Where many a secret sacrifice
And nameless rites abound;
And glittering altars cover the plains,
And statues and high towering fanes,
And priests, with chaplet-bearing trains,
Their solemn vows perform.
Each hour the wasted feast requires,
And, with retaining Sympies,
For Bacchus breathe the living lyres,
And dance, and sweet contending choir.
Salute the festive king.

Alon.

This Chorus in the original sufficiently proves that the higher elements of Poetry are occasionally mingled in the compositions of Aristophanes. The following quotation is no unfavourable specimen of his powers for humour and satiric. In the Play of the *Knights*, Demosthenes and Nicias are introduced upon the stage as complaining of the fickleness and ingratitude of their master Demus, (in whose person the vices of the Athenian people are covertly attacked,) and inveighing against

the unprincipled conduct of the demagogue Cleon. We avail ourselves of the spirited, but somewhat too diffuse, translation of a contributor to a periodical publication of high literary character:

With reverence to your worship, 'tis our fate
To have a heavy, cross-grain'd, bilious, sour
Old fellow for our master; one much given
To a hard diet; somewhat hard of hearing.
Demus his name, sir, of the parish Pops, here
Some three weeks back, or so, this lord of ours
Brought home a heavy slave from Paphlagonia,
Fresh from the sea-side, tight and young; and with
As nimble fingers and as fast a mouth
As ever yet paid tribute to the galleys.
This latter—Paphlagonian, (for the fellow
Wanted not penetration,) here'd, and weedy'd,
And fawn'd, and wagg'd his ears and tail, dog-fashion;
And then soon slid'd into the old man's graces.
Occasional devourer of leather-pamper,
With speech to the tune, made all his own—
"Go out, the court is open—out ye jolly'd our cause—"
"To town to take the bath—allow me, sir—"
This cake is excellent—pray sup this broth—
This soup will not offend you, tho' the soup falls—
You love hot stews; I pray take these things—
Hasten me, sir, with your commands for supper—
Bad times, methinks, for us! With crying looks,
Round comes my man of history, and, if he finds us
Cooking a fowl something far our master,
Incommodiously lays his paw upon it,
And, modestly, in his own name presents it!
Then, none but he, forsooth, must wait at table;
(We dare not come in sight!) but there he stands
All supper time, and, with a leathern fly-flap,
Whisks off the advances. Anon the leave
Falls to his cracks; and, when he sees
The old man plunged in mystery to the ears,
And scold'd from his few years, marks his time,
And enters on his tricks. False accusations
Now come in troops; and, at their heels, the whip.
Methinks, the nasal shuffles in among us,
And beg of one, browbeats another, cheats.
A third, and frightens all. "My honest friends,
These cards cut deep, you find it—I say nothing—
Judge you between your purses and your backs.
I could, perhaps—"—We take the gentle hint,
And give him all: if not, the old man's foot
Plays such a tune upon our tender parts,
That flinging is a just tale, a mere des-bits.

Pindar, until very lately, had not the good fortune, in this Country, to meet with a translator hardy enough to undertake an entire version of his Works; and a complete translation of the compositions of Aristophanes is to this day a desideratum in English literature. We are not, however, at all astonished at this, for reasons which we have before assigned. The Romans have attempted to introduce the knowledge of his Plays among them by a vile translation, which was executed many years back by the Rossetti; and our lively neighbours across the Channel have become imperfectly acquainted with his merits by that of Poinsett. Terucci, a native of Italy, furnished a translation of the *Plutus* and *Clouds*, which has considerable merit, and is enriched with some excellent notes. In addition to Poinsett's entire translation in French, Madame Dacier also published a translation of the *Clouds* and the *Plutus*, which gives no mean idea of the spirited originals, and, notwithstanding the sneers of Fielding and of Brunck, appears to us remarkable for its spirit, fidelity, and even delicacy. Although this Country cannot boast of a translation of all the Comedies, it has been by no means deficient in endeavours to translate the beauties of Aristophanes.

The first translation that appeared in England of the

Biography. *Plutus* was published by a Thomas Randolph, in 1651, under the quaint title of *Hey for Honesty! Down with Knavery!* This was followed by another, in 1659, with the signature of H. H. B. Stanley also translated the *Clouds*, which was printed in a folio form at London, 1708. Duplicate versions have been made by White and Theobald of the *Clouds* and *Plutus*. All these translations were below mediocrity; until, in 1797, Mr. Cumberland presented us with a version of the *Clouds*, which we do not hesitate to consider, not only as far superior to the efforts of his predecessors, but unrivalled for its ease, spirit, and fidelity, by any other modern attempts at a translation of this Poet. Mr. Young and the author of *Tom Jones* conjointly printed a version of the *Plutus*, of which the notes are good, but the wit, humour, and force, have entirely evaporated from the text. Mr. Dunster, the editor of *Paradise Regained*, published a version of the *Frogs*, which is superior to the preceding ones that we have mentioned, and is only inferior to Mr. Cumberland's admirable performance. In 1812 an anonymous translation of the *Birds* appeared, the first, we believe, that has ever been executed in this Country. Unfortunately for the success of this attempt, the author, instead of making use of the familiar blank verse of our early Dramatists, has descended to plain prose, as the vehicle of conveying the wit and spirit of the Comic Poet of Athens. We admire his learning, his knowledge of the text, and his general accuracy of explanation; but the diction, the choral subtilities, and the spirit and life of the dialogue, are utterly lost in this dress.

We believe that the Rev. Mr. Mitchell, of Sidney College, Cambridge, has in the press a translation of the entire Plays of Aristophanes, with the exception of the *Lysistrata* and the *Ecclesiazusae*, and to its appearance the eyes of scholars will be anxiously directed.

The Princeps edition of Aristophanes was published at Venice, in folio, 1498, by Maonius Aldus. It contained only nine Plays, as the *Lysistrata* and the *Thesmophoriazusae* were not at that time discovered. The

second edition was published at Florence, in 8vo. in 1515, by Bernard Jania, containing eleven Plays. The third was a reprint of the Aldine edition, with the Greek Scholia, at Florence, 1525, in 4to, by Antonius Franciscus. Ludolph Kuster published an edition at Amsterdam, in 1710, in a folio form. It was accompanied by the invaluable Greek Scholia and the Latin version of Frischlianus. This is by far the most important, and, on the whole, the most complete edition. In 1760 Stephen Bergier published an edition of Aristophanes, at Leyden, in two quarto volumes; to which a Latin translation is appended. His faults have been ably pointed out, and deservedly castigated, by Brunck, who published, at Strasburg, in the year 1783, an edition of the whole eleven Plays of Aristophanes, with the fragments collected by Canter, but omitted in Kuster's edition; together with an entire new Latin version, composed by himself. In one sense, this is the best edition of Aristophanes, inasmuch as the text is most pure; but the notes are entirely critical, and not explanatory, and it is unaccompanied with the Greek Scholia. This omission greatly derogates from the usefulness of the whole edition, and prevents us from pointing out to the reader any *separate* edition of the Poet, in which he may be studied to the greatest possible advantage. As the case now stands, Kuster and Brunck must be read together, for it is impossible to understand Aristophanes without continually referring to the excellent Scholia upon his Works. This edition was inaccurately reprinted at Oxford, 1810, by Nathaniel Bliss.

Editions of separate Plays of Aristophanes have been very numerous among continental scholars, but in this Country we have only the well-known edition of the *Plutus* and *Clouds*, published in London, the Oxford edition of the *Knights*, and one of the *Acharnians*, by Mr. Elmsley, the learned editor of the *Œdipus Tyrannus* of Sophocles, and the *Heracleidae* of Euripides. It is enriched with several notes by the celebrated Dr. Bentley, and is considered by scholars as a very complete code.

HERODOTUS.

FLOURISHED ABOUT A. M. 3559, B. C. 445.

Biography. THAT the sources of information respecting the "Father of History," as Herodotus is called by Cicero, are not more else, as well as more copious, may surprise many of our readers. Certainly the materials for the life of this celebrated Historian are at once few and of very doubtful authority; and the success which inspired so many imitators in ancient times, found no one to record its progress. He has been occasionally mentioned by various writers, and some slight allusions to the facts of his private history may be found in the pages of Aulus Gellius, Dionysius Halicarnassus, Lucian, and Strabo; but no regular biographical account has been given of him: the narrative compiled by Suidas is the basis upon which our information principally rests, and this is exceedingly meagre and unsatisfactory. It appears, however, according to the concurrent testimony of the Ancients, and, indeed, from the commencement of his own *Clio*, that the birth-place of Herodotus was Halicarnassus, the Capital of Caria, an extensive Country of Asia Minor. If the account of Strabo may be credited, the name of his father was Lyxes, and that of his mother Dryo. On the same authority we learn that he was descended from an ancient and illustrious family, and had an only brother of the name of Theodoros. About the time of his birth (according to Archbishop Usher's Chronology, a. c. 454) Lygdamis was the Tyrant of Halicarnassus, and appears to have been universally detested by the inhabitants for his rapacity and cruelty. Suidas says that our Historian, when arrived at manhood, was driven from his native city, and fixed his abode in Samos, on account of the oppressive conduct of Lygdamis; but it is not certain whether he voluntarily retired from Halicarnassus in disgust, or was forcibly expelled by the mandate of the Despot. After remaining some time at this place, determining to embrace every opportunity which presented itself for the accomplishment of his mind, he applied, although a Dorian by birth, to the study of the Ionic Greek; and to this early prepossession in favour of that mellow and refined dialect may probably be attributed the circumstance of his composing his History in it afterwards, and much of his celebrity as an author. However this may be, at Samos he appears to have first conceived the project of his admirable Work, and to have left it early in life, for the purpose of travelling and collecting materials for its composition. He successively traversed the Countries of Greece, Egypt, Asia, Scythia, Thrace, and Macedonia. Men were, at this period of the world, to be read for the purpose of making books; and it is sufficiently evident, from many passages in his Works, that he visited in person the greater part of the places and regions which he so eloquently describes. Whether, after these extensive migrations, he returned to Samos and re-established himself there, or whether the following events transpired during his early settlement in that island, cannot now be ascertained; but having received, at this place, intelli-

333

gence of a patriotic design that was formed by the lovers of freedom in his own Country for the expulsion of Lygdamis, he immediately left the island and hastened to give his powerful support to the conspiracy. Upon his arrival at Halicarnassus, he placed himself at the head of the popular party; their exertions were crowned with success, the tyrannical Lygdamis was deposed, and the people reinstated in that liberty which was, through all his life and Writings, the object of our Historian's warm eulogium. Neither his patriotism nor his fame, however, could secure to Herodotus the abiding patronage of his Countrymen. So far from conciliating their affections by this disinterested conduct, the populace and its many Tyrants seemed inclined to sward him the same fate as, according to most Historians, he had already experienced from one. Factions and cabals disagreed the cause he had espoused, and he was under the necessity a second time of precipitately withdrawing into Greece for protection. Here we are told, by Lucian and the other ancient writers, that he arrived during the celebration of the Olympic Games, and availed himself of this favourable opportunity for reciting portions of his History before the numerous and illustrious visitors; appearing in the Theatre, as the Historian says, not merely as a spectator, but an actor in the scene. The consequences to his fame were as important and as flattering as the most sanguine anticipations could have depleted. "Of the name of Herodotus none were now ignorant," says Lucian; "there was not a single person in Greece who had not either seen him at the Olympics, or heard those speak of him that came thence; so that, in what place soever he came, the inhabitants pointed at him with their finger, saying, 'This is that Herodotus, who has written the Persian wars in the Ionic dialect.'—'This is he who has celebrated our victories.'" It cannot for a moment be supposed that Herodotus repeated the contents of all the books which comprised his History on this occasion; but that he selected the more striking and interesting passages, to which the vehement oratory of the Age would add an small force of impression. His books were now, according to some writers, honoured with the names of the nine Muses by public acclamation; and the Historian himself was crowned with laurel, and dismissed with the most decided marks of approbation. At this solemnity there occurred a remarkable event, which is said to have been the means of developing the genius of another celebrated Historian. Thucydides, with his father, Olorus, was present at these Games; and, on hearing the recitation of Herodotus, though at that time a youth of only fifteen years of age, he burst into tears with emotion. Our Historian, perceiving the circumstance, and, perhaps, secretly gratified at the extreme sensibility of the youth, exclaimed to his father, Olorus, *ἀπὸς ἡ φέρει τὸ βῆν ἐπὶ τὰ μετέπειτα*—"your son is enthusiastically fond of letters."

About twelve years after this event, which is said to

Herodotus,

Herodotus
appears at
the Olympic
Games.

Biography. have taken place in the eighty first Olympiad, confident of the brilliant reputation which now awaited him, Herodotus proceeded to Athens, and in that illustrious city again repeated select portions of his Historical Work at the festival of the Panathæna. He was now in his thirty-ninth year. A people so susceptible of the beautiful and elegant in Arts and Letters as the Athenians could scarcely be insensible to the merits of Herodotus as a Historian, and we accordingly find that their literary taste was highly gratified by the recital of his Works, and their national vanity flattered in no ordinary degree by the praises which were lavished upon their splendid achievements at Marathon and Salamis. He was received with the most rapturous and enthusiastic plaudits; his brows were again decorated with laurel; the liberal present of ten talents was proposed to him; and a decree of the people in full assembly unanimously ratified the gift. Some respectable writers, however, dispute this account of Herodotus' visit to Athens, and assert that he never recited his History at the metropolis of Attica, but only at Olympus during the time of the celebration of the public Games at that place. It is also remarkable that Lucian, who mentions at some length the circumstance of Herodotus' presence at the Olympic Games, does not make the slightest allusion to his journey to Athens. Other accounts distinctly assign the portions of his Work read on these occasions.

The reputation of Herodotus was now in the zenith of its splendour, his good fortune had been commensurate with his merits, and by his very first efforts he had reached the highest pinnacle of literary renown. But he could not be induced to settle at Athens. At the commencement of the next Olympiad, during the Archæology of Callimachus, we find him joining a body of enterprising adventurers and colonists, who, under the protection of the Athenian Government, intended to form a settlement in that part of Italy which was afterwards called Magna Græcia. This expedition was rendered illustrious not merely by the presence of Herodotus, but by that of Lysias, at that time a very young man, and who afterwards became so renowned as an Orator. In the company of the Father of History, he imbibed, perhaps, that solid knowledge which became the foundation of his future fame. Thurium, or Thuri, was the place of colonization fixed upon by the Athenians; and was situated on the coast of the Tarentine gulf, very near the site of the ancient Sybaris. It is the generally-received opinion, which is stated by Suidas, that Herodotus spent the remainder of his days in this place, which is considerably strengthened by his having obtained the epithet of the Thurian, from the name of this settlement. Some writers, however, assert, that he died at Pella, a town of Macedonia, which was celebrated for being alike the birth-place of the Tragic Poet Euripides and of Alexander the Great. The appellation of Thurian, as applied to Herodotus, is to be first found in the Works of Aristotle, who is followed in this respect by Pliny, Julian, and others. Strabo, the Geographer, however, in his fourteenth book, calls him the Halicarnassian, and adds that he was afterwards called the Thurian, because he accompanied the colony which went to establish itself at Thurium; but the former is the most general title by which the Ancients were accustomed to designate the Father of History. One argument of a singular kind is brought against Suidas's statement of the death of our Historian, by Ammianus

Marcellinus, in his Life of Thucydides. He contends that it is impossible he could have died at Thurium, because his tomb was to be found at Athens, among the monuments of Cimon; and from this account President Bouhier, in the *Mémoires de l'Académie des Inscriptions et Belles Lettres*, at Paris, attempts to refute the facts advanced by Suidas. But what was the tomb in question? Inquires Monsieur Larcher, in his preface to his remarks on the admirable translation of Herodotus. He observes, that it was probably a mere cenotaph, one of those marks of honour and distinction which were frequently bestowed upon the celebrated characters of antiquity, as in our own times, irrespective of the place of their death; and he brings forward several instances of this practice among the Ancients. Indeed, Stephen of Byzantium, the well-known Geographer, has transcribed an inscription, which is said to have been found at Thurium, and which unequivocally asserts the place of his decease. Wherever he finished his days, it is certain (according to Phry) that Herodotus not only resided at Thurium for a considerable length of time, but that he here corrected, enlarged, and completed his History. *Auctor ille Herodotus Historiam condidit, Thuriis in Italiâ.* We have thus explored every source of the personal history of Herodotus: what was the precise age at which he died we do not learn, nor the Olympiad in which his death took place.

The opinions of the most illustrious critics of antiquity, on the merits of our Historian, will not be uninteresting to the reader. Longinus, in his Treatise on the Sublime, considers him a second Homer amongst Historians, and applies to him the distinguished epithet of *Ὀμηροειδὴς*, *ἄνευ Ἡρόδοτος Ὀμηροειδέστι ἐρέετο*. His countrymen, Dionysius of Halicarnassus, runs a long parallel between the Historian of Thurium and Thucydides. We have not room to transcribe the whole passage, but may quote a portion of his elegant eulogium: "*Ἰσὺ δὲ συνέλπον εἶναι, καὶ μὲν αὖ συνέσει ἀμφοτέρω δ' ἄρ' ἐν ἀνεκδοταῖς ποιήεντι αὐτὸν λόγον διαφέρειν δ' ἐκαστὸν τὸν μάλιστα ἀλλήλων, οἷοι τὸ μὲν Ἡρόδοτος κάλλος διατρεῖν ἐστὶ, φοβερὸν δὲ τὸ Θουκυδίδου.*" In other words, then, the *καίρεσι* of both are beautiful, for I am not ashamed to call them *καίρεσι*; but they differ from one another, particularly in this, because the beauties of Herodotus consist in elegance and cheerfulness; those of Thucydides in sternness and austerity." Quintilian, in his Institutes, speaking of the style of Herodotus, calls it sweet, pure, and flowing. Cicero says it is copious and polished. (*fusum atque tractum*;) and, in his Treatise De Oratore, makes mention of him in strong terms of eulogy: *Atque tanta est eloquentia, ut me quantum ego Græcæ scripta intelligere possum, magnopere delectat.* "His eloquence is so great, at least as far as I understand the Greek language, that it exceedingly delights me." Aristotle quotes him, in his Rhetoric, as an instance of the flowing style, which he designates by the expression of *λέγει ἡμερῶς*. These are the principal testimonies of antiquity in favour of Herodotus, but it must not be concealed that some of the ancient writers have formed very different opinions of his claims as a Historian. Ptochæus, in particular, has vehemently attacked him; and, although he allows him the merit of great beauty and accuracy of composition, he wrote a Treatise expressly to derogate from his fame, and to shake the authenticity of his great Historical Work.

Disputes about the place of his death.

Opinions respecting his merit.

Joins the expedition to Thurium.

Biography. In his Treatise on the malignity of Herodotus, Plutarch accuses him of injustice toward the Greeks, and asserts that he has compromised their honour, especially that of Thebes and Corinth, for the sake of flattering the Medes and Persians. He proceeds to state, that in his account of the naval engagement at Salamis, he has unpardonably exaggerated the heroic exploits of Artemisia, Queen of Halicarnassus, because Caria, of which that town was the Capital, happened to be his native country. The invective of Plutarch is, on the whole, so exceedingly bitter, that had the two writers flourished at the same period, we must have concluded it to have been the fruit of strong personal antipathy. Were the charges which he publishes worthy of serious refutation, we might ask what inducement could the Historian have had to exalt the character of the Persians at the expense of his Countrymen's reputation. Indeed, the very contrary is the tendency of his Writings; and a perusal of the *Erato* will sufficiently confirm the fact. Plutarch, himself, perhaps, was much more the victim of these undue partialities, and has been supposed to bring forward these accusations against Herodotus, because the latter, in his narrative of the Persian invasion, invectives against the Thebans, who were the principal inhabitants of Boeotia, (the birth-place of Plutarch,) for their meanness and cowardice in deserting the common cause of Greece, and for being the first to submit to the Persian yoke.

Other antagonists of Herodotus. Dion Chrysostomus, the Favourite of the Emperor Trajan, is another of the celebrated antagonists of Herodotus: he directly charges him with having falsified the account of the Battle of Salamis, by representing that Adimantus, the Corinthian General, fled at the commencement of the engagement, and thus endangered the safety of Greece—an imputation upon the national character of the Corinthians, which he attributes to the circumstance of the refusal of that people to present Herodotus with a sum of money for the recital of his History. Other eminent writers, both of ancient and modern times, have regarded our Historian as utterly deficient in the grave and austere dignity of Historical truth. Among the rest, Ctesias, Strabo, Diodorus Siculus, and Aulus Gellius, have brought forward many strong and vehement objections against the authenticity of his assertions and descriptions. Manetho boldly disputes his accuracy respecting many of the manners and customs of Egypt; but of them, as we have observed in another place. (*Herodotus*, chap. v. of Egypt.) Herodotus invariably states that he derived his information from the Priests of that Country, and does not pretend to communicate the facts generally from his own personal knowledge; and, while something must ever be allowed for his credulity in receiving these statements, much more might have been expected from the barbarism of the Age, and no just impeachment of his industry as a Historian has yet been established. It is but just, indeed, to add, that the researchers of modern travellers, especially in Egypt, have increased rather than diminished the confidence which has been placed for Ages in the general accuracy of his narrative.

In some of the details of his History, Herodotus partakes of the ignorance of the times in which he lived, with regard to all Physical Science. Aristotle, in his History of Animals, censures him for asserting that, at the siege of Ninus, an eagle was seen to drink, when it is notorious that all birds which have crooked claws,

γομφύλινες, are never in the habit of drinking. Other mistakes have been remarked with respect to his account of the Nile also, and the causes of its periodical inundations; and his belief in visions, oracles, and omens: all of which are capable of a similar explanation.

The style of Herodotus is universally allowed to be remarkable for its harmony and sweetness: and may be compared to a river which flows equally and gently between its banks, fertilizing and gladdening the meadows through which it rolls, while that of Thucydides, with whom alone he can be paralleled, resembles the mountain torrent with its rapid tide, carrying every thing before it. It has been thought singular by some writers, that Herodotus, who was born a Dorian, should have been induced to compose his History in a foreign dialect, and that it would have been more to his honour to have disciplined his native Tongue to this important use; but the Doric in his day was hopelessly rude and dissonant. Even in the polished Court of Ptolemy Philadelphus, at a much later period of time, it was considered as broad and inharmonious, and must never be confounded by the students with that mellow Tongue which is so much admired in Theocritus, and the other Pastoral Poets of Greece. Hesychius, in his Lexicon, at the word *Βαφειογενής*, informs us that the inhabitants of Caria were so called for their harsh and barbarous pronunciation. It must be confessed that the style of Herodotus owes all its charms to the dialect of Ionia, which, though deficient in terseness, when compared with the Attic, is, perhaps, equal in elegance, and certainly superior in melody. The plastic hand of the Historian found facilities in this language for moulding the most important events and assertions into the most engaging forms; nothing can exceed the general simplicity of style in which every thing is told, or rather placed before the eye of the reader with the utmost distinctness; never is he infected by the nania for fine writing; we find

No inextricable graces to beguile,
No clustering ornaments to clog the pile;

there breathes throughout the whole composition a grave but mild dignity. It must, however, be confessed, that there is nothing of that Philosophy of History to be found in Herodotus for which Thucydides first distinguished himself, but which, perhaps, was not fully cultivated until the time of Tacitus. He seems to have had no idea of tracing effects to their causes, or of explaining the nature of the political convulsions which he describes; and, but for the brilliancy of diction with which he clothes the actions he depicts, he would, in some instances, hardly rank higher than Froissart or Montrelet, the Chroniclers of modern times.

Herodotus is, in truth, more dramatic than any other writer of Ancient History, and, like the penmen of a higher school, he does not narrate what Solon and Cæcæus said and did, but he introduces them to the reader as speaking and acting in his immediate presence. Of his verbiage, which, after all, is the distinguishing excellence of a Historian, and upon which we have already touched, it has never, generally speaking, been fairly impeached; on the contrary, it has been long acknowledged among scholars, that, when they at all approximate, his Writings are more conformable to the Sacred Scriptures than any other of the ancient Historians. We cannot but admire the pertinacious industry and perverse erudition of some modern scholars, who, in

Herodotus.

445.
His style.

Biography. collecting every possible objection to the truth of his narrative, have forgotten that he never vouches for the accuracy of his statements, unless the facts actually passed under his own observation. In the Thalia, it is true that he gives us a tedious fable respecting the Arimaspi, an extraordinary tribe of Scythia, who had but one eye in their forehead, and "who stole the Grippon's gold in the North;" but it must be recollected, that he ridicules this story in telling it, and expressly declares his disbelief of its truth. He also details the current accounts of the Oioripæ, the Anthropophagi, and the Aigipæ, or goat-footed men; but they are given as popular traditions, and reflect only a fair image of the times and people amongst whom he wrote. The same remark will apply to the account of Alerix, in the Melpomene, who was said to run over the Earth, without eating any food, and with an arrow, which served instead of a Pegasus. In another part of that Book he solemnly protests against the truth of a similar story, which he feels obliged to tell, respecting a neighbouring nation to the Scythians, who were said to have acquired the appellation of Lycanthropi, from the circumstance of their being metamorphosed into wolves once a year, and in a few days resuming their human shape. These very stories, we would contend, that can have no credit with us as facts, include a matter-of-fact description of the Age which could believe them; and must be far, therefore, from establishing the charge either of intentional falsehood, or the folly of mingling truth with fable, without distinguishing between them.

His veracity.

Independently of what we have now said, the personal character of Herodotus would successfully repel the darker part of the insinuations which have been thus thrown out against him. Although a Heathen and an idolater, there was an evident dominion of conscience to which he bowed in some remarkable circumstances of his life, and which would not suffer him, as a Historian, to treat lightly, or intrude into those mysteries of Religion, which he believed as a Man. Having been induced to say thus much respecting the veracity of this excellent Historian, from a sense of the injustice with which it has been fashionable to treat him, we shall now give a short analysis of the Work itself.

Analysis of his History.

This History was, as before mentioned, recited by Herodotus himself, at the Olympic Games, and embraces a period of time, from its commencement to its close, of about two hundred and forty years. It professes to be a History of the Greeks and Barbarians generally, or what we should, in modern days, term a Universal History, for the Greeks called all nations beside themselves by the name of Barbarians. It particularly treats of the wars of the Persians against the Greeks, and their several invasions of the Grecian States; and, with a full and interesting account of other nations, represents every thing as it bore upon the Grecian interest, manners, and customs.

The narrative commences with the Empire of Cyrus the Great, the first King of Persia, and continues the History of that State till the reign of Xerxes, concluding with the battle of Mycale, which took place after his unsuccessful expedition into Greece, and which is about the period of the life of the Historian. This History, as we have intimated, is divided into nine books, named after the nine Muses. The first book, Clio, treats of the transfer of the Kingdom of Lydia, from Gyges into the hands of Croesus, the minority of Cyrus, and his

subsequent overthrow of the unwieldy Lydian Empire. It also notices the rising greatness of the powerful Republics of Athens and Lacedæmon. The second book, the Euterpe, gives a copious and judicious account of Egypt, of Egyptian customs and manners, and a long dissertation upon the succession of their Kings. The third, the Thalia, contains an account of the exploits and achievements of Cambyses, and particularly of the subjugation of the whole of Egypt by that capricious and tyrannical monarch, and finally records the election of Darius Hystaspes to the Persian throne, which was vacant by the death of Smerdis the Impostor. The fourth, the Melpomene, gives a detailed narrative of the unfortunate and calamitous expeditions of the Persians, during the reign of Darius Hystaspes, against the Scythians. The fifth, the Terpsichore, mentions the Republics of Athens, Lacedæmon, and Corinth, in their progress to stability and fame; gives a concise view of their resources and strength as they existed in the time of the Persian Emperor, Darius, and concludes with the expulsion of the Tyrant Hippias from Athens. The sixth, the Erato, records the origin of the Lacedæmonian Kings, the causes which induced Darius to declare war against the Greeks, the first invasion of Greece by the Persians, and finishes with the memorable battle of Marathon. The seventh, the Polyhymnia, contains a full narration of the formidable expedition of Xerxes, the son of Darius Hystaspes, into Greece, and concludes with an animated account of the battle which took place between the Greeks and Persians at the Straits of Thermopylæ. The eighth, the Urania, narrates the further progress of the arms of Xerxes, the taking and burning of Athens by the Persians, together with the events which took place at the sea-fight off Salamis, a battle which eventually led to the utter overthrow of the Persian power in Greece. The ninth, the Calliope, treats of the battle at Platæa, the fight off the Promontory of Mycale, and the subsequent retreat of the Persians in consequence of these engagements.

The great Historical Work of Herodotus has been in abridgement several times abridged. The principal performances of this kind are the well-known Work of Theopompus, of Chios, mentioned by Suidas, and that of David Chytraeus, which contains many valuable and learned notes. Before we proceed to enumerate the various translations and editions of our author, we must give some short account of a Work which has been attributed to him, without sufficient proof. It is called the *Life of Homer*, and has been published in most editions of them as an integral part of his Works. The principal advocates in favour of its genuineness are Fabricius, the celebrated author of the *Bibliotheca Græca*, the President Boucher, and our learned Countryman, Joshua Barnes, the well-known editor of Euripides, Anacreon, and several other classical Works; while Vossius, Spahnemius, Berglerus, Wesseling, and a legion of minor critics, have entered a solemn protest against its authenticity, and brought forward various arguments from the discrepancies of the style of this piece, and its general manner, to prove its utter incompatibility with its claims. Independently of these circumstances, it has also been remarked, that of all the writers of antiquity who have undertaken to discuss the birth, fortune, or Poems of Homer, not one has, by the most remote allusion, glanced at this Work, whose subject and whose author (had it been genuine) had

Herodotus.

8559.
—
B. C.
445.

Biography. equally and infallibly insured it attention. In addition to this proof, which is almost decisive upon the question, there also exists a chronological argument against its authenticity. The author of this Life, whoever he was, asserts that Homer lived one hundred and sixty-eight years after the Trojan war, and six hundred and twenty-two before the expedition of Xerxes against the Grecian States. Now, in the second book (the Euterpe) of his History, we find that Herodotus himself remarks that both Homer and Hesiod lived four hundred years before him. It therefore follows, as a natural consequence, that these writers must have flourished many more years after the Siege of that celebrated city.

The translations of Herodotus, as might be expected, have been very numerous, in most of the modern languages. We must be content to select the principal. The first that appeared was in Latin, by Laurentius Valla, a celebrated Greek scholar, and was printed at Venice, in 1474. Many editions of this version of Herodotus have been since published; it was revised by one Conrad Hoesbachi, of Cologne, in 1537, and its excellence has secured to it the honour of accompanying the Greek text in all respectable editions to the present day.

Monsieur Larcher, some years ago, favoured the world with the most faithful and spirited French translation of Herodotus which has yet appeared. From an intimate acquaintance with this admirable performance, we are unable to say whether we most admire the various erudition with which he has enriched his notes, or the happy and appropriate expressions in which he has conveyed the sense and spirit of his author. A late English translator has freely availed himself of the learning of Larcher, which incomparably exceeds that of any modern commentator on our Historian. A curious old English translation of the two first of the nine books of Herodotus was published in London by Marsh, in 1584. A complete translation did not appear in the English language until the year 1737, when a Mr. Littlebury published the text of Herodotus in two volumes, unaccompanied by either note or comment. This version evinces some care and learning; it is, in the main, faithful in letter to the original, but completely deficient in conveying its spirit. The late Mr. Beloe, well known in the literary world, both by his Writings and his public avocations, accomplished a translation of the whole History, and first published it in 1791. After the obsolete performance of Littlebury, it would confer but small honour to say, that it is very superior to any which has made its appearance in our language. It is written in easy, perspicuous, and, occasionally, in elegant language; but we cannot recognise Herodotus' resemblance in this mirror of a translation; it not unfrequently mistakes the sense; it sometimes perverts the meaning of his original, and, in more than one instance, it is evidently translated from the French of Larcher rather than from the Greek. Mr. Payne Knight, one of the most elegant and critical scholars of his Age, points out an egregious mistake of this translator, in his profound disquisition upon the Principles of Taste. The sentiments of so eminent a scholar may not perhaps be uninteresting to our readers, and we shall make no apology for subjoining them. The His-

torian having merely observed, "that the greatest heat of the sun was at a certain hour of the morning, when the business of the forum ceased, and not in the middle of the day, as in other Countries, *θερμότερον δὲ τότε τὸ ἥλιος ῥέειναι τοῖς ἀπὸ θύρας τοῦ δαδῶντος ἢ κατὰ τὸν καιρὸν τῆς ἀλλοτρίης μεσημβρίας, ἀλλὰ ὑπερβίβας μᾶλλον τὸ ἡριπύρρον διαλάσας*, Lib. iii. 104. It is thus rendered, in the translation, "In distinction from all other nations, the heat with these people (the Indians) is greatest, not at mid-day, but in the morning! They have a vertical sun, when with us people withdraw from the forum."

Dr. Lempriere, author of the *Classical Dictionary and Universal Biography*, published in 1791 an English version of the Clio of Herodotus, as a specimen of an entirely new translation, but did not favour the Public with a continuation of his performance.

The principal editions of Herodotus are as follow:
Herodoti Historici, Gr. fol. Venet. Ald. 1502. This is the Princeps Aldine edition, and was printed by Aldus Manutius.

— à Josch. Camerario, Gr. fol. Basilæ, 1541. A good edition, reprinted 1557.

— ob Henrico Stephano, Gr. fol. 1570. One of the most correct, according to Dr. Harwood, of the Greek classics published by Stephens.

— Gr. et Lat. fol. Hen. Steph. Parisiis, 1592. This is an excellent edition, corrected, amended, and enlarged; it is a reprint of the former one, but rendered greatly preferable by the additional notes, &c.

— à Gothofredo Jungermanno, Gr. et Lat. fol. Frankfurt, 1608.

— cum notis Henr. Steph. a Fred. Sylburgio, Gr. et Lat. fol. Olive P. Steph. 1618.

— à Thomâ Gale, Gr. et Lat. fol. Londini, 1679. This is a very superior edition.

— à Jac. Gronovio, Gr. et Lat. fol. Lugduni Batavorum, 1715. This is by no means a valuable edition; and it has been well observed that the editor knew more Latin than Greek.

— Gr. et Lat. 12mo. Glasgou, 1761, 9 vol. This is a very valuable and correct edition.

— à Petro Wesselingio, Gr. et Lat. fol. Amstelædæmi, 1763. This is by far the best edition of Herodotus, which has appeared in the Republic of Letters, and, in spite of various illiberal attempts made by subsequent commentators to depreciate its merits, still remains vastly superior to every edition which has preceded or succeeded it. It contains all the various readings, is adorned by numerous learned and judicious notes, and is, in short, an exemplar for future editors of classical books.

— Gr. et Lat. cum notis Variorum. Reizius, tom. 1, Bro. Lipsæ, 1778.

— curâ Schæferi, Gr. vol. 1, 2, Bro. Lipsiæ, 1800. This last edition has taken Wesseling's text for its basis, and has certainly made some excellent emendations in the original text. It was commenced by Reizius, and upon his decease was finished by Schæfer. It was reprinted incorrectly at Oxford in 1809, by N. Bliss.

Emilius Portus published a Lexicon for the use of those who were desirous to study the Works of Herodotus; and it was reprinted at Oxford, by Bliss, in 1817

HISTORY.

CHAPTER X.

OF PERSIA.

Persia.

§ I. Topography of Media and Persia.

At the close of our account of CYRUS (p. 278) we described the dying Prince, on the authority of Xenophon, as solacing himself with the reflection, that he had advanced Persia from an inconsiderable Kingdom to a mighty Empire. According to that Historian, it was now terminated to the East by the Red Sea, (as the Ancients termed the Indian Ocean,) to the North by the Euxios, to the West by Cyprus and Egypt, and to the South by Ethiopia. It is described, in the Book of Daniel, as reaching "from India even unto Ethiopia;" and, soon after the time of Cyrus, it was divided into one hundred and twenty Provinces, including an extent, as calculated by the learned Prideaux, forty times as large as England. Such was that portion of Asia which is distinguished in Ancient History as the Medo-Persian Empire.

We should here, perhaps, proceed to inquire into the progress of this Empire from its inconsiderable commencement to that large extent which it attained under Cyrus, and to collect what has been commemorated by the ancient authors generally followed upon these subjects. But our attention is demanded to the curious and important discovery respecting Persia, made by a distinguished Oriental scholar, the glory of our Country and of his Age; one who sought in the East to collect the priceless treasures of her ancient lore, leaving to posterity the acquisition of that wealth which the world covets.

In the desiderata found among Sir William Jones's Papers, he had mentioned "The History of Persia, from authorities in Sanscrit, Arabic, Greek, Turkish, Persian, Ancient and Modern." This he did not live to undertake. He has, however, in his VITH Dissertation, given a large account of "a rare and interesting Tract on twelve different Religions, entitled the *Dabistan*, and composed by a Mohammedan traveller, named Mohsua Fâni." On the "evidence" drawn from this Tract, which "appears unexceptionable," he shows that the Persian Empire, under the denomination of "the Irânic Monarchy, must have been the oldest in the World;" and concludes, "that Irân, or Persia, in its largest sense, was the true centre of Population, of Knowledge, of Languages, and of Arts; which, instead of travelling Westward only, as it has been fancifully supposed, or Eastward, as might with equal reason

have been asserted, were expanded in all directions, to all the regions of the world, in which the Hindû race had settled, under various denominations."

Sir William Jones does not appear to have drawn this extraordinary conclusion till after a cautious and diligent investigation of a subject which it required his peculiar attainments satisfactorily to discuss. He inquired into "the ancient languages and characters of Irân." These he found to have been "Chaldaic and Sanscrit," which "no supposition of a mere political or commercial intercourse between the different nations will account for, because, they are too numerous to have been introduced by such means, and are not the names of exotic animals, commodities, or Arts, but those of material elements, parts of the body, natural objects and relations, affections of the mind, and other ideas common to the whole race of Man." Hence our author concludes, "that the language of the first Persian Empire was the mother of the Sanscrit, and, consequently, of the Zend and Farsi, as well as of the Greek, Latin, and Gothic; that the language of the Assyrians was the parent of Chaldaic and Pahlavi; and that the primary Tartarian language had also been current in the same Empire; although, as the Tartars had neither books, nor even letters, we cannot with certainty trace their unpolished and variable idioms."

Discovering, "therefore, in Persia, at the earliest dawn of History, the three distinct races of men" who were "possessors of India, Arabia, and Tartary," he proceeds to inquire "whether they were collected in Irân from distant regions, or diverged from it as a common centre." To the latter conclusion he is thus determined.

To "the central position of Irân, which is bounded by Arabia, by Tartary, and by India," our author adds the considerations, that "the Brahmins could never have migrated from India to Irân, because they are expressly forbidden, by their oldest existing laws, to leave the region which they inhabit at this day;" that "the Arabs have not even a tradition of an emigration into Persia before Mohammed, nor had they, indeed, any inducement to quit their beautiful and extensive domains;" and that, "as to the Tartars, we have no traces in History of their departure from their plains and forests till the invasion of the Medes, who, according to etymologists, were the sons of Media; and even they were conducted by the Princess of an Assyrian family." Such is the fullest account which our limits

Topography of Media and Persia.

Sir William Jones's theory.

Persia.

will allow of the principal arguments which induced Sir William Jones to receive the doctrine of the *Dabistan*—"that a powerful monarchy had been established for Ages before the accession of Ceymers," who has been considered as the grandson of Noah. This account, considering our author's high authority, we have been solicitous to select from the Dissertation, in his own language. In connection with his opinion on the doctrine of the *Dabistan*, we may suitably refer to another learned Orientalist, Mr. Richardson, in his *Dissertation on the Languages, Literature, and Manners of the Eastern Nations*, prefixed to his *Persian Dictionary*. He remarks, on the authority of "Asiatic Historians," (p. 32,) that "Babylonia, Syria, Assyria, and Media, seem to have been merely feudatory Kingdoms of the old Persian Empire;" and that "Alexander the Great divided the Eastern Provinces of Persia among the Princes to whose families they originally belonged." He adds, on the same authority, that, "on this occasion, they received a banner from the hands of the Conqueror, paid homage, and engaged to maintain a certain number of troops, upon a footing somewhat resembling the military vessels of the Ottoman Empire."

Iran its
ancient and
proper
name.

Sir W. Jones observes, at the commencement of his Dissertation, that the Country, "which Europeans improperly call Persia, is correctly denominated Iran by the present natives of it, and by all the learned Mussulmans who reside in the British territories." Of this, "one of the most celebrated and most beautiful Countries in the world, the noblest island, (for so the Greeks and the Arabs would have called it,) or at least the noblest peninsula, on this habitable globe," he proceeds thus to ascertain the "largest boundaries."

"Let us begin with the source of the great Assyrian stream Euphrates, (as the Greeks, according to their custom, were pleased to mis-call the Forth,) and thence descend to its mouth in the Green sea, or Persian gulf, including in our line some considerable districts and towns on both sides of the river. Then, coasting Persia, properly so named, and other Iranian Provinces, we come to the Delta of the Sinthu, or Indus; whence, ascending to the mountains of Cashgar, we discover its fountains, and those of the Jaidan, down which we are conducted to the Caspian. We next are led from the sea of Kismir by the banks of the Cur, or Cyrus, and along the Caucasian ridges, to the shore of the Euxine, and thence by the several Grecian seas to the point from whence we took our departure, at no considerable distance from the Mediterranean;" and including "the Lower Asia within this outline, because it was unquestionably a part of the Persian, if not of the old Assyrian Empire."

"It may seem strange," continues Sir William, (and we shall make no apology for so considerable an extract upon a matter so important to Persian History,) "that the ancient History of so distinguished an Empire should be yet so imperfectly known; but very satisfactory reasons may be assigned for our ignorance of it: the principal of them are the superficial knowledge of the Greeks and Jews, and the loss of Persian archives or Historical compositions. That the Grecian writers, before Xenophon, had no acquaintance with Persia, and that all their accounts of it are wholly fabulous, is a paradox too extravagant to be seriously maintained; but their connection with it in War or Peace had, indeed, been generally confined to border-

ing Kingdoms under feudatory Princes; and the first Persian Emperor, whose life and character they seem to have known with tolerable accuracy, was the great Cyrus, whom I call, without fear of contradiction, Caikhosrau; for I shall then only doubt that the Khosrau of Firdaus was the Cyrus of the first Greek Historian, and the Hero of the oldest political and moral Romance, when I doubt that Louis Quatorze and Lewis the Fourteenth were one and the same French King; it is utterly incredible that two different Princes of Persia should each have been born in a foreign and hostile territory; should each have been doomed to death in his infancy by his maternal grandfather, in consequence of portentous dreams, real or invented; should each have been saved by the remorse of his destined murderer, and should each, after a similar education among herdsmen, as the son of a herdsman, have found means to revisit his paternal Kingdom, and having delivered it, after a long and triumphant war, from the Tyrant who had invaded it, should have restored it to the summit of power and magnificence. Whether so romantic a story, which is the subject of an Epic Poem, as majestic and entire as this kind, be Historically true, we may feel perhaps an inclination to doubt; but it cannot with reason be denied, that the outline of it related to a single Hero, whom the Asiatics, conversing with the Father of European History, described according to their popular traditions by his true name, which the Greek alphabet could not express: nor will a difference of names affect the question; since the Greeks had little regard for truth, which they sacrificed willingly to the graces of their language, and the nicety of their ears; and, if they could render foreign words melodious, they were never solicitous to make them exact; hence they probably formed Cambyses from Cambakhsh, or *Granting desires*, a title rather than a name, and Xerxes from Shîrûy, a Prince and warrior in the Shâhnâmâh, or from Shîrshâh, which might also have been a title; for the Asiatic Princes have constantly assumed new titles or epithets at different periods of their lives, or on different occasions; a custom which we have seen prevalent in our own times, both in Iran and Hindustan, and which has been a source of great confusion even in the Scriptural accounts of Babylonian occurrences: both Greeks and Jews have, in fact, accommodated Persian names to their own articulation; and both seem to have disregarded the native literature of Iran, without which they could at most attain a general and imperfect knowledge of the Country."

Of this Empire of Iran, as it was extended, or rather restored, by Cyrus, Assyria has been already described. (p. 214.) Other Provinces will be noticed in their proper places. We shall here confine our inquiries to the topography and early History of Media and Persia; the former of which had attained a superior importance, if not the sovereignty over Persia, at the time at which those Countries first attracted the attention of the Greeks.

Media is a Country, the name of which the Sacred History appears to derive from *Medai*, one of the descendants of Japhet; while, according to Strabo, it was denominated from Medus, the son of Medea and Jason, or from a city called Media, whence the whole Country borrowed the name. This Country was bounded on the North by the Caspian sea; on the South by Assyria, the Sarians, and Persia Proper; on the West by

Topo-
graphy of
Media and
Persia.

Persia.

Armenia Major; and on the East by Parthia and Hyrcania. It now forms the Province of Al Jibal, or Irac Asami.

Media was, in early times, divided into six Provinces, which were afterwards reduced to two—Media Magna and Media Atropatia. In the former the principal Cities were Laodicea, Apamea, Arsacia, and especially Ecbatana, probably the present Tauris, the seat of the Medians, and afterwards of the Medo-Persian monarchs. Here, according to Josephus, "Darius found among the records of Cyrus his decree, commanding that the Temple should be built in Jerusalem." (Antiq. b. xi. c. 4.) Ezra (vi. 2) names the place "Achmetha, the Palace in the Province of the Medes." This City is also mentioned by name in the Books of Tobit and Judith. In the latter (i. 2-4) it is described as having "walls round about, of hewn stones three cubits broad and six cubits long, the height of the wall seventy, and the breadth fifty cubits, gates raised to the height of seventy, and the breadth forty cubits, and towers upon the gates a hundred cubits high, and the breadth in the foundation threescore cubits." The following account of Herodotus represents this City as possessing great importance and extent, and being of a very singular construction.

"There were seven walks of a circular form, gradually rising above each other to the extent of the height of each wall. The palace and treasury were within the innermost enclosure. The inner wall was equal in circumference to the city of Athens, (which Thucydides has described as one hundred and seventy-eight furlongs.) The battlements of this outer wall were painted white, the next black, the third purple, the fourth blue, the fifth orange; so that the walls might be known by their different colours. The two innermost were distinguished from the rest, the one being covered with silver, and the other with gold." In this Province was also situated Regeia, described by Isidorus as the greatest city in Media. It is supposed to have been the same as Rages, mentioned in the Book of Tobit as near to Ecbatana.

Gaza.

Media Atropatia contained Gaza, the metropolis of the Province; and also the cities of Samian, Faza, and Cynopolis. This tract, according to Strabo, was possessed by the Cadusi and the Caspi, a barbarous people of Scythian origin.

Face of the country.

The principal Mountains of Media, according to Ptolemy and Strabo, were Choatra, passing Media from Assyria; Zagrus, according to Ptolemy, one hundred cubits high, dividing it from Assyria on the East; also Parachontra, placed by Ptolemy on the borders towards Persia, and by Strabo on the confines of Media, Hyrcania, and Parthia. To these boundaries, between Media and the adjacent regions, must be added the Orontes, the Jaxartes, and Corocus, mountains of Media, arising in the middle of the Country. The rivers of Media, according to Ptolemy, were the Straton, the Ananidus, the Cyrus, and the Cambyse. It has, however, been remarked, that "these rivers, as they are represented to disembrace themselves into the most southern part of the Caspian sea, could not belong to Media Proper as it has been described by the Ancients."

The northern parts of Media, lying between the Caspian mountains and the sea, are very cold and barren, the earth swampy, and full of marshes. Insects abound

there, and anciently those parts were greatly infested with scorpions. The Provinces more remote from the sea enjoy a wholesome air, though liable to heavy rains and violent storms, especially in the Spring and Autumn. The southern parts produce all sorts of grain and necessaries for life. Here are large plains, among which that of Nysa is famous for the numerous studs of horses kept for the use of the Persian monarchs, and often mentioned and celebrated by the Ancients.

The Country of Media is first known in History as a Province of the Assyrian Empire, to which, according to Diodorus Siculus, it was subjected by Nimrus, in the XIIIth century before the Christian era. For several Ages the Medes appear to have patiently endured the yoke, until they revolted under Arbaces, Governor of Media, as we have already related in our account of SARRANAPALUS. (p. 215.)

§ 11. Early History of the Medes.

Diodorus Siculus, on the authority of Ctesias, has here introduced the names and actions of seven Princes, respecting whom Herodotus is entirely silent; but as Ctesias has been regarded as justly entitled to the epithet fabulous, we therefore prefer the authority of "the Father of History." According to Herodotus, the Medes, on recovering their independence, first adopted a popular government, or rather several distinct governments, which appear soon to have been jealous of each other, and disposed to hostility. After some years of confusion and anarchy, one of their Countrymen, Deioceus, by the reputation he attained as a Judge of their differences, procured himself to be elected King, in the year 710 before the Christian era.

This first King of the Medes soon degenerated from the exercise of mildness and equity which had procured his advancement, and became a Tyrant. He exacted from the people the labour of building, for his magnificence, the famous City of Ecbatana, where, to preserve his dignity, he kept himself concealed in the interior of his Palace, "believing," says the Historian, "that, while invisible to his subjects, he should be regarded as one of a superior race." Yet, as Montesquieu has remarked, this seclusion affected by the Princes of Asia was attended with no inconsiderable hazard.—*Cette puissance invisible qui gouverne est toujours la même pour le peuple. Quoique dix rois, qu'il ne connaît que de nom, se toient égarés l'un après l'autre, il ne sent aucune différence, c'est comme s'il avait été gouverné successivement par des esprits.* (Lett. Pers. No. 100). Herodotus, however, has described this Prince as making himself known by a vigorous exercise of justice, which, from the recess of his Palace, he distributed to all his subjects by means of his officers.

Deioceus, according to the most probable account of these Ages of uncertain History, appears to have passed fifty-three years in the exercise of royalty, when ambition drew him from his retirement, and he was slain in battle with the Assyrians. His son Phraortes succeeded to his Crown, and also inherited his martial propensities. He fell before the walls of Nineveh, after a reign of twenty-two years.

Cyaxares, the son of Phraortes, now ascended the throne. He rigorously disciplined his army, soon recovered what his father and grandfather had lost to the Assyrians, and then carried the war into the enemy's

Persia. Country. There he besieged Nineveh, to revenge the injuries which Nebuchadnezzar had inflicted on the Capital of Media. But he was called away by a formidable irruption of the Scythians, who now overran a great part of Asia. Engaging them in battle, his army was routed and his Country for some years subjected to the conqueror. At length he is said to have prevailed over his enemies by the following stratagem. He invited them to a general entertainment among the Medes. The master of each family intoxicated his guest. Then the Scythians were massacred, and the Kingdom was restored to independence, though not to the enjoyment of Peace; for Cyaxares was presently engaged in a war with the King of Lydia, the occasion and event of which we have already described. (p. 266.)

Released from the Lydian war, he resumed the siege of Nineveh, which he took, in conjunction with Nebuchadnezzar, King of Babylon. The confederate Princes now led their army against the King of Egypt, whom they forced to abandon his acquisitions in Assyria, and to retire into his own Country. Their joint efforts against the Holy Land are detailed in the Sacred History.

Herodotus attributes to Phraortes the conquest of Persia, but that Country was rather subdued by his son Cyaxares—a supposition which best agrees with the language of the Scriptures. Thus the Kingdom of Media was enlarged to a powerful Empire, for Cyaxares shared his conquests with the King of Babylon. The Median Prince died in the fortieth year of his reign, and was succeeded by his son Astyages, the Ahasuerus mentioned in the Book of Daniel.

We have seen (p. 266) the marriage of this Prince with Aryetis, the daughter of the King of Lydia. By her he had Cyaxares II., called in Scripture Darius the Mede. He had also a daughter named Mandane, who became the mother of Cyrus, to which name (p. 275) we refer for the later History of the Medes. We proceed to the topography of Persia, and to deduce the early History of that Country to the same periods.

§ III. Of Persia Proper.

Persia Proper was named by Moses Elam, from the son of Shem, and is the Phars of the modern Kingdom. Ptolemy assigned to it the following boundaries. On the North, Media; on the South, the Persian Gulf; on the West, Susiana; and Carmania on the East. Its principal Cities were Persepolis, which became the metropolis of the ancient Persian Empire; Arima; Marandium, called now Maraz; Tosee, the Capital of a district of the same name; and Pasargard, built by Cyrus, and honoured with his tomb. On the testimony of ancient authors, this Country is thus described: to the North, hilly and barren, bearing neither fruit nor corn sufficient for the inhabitants, but producing emeralds, though of inconsiderable value; on the coast of the Persian Gulf, the soil hot and sandy, producing few trees beside palms; between these, a rich and pleasant region, abounding with corn, fruit, and cattle, and better watered, though by small rivers, than most of the neighbouring Countries. Xenophon describes Persia as so mountainous, that it was ill adapted for the breeding or the use of horses. Thus the Persians excelled as foot-soldiers, while the Medes were famous for their cavalry.

In our Introductory Chapter, (p. 67.) we have remarked the great obscurity in which we find the History of Persia during the period we are now passing over. In this penury of Historical information, the following narrative is supplied from the Asiatic Histories, by the learned Orientalist we have already quoted. Mr. Richardson says,

"About 800 years before the Christian era, a usurper called Zohak, we are informed, reigned in Persia. His government was oppressive, and became at length insupportable. The citizens of Ispahan (probably the ancient Aspadane) flew to arms, and, headed by a blacksmith named Gao, attacked, defeated, and killed the Tyrant. Gao, after this victory, discovering the retreat of Peridoun, the heir to the Crown, placed him on the throne, and received in return Ispahan, with its dependencies, as a feudal principality. What truth may be in this remote event," he adds, "it is impossible to determine; but it is a generally-recorded fact that the blacksmith's apron, said to have been displayed by Gao, when marching against Zohak, as a banner from the point of a spear, was taken by the Arabians at the Battle of Caddesia, when they conquered Persia, in the year 636. It had been laid up in the treasury of the Persian Kings, and was enriched with jewels to a prodigious value. It was considered as the great standard and palladium of the Empire, and was never carried to the field but on important emergencies, or when the King marched in person."

Mr. Richardson also refers to the Asiatic accounts of Rostan, "equally the favourite of History and Romance. He was a successful General under the first Kings of the Kainian dynasty, and received, in reward for his services, the Provinces of Sejestan and Zabestan, as feudal appanages of the Crown of Persia." (*Disert.* p. 33.) Here it may be proper to add what Sir Isaac Newton learned from "the Histories of the Persians now extant in the East, that the oldest dynasties of the Kings of Persia were those whom they call Pischdadians and Kainides, and that the dynasty of the Kainides immediately succeeded that of the Pischdadians. That the sixth King of the Kainides, whom they call Bahaman, and whom they take for Darius Medus, went Westward into Mesopotamia and Syria, and conquered Belshazzar, the son of Nebuchadnezzar, and gave the Kingdom to Cyrus, his Lieutenant-general over Media." (*Chronol.* p. 373—375.)

Returning to the scanty information which the Greek Greek Historians had acquired respecting the ancient Kingdom of Persia, we find Aeschamenes mentioned by Herodotus (l. vii. c. 11) as the head of a Royal House from which Xerxes traced his descent. From him is derived Cambyzes, who, marrying Mandane, the daughter of Astyages, became the father of Cyrus. Xenophon describes Cambyzes (b. i.) as "of the race of the Persidae, who were so called from Perseus." Whether the Persians had now recovered their independence, or whether Cambyzes was a tributary Prince to the King of Media, is left by the ancient Historians in great uncertainty. We proceed to collect what information has not already appeared in other places of our Work respecting the Medo-Persians, as they appeared in early times under the Empire of Cyrus.

§ IV. Of the Religion of Ancient Persia.

Sir W. Jones remarks, that "the primeval Religion

of Iran, if we may rely on the authorities adduced by Mohean Fâsi, was that which Newton calls the oldest (and it may be justly called the noblest) of all Religions—a firm belief that one supreme God made the world by his power, and continually governed it by his providence; a pious fear, love, and adoration of him; a due reverence for parents and aged persons; a fraternal affection for the whole human species; and a compassionate tenderness even for the brute creation." On the same authorities it appears that Hushang, whose system of Religion was long anterior to that of Zoroaster, introduced a worship which became popular, and which "was purely Sabian, a word deduced by Grammarians from *saba*, a host, and particularly the host of heaven, or the celestial bodies, in the adoration of which the Sabian ritual is believed to have consisted."

"In the learned Work," (the *Debiestan*, which gave occasion to Sir W. Jones's Dissertation,) "there is a description of the several Persian temples dedicated to the sun and planets, of the images adored in them, and of the magnificent processions to them on prescribed festivals, one of which is probably represented by sculpture in the ruined City of Jemshid, (Persepolis.) But the planetary worship in Persia," he adds, "seems only a part of the complicated Religion which we now find in the Indian *Puranas*."

Sir Isaac Newton, speaking of the period prior to Hystaspes and Zoroaster, says, that "the various Religions of the several nations of Persia consisted in the worship of their ancient Kings." (SA. *Chronol.* 41.) He afterwards, on the authority of Suidas, says, that "Zoroaster gave a beginning to the name of the *Magi* among the Persians, changing their ancient sacred rites," and, "according to the sacred commentary of the Persian rites ascribed to Zoroaster" by En-ebius, (*Præp. Ecan. h. i. c. ult.*) teaching a pure theism. "But," he adds, "in a short time they declined from the worship of this eternal invisible God, to worship the sun, and the fire, and dead men, and images, as the Egyptians, Phœnicians, and Chaldeans had done before." (*Chronol.* 351, 352.) It appears, however, from the following description, by Xenophon, of the objects, rites, and ministers of worship, that the name and authority of the *Magi* were not first introduced by Zoroaster, or, at least, not in the Age of Hystaspes, and that the worship of the Persians, in the time of Cyrus, was by no means confined to the deification of their Kings.

Cambyses, at the close of a long admonition to his son on his departure into Media, warns him that "the gods, who are eternal, know all things that have been, are, or shall be." (b. i. ad fin.) "When they had passed the borders, they supplicated the gods, guardians of Media, to receive them propitiously." (b. ii. ad int.) On leaving his uncle Cyaxares, to march against "the Assyrians and Carians," Cyrus sacrificed "first to regal Jove, then to the other deities. He also invoked the heroes, inhabitants, and guardians of Media. As soon as he had passed the borders, he propitiated the Earth by libations, and the gods by sacrifice, and supplicated the heroes, inhabitants of Assyria. He then again sacrificed to paternal Jove." (b. iii.)

But the fullest information on these subjects, given by Xenophon, is in the description of a Royal procession, and the performance of a solemn sacrifice.

"When the gates of the Palace were thrown open, first were led bulls of great beauty, four a-breast, devoted to Jove and other gods, as the *Magi* directed. Next to the bulls were horses, for a sacrifice to the sun. After these proceeded a white chariot, with a perch of gold adorned with a wreath, and sacred to Jove. After this a white chariot, sacred to the sun, and adorned as the preceding. This was followed by a third chariot, whose horses were adorned with scarlet coverings. Behind this followed men, bearing fire upon a large altar. After these Cyrus himself appeared. All the people, at the sight of him, paid their adoration; but no Persian ever paid Cyrus adoration before. When they came to the sacred enclosures, they sacrificed to Jove, and burned the bulls to ashes, as they did on sacrificing the horses to the sun. Theo, killing certain victims to the Earth, they did as the *Magi* directed. Then they sacrificed to the heroes, guardians of Syria." (b. viii.)

Describing the circumstances immediately preceding the death of Cyrus, the Historian says, that "he made the usual sacrifices, and danced the Persia dance, according to the custom of his Country." Then, in consequence of a dream, by which he was "assured that his end drew near, he sacrificed on the summit of a mountain to Jove paternal, the sun, and the rest of the gods." (b. viii.)

Xenophon represents the Medes and Persians as having also greatly revered diviners, and addicted themselves to the practice of augury. The ministers of their Religion, whom he calls *Magi*, appear to have been held in very high esteem. They were allowed to separate for the gods, from the spoils taken in war, whatever they chose, and to set apart any portion of land as sacred to their worship. Of this worship they had the sole direction, and particularly appointed what deity should be invoked on any special occasion. If, as we have conjectured, (p. 273,) the Work of Xenophon "be authentic in all its prominent details," such is probably the most satisfactory account now remaining of the objects, rites, and ministers of worship entertained by the Persians in the reign of Cyrus, the period to which we limit our inquiry. As to Herodotus, though he wrote before Xenophon, yet he does not profess to describe Persia as it had been, but rather as he himself observed it. His short account, however, upon this subject, which is here quoted, does not materially differ from the description by Xenophon, except as rejected by the Persians.

"They erect no statues, temples, nor altars; but rather charge with great folly those who erect them; for they do not, like the Greeks, believe that the gods are born of men.* They sacrifice on the summits of the mountains to Jupiter, and give that name to the whole circumference of heaven. They also sacrifice to the sun, the moon, the earth, fire, water, and the winds. To these alone they have sacrificed from the beginning." (*ἑρῶντες πρὸς τῶν πάντων θεῶν ἀρχαῖον*.) evidently confining himself to the period concerning

* This reader may profitably consult on this passage The *Dissert. Legation*, b. x. s. 1; M. Larcher's *Hérodote*, Note l. 363; and Mr. Hugh Farmer, on *The General Providence of the Workshop of Human Spirits in the Ancient Heathen World*, 60—84.

which we now inquire; for be adds, as if passing down to his own times, "They have learned from the Assyrians and Arabians to worship Urania; the Assyrians naming Vana, Mylitta; the Arabians, Alitta; and the Persians, Mitra."

"To conclude our inquiry into the Religion of the Medo-Persians, before and under the government of Cyrus, it appears, from the foregoing details, that they were still as really idolaters at the death of that Prince as at the period to which the *Dabestan* referred; though, if the Historians we have quoted had received, or have recorded correct information, the temples and images had disappeared. As to Arimanius and Oromasdes, the Principles of light and darkness described by Plutarch (*In and Osiris*) as the principal deities of the Magi, there is no evidence for their worship in this period, and they will naturally come to be considered under Zoroaster. After all the Historical authorities adduced upon this subject, there has been an attempt to show us that Cyrus is described by the Prophets as "a Prince acquainted with the true God," and that "his people were never reproached in the Scriptures with idolatry." We refer to a note on the life of Zoroaster, in the *An. Univ. Hist.* v. 390. Mr. Richardson, too, attributes to the Religion of the ancient Persians more remains of the original theism, though corrupted, than we have discovered. He says that, "exclusive of the universal belief in the facient Peri system, they appear, in general, to have acknowledged one Supreme Being, and to have paid a high degree of veneration to angels as subordinate deities. This, with a respect to the stars, was the great doctrine of the Sabian Religion, which prevailed of old in Persia, Arabia, and other Eastern Countries." (*Dissert.* 37.)

§ V. Language, Manners, and Customs.

We have already noticed the result of Sir W. Jones's inquiry into "the ancient languages and characters of Iran." The learned Orientalist lately quoted remarks that "the language spoken anciently in Persia opens a wide field of unsatisfactory inquiry;" that "the union of those people, named by Europeans the Medes and Persians, is of such high antiquity, that it is lost in darkness; and long precedes every glimmering we can discover of the origin of their speech. Whatever their language was, therefore, it must have evidently been very nearly the same, with the simple and common variation of provincial idiom." He adds, that "in this Tongue we have no genuine remains;" for the Works attributed to Zoroaster are spurious,* being "the wretched rhymes of a modern Parsi Distour, who lived about three centuries ago." He adds, that "the old dialect of Persia is entirely lost" amidst "barbarous corruptions or inventions of the Guebre Priests, without the least similitude to the inscriptions still discernible on the ancient ruins of Persepolis."

The forms of government in Media and Persia appear to have differed considerably. The first is generally supposed to have been despotic, after the accession of Deioces, except that the Kings, even though they claimed to equal the gods themselves, had not the power of re-

versing their own decrees. As to Persia, we have found feudal customs described as prevailing in that Country; where, says a great authority on the subject of government, Algernon Sidney, "the Kings were limited till they conquered Babylon." Thus, according to Xenophon, (b. i.) Cyrus, when he sought for aid against the King of Assyria, sent to "the public council" as well as to Cambyses; and requested Cyrus to endeavour to obtain the command of the forces, "if the council should send any." Xenophon adds, "that the elders in council chose Cyrus commander of the expedition into Media." It appears also from this passage that Persia must have recovered her independence which, as we have related, she lost under the ascendancy of the first Cyaxares.

The Medes are said to have been warlike, though in the time of Cyrus they had become effeminate and luxurious, and were charged with corrupting the Persian plainness and simplicity. They were celebrated for the use of the bow, with which they fought on horseback. Their arrows, according to an ancient writer, quoted by Eusebius, were "poisoned with a bituminous liquor called naphtha. Thus prepared, they were shot from a slack bow, and burned the flesh with such violence, that water only increased the flame, dust alone could abate it." The same writer reports that they encouraged a breed of large dogs, "to whom they used to throw the bodies of their friends, parents, and relations, when at the point of death, looking upon it as dishonourable to die in their beds, or to be laid in the ground."

The practice of polygamy, so inconsistent with domestic happiness, was carried by the Medes to great excess. According to Simbo, it was even enforced by law, and appears to have been allowed to the wives, as well as enjoined upon the husbands. In confirming alliances, the Medes, according to Herodotus, like the Lydians, (besides the ceremonies they used in common with the Greeks,) were accustomed to make an incision in the arm, and to pledge one another in the mingled blood.*

As to the manners and customs of the Persians, Herodotus (b. i.) describes the profusion which they indulged in the celebration of birthdays, their minute distinction of ranks, in their forms of salutation, and their eagerness to adopt the fashions of foreign nations. He justly commends the law which forbade any person, even the King, to punish a criminal capitally for his first offence; and another, which restrained the severity of masters towards their slaves. On the subject of the Persian education, Xenophon has enlarged as the design of his *Cyropædia* naturally led him. According to him, to prevent crimes by a wise early institution, rather than to punish them with severity, was the great object of the Persian government, which Herodotus had before praised for rendering falsehood unprofitable, and not permitting that to be spoken of, which it was improper to practise. Under such a salutary discipline, according to this Historian, was Cyrus formed, and to such a national education was he indebted for that courage, perseverance, and subordination among his soldiers, which enabled him to become the founder of the Medo-Persian Empire.

Architec-
ture.

The Sciences have no place in an account of this Empire in the time of Cyrus; and of the Arts which then adorned it very little can be discovered. Cyaxares, called Darius the Mede, according to Sir Isaac Newton, "was the first King of the Medes and Persians who coined gold money. They were called Darics, or *Stateres Dariæ*, and stamped on one side with an effigy of an archer, who was crowned with a spiked crown, had a bow in his left hand, and an arrow in his right, and was clothed with a long robe." He adds, "I have seen one of them in gold, and another in silver. They were of the same weight and value with the Attic stater, weighing two Attic drachms." (*Chronol.* 319.)

To what degree of perfection Architecture and the Arts of design had arrived in Medo-Persia, at the close of the period which we are describing, very little indeed can be ascertained, but from the discovery and description of the palace of Persepolis, a city, the building of which is attributed by *Ælian* to the elder Cyrus. As, on this very probable supposition, its ruins are the only remains of his magnificence, and the shattered ornaments most refer to the manners and customs of his time, we shall close this section with the description of Persepolis, given by one of the earliest European travellers in modern times. We refer to the *Travels of Mandelstoe*, who, in 1638, visited the ruins, which are "called by the Persians *Tiziminar*, i. e. Forty Pillars."

Persepolis.

"The foundation on which this vast structure was erected, is raised twenty-two geometrical feet, having at each of its four corners stairs of white marble of ninety-five steps, so flat and broad, that twelve horses may go up conveniently together abreast. Before you come to the main body of the structure, you pass through a square, where you see the ruins of a wall, and the remainders of two great gates, each of which have a horse harnessed and saddled, after a very stnick manner, carved on one side; and, on the other, two creatures, resembling a horse, except that they have wings on each side, and the head is crowned like that of a lion. On one side you see the ruins of nineteen pillars of white and black marble, the least of which are eight, and some

ten ells high, without the bases. The inhabitants thereabouts told me that, not many years before, there were forty pillars standing.

"As you go on further you meet with the ruins of two rooms but indifferently large, but every thing is of the finest polished marble. Several figures of men, of an extraordinary size, are to be seen on both sides the doors, some in a sitting, others in a standing posture, their hair falling down carelessly over their shoulders, and their garments reaching down to their heels, with very wide sleeves, and a girdle round the waste. They had very long beards, and round cups on their heads. Hard-by you find certain unknown characters engraven upon a square pillar, which have no resemblance to the Greek, Hebrew, Arabian, or any other language, being triangular, or rather pyramidal. There are twelve lines of them so well proportioned and nicely engraven, that they have not the least footsteps in them of barbarism.

"There is upon the same ground-work a large court ninety paces square, with two gates on each side, some of which are six, others only three paces wide. You see also in another court very curious carved work in marble—battles, triumphs, Olympic Games, every thing in its due proportion. Upon each of the gates you find a graceful person carved, sitting with a globe in one, and a sceptre in his other hand. My curiosity led me to get up on high, where I saw a King represented, paying his devotions to the sun, fire, and a serpent." (*Harris's Voyages*, 1706, xi. 115.)

Our traveller expresses his regret as to these surprising ruins, "that no body hitherto has undertaken the engraving of them." This desideratum has been since amply provided to the curious in such researches, by Chardin, *Le Brun*, and the author of *Persepolis Illustrata*, 1739; the plates of which appear to have been copied in the *Ancient Universal History*. Our Countryman, Sir Edward Herbert, visited Persepolis a few years before Mandelstoe. His narrative, which is less perspicuous, may be seen in *Harris's Voyages*, l. 430, where are delineated the unknown characters.

CAMBYSES.

FLOURISHED FROM A. M. 3475. B. C. 529. TO A. M. 3483. B. C. 521.

Biography. We have shown, in the biography of Cyrus, the different accounts of the manner of his death, as described by Herodotus and Xenophon. They agree, however, in the opinion, that he left to Cambyzes the undisturbed possession of that vast Empire to which he had attached the name of Persia. According to the former Historian, before Cyrus set out on the expedition, in which he represents him as miserably perishing, he appointed his successor, after the manner of the Persian Kings, and named his son Cambyzes to that dignity; committing Crassus to his charge, with an injunction to treat the captive Prince with kindness and respect.

Following Xenophon's more probable account, Cyrus appears to have closed his life in peace and honour, dying in his palace, (of Pasargada,) surrounded by his family. In his last hours, he conferred the Empire on his eldest son Cambyzes, with the reserve of the rich and powerful Satrapy of the Medes, Armenians, and Cadusians, with which he invested his younger son Tanoxares, the Smerdis of Herodotus, and the Mergis of Justin.

Accession of Cambyzes. According to the opinion adopted by Herodotus, Cambyzes was the son of Cassandane, the daughter of Phraortes, of the race of the Achaemenides, though we shall presently relate another conjecture upon this uncertain subject. Of the age which this Persian Prince had attained on his accession, or how his reign was occupied before his expedition to Egypt, and the previous preparations, we have no account, except what occurs in Josephus and the Sacred History. From the former we learn (Antiq. xi. 2) that "the Governors in Syria and Phoenicia, and in the Countries of Ammon, and Moab, and Samaria, wrote an epistle to Cambyzes," in which they persuaded him that, if the Jews were permitted to rebuild the city and temple, they would refuse to pay tribute or do homage, but "resist Kings, and choose rather to rule over others than to be ruled over themselves." On reading this epistle Cambyzes "forbad the Jews to build the city and the Temple; accordingly, these Works were suspended till the second year of Darius."

His military spirit. Cambyzes, indisposed to cultivate the spirit or the Arts of Peace, was early desirous, as a favourite object of his attention, to employ the Persian forces, which his father had rendered invincible, in some important military service. It is justly remarked by Mr. Whiston, in his Josephus, that were Herodotus's account of the death of Cyrus correct, it is inexplicable that, instead of marching into Egypt, Cambyzes should not have prepared "to avenge his father's death upon the Scythians and the Massagetae, and to prevent those nations from overrunning his northern Provinces." He, however, turned his attention wholly to Egypt, under what circumstances of provocation it is not easy exactly to ascertain, amidst the very different representations upon this subject.

According to one account, on which Herodotus relies, VOL. IX. 345

Cambyzes had sought in marriage the daughter of Amasis, King of Egypt, who both doted and detested the power of Persia. He was thus unwilling to accept, yet fearful of declining, the proffered alliance. Under these impressions he sent, instead of his own daughter, Nitetis, the daughter of Apries, the former King of Egypt, whom he had dethroned and imprisoned. Cambyzes married this Princess, who was elegant and beautiful, supposing her to have been the daughter of Amasis. She, however, soon undeceived him; when he prepared to revenge the insult by immediate hostilities against Egypt. Such is the Persian account.

On the contrary, Herodotus says, "the Egyptians claim Cambyzes for their own, by asserting that this incident did not happen to him but to Cyrus. He disputes this statement; but Ptolemy, in his *Stratagemata*, relates that Nitetis lived a long time with Cyrus as the daughter of Amasis: till, after bringing him many children, besides Cambyzes, she acknowledged herself the daughter of the deposed King Apries, whose wrongs she persuaded her husband to avenge; but he dying before he could accomplish that design, she urged her son to retaliate the injuries his grandfather had suffered from Amasis and the Egyptians. There is still another story. Nitetis is said to have been the wife of Cyrus, but not the mother of Cambyzes. His mother, Cassandane, complaining in her son's presence of Cyrus's neglect, Cambyzes, at ten years of age, vowed hostility to the country of Nitetis, and, on ascending the throne, made war against Egypt. Yet, after all, the most probable account is, that the Egyptians had become in some measure tributary to the Persians, in consequence of their alliance with the King of Lydia, and, on the death of Cyrus, had refused to acknowledge his successor. Whatever might have been the occasion of the war, the reign of Cambyzes commenced with numerous preparations for the invasion of Egypt.

He engaged ships from Phoenicia and Cyprus, and attached to his native troops a numerous body of Ionians, Eolians, and Greeks. Of these Greek auxiliaries, the principal part had revolted from Amasis, under the conduct of their Commander, Phanes of Halicarnassus, whom Herodotus describes as distinguished by mental as well as military accomplishments. That General, on some affront which he had received from Amasis, determined to revolt, and escaped in a vessel from Egypt, with a design of offering his services to Cambyzes. Amasis ordered him to be vigorously pursued, by the most faithful of his eunuchs, in a three-banked galley. He was overtaken in Lydia, but intoxicated his guards, and escaped into Persia. There he found Cambyzes projecting his expedition. He was, however, deterred by the difficulty of supplying his army with water on its march through the desert, which Herodotus describes as a three days' journey.

Phanes.

Phanes first explained to Cambyses the resources and situation of the enemy, and the nature of the country he was about to invade. To secure the most accessible entrance into Egypt and a supply of water for his army, he recommended an alliance with the Arabian Prince who ruled over the intervening Country. The ceremonies observed in forming such an alliance Herodotus has described. They are sufficiently curious to warrant their insertion.

"On these occasions, some one connected with both parties stands between them, holding a sharp stone. With this he opens a vein of the hand, near the middle finger of each of the contracting parties. He then takes a piece of the vein of each, which he dips in their blood. With this he stains several stones, purposely placed in the midst of the assembly, invoking, during the ceremony, Bacchus and Urania. When this is concluded, he who solicits the conjugal pledges his friends for the sincerity of his engagements." The alliance being thus ratified, the Arabian Prince "ordered all his camels to be laden with camel-skins filled with water, and to be driven to the Deserts, there to wait the arrival of Cambyses and his army." (Herod. iii. c. 8.)

The Persian Prince had entered the fourth year of his reign, when, his formidable preparations being thus completed, he set forward at the head of his army. On reaching the borders of Egypt, Cambyses was apprized of the death of Amasis, after a reign of forty-four years; a death which spared him the sight of his country's subjugation, and closed a life which, according to Herodotus, had never been marked by any great calamity. Psammetichus, his son, succeeded to the precarious throne, and was now advancing against Cambyses with a powerful army.

Death of Amasis.

Pelusium taken by stratagem.

Psammetichus had garrisoned Pelusium, the key of Egypt towards the Mediterranean. The possession of that place became essential to the projects of Cambyses, as the only means of securing a communication with his fleet. Understanding that the garrison consisted entirely of Egyptians, he availed himself of their peculiar superstitions, according to the advice of Phanes, for the Greeks probably held in contempt all superstitions except their own. Cambyses, therefore, as Polyænus relates in his *Stratagemata*, ordered a number of cats, dogs, sheep, and other animals esteemed sacred by the Egyptians, to be ranged in the front of his army as he advanced to the assault. The besieged, not daring to employ a hostile weapon against their gods, could offer no opposition to the besiegers, and thus the city of Pelusium was taken without any resistance.

Psammetichus advanced towards the Pelusian mouth of the Nile, and encamped opposite to the Persians. The Greeks and Carians, who had remained faithful to their alliance with Egypt, now punished the defection of Phanes, by indulging a barbarous retaliation upon his miscreanting family. On his flight from Amasis, he had left his sons in Egypt. These were now brought out before the camp, and singly put to death, in sight of their father. A vessel had been prepared for the purpose of receiving their blood. This was afterwards filled with wine and water. The auxiliaries, having drank the horrid potion, (*ταύροις δὲ κόβ' ἀμάρων*)* and

The sons of Phanes put to death.

probably sworn to avenge the treason of Phanes, immediately engaged the Persians. The army of Psammetichus, was, however, soon discomfited, and the greater part destroyed, only an inconsiderable number of the fugitives escaping to Memphis, whither Cambyses prepared to follow them.

Cambyses.

521.

Herodotus relates, from his own observation, a curious circumstance connected with this battle. The people of the place where it was fought pointed out to him two distinct heaps of bones, into which those belonging to each army had been separated. The skulls of the Persians were soft, and would yield to the slight impression even of a pebble, while those of the Egyptians were so hard that the blow of a large stone would scarcely break them. To account for this diversity, it was remarked that the Egyptians, from an early age, shaved their heads, and rendered them hard by a constant exposure, uncovered, to the action of a fervid sun, while the skulls of the Persians became soft by being always sheltered under caps and turbans.

Egyptians defeated.

After thus routing the army of Psammetichus, the Persian Prince appears to have sought the completion of the conquest of Egypt, without the further effusion of blood. With this design, at Memphis, to which the fugitives had retired, was seated on the Nile, he sent a Persian herald up the river, in a vessel of Mithylene, to demand their submission. The infuriated people, soon as they saw the vessel enter the harbour, disregarding the sacred character of a herald, rushed from the citadel, destroyed the vessel, tore the pieces the crew, convulsing of two hundred, and carried the mangled limbs into the citadel, probably to deprive them of the rites of sepulture. The Persians immediately besieged the place. After an unavailing resistance, the Egyptians surrendered, when Cambyses proceeded to execute a most rigorous vengeance, of which Herodotus has given a very interesting description.

Memphis taken.

On the tenth day after the surrender of the citadel, Psammetichus was conducted without the walls, that, while himself a public spectacle, he might feel the distress and mortification of the following scene. His daughter, habited as a slave, was sent with a picher to draw water accompanied by young women in the same servile attire, who were the daughters of the first families in the place. The children and parents loudly expressed their grief, while Psammetichus merely fixed his eyes upon the ground. Next, he beheld his son, with two thousand Egyptians of the same age, parading in procession, with ropes round their necks and bridles in their mouths. These were selected for execution by the counsellors of Cambyses, to avenge the destruction of the Mithylenian crew. They had determined that, for each man massacred, ten Egyptians should be put to death. Psammetichus witnessed the whole scene; yet, while the Egyptians around him wept and uttered loud lamentations, he remained unmoved as before. Then appeared a venerable old man, who had formerly been a guest at the royal table, and was now in the garb of a mendicant. After being made to pass through the ranks of the army to ask alms, he was conducted to Psammetichus, to beg alms of him, and the Egyptians around him. The King could not suppress his emotions, but, calling on his friend by name, beat his head and wept loud. To an inquiry, by Cambyses, why such scenes as he had before witnessed had failed to excite any lamentations, the captive Prince thus

Disgrace of Psammetichus.

* Herod. iii. 11. Thus, according to Bulliott, (*Hell. Catal. xvi*) Catiline is said, after exacting an oath of secrecy of his fellow-conspirators, to have handed round a mixture of blood and wine; *Ammon corpora torquentem vino permixtum in potum circumtulit*.

Biography. replied: "Son of Cyrus, the misfortune of my family were too great to be thus lamented; but it became me to shed tears for the sad condition of a friend, who, in his old age, has fallen into indigence, from the possession of rank and fortune." It added that even Cambyses was affected by this reply, and that Cræsus, and all the Persians who were present, wept at the affecting incident.

From A. M. 3475. Cambyses, thus softened, would have saved the life of the son of Pammenitus, and issued his orders to prevent the execution, but his mercy came too late. The young Prince had suffered among the first of the two thousand victims.

He C. 521. He spared, however, the life of the wretched father, till he was shortly after convicted, or at least accused, of encouraging attempts for the recovery of his Crown.

Death of his son. Pammenitus, who was put to death by being forced to drink bull's blood, thus closed a disastrous reign of only six months' continuance.

Pammenitus put to death. From Memphis Cambyses proceeded to Saïs, and entered the palace of Amasis, on whose corpse he projected a mean revenge. He ordered it to be taken out of the tomb, and treated in his presence with every possible indignity. The corpse was then burned, as if in direct opposition to the Egyptian custom of preserving the bodies of the deceased; though also, as Herodotus remarks, in defiance of the veneration paid to fire in the Religion of the Persians. He adds, however, that Amasis, warned by an oracle, or rather naturally apprehending this violation of his tomb, had directed his interment in the interior recess of the sepulchre, while another corpse, on which Cambyses now gratified his revenge, had been placed at the entrance. Thus, in the language of the Prophet, did "the sceptre of Egypt pass away," while the whole Country submitted to the conqueror. The neighbouring people, also, the Bactrians, Lybians, and Cyrenians, sent presents, and imposed on themselves an annual tribute.

His martial projects. Cambyses, now in the fifth year of his reign, instead of returning to Persia, which he does not appear to have ever revisited, pursued other objects of ambition, dictated by a restless disposition, utterly incapable of pacific occupations. He determined to make war upon three nations at once, the Carthaginians, the Ammonians, and the Macrobians or long-lived Ethiopians. From the first of these projects he was diverted by the refusal of the Phœnicians to employ their ships against the Carthaginians, with whom they had a friendly alliance, and who had descended from their ancestors, for Carthage was a colony of Tyre. The other naval forces at the command of Cambyses were insufficient for his design, and he could not venture to compel the service of the Phœnicians, who had voluntarily joined his arms, and who constituted the principal and most skilful part of his naval force. Thus Carthage escaped the yoke of subjection to the Persians, and was left to occupy and reward the Roman valour, while Cambyses determined to pursue his other projects.

Design on Ethiopia. He sent spies into Ethiopia, to learn the condition and resources of the Country. These assumed the character of ambassadors, bearing presents from the King, and charged to inform themselves respecting the marvellous *table of the sun*. According to Herodotus, there was a plain, near the chief city of the Ethiopians, filled to the height of four feet with the roasted flesh of all kinds of animals. From these whoever pleased

might satisfy their hunger. Solinus and Pomponius Mela describe this supply as supernatural; Pausanias rejects that account as fabulous. Herodotus says, the natives of the place affirm that the Earth immediately produces these viands; but he more justly concludes that they were carried to this table in the night, under the inspection of the magistrates.

The ambassadors employed by Cambyses were some of the Ichthyophagi, so named from their subsisting entirely on fish. He sent for these people from Elephantine, because they were skilled in the language of Ethiopia, on which their Country bordered. To them he committed the following presents for the King: "A purple vest, a gold chain for the neck, bracelets, an alabaster box of perfumes, and a cask of palm wine."

The Ethiopian Prince soon detected the design of these pretended ambassadors, and treated both them and their royal master with contempt. He undervalued the presents, especially the gold chain, for among the Ethiopians brass was the rarest metal, and prisoners were secured by chains of gold. The King, however, relished the wine, and advised Cambyses to be content with his own dominions, and not covet the possessions of another. He sent him also, in return for his presents, his own bow, adding this counsel, "When his subjects can bend this bow with the same ease that I do, then, with a superiority of numbers, he may venture to attack the Macrobians Ethiopians; in the mean time, let him be thankful to the gods that the Ethiopians have not acquired the same ambitious views of extending their territory."

Cambyses, highly incensed by this message, immediately commanded the march of his army, though quite unprovided for such an expedition, "never reflecting," says Herodotus, "that he was about to visit the extremities of the Earth." He left no part of his force behind, except the Grecian auxiliaries, on whom he depended to keep the Country in awe. Arriving at Thebes, in Upper Egypt, he detached from this army 50,000 men, to march against the Ammonians, with orders to ravage their Country, and burn the temple of Jupiter Ammon. By the help of guides, they reached the city of Oasis, at the distance of seven days' march from Thebes. What became of them afterwards was never known. Herodotus relates, from the Ammonians, that "after they had left Oasis, they halted to take some repast, when a strong South wind arose and overwhelmed them beneath a mountain of sand." This account appears to have been credited by Plutarch, in his life of Alexander, where, speaking of that prince's design "to visit the temple of Jupiter Ammon," he adds, "it was a long and laborious journey, and they might be surprised by a violent South wind amidst the wastes of sand, as it happened long before to the army of Cambyses. The wind raised the sand, and rolled it in such waves, that it devoured all 50,000 men." A modern traveller (Savary) conjectures, with great probability, that the Egyptians, intending the destruction of their enemies, having brought them into the vast solitudes of Lybia, abandoned them in the night, and delivered them over to death.

Cambyses, in the mean time, advanced with his main army against the Ethiopians. He had not proceeded through a fifth part of his projected route before he began to find the fatal effects of his imprudent haste. The scanty stores of provisions were consumed,

Presents interchanged.

Cambyses marches into Ethiopia.

Biography. The army then fed on the beasts of burden, and at length poorly subsisted on the roots and herbs which an uncultivated soil could supply. Cambyzes had yet the indiscretion to advance, till his troops were reduced, amidst sands and deserts, to the dreadful expedient of devouring one another. The whole army was now decimated, every tenth man, selected by lot, being slain, and prepared as food for his companions; thus providing a nourishment, says Seneca, more horrible than famine. *Alimentum habuerunt fame satius.* This scene he well contrasts with the unfeeling luxury of the King. *Servabantur illi interim generosa avia, et instrumenta pulularum camelis stabantur, eum sortirentur milites quis quis male periret, quis pejus viveret.* "His attendants provided delicate birds for his table, and conveyed on camels his culinary utensils, while his soldiers were determining by lot who should miserably perish, or preserve their existence in greater misery." At length this voluptuous Prince, who cared only for himself, began to be apprehensive for his personal safety. He now desisted from his purpose, and marched back with the remains of his army, of which such numbers had perished, without feeling the stroke of an enemy. Halting at Thebes, "he found," says Rollin, "the gods more easy to be conquered than men."

Return to Thebes.

Thebes was famous for the wealth and magnificence of the temples there dedicated to the gods of Egypt. These temples Cambyzes now pillaged of their movable riches, which amounted to three hundred talents of gold, and two thousand three hundred of silver, and then commanded them to be burned to the ground,—probably instigated by the Persian abhorrence of temple-worship. He also, according to Diodorus, took away from the tomb of King Ozymandias the celebrated circle of gold, which was in circumference three hundred and sixty-five cubits, and represented on its surface all the motions of the heavenly bodies. Sir Isaac Newton, who names the Egyptian King Amemphis, says, that "in his temple or sepulchre at Abydos, they placed a circle of three hundred and sixty-five cubits in compass, covered on the upper side with a plate of gold, and divided into three hundred and sixty-five equal parts, to represent all the days of the year; every part having the day of the year, and the heliacal risings and settings of the stars on that day, noted upon it; and this circle remained there till Cambyzes spoiled the temples of Egypt." (Chron. p. 30.) The Persian Prince also visited the famous statue of Memnon; the mutilated remains of which modern travellers have discovered among the ruins of Thebes. This wonderful production he began to break in pieces, under pretence of discovering some magical secret which might have occasioned the extraordinary musical sounds.

To Memphis.

Leaving Thebes, Cambyzes returned to Memphis, where he dismissed the Greek auxiliaries. The Egyptians were now celebrating a most solemn and joyful festival on the discovery of their god Apis. Whatever emblematical designs may have been ascribed to "the wisdom of the Egyptians" in worshipping the sacred ox, the following were his natural qualities:

Apis.

Herodotus describes this supreme deity of Egypt as a calf, whose "skin is black, on its forehead is a white star of a triangular form, the figure of an eagle on the back, the tail divided, and under the tongue an insect like a beetle." According to Pliny, this sacred bull must

have "a white spot resembling a crescent on the right side, and a lump under the tongue." When a calf was found, really, or according to the pretences of the Priests, answering the proper description, they announced to the people the birth of Apis and fecundity.

"Immediately," says Ælian, "they built a temple to the new god, facing the rising sun, according to the precepts of Mercury, where they nourished him with milk for four months. This term being expired, the Priest repaired in pomp to his habitation, and saluted him by the name of Apis. They then placed him in a vessel, magnificently decorated, covered with rich tapestry, and resplendent with gold, and conducted him to Nilopolis, singing hymns and burning perfumes. There they kept him for forty days. During this space of time, women alone had permission to see him, and saluted him in a manner grossly indecent. After the inauguration of the god in this city, he was conveyed to Memphis with the same retinue, followed by an innumerable quantity of boats sumptuously adorned. There they completed the ceremonies of his inauguration, and he became sacred to all the world." It was in the ceremonies of this festival that Cambyzes found the Egyptians so unseasonably employed when he returned to Memphis, disappointed and dispirited, from his Ethiopic expedition.

The Persian Prince apprehended that these festivals were excited by the joy of the Egyptians, on the knowledge of his disasters. He interrogated the magistrates, and, disbelieving their story, commanded them to be put to death. He then sent for the Priests, who also assured him that they were rejoicing because they had found their god Apis. This deity he commanded them to bring into his presence, when, seeing a calf, he burst into laughter, or rather into a rage, and, drawing his sword, gave the animal a mortal wound. He ordered the Priests to be severely scourged, and forbade the people of Memphis, on pain of death, to persist in the worship of Apis. The god, according to Herodotus, "died in the temple, and was buried by the Priests without the knowledge of Cambyzes." Plutarch says that, by the King's order, Apis was exposed and devoured by dogs. Of the ox Apis, he well remarks that, "though revelling in every delight that he can desire, yet he longs after the liberty which nature gave him, wants to bound over the fields and pastures at his pleasure, and discovers a manifest uneasiness under the hands of the Priest who feeds him." (Cleonemus ad Æn.)

To this outrage on their Religion, the Egyptians, as Insanity of we learn from Herodotus, (iii. 30.) were ready enough to attribute, as a judgment, the insanity of Cambyzes. That Historian, however, says, (iii. 33.) that "from the first hour of his birth he laboured under what by some is termed the sacred disease." This disease (the epilepsy, according to Hippocrates) the Historian further supposes to have produced his mental derangement, of which, indeed, he had given some proofs before his adventure with Apis. "The madness of the heart," at least, he had amply discovered; and his story will soon afford us some additional examples.

The brother of Cambyzes, whom we have already mentioned, attended him on his expedition into Egypt, and was the only officer in the army who could bend within two fingers' breadth, the bow which the King of Ethiopia had tauntingly presented to the Persian Prince. This superiority naturally excited jealousy in such a

Death of Cambyzes.

Biography. disposition as Cambyses indulged. He could no longer bear the company of his brother, but on some pretence sent him back into Persia. Dreaming, however, that a messenger arrived to inform him that Smerdis had ascended the throne, and touched the heavens with his head, his jealousy was awakened. He sent into Persia his favourite courtier, Prexaspes, who executed his bloody commission, and quieted the apprehensions of Cambyses by putting his brother to death. The manner of his death is differently related. Some report that Prexaspes drowned the Prince in the sea; others that he watched an opportunity, and assassinated him during the diversion of the chase.

Death of Meroe. This murder soon gave occasion to a second. Cambyses had a sister called Meroe, who accompanied him in his expeditions, and whose name he gave to an island in the Nile. He indulged a passion for this Princess, and was desirous of marrying her. He therefore consulted the Royal Judges whether the Egyptian laws would allow such a marriage. The interpreters of the law shrewdly replied, that there was no law to authorize a marriage between a brother and sister, but they had a law which declared that a King of Persia might do what he pleased. Herodotus attributes to "the Royal Judges the most approved integrity," yet he admits that "in this answer the awe of Cambyses prevented their adopting literally the spirit of the Persian laws," and that, "to secure their persons, they took care to discover what would justify him who wished to marry his sister." Thus Cambyses gratified his inclination, and afforded the first example of those incestuous marriages which became common in Persia.

This Meroe, affected by the cruelty of Cambyses in putting her brother to death, could not suppress her grief and resentment, which forced from her a disingenuous application of the following occurrence, related by Herodotus on the authority of the Greeks. Cambyses diverted himself, in the presence of Meroe, with a combat between the cub of a lioness and a young whelp, which another whelp of the same litter presently flew to assist, and they thus overcame the young lion. Cambyses enjoyed the sight, but the Princess wept; because, on seeing one whelp assist another, she remembered Smerdis, who was unsupported, and whose death she feared no one would revenge. Herodotus adds another account from the Egyptians; that Meroe divided a lettuce, and then accused Cambyses of thus dividing the house of Cyrus. However the provocation was offered, the enraged husband aimed a blow at the Princess with his foot, which produced a miscarriage and became speedy death.

Excesses of Cambyses. Cambyses, indeed, appears, at this period of his reign, to have indulged his cruel disposition to an excess of frenzy. He caused several of his principal Nobles to be crucified alive, and daily sacrificed some of the courtiers to his fury. Prexaspes, his obsequious agent in the murder of his brother, was now rewarded as his guilty compliance with the Tyrant's pleasure had so justly merited. He was one day asked by the King what opinion the Persians entertained of him. The courtier replied, that they admired his wisdom, but regretted that he indulged to excess in wine. "They think," replied the King, "that wine disturbs my understanding, but you shall judge." Theo, after drinking more freely, he ordered the son of Prexaspes, who was his euphener, to stand upright at the further end of the

room in which they were feasting. "Now," turning to Prexaspes, he said, "If I shoot this arrow through the heart of your son, the Persians have slandered me; but, if I miss, I will allow that they have spoken truth." He drew his bow, the youth fell, and, on his body being opened, it was found that the arrow had pierced his heart. Cambyses asked the wretched father if he had ever seen any one shoot with a steadier hand. Prexaspes, either from the base servility of a courtier, or from apprehensions for his own life, but who, as Rollin remarks, "ought not to have had voice or life remaining," replied that Apollo himself could not have aimed more correctly. Scæva, who attributes the answer to flattery rather than to fear, thus condemns the monstrous adulation, *Sceleratius telum titulus laudatum est, quàm missum.*

We have seen that Cyrus had commended Cressus to the care and protection of his son. His excesses provoked the captive King of Lydia to venture on a remonstrance, preceded, indeed, by a flattering compliment. When the courtiers were once depreciating Cyrus, in comparison with Cambyses, who, "to all which Cyrus possessed, had added the Empire of Egypt and the Ocean," Cressus claimed the superiority for his conqueror, because he had left behind him such a son as Cambyses. His fidelity, however, was rewarded, though his flattery had been well received. Cambyses suddenly drew his bow, when Cressus escaping by flight, he commanded his immediate execution. The courtiers delayed, expecting that the King would presently relent, and revoke the cruel order. Thus it happened, when Cambyses rejoiced to find Cressus alive, but put his attendants to death, for having disobeyed his orders. It was at Mæphis, according to Herodotus, that Cambyses was abandoned to these cruel extravagancies; there, also, he employed himself in forcibly entering the sacred recesses of the temples, lo violating the tombs, and, as if to indulge an inhuman curiosity, in examining the bodies of the dead.

As to his talents for government, they appear to have been exclusively military; and such, indeed, are almost all the recorded transactions of his reign. To his spirit of military adventure we have seen how he was indebted for the vast extension of his Empire. One accession, however, he acquired by the base and successful policy of one of his Satraps.

Polycrates, the Tyrant of Samos, for the term had not originally an ill sense, was the friend of Amasis, King of Egypt. Herodotus describes his uninterrupted prosperity, which caused Amasis to disclaim his alliance, concluding that a person uniformly prosperous was reserved for some uncommon calamity, in which a friend and ally could not fail to bear a part. On this rupture, Polycrates had assisted Cambyses, in his invasion of Egypt, with a naval force, consisting of some discontented Samians, whom he wished to expatriate. This Prince was at length deserted by his good fortune, and his destruction was effected in the following manner:

Oretes, irritated by a reproach cast upon him of Oretes, having neglected to conquer Samos, which lay so contiguous to his government of Sardinia, resolved, at any rate, to circumvent Polycrates and become master of the island. For this purpose he adopted the following stratagem. Pretending to revolt from Cambyses upon some discontent, he expressed a wish to secure his

Biography. treasure. This he proposed to intrust to the care of Polykrates, and to present to him one half of it, by which he might be enabled to conquer Ionia and the adjacent islands. Polykrates, who ardently desired to increase his treasure and also extend his dominions, sent a messenger to Sardis. There a large number of bags were shown to him, full of gold, as he supposed, but really filled with stones, covered at the top with the precious metal. On the return of his messenger, with a highly flattering report, Polykrates, eager to possess the treasure, set out for Sardis, contrary to the counsel of his friends, only taking with him Democleas, a celebrated physician of Crotona. Immediately on his arrival, Ortes arrested him as an enemy to the State; and, by that treacherous Satrap's orders, he lost his life on a gibbet. Thus ended the uninterrupted prosperity of Polykrates, (who had probably intellectual accomplishments superior to his contemporaries, for Athenæus celebrates his extensive Library,) and thus was Samos added to the Persian Empire.

Cambyzes had entered the eighth year of his reign, when he left Egypt with a design to return into Persia, where, as we have remarked, he appears never to have resided, except during his preparations for the invasion of Egypt. On his arrival in Syria, he met a herald sent from Susa to apprise the Persian army that Smerdis, the son of Cyrus, was proclaimed King, and to command their obedience. This revolution had the following origin: when Cambyzes left Persia, on his expedition into Egypt, he committed the government of the Country to Patizithes, one of the principal Magi, who had a brother resembling Smerdis, the son of Cyrus. Patizithes was apprised of the death of Smerdis, which had been concealed from the public; and he was aware that the tyranny and extravagancies of Cambyzes had now become insupportable; he therefore ventured to place his brother on the throne, as the true Smerdis, and caused him to be proclaimed by heralds, dispatched for that purpose, through the Empire.

Cambyzes, though enraged at the appearance of a herald on such a commission, yet had the consideration to respect his sacred character; he, however, strictly examined him. He also interrogated Presapes as to the certainty of his brother's death, which he now affected to disprove, accusing the deception of his dream. From these inquiries, it fully appeared that the true Smerdis was really dead, and that the usurper of the Persian throne was Smerdis the Magian. With the hope of speedily disposing of him, Cambyzes ordered the immediate march of his army into Persia: that Country, however, he was never more to see; for, when mounting his horse, his sword slipped from the scabbard, and gave him a mortal wound in the thigh.

The Egyptians recollected that Cambyzes had inflicted such a wound on Apis, and they naturally indulged the belief that the horrid impiety, as they esteemed the action, was now retaliated, while Cambyzes suffered the just judgment of their deity. Yet, that it was "an especial judgment from heaven upon him for that fact," which seems to have been eposued by the pious and learned Pridesaux, we are not able to perceive; nor does the opinion that "God bath very signally

punished the profanations of Religion in the worst of times, and under the worst modes of heathen idolatry," appear worthy of that author's judgment and religious information. (See Coenert. pt. i. h. iii. an. 522.)

Cambyzes, amidst the cruel and extravagant occupations of his short reign, had found leisure to comply with some of the religious observances of his time. While he remained in Egypt he had sought to learn his future fortunes, by consulting the Oracle of Buttus, which was famous in that Country. It was there revealed to him that he should die at Ecbatana; and he seems to have known only of the city in Media where that name. There all his treasures were deposited and there he aspected, from this answer of the Oracle, to die in his old age. There was also another Ecbatana, in Persia, described, by Pliny, as a town of the Magi. But when Cambyzes found that the town in which he lay in his wounded condition was also called Ecbatana, "he exclaimed," says Herodotus, "This is certainly the place in which it is appointed for the son of Cyrus to die." This Ecbatana, in Syria, according to Pliny, was situated on Carmelus, a mountain of Galilee, on the Mediterranean, about fifteen miles South of Ptolemais.

Twenty days had elapsed since Cambyzes had received the fatal wound. He now summoned around him the principal Persians in his train. To these he explained how he had been induced to kill his brother, whose death he bitterly lamented. Cambyzes next endeavoured to excite his courtiers against Smerdis the Magian, and conjured them not to suffer the Empire to revert to the Medes, for the Magian was of that nation. But the dying advice of this Prince was received with the inattention which his life had deserved. The Persian Nobles attributed it to nothing but resentment against his brother; and submitted to the usurper, whom they regarded as the true Smerdis; especially as Presapes, probably bribed to the interest of the Magian, soon varied his cory, and declared that he had not killed Smerdis with his own hand.

"Cambyzes," says Herodotus, "bewailed his misfortunes; and, when the Persians saw the King thus involved in sorrow, they tore their garments, and expressed their grief aloud. After a short interval, the boat became infected, the thigh mortified, and death ensued." "Thus," adds the Historian, whose third book we have here generally followed as almost our sole authority, "died Cambyzes, son of Cyrus, after a reign of seven years and five months, leaving no posterity."

The reign of Cambyzes, whom Josephus (*Ant. xi. 2*) inaccurately describes as dying at Damascus, has been sufficiently characterized by its uniform cruelty and violence. He seems to have possessed, as before observed, sufficient military talents, but, if he had any other accomplishments, their memory has perished. The son of Cyrus must always be regarded as unworthy of his father, and be ranked, in all faithful History, among that too large assemblage of despotic Princes who have lived only for themselves. His reign, though short, was indeed long enough to exhibit, in a striking manner, the mischievous effects of unlimited power, especially when administered by unbridled passion.

FLOURISHED FROM A. M. 3483. B. C. 521. TO A. M. 3447. B. C. 485.

Biography. Two premature death of Cambyzes, which we have already described, the absence of the Persian army from the Capital of the Empire, and especially the incredulity of the Nobles as to the death of Smerdis; all these circumstances seemed to promise the Magian that his usurpation would be successful, and that he might be suffered peaceably to occupy the throne of Cyrus, under the pretence of being really his son.

This usurper, the Smerdis of Herodotus and the Orontes of Justin, is named Mardys by Eschylus, and, by Ctesias, Spendadates. According to Mr. Richardson's *Dissertation*, there is no name in the Persian Histories of their Empire by which Smerdis Magus can be designed. But, as the learned writer remarks, these Histories are equally silent respecting Cyrus, Croesus, and the accession of Darius Hystaspes by the neighborhood of his house. That this Smerdis was the Artaxerxes mentioned by Ezra (c. iv.) is affirmed with the highest probability. To him, therefore, may be justly attributed the name rigor towards the Jews which we remark in the conduct of his predecessor Cambyzes. Both of them might, indeed, regard it as no unpopular measure, at the commencement of their reigns, to discontinue those obnoxious tributaries; for such the sacred laws and customs of the people of God must have rendered them to all idolatrous nations. Hence Plooy the elder describes them as a nation distinguished by their contempt of the gods; *gens contumeliosa numinum insignia*.

Smerdis the Magian.

His severity to the Jews. For the Royal order, which prohibited the Jews to proceed in rebuilding the city and Temple, we have the authority of Ezra, (iv. 7-24.) Josephus being entirely silent as to any intercourse between the Court of Persia and the Jewish people, from the death of Cambyzes till after the first year of Darius. The circumstances mentioned by Ezra cannot be more accurately described than in the following narrative which Dr. Prideaux has collected from the Sacred Historian:

"As soon as Artaxerxes was settled in the Kingdom, after the death of Cambyzes, the Samaritans wrote a letter to him, setting forth, that the Jews were rebuilding their city and Temple at Jerusalem; that they having been always a rebellious people, there was reason to suspect that, as soon as they should have finished that Work, they would withdraw their obedience from the King, and pay no more toll nor tribute, which might give an occasion for all Syria and Palestine to revolt also, and the King be excluded from having any more portion on that side the river Euphrates; and for the truth of what they had informed him of, as to the rebellious temper of that people, they referred him to the records of his predecessors, wherein they desired search might be made concerning this matter. On the receipt of this letter, examination being made, according to the purport of it, into the records of former times, concerning the behaviour of

the Jews under the Assyrian and Babylonish Empires, and it being found in them with what valour they had long defended themselves, and with what difficulty they were at length reduced by Nebuchadnezzar, an order was issued forth to prohibit them from proceeding any further, and sent to the Samaritans to see it put in execution, who immediately, on the receipt thereof, went up to Jerusalem, and, having exhibited their order to the Jews, made them desist, by force and power, from going on any further with the work of the house; so it wholly ceased till the second year of Darius, King of Persia, for about the space of two years." (*Connect.* pt. i. h. iii.) Dr. Prideaux justly concludes that this rigorous decree was not a little promoted by the circumstance that Artaxerxes was of the sect of the Magi, which held the Jews in the utmost abhorrence. This Magian, though thus sagacious to the Jews, had the policy to conciliate the other nations which composed the Persian Empire. "He commenced his reign," says Herodotus, "by publishing everywhere an edict, which exempted his subjects, for the space of three years, both from tribute and military service; and also distinguished the various dependents on his power by great munificence." He appears to have so well succeeded in these attempts to conciliate, that, according to the same Historian, "he was seriously regretted, after his death, by all the inhabitants of Asia, except the Persians." These would be likely enough to indulge a national antipathy, because the Magian was a Mede. The usurper also married the wives of Cambyzes for the obvious purpose of giving plausibility to his pretensions; but this circumstance proved the speedy occasion of his ruin.

We found the Nobles, who attended the last hours of Cambyzes, convienced, notwithstanding the assertions of the dying Prince, that his brother had really ascended the throne. With this conviction they appear to have returned to the Capital. Among these Nobles was Otanes, the son of Pharnaspes, a Persian distinguished by his rank and fortune; he was the first who suspected that the reputed Smerdis was not the son of Cyrus, from the extreme caution which he displayed by never venturing to remove from the citadel, or to loathe any of the Nobles into his presence. Otanes had a daughter named Phadyma, one of those who had been married to Cambyzes, and had now become the wife of his successor. The father inquired of his daughter if the person with whom she cohabited were the son of Cyrus? She replied, that she had never seen that Prince; nor had she any previous acquaintance with her present husband. Otanes then referred his daughter to Atossa, the daughter of Cyrus, who had also been married to Cambyzes, to learn whether the person with whom they now cohabited was her brother. But this satisfaction could not be procured, as the usurper, among other precautions, had kept his wives

Darius.

His general lenity.

Biography. strictly apart. Otanes now prevailed on his daughter to attempt an hazardous experiment. The Magian, for some great crime, had, during the life of Cyrus, been deprived of his ears. As this circumstance would serve to settle the question of the usurpation, Phadryna was urged to make the discovery, whether he were the true or the pretended Smerdis, when next called to her husband's bed. "As soon as she saw him in a profound sleep she tried to touch his ears, and being perfectly satisfied that he had none, as soon as it was day, she gave intelligence to her father."

Otanes immediately communicated the discovery to two Nobles, on whom he could rely, and who had indeed suspected the imposture. They now agreed that each should choose a friend, to whom they might safely intrust the important secret. To these six confederates was presently joined Darius, who was named Oehus before his accession to the throne. He had opportunely arrived from Persia, where his father, Hystaspes, was Governor; and indeed he came to Susa with a full conviction of the usurpation of the Magian, and a design to accomplish his immediate destruction. To this he warmly urged his associates; opposing the caution of Otanes, who would have first strengthened their party. But Darius was inflexible, and threatened that if the day were suffered to pass without executing their purpose, he would not wait to be betrayed to-morrow, but would immediately disclose to the Magian the whole conspiracy. Gubryas, another of the confederates, whose daughter Darius had married, now seconded his ardour, and his sentiments gave universal satisfaction.

Prexaspes. In the mean time, according to Herodotus, the two Magi, Patignishes and the pretended Smerdis, sought to engage the good offices of Prexaspes, whom that Historian unaccountably describes as "a man who, through every period of his life, merited esteem." Of what description must have been his admirers, some passages in the biography of Cambyses sufficiently discover. Yet the peculiar outrage which he had suffered from that frantic Prince, by the murder of his son, might well be supposed to have inspired Prexaspes with hostility to the whole House of Cyrus. The two Magi commanded the attendance of this flexible courtier, in the citadel, where they had secured themselves, and first exacted from him an oath not to reveal the deceit they had practised. Then having, as they fondly imagined, bribed him to their purpose, by the promise of munificent rewards, they proposed to assemble the people around the tower of the royal residence, whence he should declare aloud that it was Smerdis, the son of Cyrus, who now occupied the throne.

His declaration and death. "Prexaspes having consented to their proposal, the Magi assembled the people, and sent him to harangue them from the top of the tower. Utterly regardless of their instructions, he first recounted the genealogy of Cyrus from Achæmenes; and when he arrived at Cyrus himself, he enumerated the favours which he had bestowed on the Persians. Prexaspes then proceeded to discover the truth which he had long concealed, from the danger of revealing the transaction, but which was now forced from him. He, at length, assured the people that he had actually slain Smerdis, the son of Cyrus, and that the persons now governing were the Magi. Then, after lavishing imprecations on the Persians, unless they determined to recover the Empire,

and take vengeance on the usurpers, he threw himself headlong from the tower." Thus died Prexaspes, greater than he had lived; though, as Larcher has remarked in the following passage, where he contrasts and accounts for the various conduct of this courtier, he might have closed his life more nobly than by a horrible suicide.

On this self-destruction of Prexaspes the learned writer just mentioned, whom every inquirer into Ancient History would wish to accompany, thus sily philosophizes: *Comment concilier cette action mâle et vigoureuse avec la réponse pusillanime et avilissante du même homme au despote des Perses! Ici, quelle énergie! Là, quelle bassesse! Un homme assez fort pour se tuer dans une pareille circonstance, et par un motif aussi noble, a-t-il pu voir de sang-froid égarer injustement son fils, et louer lâchement l'adresse du meurtrier! La mauvaise éducation, l'habitude du joug, le despotisme peuvent comprimer le pers; mais, loin de se détruire, souvent ce report réagit avec une force irrésistible. Detru ces contrariétés dans le même homme, ce mélange de bassesse et de grandeur, dont, sans cela, on a peine à rendre compte. Avec des principes, Prexaspes se serait rendu redoutable au tyran sous lequel il plioit sans murmurer; avec des principes, le même, au lieu de se tuer, aurait prévenu les sept conjurés. Hérodote, iii. 318. (How can we reconcile this bold and daring action with the sly and dastardly answer of the same man to the Persian despot? In the one case what intrepidity! In the other what baseness! A man of sufficient fortitude to kill himself in such a manner, and for such a noble purpose, could yet behold without emotion the murder of his innocent child, and even basely praise the skill of the murderer! An ill education, habits of servility, despotism,—these may, indeed, repress the spring of honourable action, but, so far from its being destroyed, that spring will often recover its elasticity, and act again with irresistible force. The influence of just principles would have made Prexaspes the dread of the tyrant, to whom he tamely submitted without a murmur. With these principles, instead of killing himself, he would have anticipated the deed of the seven conspirators.)*

The dying declaration of Prexaspes, joined to the discovery made by the daughter of Otanes, could not fail to convince the people of the usurpation of the Magian, and his reign must have soon terminated, even if the daring enterprise of the seven conspirators had been unsuccessful. Herodotus asserts, and seems to have been followed implicitly by those who have written after him, that these conspirators were ignorant of what had passed at the tower of Susa, till they learned the fate of Prexaspes on their passage to the citadel. The Historian adds, that "they withdrew for awhile to deliberate." Otanes proposed to defer the enterprise; but Darius urged its immediate execution. "They were still divided in opinion, when they observed seven pair of hawks, who pursued two pair of vultures, and tore them in pieces with their beaks and claws." The conspirators accepted the omen, and advanced to the palace; but their previous ignorance of the fate of Prexaspes is as improbable as the marvellous tale, so consonant with ancient superstition, which it served to introduce. Must not the order for assembling the populace have been a matter of public notoriety? And would the conspirators fail to place some one in the

Remarks.

The conspiracy
attacked the
Magian.

Biography. crowd, where they might themselves decline to appear, to bring the earliest notice of the result? It was probably on such information, that, "after imploving the aid of the gods, they proceeded instantly to attack the Magi," during the first moments of their consternation.

The devoted Tyrants were deliberating on the conduct they should observe in this extremity of their affairs, when the conspirators, having availed the outer guards by their rank, and slain the eunuchs who opposed their further progress, were rushing towards the inner apartments. The brothers, hearing the cries of the eunuchs, and presently ascertaining the occasion of the tumult, determined on a resolute, though hopeless defence. One of them armed himself with a bow, which, as the conspirators pressed on him, became useless, and he fled to an adjoining apartment. The other seized a lance, with which he wounded Aspathines in the thigh, and deprived Intaphernes of one of his eyes, but presently fell in the unequal combat. Smerdis, who had fled unarmed, was pursued by Darius and Gobryas into a dark apartment. The latter seized him round the waist, when Darius feared to aim a thrust at him, lest he should destroy his friend. "Strike," said Gobryas, "though you kill both!" Darius obeyed, and ran his sword through the Magian. The two wounded conspirators remained to guard the citadel. Their five companions sallied forth into the city, making violent outcries, and exposing in their hands the bloody heads of the Magi.

The people, informed of what had been achieved, and of the Magian imposture, of which, however, the last words of Prexaspes had sufficiently apprized them, became irritated against the whole sect, and determined to follow the bloody example of the conspirators. They put to the sword every one of the Magi who came in their way, and night alone prevented their utter extirpation. Herodotus adds, that "the Persians solemnly observe that day as one of their grandest festivals. They call it *Magaphonia*, or the "Slaughter of the Magi." On that day none of the sect is permitted to appear in public."

No revolution was ever more complete and nodisputed than that which ended the reign of eight months which have been assigned to Smerdis the Magian; a royalty which was, indeed, little more than a splendid imprisonment. After five days, the conspirators, who had no further use for weapons, met together to deliberate on the future government of the Empire. Herodotus, on this occasion, attributes to these rough soldiers remarks worthy of philosophical politicians, on three different forms of government—democracy, aristocracy or oligarchy, and a monarchy. He describes Otanes contending most tenaciously for the first and popular form of government; and he seems to have pursued his convictions upon the point with much personal disinterestedness. Megabyses contended for the second, and Darius for the third. This last opinion being approved by four out of the seven conspirators, a monarchy was the government adopted, or rather continued, for the Persian Empire. Otanes, without further opposition, protested, for himself and his posterity, against being subjected to the will of a Sovereign; and Herodotus adds, that when he wrote his History, the family of Otanes was the only one which retained its liberty, on condition of not transgressing the laws of the Country. This liberty, probably, was only an exemption from personal service at the will of the Sovereign; for it is difficult to suppose any other

Independence which would consist with the described submission.

Otanes thus declining to have any concern in the election of a King, his six companions consulted how best to accomplish their design. "It was agreed upon, as a preliminary, that whoever of them became King, there should, every year, in honour of Otanes, be presented to him, and to his descendants for ever, a Median babit, and that he should also receive such presents as the Persians deemed most honourable. These distinctions were awarded to him because he projected the deposition of the Magian, and took the first steps towards the execution of the design. For themselves, they mutually agreed that each should have access to the royal palace without the ceremony of being announced, except when the King was in the company of his wife; and that the King should not take a wife but from the family of one of the conspirators." These preliminaries being adjusted for their mutual advantage and security, "they agreed to meet the next morning at sunrise, and that he whose horse neighed the first should be made King." The Persians adored the rising sun, and probably some homage to that deity was designed by the conspirators when they agreed to assemble at his rising. Whether their determination, by the neighing of the horse, had any religious reference, is not so clear. Such, however, is the opinion of M. l'abbé Brotier, in his remarks on Tacitus, (*De moribus Germ.* §. x.) where that Historian had attributed to the ancient Germans a disposition to draw presages and warnings from the actions of the horse. *Proprium gentis, equorum quoque præsegiæ as monitus experiri.*

Herodotus here introduces a story respecting the contrivance of Darius's groom to procure the Empire for his master, on which, as before remarked, the Persian Historians are silent. He says, "The next morning, at break of day, according to their agreement, they assembled on horseback. As they traversed the suburbs, when they came to the place whither the night before a mare had been brought to the horse of Darius, he immediately began to neigh. At the same time there was thunder and lightning, although the sky was quite clear. These signs appearing to signify the favour of heaven to Darius, served that Prince for an inauguration. The other Noblemen immediately dismounted, fell prostrate at his feet, and hailed him King." Herodotus relates, that Darius was no sooner seated on the throne, than he commanded "the erection of an equestrian statue with this inscription: Darius, son of Hytaspes, obtained the sovereignty of Persia by the sagacity of his horse (whose name was inserted) and the ingenuity of Ælares, his groom."

Darius, whose original name, as we before remarked, according to Ochsus, had reached the twenty-eighth year of his of Darius. age when he had thus the good fortune to be raised to the throne of Persia; a name which then comprehended by far the greatest part of that portion of Asia known to the Greeks in the Age of Herodotus. He was the son of Hytaspes, who will appear in another place as the friend and patron of Zoroaster. This noble Persian was of the Race of Achæmenes, and consequently a relation of Cyrus, whom he had attended in all his wars, and was by him appointed Governor of Persia. In the writings of the modern Persians he is named Lorasph, and his son Gushasp.

Their mutual agreement.

The sect of the Magi massacred.

Deliberation of the conspirators.

Biography.—had married the daughter of Gobryas, his daring associate in the destruction of one of the Magians. To this wife he added, on his accession to the throne, the two daughters of Cyrus—Atossa, who had been the wife of her brother Cambyzes, and afterwards of the Magian, and Artyston, who had never been married, and who became the most favoured of his wives. He also married Parmys, the daughter of Smerdis, the son of Cyrus, and Phaeisima, the daughter of Otanes, who detected the Magian.

Having strengthened himself by these marriages, he proceeded to divide the Empire into twenty governments, each having a Satrap, by whom he collected an annual tribute. Among these Satrapies, the Holy Land was comprehended in a large district, which formed the fifth. It is merely named by Herodotus as the Syrian Palestine. "Had he," says Major Rennell, "been ended with a prophetic spirit, to have foreseen that from Palestine there was to arise a light to guide the footsteps of men to the highest state of happiness that this world affords, by humanizing them, and making them fitter for the purposes of Society; and, moreover, by giving them hopes of a better state hereafter; he would have thought it a spot of much more importance than he attaches to it." (*Geog.* p. 247.)

Annual revenues.—The annual revenue drawn from these Satrapies, Rollin computes at forty-four millions of livres, or not quite two millions sterling. Mr. Gibbon, from a comparison of two passages in Herodotus, (b. i. c. 192, and b. iii. c. 89, 96,) conjectures that "the monarch might annually save three millions six hundred thousand pounds, of the seventeen or eighteen millions raised upon the people." From these imposts were exempted the Province of Persia, the Ethiopians bordering on Egypt, whom Cambyzes subdued, and the inhabitants of Nyssa, sacred to Bacchus; who, instead of paying any specific taxes, each made an annual present.

As to all the other Provinces, Darius ascertained the tribute they were severally to pay, connecting sometimes many neighbouring nations into one district; and sometimes passing over many which were adjacent, and forming one government of various remote and scattered nations. During the reign of Cyrus and his son, there were no specified tributes, but presents were made to the Sovereign. Such is the account given by Herodotus, though it ill agrees with the unusual forbearance, as to the exaction of the regular tribute, which we have ascribed on his authority, to the Magian usurper. The Historian adds, that, in these innovations, Darius seemed to design only the acquisition of wealth, and that, as Cambyzes had been negligent and severe, while Cyrus had discovered a gentle disposition, studying the good of his subjects, the Persians called Darius a merchant, Cambyzes a despot, and Cyrus a parent. Yet the moderation of Darius, in the exaction of these imposts, is thus applauded by Plutarch: "When he laid a tax upon his subjects, he summoned his Lieutenants, and asked them whether the tax was burdensome? When they told him it was moderate, he ordered them to collect half as much as was at first demanded." (*Apoth. ad Ant.*)

Revolt of Intaphernes.—Soon after Darius had been raised to the throne, he was alarmed by apprehensions of a revolt against his authority. Intaphernes, one of the seven conspirators, attempted to enter the royal palace, in consequence of their mutual stipulation for free intercourse with the

King. He was stopped by the keeper of the gates and an officer of the Court, because the King was in the company of one of his wives. Intaphernes, regarding this interruption as a mere excuse, drew his sword, and cut off their ears and noses; then, with his horse's bridle, tying them together, he left them in that mangled condition. Thus they presented themselves before the King, and related the conduct of Intaphernes.

The monarch, suspecting some concert among the conspirators, and that this attempt to enter the palace so unseasonably was part of an extended project of rebellion, sent for the rest of his former companions separately, but found no ground of accusation against any of them. "When he was thus convinced," says Herodotus, "that there was no concert between the conspirators, still apprehending that Intaphernes would revolt, and also suspecting his connections, he ordered him to be seized, with his sons and all his family. They were put in irons, and condemned to die."

The wife of Intaphernes, whose freedom from arrest on this occasion is certainly a very improbable circumstance, now appears to have appealed incessantly to the compassion of the King, presenting herself for that purpose before the royal palace. Darius, at length, moved by her importunity, granted her the life and liberty of any one of her family whom she would choose. This wife and mother now neglected to save her own immediate family, and requested the preservation of her brother; alleging to the astonished King, that she might have another husband and other children, but as her parents were dead, she could not have another brother. With this strange preference, of which an instance may also be found in the *Antigone* of Sophocles, Darius is said to have been so much gratified, that he pardoned her brother, and also her eldest son. Intaphernes and the rest of his family were immediately executed. Thus speedily perished one of the brave conspirators, by the power which he had contributed to raise. The cruelty of Intaphernes was, indeed, not ill required, and it sufficiently discovers the rancour and worse than brutal manners of the Age; but whether this royal counsellor, with his unhappy, and, so far as appears, unoffending family, became the victim of the just apprehensions or the unfounded jealousy of his former companion, it is impossible to ascertain.

In our account of Cambyzes (p. 349) we have mentioned the conduct of Oretes, Governor of Sardis, who basely put to death Polycrates, and seized upon his island of Samos. This, as his conduct soon discovered, was not designed to extend the Persian Empire, but to aggrandize himself. Taking advantage of the relaxed royal authority during the short period of the Magian usurpation, he put to death Mitrobates, the Governor of Dascylium, and his son; the father having formerly offended him. Both were highly esteemed in Persia. Oretes also ordered the assassination of a messenger sent to him from Darius. The King determined to punish the Governor of Sardis for these and other enormities. Yet, as he was a Satrap of very extensive power, (for he ruled over Phrygia, Lydia, and Ionia, and had regularly a guard of a thousand men,) Darius resolved to proceed by stratagem, rather than by open force. He assembled his Nobles, and asked which of them would undertake to bring the body of Oretes, dead or alive. Thirty Persians offered themselves to this hazardous service; but as only one could be em-

Darius.

Biography. played, the decision was made by lot, and it fell on Bagabaz, the son of Artaban. He proceeded to Sardis, furnished with letters of different descriptions, which he might employ as they best suited his purpose. They were addressed to the Secretary of the Province. Those he first delivered contained some general instructions, which had no reference to the real purpose of his mission. When he found that these letters from the King were treated with respect, he delivered one to this effect: 'Persians, King Darius forbids you to serve any longer as guards to Oretes.' In a moment they threw down their arms.' Bagabaz now ventured to go the whole length of his commission, and "put into the hands of the Secretary a letter couched in these terms: 'King Darius commands the Persians who are at Sardis to put Oretes to death.' The guards immediately drew their swords and killed him. Thus was the death of Polycrates of Samos revenged on Oretes the Persian."

Democedes the Physician. Soon after this transaction, a circumstance occurred chiefly worthy of notice on account of the important events with which it was connected. Darius had injured his foot, when leaping from his horse, while engaged in the diversion of the chase. The Egyptian Physicians at his Court tried their utmost art, but only aggravated the malady. It was now recollected that there was a Physician among the slaves of Oretes, who had been brought to Susa, with the rest of that Governor's effects; for men degraded in the condition of slavery have been usually regarded as things rather than as persons. This slave was Democedes of Crotona, whom we mentioned, in the biography of Cambyzes, (p. 350.) as having accompanied Polycrates when he took his fatal journey to Sardis. "He was brought before the King," says Herodotus, "in chains, and covered with rage." Darius inquired if he was skilled in Medicine. This he refused to confess, lest he should be detained in the King's service, and never suffered to revisit his home. Darius, suspecting that he dissembled, determined to put him to the question, and bade his attendants produce the instruments of torture. Democedes now resumed his true character, and, by his applications, speedily recovered the King. In acknowledgment of his cure, Darius granted him the pardon of the Egyptian Physicians, who, according to Herodotus, (lib. iii. c. 132.) were barbarously condemned to crucifixion, because they had failed in their attempts to heal the King's malady. He also presented him with two pairs of fetters of gold. Upon which Democedes ventured to ask the King, whether, in return for his restoring him to health, he wished to double his calamity. The King was delighted with the reply. He now ordered that Democedes should be introduced to his wives as "the man who had restored the King to life." By every one of these he was suitably rewarded.

This celebrated Physician had a sumptuous house provided for him at Susa, a place at the royal tables, and every thing he could desire, but the liberty of returning into Greece. That liberty he gained by means of Darius's Queen, Atossa, whom he cured of a very desperate disorder, and from whom he had previously exacted a promise that she would promote his favourite object. Atossa, the daughter of Cyrus, was also desirous that the King should extend his dominions by making a conquest of Greece. "I wish," says she, "to have in my service women of Sparta, Argos, Athens,

and Corinth, of whom I have heard so much." For such scorching objects have mankind been involved in the miseries of war!

Darius, as the result of this conversation with Atossa, appointed fifteen Persians, in whom he could confide, to accompany Democedes, whom he loaded with presents and entreated to return. The Persians, by the assistance of their guide, were especially to examine every part of the Grecian coast. From Sidon they sailed to Greece in two triremes, and a larger vessel containing valuable stores. Having visited the principal Grecian cities, they passed over to Tarentum, in Italy. There, to encourage the escape of Democedes, the helms of the vessels were taken away, and the Persians detained as spies. In the meantime, the Physician proceeded to Crotona, where he married a daughter of Milo the wrestler; of which marriage he desired the Persians to inform their master. He appears to have passed the remainder of his life in health and reputation.

The Persians were now liberated, and the helms of their vessels restored. They sailed to Crotona, where they endeavoured to seize Democedes, and in vain demanded that he should be given up, as a subject of the King. Thus deprived of their conductor, they abandoned the further survey of Greece. On their return, being forced by contrary winds on Japygia, now Cape di Leuca, they were made slaves, but ransomed and sent home to Darius by Gillas, so exile from Tarentum. Such, according to Herodotus, were the adventures of "the first Persians who, with the view of examining the state of Greece, passed over thither from Asia."

About this period, in the third year of Darius, the transactions of his reign have a very important co-occurrence with the Sacred History. The Jews had resumed the erection of the Temple and the restoration of their city, works which we have seen suspended by the rigorous prohibitions of Cambyzes and the Magian. On the accession of Darius, they were at first inattentive to improve the favourable opportunity, and suffered for their neglect by the failure of their vintage and harvest. At length, being divinely warned by the Prophet Haggai, they zealously applied themselves to the work, which their inveterate foes the Samaritans again endeavoured to obstruct. But Talmai, the Satrap who governed Syria and Palestine, appears, on this occasion, to have acted the part of a just and prudent magistrate. He proceeded to Jerusalem, and demanded of the Jews by what authority they acted. On their producing the decree of Cyrus, Talmai wrote to Darius, who ordered that search should be made for the original decree, which was found among the archives in the palace of Ecbatana, or, as Ezra names it, "Achmetha, the palace that is in the Province of the Medes." This original decree agreeing with the copy which the Jews had produced as the justification of their conduct, Darius ordered that it should be again published. He also decreed the restoration of the sacred vessels of which Nebuchadnezzar had spoiled the former Temple; and that resources for carrying on the work should be dispensed to the Jews out of the revenues of the Province, "that they may offer sacrifices of sweet savour unto the God of heaven; and pray for the life of the King and of his sons." If any one obstructed the work, timber was to be taken down from his own house to construct a gibbet on which he should

Josephus's
account.

he langed, and his house be demulsified. (Ezra, ch. v.) Prideaux (pt. i. h. iii.) remarks, on the authority of the learned Lightfoot, (*Of the Temple*, c. 3.) that "the decree having been granted by Darius, at his palace in Shushan, (or *Susa*, as the Greeks call the place,) to remembrance hereof, the Eastern gate in the outer wall of the Temple was, from this time, called the gate of Shushan, and a picture and draught of that city was portrayed in sculpture over it, and there continued till the last destruction of that Temple by the Romans."

The account given by Josephus of the circumstances by which the Jews obtained these royal favours materially differs from the Sacred History. According to the Jewish Historian, in his *Antiquities*, (b. xi. c. 5.)

"Darius, the son of Hystaspes, while he was a private man, had made a vow to God, that if he came to be King, he would send all the vessels of God which were in Babylon to the Temple at Jerusalem." He adds, that "Zorobabel came to Darius from Jerusalem; for there had been an old friendship between him and the King," who made him one of his body-guards.

The Historian proceeds to relate that, "in the first year of his reign, Darius feasted those which were about him, and those born in his house, with the Rulers of the Medes, and Princes of the Persians, and the Toparchs of India and Ethiopia, and the Generals of the armies of his hundred and twenty-seven Provinces." The King, on retiring to rest, being unable to sleep, called upon his three body-guards, of whom Zorobabel was one, to divert him by their solution of problems which he proposed to them "concerning the strength of wine, of a King, of women, and of Truth," promising munificent rewards to him who excelled. Zorobabel, who discoursed last, upon Truth, is described as having "spoken the most wisely," when "the King commanded that he should ask for somewhat more than he had promised, which he would give him, because of his wisdom, in which he exceeded the rest. Zorobabel put him in mind of the vow which he had made to build Jerusalem and the Temple of God. 'This,' said he, 'is that request which thou permittest me to make.' So the King was pleased with what he said, and arose and kissed him; and wrote to the Toparcha and Governors, and enjoined them to conduct Zorobabel and those who were going with him to build the Temple. He also ordered the rulers of Syria and Phenicia to cut down and carry cedar-trees from Lebanon to Jerusalem, and to assist him in building the city; and that all the captives who should go to Judea should be free; and he prohibited his Deputies and Governors to lay any taxes upon the Jews. He also enjoined the Idumeans, and Samaritans, and the inhabitants of Celestria to restore those villages which they had taken from the Jews; and that fifty talents should be given them for the building of the Temple. And he sent the vessels, and fulfilled all that Cyrus had intended for the restoration of Jerusalem."

Such are the circumstances which, according to Josephus, led Darius to become the worthy successor of Cyrus, as the restorer of Jerusalem and the Temple. Some parts of this narrative, however, seem to show that the learned Jew had studied, till he had learned to imitate the narvellous digressions of the Greeks. Yet the able translator of Josephus, Mr. Whiston, whose erudition on some points was as remarkable as his fearless integrity on all occasions, considered "the

whole a contrivance of King Darius, in order to be decently and ioffensively put in mind, by Zorobabel, of fulfilling his own vow for the rebuilding of Jerusalem." He also attributes to Cyrus and Darius a disposition to worship "the one true God, the God of Israel, though the entire idolatry of their Kingdoms made them generally conceal it." That these Princes had great reverence for the God of the Jews, whom they could scarcely have failed to regard as superior to all other local deities, cannot be questioned; but the evidence is yet to be produced for the extraordinary fact that they had received the doctrine of the divine unity, in opposition to the Polytheism of their Age and Country.

Hitherto the transactions of the reign of Darius had been entirely pacific. The first armament of Darius was directed against Samos, which seems not to have remained under the Persian power when Polycrates was basely allured to Sardis, and there murdered by the Governor Oretes. When Otanes summoned the island, Mæandrius, who commanded there, consented to retire; and Otanes prepared to invest with the government Syloson, the brother of Polycrates, who was now in favour with Darius, on account of a service he had rendered to the King while an officer in the army of Cambyses. The Samians, however, under Charicles, the brother of Mæandrius, surprised and killed some of the principal Persians, who, depending on the truce, were "sitting at their ease. The rest of the troops soon came in their assistance, and repulsed the Samians." As the horrid result of this treachery, Otases, irritated by the destruction of his soldiers, ordered a general massacre of the inhabitants, and at length delivered the island to Syloson, probably as a tributary to Darius. Samos was thus depopulated, from the exasperation of the Persians, as we have learned from Herodotus; or by the cruelty of Syloson, as Strabo relates. It was, according to the former Historian, re-peopled by Otases, whose military appointment on this occasion was not a little extraordinary. It will be recollected, that among the seven conspirators, he alone had contended for a democracy, and had stipulated for himself and his family that they should not be regarded as subjects of the regal government.

While this expedition to Samos was in preparation, Revolt of the subleaded, but still disaffected and powerful Province Babylon. of Babylon broke out into a rebellion, for which it had been preparing during several years. In this design it was, no doubt, greatly assisted by the absence of Cambyses from the government, the Magian usurpation, and the weighty cares of Darius, on his accession to the Empire. Expecting the speedy vengeance of the King, who, on the first news of this revolt, had assembled his forces, the Babylonians prepared to sustain a protracted siege, and resorted to a horrible expedient. "Of all the women in Babylon," says Herodotus, "each man, besides his mother, reserved one female of all his household, to whom he was most attached; the rest were collected together and strangled." The Historian coolly adds, that "one woman was preserved to prepare the bread, and the rest were destroyed to prevent a famine." It has been well remarked by Prideaux, that now "was very signally fulfilled the Prophecy of Isaiah, (xlvii. 9.) that two things should come to them in one day, the loss of children and widowhood. In what greater perfection," adds the learned and pious author, "could these calamities come

Biography. upon them, than when they themselves, thus upon themselves, became the executioners of them?" The same author satisfactorily shows, on the testimony of Zechariah, (i. 7.) that "the revolt of the Babylonians could not have occurred till the year 517 before the Christian era, and in the beginning of the fifth year of Darius."

The King advanced with a powerful army, and laid close siege to the revolted city. The Babylonians, confiding in their preparations and the strength of their walls, which Cyrus had left entire, treated the besiegers with contempt. They even amused themselves by dancing on the ramparts. Referring, probably, to a proverbial phrase for an impossibility, they assured the Persians that Babylon would be taken when moles should produce young. Thus, after a year and seven months passed before the walls, Darius and his army despaired of reducing the city. They had vainly employed all the known stratagems of war, not forgetting those by which Cyrus had formerly succeeded. But the Babylonians were ever on their guard, and could be neither surprised nor overpowered.

It was in this extremity, and in the twentieth month of the siege, that an officer in the army of Darius distinguished himself by a deed so extraordinary, that the Historian might well have introduced his account without a prodigy. This person was Zopyrus, the son of Megabyzus, one of the seven who had put an end to the Magian usurpation. According to Herodotus, this officer, being informed that one of his baggage-mules had produced a foal, was at first incredulous, and, when convinced of the fact, enjoined secrecy on his attendants. He, however, reflected on the circumstance, and calling to mind the taunting language of the Babylonians, assured himself that the city might be taken.

Zopyrus now presented himself before Darius, and asked if he greatly desired to conquer the place. The King eagerly replied in the affirmative. He then deliberated how he might effect his object so that the capture of the city should be attributed solely to himself; and found no scheme so plausible as that of mutilating his own person, and, in that condition, seeking refuge in Babylon as a fugitive escaping from the cruelty of Darius. Zopyrus did not allow a moment's reflection on the irreparable injuries he was about to inflict on himself, but immediately cut off his nose and ears. He also clipped his hair, so as to assume the degrading appearance of a slave; and having scourged himself till his body discovered the bloody strokes of the whip, he thus presented himself before the King.

"Darius, indignant at the sight of a person of his rank so cruelly treated, leaped instantly from his throne, and extremely inquired of him who had thus mutilated him, and on what pretence? 'No man, sir, except yourself,' answered Zopyrus, 'could have the power to use me in this manner. I have thus disfigured myself, being vexed to behold the Assyrians deride the Persians.' 'Most wretched man,' exclaimed Darius, 'would you thus disguise the infamy of the deed you have perpetrated? Inconsiderate mortal! will the enemy yield the sooner because you have mutilated yourself? Were you not deprived of Reason upon this occasion?' 'Sir,' replied Zopyrus, 'if I had apprized you of my intention, you would not have suffered me to execute it, I therefore acted for myself. Unless you deny me your support, Babylon is certainly ours. I propose, in

my present condition, to go thither as a deserter. I shall ascribe my sufferings to your orders, and hope they will be thus encouraged to intrust a part of their forces to my command. On the tenth day after I am admitted into Babylon, do you, sir, detach 1000 men, whose loss will be unimportant, to the gate of Semiramis. Seven days after, post 2000 more near the gate of Ninaveh. After an interval of twenty days, send 4000 men towards the gate of the Chaldeans; but let none of these detachments have any weapons except their swords. At length, after that twentieth day advance the whole army direct to the city for a general assault. But, above all, let the Persians be stationed before the Belidian and Cissian Gates. I fully expect that the Babylonians, having witnessed my exploits in the field, will intrust to me the keys of those gates. The Persians, under my guidance, will then accomplish the rest."

"Having thus spoken, he hastened towards the gates of the city, looking back frequently, as if with the apprehensions of a deserter. The sentinels on the watch-towers perceiving him, quickly descended, and, opening the wicket of their gate, demanded who he was, and for what purpose he sought admittance? He answered that he was Zopyrus, and that he had come over to the Babylonians. On this the keepers of the gate brought him before an assembly of the people, (*ἔτι τοὶ κορὰ τῶν Βαβυλωνίων*), to whom he deplored his miserable condition, which he attributed to the cruelty of Darius, because he advised him to raise the siege, no hope remaining of his reducing the city. 'Now,' says he, 'I come to you, Babylonians! a promoter of your cause and an inveterate foe to Darius, his army, and the Persians. With all his plans I am well acquainted, and can well revenge the treatment I have received.' The Babylonians, seeing a Persian of the first quality deprived of his nose and ears, his body lacerated and covered with blood, readily believed his story, and that he came to assist them. They were quickly disposed to gratify his wishes, and without hesitation gave him the command of a detachment of their forces. With these he proceeded to accomplish the plan which he had concerted with Darius."

Zopyrus had now slain, in the three projected ramparts, and probably without any remorse, the 7000 fathers of his Countrymen whose lives were devoted to the success of his stratagem. The Babylonians regarded him with unbounded confidence. He was entrusted with the command of all the forces, and the guard of the ramparts. On the day appointed, Darius advanced with his army to a general assault. Zopyrus now dropped the mask. While the Babylonians were repulsing the soldiers from the ramparts, he opened to the Persians the Cissian and Belidian gates. Those of the Babylonians who saw what passed fled for refuge to the temple of Jupiter Belus; the rest continued firm at their posts till they also knew that they were betrayed to the enemy. Thus fell Babylon a second time into the power of the Persians.

Darius signified his victory by crucifying 3000 of the most distinguished among the Babylonians, as if to appease the manes of the Persians who had been sacrificed to the stratagem of Zopyrus. The walls of Babylon were now lowered, and the gates taken away. Thus began the Prophecy to be fulfilled concerning this glory of kingdoms, though long after this period, accord-

ing to Plutarch, (*Dr Exilis*), "the Persian Kings passed their Winter in Babylon, their Summer in Media, and their Spring at Susa." The same author (*Apophthegm*) says of Xerxes, what Larcher justly transfers to Darius, that, "being offended with the Babylonians, who rebelled, and having overcome them, he forbade them the use of arms, but encouraged them to pass their time in singing and playing on instruments, and in other dissipations." To supply the loss of the women who had been cruelly cut off at the commencement of the siege, Darius ordered that fifty thousand should be sent to Babylon from the neighbouring nations.

As to Zopyrus, Herodotus makes the King extol him beyond any Persian, except Cyrus. Plutarch relates (*Apophthegm*) that as Darius was once "opening a pomegranate, being asked of what he would wish for a number equal to the seeds of that fruit, he answered of Zopyrus," and "that he would not have Zopyrus named to gain a hundred Babylonians." Herodotus records the same anecdote, except that he gives the former the name of Megabyzus. On Zopyrus the King now accumulated wealth and distinction. Every year he made him such presents as were most valuable in the estimation of the Persians. He also appointed him Governor of Babylon during life, with an exemption from tribute. His son Megabyzus succeeded to his honours, which his grandson tarnished, by betraying his Country, and deserting to the Athenians.

Darius
invades
Scythia.

After this complete subjugation of Babylon, Darius did not manifest any inclination for repose, but immediately marched in person against the Scythians, under the pretence of revenging their former invasion of the Media. That event had occurred one hundred and twenty-eight years before; but Ambition is never destitute of an occasion for war. The King made formidable preparations, deaf to the prudent counsel of his brother Artabanus, who urged that Scythia, from the poverty of the Country, would prove, if subdued, a worthless acquisition: while the distance from Persia, with the harry and roving manners of the inhabitants, would make the conquest very uncertain. Darius excused but disregarded this advice, and proceeded from Susa with his army, having first committed a deed of cruelty not unworthy of a conqueror. A Persian, named Oebasus, had three sons enrolled for this expedition; he requested that one might be left with him to solace his old age. Darius affected graciously to exceed his request, by discharging all of them from military service. The deluded father was overjoyed, but presently found that the King had ordered their immediate execution.

Darius marched from Susa to Chalcedon upon the Bosphorus, where a bridge had been constructed by the ingenuity of Mandrocles the Samian, whom the King munificently rewarded. Near the spot he ordered the erection of two columns, on one of which were inscribed in Assyrian, and on the other in Greek characters, the names of the nations which attended him. He is also said to have erected pillars in other places, with pompous inscriptions, in one of which he allowed himself to be described as the best, and handsomest of all men living. The King had collected troops for this expedition from all the nations which acknowledged his authority, amounting, cavalry included, to 700,000 men. There was also a fleet of six hundred ships, to provide the necessary supplies for such an army, and to wait the

troops and their baggage across the wide rivers of Thrace and Scythia. "The circuit taken in this expedition," says Major Rennell, "cannot well be estimated at less than a march of one hundred and fifty days, or five months." The same able Geographer, in his *Remarks on Herodotus*, thus traces from that Historian the riots of Darius:

"He crossed the Danube over a bridge of boats, not far above the site of Ismail; the Ionian fleet being despatched from the Bosphorus to perform the service of laying the bridge. Having left the Ionians in charge of it, he marched through Scythia, eastward to the Tannis, the Scythian army, which was divided into two bodies, retiring regularly before him, at the distance of a day's march, filing up the wells, and destroying the produce of the fields; their families and cattle being previously sent to the northern frontier. Darius, crossing the Tannis, came into the territories of the Sarmatians, and from thence into those of the Budini, which, having crossed, he came to the Desert, of seven or eight days' journey in breadth. Here he halted, on the banks of the Oasus, (supposed to be the Volga,) where he constructed eight lodges, at about six miles from each other, the remains of them being visible in the time of Herodotus. And this was the most distant limit of the expedition of Darius Eastward." (*Geog. Syst. of Herod. p. 102.*)

"It had been the intent of the Scythians to entangle the Persians in the Desert lying between the Budioi and the Thyssageis, but, finding this scheme impracticable, they made the circuit to the North and West, leaving the Persians at fault." (*Ib. p. 104*.) Arriving in Scythia, Darius found two other bodies of the Scythians, who retired before him, and treated with contempt his demand of submission to the Great King, by the customary presents of earth and water. On the contrary, the Scythians despatched a messenger to Darius, bearing to the King these enigmatical gifts, a bird, a mouse, a frog, and five arrows; the language of which Gobryas thus interpreted: "Persians! unless you can fly like the air like birds, hide yourselves under the earth like mice, or leap into the marshes like frogs, you will never return to your Country, but will perish by these arrows."

At length, perplexed by the cautious policy of the Hs retreat. enemy, his provisions nearly exhausted, and his army weary and dispirited, the King found it necessary, according to the advice of Gobryas, to abandon the further prosecution of his rash enterprise. Determining on a retreat, he lighted fires in the night to disguise his proceedings, and decamped with all possible expedition, leaving the sick and aged in the power of the Scythians. These now advanced to the Danube, where, as they were chiefly cavalry, and well acquainted with the country, they arrived before Darius, and would have persuaded the Ionians to retire with their vessels, and thus destroy the bridge. Miltiades the Athenian, the Prince of the Chersonesus, advised a compliance with their proposal, according to Cornelius Nepos, *Ne a fortis datam occasionem liberanda Græcia dimittenda*; (lest an opportunity should be lost of securing the liberties of Greece.) This was strongly opposed, from a selfish motive, by Histæus the Milesian, who at length gained over the rest of the Ionian leaders to the interest of Darius. They removed only a part of the bridge, and thus deceived the Scythians, who now

His designs
upon India.

returned in the hope of intercepting the Persians. Darius, by marching in another direction, had avoided the enemy, and at length reached the Danube. In the Persian army was an Egyptian of a very powerful voice, who was commanded to call out for Histieus the Milesian. He was heard, and the bridge was immediately formed for the passage of the troops. The King now proved the wisdom of Coes the Mytlenian, who had recommended the preservation of this bridge, when, in the confidence of victory, Darius, after he had first passed over, had given orders for its destruction. Thus the remains of the Persian army escaped from this disastrous expedition, while the Scythians were engaged in a long and fruitless pursuit. They hence regarded the Ionians as the basest of mankind, attached to servitude, and incapable of freedom. Darius passed the winter and most of the following year at Sardis.

Megabyzus had been left by Darius in Thrace; whence he sent messengers to Amyntas, King of Macedonia, to demand earth and water. This was readily offered, though the gross indiscretion of the young Persian Noblemen who formed this embassy cost them their lives at a Macedonian banquet. In the mean time Darius became ambitious of extending his territory towards the East. Nor in the conjecture of Major Rennell improbable, that, while in the army of Cambyses, he had made observations which inspired his attempt to penetrate India by the Persian Gulf. Herodotus, in his account of the divisions of the Empire, describes the Indians as forming the twentieth Satrapy, and paying six hundred talents of gold. (Lib. iii. 94.) Of the acquisitions of Darius in India, and the circumstances which opened that Country to his ambition, the only account remaining is the following short passage of the same Historian: "A very considerable part of Asia was discovered by Darius. That Prince, wishing to ascertain where the India flowed into the ocean, sent out ships, with persons in whom he had confidence, especially Scylax of Caryandis. They embarked at Caspatras, in the Parthian territories, following the eastern course of the river towards the ocean. Hence, sailing westward, they arrived, after a voyage of thirty months, at the same port from whence the Phœnicians formerly sailed to circumnavigate Libya. In consequence of this voyage, Darius subdued the Indians, and became master of that ocean." (Lib. iv. 44.) Prideaux conjectures that, when Scylax "returned by the Straits of Babelmandel and the Red Sea, he landed where now the town of Suez stands, at the hither end of that sea." He dates the commencement of the voyage at B. C. 509, in the thirteenth year of Darius. Two years are allotted for the discoveries and return of Scylax. The succeeding three years appear to have been occupied in the invasion and conquest of India, or, at least, those years are not accounted for by any other transactions of Darius's reign. Thus, in the nineteenth year of that reign, and B. C. 503, may be dated the commencement of those events which brought the armies of Persia into Greece, and gave rise, in the first instance, to one of the most splendid passages in her brilliant History.

Darius, under a sense of his singular obligations to Histieus, had made him Sovereign of an extensive territory in Thrace. Megabyzus, who governed that Country for the King, represented to his master the impolicy of this grant; on which Darius summoned

Hystieus to his Court, and detained him there, under the pretence of requiring his counsel, while Aristagoras, his nephew and son-in-law, governed Miletus as his Lieutenant. This Governor concerted with Aristophanes, brother of Darius, and Governor of Sardis, the conquest of Naxos. Failing in his attempt upon that island, he apprehended the resentment of Aristophanes, and to secure himself, encouraged the Ionians to join him in a confederacy against the Persians. They made a fruitless application to Sparta for succours, which, on the contrary, were readily contributed by the Athenians, now irritated against Aristophanes. Ten years before, he had received Hippian the Tyrant, expelled from Athens, and, by a haughty message, had attempted his restoration, as we had occasion to relate in former sections, (pp. 222, 229.) Twenty ships, under the command of Miltiades, joined Aristagoras and the Ionians, who were now in the third year of their revolt against the Persian power.

The confederates, landing near Ephesus, and taking some Ephesians for their guides, passed over Mount Tmolus, and arrived at Sardis, where Aristophanes and his troops retired to the citadel, which they maintained. The enemies burned the city, but missed the plunder of it. In their attempt to reach their ships they were intercepted by the Persian forces, and defeated with a great slaughter. The Athenians now retired from the confederacy, which they could never be persuaded again to join. When Darius was informed of these events, "he desired to know who the Athenians were. On being told, he called for his bow, and shooting an arrow in the air, exclaimed, 'Suffer me, O Jupiter! to be revenged on these Athenians.' He afterwards directed one of his attendants to repeat to him, three times every day, when he sat down to table, 'Sir, remember the Athenians.'" (Herod. h. v. c. v.)

The Ionians, however, though thus deserted by their allies, for some time maintained themselves against the Persians. At length they were defeated both by sea and land. Aristagoras was slain, and Miltiades taken and destroyed. Histieus had been allowed to quit Susa, under pretence of quieting the disorders of his Country, but had joined the confederates. He was now taken in an engagement, and immediately crucified by order of Aristophanes, lest Darius should have prevented it, as he is said to have deeply regretted his death. The Persians proceeded to reduce the Hellespont, and the Thracian Chersonesus; Miltiades, who commanded there, put his effects on board five vessels, and sailed to Athens. The Phœnicians intercepted him, and took one of the vessels, commanded by his son, Metiochus, on whom Darius refused to avenge his quarrel with the father. According to Herodotus, the King "showed him the greatest kindness, gave him possessions in Persia, and married him to a Persian lady."

Darius was now in the twenty-eighth year of his reign, when he appears to have engaged with peculiar ardour in his project for the conquest of Greece. Recalling the former Commanders, he committed the conduct of the Persian forces solely to Mardonius, the son of Gobryas, a very young man, who had recently married a daughter of the King. Mardonius, according to Herodotus, collected at the Hellespont "a numerous fleet and a powerful army," with which he "proceeded towards Eretria and Athens," to revenge the burning

Mardonius

marches

into Greece.

Biography. of Sardis. On his arrival in Macedonia, that Country presently submitted. But the Thracians, availing themselves of his insecure inattention, surprised his army in the night, destroyed a great number of his soldiers, and wounded Mardonius himself. His fleet, in the mean time, while doubling the Cape of Mount Athos, now Capo Santo, encountered a storm, in which there perished three hundred of his ships and 20,000 men. Thus disabled, Mardonius returned into Asia with the wreck of this mighty armament, when Darius, too late, regretted the confidence he had rashly placed in his youth and inexperience.

The King, who still had the resources of immense treasure and a vast population at the command of his sovereign will, could not be diverted from his ambitious project. He, however, first sent heralds into Greece to demand submission, in the customary form. The dread of the Persian power prevailed over the people of Ægina and many of the Grecian cities; at Athens and Sparta they were otherwise received. "The Athenians," says Herodotus, "threw the heralds of Darius into their pit of punishment, and the Lacedæmonians, into wells, telling them to procure the earth and water there, and carry it to their King." (b. vii. c. 33.)

Darius now hastened the departure of Datis the Mede, and Artabanes, his own nephew, son of the Governor of Sardis, whom he had appointed General in the place of Mardonius. They received special orders from the King to plunder and burn Eretria and Athens. On reaching the coasts of Ionia, they collected an army of 300,000 men, and a fleet of six hundred ships. In the ensuing Spring they assembled their whole fleet at Samos. Having taken Naxos, and all the neighbouring islands, they besieged Eretria. The dissension among the citizens, the retirement of the Athenian succours, hopeless of serving such self-devoted allies, and the treachery by which the city was at length betrayed to the Persians, we have already narrated, (p. 290.) To execute the royal vengeance, Eretria was pillaged, the temples were destroyed, in revenge for those burned at Sardis, and the inhabitants were sent captives to Susa. There, according to the caprice so often discovered in the exercise of despotic power, Darius treated them kindly, and allowed them a settlement, in which their descendants were found to after ages.

Passing over to Attica, the Persians were led by Hippas to the plain of Marathon, ten miles from Athens. Their army, according to Cornelius Nepos, (*Miltiad.*) consisted of 300,000 foot, and 10,000 horse. The forces which the Athenians could oppose to such a formidable hostility were only 10,000 foot, (including 1000 Plataeans,) for they had no cavalry. The particulars of this almost incredible battle; the choice of Miltiades for General, by the disinterested patriotism of Arimides and the rest of his companions; the delay of the Lacedæmonian succour, from a superstition which robbed them of a glorious distinction;—all these subjects, which belong more properly to the History of the victors, have been already related, (p. 290.)

The Persian soldiers had now lost much of that hardihood which distinguished the armies of Cyrus. According to Plutarch, (*Aristid.*) "those who fought in the Battle of Marathon had garments embroidered with gold upon their delicate bodies, well suited to their effeminate minds." They are, however, admitted by Hero-

dorus to have consisted of Persians and the Sacæ, obliging the Greeks to give way, and pursuing them. But the Athenians and Plataeans, who formed the wings of the Grecian army, closed upon the Persians, and obtained a complete victory, killing a great number, and pursuing the rest, who were escaping to their ships. The loss of the Persians in this battle is stated by Herodotus to have been no more than 6,400 men slain on the field, but Trogus computed that, by sword, shipwreck, and disease, there were lost 200,000. Hippas, who had thus basely designed the subjugation of Attica, deservedly fell in the Battle of Marathon, according to the general opinion, though, according to Strabo, he fled to Lemnos, where he sickened and died. This memorable event is placed at the year a. c. 491, and in the thirty-first year of the reign of Darius. Pausanias relates, that in the Porico at Athens, called Porico, there was a Picture, in which the most celebrated Athenians and Plataeans were drawn from the life. There were represented to one part the Barbarians flying into the marsh, who so largely contributed to the victory of the Greeks, who, in another part, were slaughtering their enemies, as they attempted to enter the Phœnician vessels.

Herodotus, at the commencement of his seventh book, (*Polymnia*), says, that "when the news of the Battle of Marathon reached Darius, he who was before incensed against the Athenians for their destruction of Sardis, became still more exasperated, and resolved more eagerly on the invasion of Greece. He therefore instantly sent orders to the cities under his allegiance to provide a far greater number of transports, horses, and provisions." "Thus," adds the historian, "Asia experienced three years of confusion; her ablest men being called out to the Greek expedition. In the fourth year the Egyptians revolted."

Darius was now preparing two armies, that he might at once display his power in Attica and Egypt. But his intention was diverted to a contest in his own family for the succession in his Crown. This, according to the custom of the Persians, their Kings determined before they proceeded on a military expedition. One competitor was Artobazanes, his eldest son by the daughter of Gobryas, whom he had married, as already mentioned, while to a private condition. The other was Xerxes, the eldest son of Atossa, the daughter of Cyrus. On him, according to the advice of Demotares, the sated King of Sparta, the succession was bestowed, because the father of Artobazanes was only a private individual at the time of his birth, while the father of Xerxes was a King.

Herodotus, to whom we are almost entirely indebted for our knowledge of Darius, describes this appointment of a successor as the last transaction of his reign. His preparations, indeed, to accomplish mighty projects were unceasing; but he was arrested by a power mightier than his own. He died after a reign of thirty-six years, a. c. 486, and, according to this Historian, "in the year which followed the revolt of the Babylonians, leaving ungratified the resentment he had cherished against the Egyptians and Athenians, who had ventured to oppose his power."

It is just reflection of Dr. Prideaux, that "as God was pleased to make Darius His instrument to restore His Temple at Jerusalem, and to promote His worship

Darius.

Death of Darius.

Biography. there," so "He blessed him with a numerous issue, a long reign, and great prosperity." But when that learned and pious author describes him as "a Prince of wisdom, clemency, and justice," we confess our inability to discover those invaluable qualities predominating in the transactions of his reign. He has had the undisputed, and probably justly-merited, reputation of being a judicious military Commander; and, according to Plutarch, (*Apophteg.*) he praised himself for his presence of mind in battles and dangers." Yet there was little wisdom

discovered in the attempts to extend rather than to consolidate and improve an already unwieldy Empire. And, as to the clemency and justice of Darius, though some traces of these may appear as "a spot of azure in a clouded sky," yet we cannot describe them as characteristic of his government, till we have forgotten the family of Intaphernes, and the manner in which the sons of the venerable Oebasus were yielded to the request of the wretched father.

MILTIADES.

FLOURISHED ABOUT A. M. 3514, B. C. 490.

Biography. THE sickness of the Athenian democracy, ever prone to its favours, ungrateful in its neglect, or tremendous in its anger, is in no instance more strongly illustrated than in the lives of the Patriots Miltiades, Aristides, and Themistocles. Each of these exalted citizens possessed his own peculiar virtues; each of them was loaded with honours and rewards, and each of them, in his turn, felt the severity of those laws and the tyranny of that power which he himself had so largely contributed to support, if not to originate. In contrast with the evils, however, of a popular form of government, exemplified in the lives of these celebrated men, we must not omit to observe, on the other hand, a certain beneficial result. In times of public danger, and of threatened subversion under foreign dominion, men of great and extraordinary powers in a democracy rise up, as it were, from the very stones of their cities; real merit much more readily finds both its due impetus and its due reward; and the temptations of Ambition are open to its votaries only, because they have first preserved them to their Country. Among the Athenians, the extreme jealousy of native power, lodged in the hands of any one person, for a long time effectually guarded them against the ambition of their chieftains. But as individuals possessed too little, so the aggregate of the community enjoyed too much authority; and the misuse of that power is strikingly displayed in the lives of those who were in turn the favourites and the victims of a fierce and ungovernable populace.

Miltiades, the senior Chief of the heroes of Marathon, and the immediate director of the triumphs of that ever-memorable spot, was descended from a noble and distinguished family. His father, named Cimon, the son of Cypselus, was one of those high-minded Athenians who, in the time of Pisistratus, could not brook obedience to the Tyrant, and quitted his Country in consequence of that feeling. The magnanimity of Pisistratus, however, soon induced him to return, and he was afterwards slain in a domestic tumult in the city. This Cimon left two sons, one named Stesagoras and the other Miltiades, the Athenian General. Stesagoras was soon called to a higher station than that which either his father or himself had filled in Athens. The sons of Cimon had an uncle named Miltiades, the

son of Cypselus, who, by his own merits, and in consequence of the dictates of the Delphic Oracle, became Prince of the Thracian Dolonces, the inhabitants of a part of Chersonesus; and, dying without issue, his nephew Stesagoras succeeded him in that sovereignty. The reign of Stesagoras was short; he was slain by a blow from an axe, given by an enemy disguised in the dress and accoutrements of a deserter; and dying, like his uncle, without issue, Miltiades, the celebrated Athenian General, became entitled to the throne and property of his brother. He was a favourite at this time with Pisistratus, the Sovereign of Athens; and that Prince, ever the friend of monarchy, assisted him with a small army to support his title. With one ship only he sailed to take possession of his new government; and, perceiving the necessity of stratagem, on his arrival in the Chersonesus he absented himself from the public shows, and affected a particular seclusion, pretending grief for the death of Stesagoras, and a desire to do honour to his memory. By this artifice he collected, to console with him, all the principal persons from the neighbouring cities; an event for which Miltiades had duly prepared. The murder of his father Cimon is said to have been contrived, or perpetrated, at Athens, by the very persons whom he now found in his power; they were, therefore, seized and imprisoned by order of Miltiades, and his path to the throne was secured from danger; but what, if any, further punishment was inflicted on them, is nowhere recorded. Miltiades now found himself the undisputed master of Chersonesus. He immediately formed a body-guard of five hundred auxiliaries; and allied himself, by marriage, with Olorus, King of Thrace, by whose daughter, Hegesippa, he was presented with a son Cimon, afterwards so celebrated in Grecian History. The new monarch was not, however, destined long to enjoy his dominions in tranquillity: he was to descend from this petty throne to lead the way to an imperishable renown; and the same causes that compelled the one event, so humbling to his early ambition, were the means of shedding greater lustre on his name than any contemporary sovereignty could have bestowed. In the third year of his government, Darius, in resentment of certain alleged injuries he had received from the Athenians, made retaliation on all Greece and the neighbouring Countries; when

Biography. the Scythian Nomades, or wandering tribes, either irritated by some injuries they had received from the Persian expedition, or taking advantage of the general state of confusion and alarm which it occasioned, assembled in great numbers on the borders of Chersonesus, and desolated the country around indiscriminately, whether under the Persian dominion or in alliance with the Greeks. This was a force which Miltiades found himself unable to withstand, and he prudently retired until the storm should blow over. According to the customary mode of warfare with the Scythians, they plundered the Chersonesus, without attempting to maintain it, but soon snuffed it in revert to its former Prince; and Miltiades was reinstated in his power by the Dolonces. A short interval of Peace succeeded; but in the third year after his restoration, Darius, provoked, perhaps, by the known attachment of Miltiades to the Athenians, sent a powerful army of the Phœnicians against him; and the hero, surrounding himself with his friends, and collecting all his riches, finally abandoned his dominions, and set sail, with a fleet of five ships, for Athens.

Finally
abandons
his throne.

The Athenians had been prepared to receive the royal fugitive with honour. He had never, in the course of his sovereignty over Chersonesus, forgotten his connections with his native soil; and, on one occasion, had rendered Athens a considerable service. The inhabitants of the island of Lemnos, having been admonished by the Delphian Oracle to compose their differences with the Athenians by an absolute submission, the Lemnian ambassadors are said to have answered contemptuously, and, as it was then deemed, impudently, that "they would comply when a ship from the Athenian dominions should be blown into their harbour by a North wind;" confident, in the then imperfect state of the Art of navigation, that, as the haven of Lemnos was situated to the North of Attica, they were perfectly secure from such an event. Miltiades, however, being possessed of the Chersonesus, easily sailed from a port in the Hellespont, and won the harbour of Lemnos, driven thither by a strong North wind; when, aware alike of the Oracle and of the positive answer of the Lemnites, he instantly demanded a fulfilment of both, by their submission to him as representative of the Athenians. This requisition was immediately complied with; partly, perhaps, through their superstitious reverence of the Oracle, and partly in deference to their own honour.

His former
services to
Athens.

But neither these services nor the known friendship of Miltiades to the Athenian State could screen him from censure, on account of that which was, in the eyes of the Athenians, a serious crime. He had, from an Athenian citizen, become a monarch; and, in their inveterate hatred to Kingly government, these arbitrary Republicans actually formed an accusation against him on this account, and he was regularly tried for the offence, of which, however, he was as strangely acquitted. His talents, reputation, and riches, now soon elevated him to the highest offices of public trust and honour, when the ambassadors of Darius came to Athens, demanding *earth and water* from the citizens, in token of their submission to the Persians. To the eloquence and exertions of Miltiades Athens owed the glory of her decisive conduct. He induced his Countrymen to throw those emissaries of the Tyrant into a pit, as a signal of defiance to their master, pro-

claiming to them aloud, that in that place they would find the objects of their requisition, earth and water, sufficient for their purpose, and as much as the Athenian honour could grant them. After this hostile menace, when war was on both sides preparing with the utmost activity, Miltiades was appointed one of the ten Generals to command the Athenian army, and we have already seen in how vigorous and able a manner he conducted those troops to immortal honour in the field of Marathon; and how vigilant a part he acted immediately afterwards, when he marched from Marathon, and saved Athens from being attacked and plundered by those fugitives whom he had already beaten. See PISTRATICH, p. 290.

Commander
at Marathon.

On his return to Athens from the splendid victory of Marathon, Miltiades was treated with increased respect. He was represented in the Picture, painted by order of the Athenians in the Poecilian porico, foremost amongst his contemporaries and coadjutors, the ten Captains, animating his soldiers to the charge. But this appears to have been his only reward. In the height of his popularity, the Athenians rejected his demand of an olive crown, and severely rebuked the hero for presuming to claim it. Soon afterwards, in an assembly of the people, he proposed that they should make a descent upon the island of Paros, to retaliate upon the inhabitants of that place the offence which they had committed in rendering assistance to Darius. In his late expedition to Marathon. Some Historians affirm that the real motive which influenced the Athenian General in this proposal was a private quarrel betwixt him and one Lysagoras, a Parian chieftain. Unfortunately, both for his own fate and the fortunes of the Athenians, Miltiades, now a leading man in their assemblies, succeeded without difficulty in persuading them to adopt his scheme; and they entrusted him with a fleet of seventy ships, well manned, and proportionally appointed. With this force Miltiades sailed from Athens in high hopes of conquest, and promising to return with great riches and other advantages, the fruits of his anticipated victory. Arrived at the island of Paros, he landed without opposition, and sent heralds to the city demanding the sum of one hundred talents to be immediately paid him as a ransom for their Country, which, in case of refusal, he threatened to give up to the violence and plunder of his irritated army. The Parians, unmoved by these menaces, and confident of their own strength, refused even to deliberate on his proposals, sent back to Miltiades an unqualified defiance, and vigorously prepared for resistance. The Athenian army then invested the city, and, for a time, carried on the siege with considerable zeal, and with some prospect of ultimate success; when, by either treason or accident, an event befell their General which proved fatal to all their anticipations. One Timon, a Parian Priestess, came secretly to Miltiades, promising that she would disclose to him a method by which he might take the city with the utmost ease, and the Athenian General listened to her scheme with too eager a credulity. In consequence of her advice, he repaired in secret and alone to the temple of Ceres the law-giver, expecting to find its gates readily opened for his reception. In this he was disappointed, and by no violence was he able to force them. He, therefore, climbed to the top of the wall, and thence leaped down into the area of the temple, still encouraging the

Finding in this place no one ready to assist him, or seized, as Herodotus says, with a sudden horror at his own impiety, he determined to attempt his return. With this view he hastily re-ascended the wall, when his foot slipped, and he broke his thigh in falling, or, according to other accounts, dislocated his knee-pan. In what manner he reached his camp we are not told, but his arrival there, in this deplorable condition, might well be supposed to spread consternation and panic throughout the army; in consequence of it the siege was raised, and the expedition re-embarked, baffled and defeated in its purpose.

His unfavourable reception at Athens.

The short season of the glory of Miltiades, the victor of Marathon, had now passed away. The slightest misfortune was at all times sufficient to change the aspect of the Athenian favour; and in proportion as their expectations had been raised by success, so were their vexation and anger vented upon a reverse. With an army diminished in numbers and broken in spirit, the helpless Miltiades returned mortally wounded to Athens, and found that the general disaffection was increasing. The circumstance of his personal quarrel with Lyngoras, the Parian Chief, was alleged as an argument to prove his motive for the recent expedition to have been self-interest alone; and Xanthippus, the father of the famous Pericles, boldly came forward to the general assembly, and accused their formerly victorious and highly-favoured General of having designedly misled the people into the war. This construction of his conduct was instantly adopted, and the popular voice ever ready to throw additional weight on the descending scale of the fluctuating balance of fortune now loudly demanded a sentence of death on the unfortunate Miltiades, as an expiation of his crime. The situation of the accused was the more distressing, as it was utterly impossible, from his wounds, that he could appear and enter on his own defence. His known eloquence, and even his personal appearance, might not have been without their due influence on the multitude; but he was obliged, however unwillingly, to trust his defence to Tisagoras, his brother, who, indeed, used his most strenuous and affectionate exertions on his behalf. Some writers state that he was brought into the assembly on a couch, while his cause was pleaded by his friends. Tisagoras represented to the Athenians, that, although Miltiades had failed in this last expedition, it was yet to him that they were indebted for that victory at Marathon, which had effected the preservation of Athens from the cruelties threatened by the Persian monarchs: he therefore entreated them to forgive his present error in consideration of his past services, and in regard, at least, with commiseration, him to whom they were indebted for the power of that deliberation which they now exercised, and those laws which he had protected from dissolution by the Persian King. These arguments, and this joint appeal to their justice as well as to their pity, were not without their effect. On a

solemn hearing, the assembled Athenian people acquitted Miltiades of any crime deserving death, but, at the same time, they sentenced him to pay a fine of fifty talents, the amount of the late unfortunate Parian expedition. This was a payment too large for the fortune of Miltiades to sustain; and, maimed and disabled as he was, the Athenians dragged him to prison, condemning him to suffer in person for that which he was unable to pay in money.

If the Marathonian hero had not already received his death-wounds at Pans, the ingratitudes and cruelty of the Athenians would, in all probability, have exacerbated those wounds, however slight, so as to have produced an event equally fatal. It is, indeed, by no means clear that this was not actually the case; a broken thigh, or a dislocated knee-pan, could scarcely be supposed, however immature the Art of surgery, to have produced death without accelerating or assisting causes; and where can we seek for those causes so successfully as in the wounded mind of the hero? Whatever were the immediate causes, however, this celebrated General died in prison from the mortification of his wounded limb, soon after his trial and subsequent condemnation. The cruelty of the Athenians did not end with the death of their victim: they denied the rites of burial until the fine imposed upon him was discharged; and Cimon, the son of Miltiades, offered his own person to redeem the body of his parent from further indignity. This noble son of so ignoble a father was now, in his turn, sent to prison to enforce the payment of the fine; nor was he released till, the sum being discharged by one Callias, the hard law, and the harder hearts of the Athenian democracy, were satisfied. This was at the expense of a further sacrifice made by Cimon for the redemption of his father's honour. According to the barbarous laws and customs of those days, he had married a sister by his father's side, whose name was Elpinice, and who was admired by Callias, a person of low birth, and the same who paid the fine for the liberation of Cimon; which, however, he only consented to do on Cimon's giving up Elpinice to him as his wife. Both Cimon and Elpinice were unwilling to separate; but a cause common to both, the family honour, at length prevailed, and it is recorded, as a peculiar instance of magnanimity in Elpinice, that she gave herself up to Callias, on his payment of the fine for Cimon, with the declaration that, " whilst in her power to prevent it, she would not suffer any of the family of Miltiades to remain in prison or in distress." Thus perished Miltiades, the victor of Marathon, and one of the first of those heroes who afterwards rendered Athens so famous on the pages of history. The love of power—a temptation scarcely resistible by human nature—was the principal failing of his character; but, after he had attained this power, his native generosity of heart forbade him to use it with injustice or cruelty. During the time of his magistracy, he was moderate, humble, and universally beloved; nor in the days of his adversity does the slightest spot of malignity cloud his reputation.

THE names of the two illustrious Athenians, whose lives we are now about to relate, are so closely interwoven throughout the most interesting events in which they appeared, and the character of each is so constantly illustrating that of the other, either by contrast, when they appear as rivals, or by the variety and suitability of their assistance to each other when confidants and friends, that they cannot well be disjoined. Scarcely a circumstance of importance to their Country occurred during the period in which they lived, but we find both these patriots shared in its glory and its advantages, or endured the mortification, if not the blame, of its failure; and, when the name of one of them alone stands eminent on the page of History, we generally find his compatriot in close connection with the causes or with the consequences of the event related. For these reasons, and because their united fates will serve to illustrate the same points and views in the manners, laws, and government of Athens, we shall not now disjoint what has often been considered together.

Aristides was the son of Lysimachus, of the tribe of Antiochia, and residing in the village of Allopece, in Attica. Themistocles was, on the maternal side, a foreigner, and of disputed extraction. Some writers speak of his mother under the name of Euterpe, others under that of Abrotonum; and whether she was a native of Halicarnassus, of Thrace, or of Acarnania, is uncertain; his father was named Neocles, of the tribe of Leontes. Both these great men were comparatively of mean families, and there seem to have been no particular advantages of their youth to which they were indebted for their future renown: unless, indeed, their constant companionship may be so regarded; for they appear to have been brought up from the age of boyhood together, and to have developed in their juvenile sports much of that spirit of personal rivalry which afterwards appeared in their history, and prompted them to such important actions. In boyhood, too, the different dispositions of the future Patriots were equally remarkable with their mutual jealousy. Themistocles was bold, impetuous, and ambitious, little careful of the means by which his ambition was gratified. Subtle and courteous when overawed by superior virtue or attainments; haughty and resolute on other occasions, as the object which he had in view dictated his conduct. At a very early age he is said to have cultivated the Art of Oratory, and to have exhibited unusual powers in conducting the real or imaginary accusations and defences of his schoolfellows, which attracted the decided admiration of his superiors. "Dey," said his tutor, on one of these occasions, with much more discrimination than discretion, "thou wilt become, at some future time, either a mighty curse or a mighty blessing to thy Country; thou wilt never prove an ordinary man." Aristides, on the other hand, was early designated by the firmness of

his resolutions, and the justice and equity of his general conduct. The objects he proposed to himself were moral and honourable, and the means which he used to attain them candid and honest.

As the youth grew up to manhood, their contrariety of disposition generated contrary habits of life and modes of thinking. The integrity and pride of Aristides naturally led him to the study of the Spartan Philosophy of Lycurgus. He disdained to flatter so unsteady and unwisdom popular; and, although an advocate for the cause of Republicanism, he became a supporter of the Aristocracy, and indulged perhaps an extreme contempt for the people. Truth, however, was his great object, and justice was his path—that path which, regardless of the scorn of the weak or the outcries of the wicked, he trod through life with a remarkable steadiness. Themistocles, whose motives were those of Ambition alone, chose, as might have been foreseen, the readiest way to accomplish his object, by becoming an excessive favourer of the power of the Democracy; a flatterer of their persons and their vilest passions. To this side he was also inclined by his ripening jealousy of Aristides, whose reputation and whose projects he hoped to subvert by the use of those very means which his rival despised. The rise of this aversion between these two eminent men, or rather of the unworthy jealousy of Themistocles against Aristides, is most important to trace, in forming a just estimate of their actions, as it became the source of great disturbances in the Athenian State, and shook at times the Constitution of their Country to the centre. Nevertheless, when that Country was in danger from foreign tyranny, the talents of both were united with equal warmth in protecting it.

The first, and perhaps the most eminent, occasion which presented itself in illustration of their devoted Patriotism, was that invasion of Attica, by the Persians, which was defeated with so much glory in the Battle of Marathon. Both Aristides and Themistocles were, on that occasion, amongst the ten Generals who commanded the Athenian army, under Callimachus the Polemarch; and both signalized their courage and capacity before and after that celebrated conflict; the details of which will be found in our account of the PERSIANS.

When Miltiades marched to repel the plundering fugitives of the Persian army, who had fled from the field of battle with the purpose of surprising Athens itself, Aristides was left in the chief command of those Grecians at Marathon who guarded the prisoners and the spoil. The vast treasures of the enemy now lay at his complete disposal: he was young as a Commander, and well acquainted with the tempting power of gold; but his personal disinterestedness and the severity of his public justice were alike conspicuous on the occasion. Not only was the minutest part of the conquered treasure appropriated to his own use, but he exerted

every nerve to restrain the private plunder of others, considering the whole spoil as the property of the State. He conducted it with scrupulous care to the Capital, and, amidst the plaudits of his Countrymen, resigned his important command.

The Athenians were no sooner released from the danger of that invasion, than their private dissensions rose to as high and dangerous excesses as before. The Aristocracy of the city now began to consider Aristides as their wisest adviser and firm support; whilst the popular outcry was in favour of the more ostentatious merits of Themistocles. The Athenian Constitution permitted every citizen in his turn to preside in the Courts of justice; and we shall here see the difference of principle upon which these celebrated chiefs then thought proper to direct their public conduct. "The gods forbid," said Themistocles, "that I should ever preside at a tribunal where my friends shall not find more favour than strangers." Aristides, on the contrary, held, that on a seat of justice, the inflexible rule of right should alone be his guide, unbias'd by fear, by anger, or by favour. On one occasion of this sort, a plaintiff urged in favour of his suit, and in illustration of the evil dispositions of the accused, the wrongs which the defendant had committed against Aristides himself, who instantly interrupted his plea, and exclaimed, "Mention your own cause, and the injuries you yourself have received; for I sit here as judge, and not as accuser; the suit is yours, and not mine." This rigid and unbending honesty soon procured to him a title perhaps the most illustrious of all antiquity: the name of Aristides is handed down to us in History, almost everywhere accompanied by the high and expressive surname of "the Just." Historians record another circumstance singularly illustrative of the general esteem of the Athenians for Aristides. On the representation in the public Theatre of one of the Tragedies of Æschylus, a passage strongly descriptive of a high state of moral excellence was recited, and the eyes of all the audience were instantly, and almost instinctively, turned on Aristides, considering him as a living instance of that character which the Poet had only imagined.

Themistocles, in the mean time, was reaping his peculiar honours; his popularity largely increased, and his power and his ambition grew proportionably great and insatiable. His repined not at the reputation of his rival, which he regarded as empty and unavailing, if not dangerous to its owner; for he was aware that, in proportion to the well-earned fame of Aristides, he would but afford a surer mark for the malevolence of that fierce Democracy of which he should soon become the sole director. With a base and secret satisfaction, therefore, he seems to have encouraged the general admiration of Aristides, whilst he steadily mediated his destruction; and the tremendous democratical power afforded by the trial of ostracism was fixed upon as the means of ultimately accomplishing it. This summary mode of popular justice derived its name from ostracism, a tile, the votes of the citizens being at first collected by each one writing on a tile, or shell, the name of the person he wished to condemn to banishment. Every Athenian citizen possessed this extravagant power of voting for the condemnation of an individual, without any assigned reason: and, if the name of any person was found to be written on six thousand tiles or shells, the sentence was confirmed by the judges, and the

victim of private or public pique was expelled the Commonwealth for ten years. The author of this law, which tended finally to give so much undue power to the people, is not known. Some have ascribed it to the Pinaristide, and others have pretended to trace it to so high an antiquity as the time of Theseus. If of such early institution, the power thus vested in the people was not in its origin so excessive; for the number of condemning shells not being fixed in any proportion to the population of the city, but stated at a certain given quantum, where this number embraced the majority of its inhabitants, it might be no unfair method of expressing their minds; but it is obvious that, as the citizens increased in multitude, the power became more formidable; and, in a populous city containing many tens of thousands, it could never have been difficult for a favourite demagogue to procure six thousand persons to join him in his objects of proscription. The free citizens of Athens were at this time reckoned to amount to about twenty thousand; many of them almost wholly without employment, and ever on the watch for the excitement afforded them in the oratorical talents of their leaders, the influence of whose eloquence was now at its greatest height.

The chief accusation brought forward, at the instigation of Themistocles, to remove his rival from Athens, was that very reputation for justice and honour which Aristides had so nobly acquired. "Aristides," said the agents of Themistocles, "has insensibly created himself a monarch, although without pomp or guards. From his great reputation for justice, he acts every day as umpire between contending parties; and what constitutes a Tyrant but the giving of laws?" Persuaded by this sophistry to apprehend danger to the State from the very means of its preservation, or, as their leaders would argue, from the pre-eminence of any individual in it, the giddy people condemned one man for the true greatness of his rigid virtue; insensitive to the dangers arising from the ambition of another, who must thus necessarily become the greater, in virtue of his being the more unjust. When the sentence was announced to him by the magistrates, Aristides, animated with as warm a love for his Country, and sustaining the same equanimity of mind as when the citizens had showered honours and rewards upon him, exclaimed, with uplifted eyes and hands, "I beseech the gods that the Athenians may never see the day which shall force them to remember Aristides!" Ten days (the usual time in this case) was allotted to him for his preparation to quit the territories of Athens, and the usual exile of ten years was pronounced as the period of banishment. Upon the occasion of this trial, a story is recorded of Aristides most strongly exemplifying his philosophy, and his proud sense of internal rectitude. A clown from a village in Attica, who could neither read nor write, dazzled by the eloquence of Themistocles, advanced, during the trial, toward Aristides himself, (with whose person he was unacquainted,) and requested that he would mark for him the name of the accused upon his shell. Aristides, in surprise, asked the peasant of what crime that Athenian citizen had been guilty? or, "Has he done you any personal injury?" said this illustrious Patriot. "Me injury?" replied the peasant, "no, he has neither done me any injury, nor do I know any public harm of him; but I am quite weary with hearing every body

Themistocles advises the building of an Athenian navy.

During these transactions at Athens, and, indeed, immediately after the Battle of Marathon, the war with the inhabitants of Ægina, which had begun prior to the late Persian invasion of Attica, was revived with mutual rancour and with varied success. The Athenians, conducted by Themistocles, had proved victorious in several expeditions; but the Æginetane had avenged themselves on the Attic territories, which they invaded at will, by means of their powerful armaments at sea. This advantage did not escape the observation of Themistocles, and he had, at length, the boldness to propose to the Athenians, that the profits arising from the silver-mines, which had been hitherto regularly divided amongst the citizens, should now be solely appropriated to the building of a navy. In support of this measure, he not only urged the advantages gained by their present enemy the Ægiotians, but he bade them remember that the ambition of the Persian monarch was yet unextinguished, and admonished them to prepare for another and a stronger contest with that Power. Darius, their first enemy, was, he remarked, indeed, dead; but his son Xerxes inherited both his father's power, his aversion to the Greeks, and his thirst of general conquest; that monarch was then only tranquil to prepare a steadier blow against their prosperity, and in order that he might refresh himself for new exertions in the former cause. These arguments prevailed, and the Athenians, turning their attention almost exclusively to maritime affairs, immediately built a hundred ships of considerable size, which quickly gave them the superiority at sea over the Æginetane and all the other States of Greece; as it also proved, eventually, the most efficient means of preserving their own liberties and those of their confederates from the tremendous power of the Persian King.

Xerxes' message to the Athenians.

It was about three years after the banishment of Aristides, and very shortly after these predictions and spirited precautions of Themistocles, that Xerxes, the son of Darius, sent ambassadors, attended by a Greek interpreter, to all the principal States of Greece, demanding, as usual, earth and water, as tokens of their submission to Persia. Themistocles made it his first business to pledge his Country to resistance beyond the hope of compromise. He exhorted the Athenians to put immediately to death the person who acted as interpreter to the ambassadors, and who had dared to publish in the Grecian language proposals so insulting as those of Xerxes to Grecian independence. Another act of defiance followed this. One Ariminius, a citizen of Zele, a town of Thracia, who had settled in Athens and been honoured with a kind of citizenship in that city, was detected in endeavouring to corrupt the Athenians to the Persian cause, and proved to have received bribes to this purpose from Xerxes. This man Themistocles caused to be immediately banished from the Athenian territories. His sentence was proclaimed throughout the Country by sound of trumpet, and his family declared infamous. All hope of accommodation being thus at an end, the next care of this able General was to engage the several States and cities of the Grecians to forget their minor differences in the common danger, and to unite hand and heart in one grand

effort to repel the threatened invasion. This, too, was happily accomplished. In his private character, also, Themistocles now laboured nobly for the public good. Epieydes, a powerful Orator, but deficient in every other requisite of a military leader, had induced the Athenians to appoint him to the supreme command of their army. Themistocles, aware of his incapacity for the office, applied temptations to his avarice, that he might subdue his ambition, and, improving his own fortune to raise the money, fairly bought off Epieydes from the proposed command. It is by no means improbable, however, that Themistocles had other motives besides the danger of his Country for procuring the resignation of Epieydes. The way to the supreme power in Athens was thus left completely unobstructed for himself, and to the entire command of all its military resources he was immediately elected.

The report of the invasion soon arrived; the army of Xerxes' Persians, in immense force, led by Xerxes himself as their General, was transported from their native Country by sea, and was preparing to pour down upon Greece by the memorable straits of Thermopylae. Themistocles, on learning this, strongly urged the propriety of all the disposable force of Athens quitting the city in a body, and embarking on board their fleet; thus, he said, they would be enabled to meet the invaders half way, and perhaps prevent the possibility of their landing in Greece. But the unwillingness of many of the Athenians to leave their homes completely frustrated this design, and his proposal was rejected. The Persian, therefore, made good their landing unopposed, whilst Themistocles was leading the Athenian army to join that of the Loerdæmonians. The allied forces had nearly reached Tempe, in Thessaly, when the news arrived that the straits of Thermopylae, the keys of Greece, had been forced, and that not only Thessaly but Bœotia had been overrun by the invaders; tidings which determined the troops both of Sparta and Athens to retreat to their respective cities without delay.

The Athenians were now reduced to considerable perplexity and distress. To attempt to cope with the immense force of the Persians by land, and on an equal footing, was little less than madness. The only spot whereon they could have engaged so superior a power with any prospect of success, the tardy movements of their army had not suffered them to reach. Athens was undefended by walls or any kind of fortifications, and its confined étendue was protected only by a wooden palisade. Themistocles appears to have formed an early opinion respecting the conduct now best to be adopted; and only to have refrained from declaring it until the most favourable opportunity should be afforded. In all cases of emergency the Athenians hastened to consult the Delphian Oracle for advice, which now pronounced, in two separate answers, "that Athens was destined to destruction," but "that the Athenians might yet be safe within wooden walls." It is impossible to repress the conjecture that Themistocles expected, and had, perhaps, occasioned this answer, so confirmative of his previous counsels. He did not fail to give it immediately the obvious interpretation—that the Athenians should repair to their fleet, within whose walls of wood they might yet seek safety and independence. There was not, however, wanting a party who now strongly

it.

opposed this advice, and endeavoured to interpret the Oracle (expressed as it was with the usual ambiguity) either in absolute favour of their own scheme, or so as to make it equally plausible with the project of Themistocles. This party insisted that the palanquin by which the citadel was surrounded were clearly the wooden walls to which the Oracle referred; and, either convinced by these arguments, or unwilling to abandon their house, the tombs of their ancestors, their temples, and their gods themselves, to the ravages of a merciless and exasperated enemy, a large majority of the Athenians determined to defend their city to the utmost. Baffled, but not defeated, in his darling project, the wisdom of which was fully shown in the event, Themistocles and his adherents relaxed not their efforts to convince the citizens of their error. The juncture was most critical, and, finding arguments unavailing, the Chief did not hesitate to employ those sinister and questionable means which superstition has, in all ages, afforded to State policy. He gained over to his project the Priests who officiated at the Temple of Minerva, and these venerated impostors, in furtherance of his counsels, publicly reported many direful omens. They declared that the sacred dragon refused to eat his consecrated cakes; that all food and offerings set before him remained untouched; and, finally, as most explicit augury of ill, that this adored monster, the favour of their tutelary goddess Minerva, had quitted the temple and the city, making its way directly to the sea. Worthy interpreters of this unworthy tale, they announced this circumstance as denoting that the goddess herself was no longer to be considered as residing at Athens, but as having directed the Athenians to repair to the sea to seek her future protection.

So well timed were these artifices, and otherwise so skillfully conducted, that, by degrees, the opponents of Themistocles were entirely silenced, and the populace became as eager for the adoption of his measures as before they were urgent against them. Salamis had been doubtfully mentioned by the Oracle as the place which should "lose her sons," and although this had before been interpreted to mean that the Athenians should be defeated on that spot, these fickle people were now almost universal in their belief that at Salamis was the destined destruction of the Persians to be accomplished. Another this clause in favour of a measure which had before been rejected by so large a majority, one Cynillus, an Orator, vehemently opposed the decree in question, and, either corrupted by the gold of Xerxes, or through absolute pusillanimity of spirit, proposed submission to the Persian monarch. This so enraged the citizens, that, in the midst of his Oration, they stung the speaker to death; and the women of Athens are said to have inflicted the like punishment upon his innocent wife. Once convinced, or rather determined, the citizens were quickly in full preparation for the extraordinary mode of warfare recommended. Every thing was conveyed on board the fleet, while their liberty and the name of Athenian citizens were now declared to be all that was worth their anxiety. Money, however, being wanted for their final outfit, the solemn Council of the Areopagus was called, to raise the necessary supplies; and, by means which the records of history do not explain, so large a sum was collected, that eight drachms was given to every man as he went on board the fleet. But Themistocles did not deem this

The Athenians embark on board their fleet.

sufficient for the expedition, and again resorted to one of those expedients which his mind was ever fruitful in producing. Under cover of the authority of the Priests, he asserted, that the shield of Minerva, on which the snake head of Medusa was sculptured, had been stolen, and a warrant was granted to him to search the recesses of the temple, that he might regain it. Under this pretence he took away all the money he discovered in his search, and made amends for his deceit by distributing it freely and equally amongst the citizens, to accomplish their necessary appointments.

An act of justice, too, with regard to Aristides, was one of the best features of this state of the public mind. Themistocles himself proposed a decree to recall all those citizens who had been banished from their Country, which was readily confirmed by the Athenians. This was understood to be directed immediately to the case of Aristides, whose means of becoming a powerful foe to Greece were now justly feared by those who had treated him with so much indignity. In virtue of the decree now issued, Aristides rejoined his Countrymen in their exigency, (A. C. 479.) Themistocles hailed his return with warm protestations of attachment and esteem, and every heart glowed with emulation to the common cause of liberty.

Thus nobly freighted, the Athenian fleet, under Themistocles' leadership, to join that of the Spartans, commanded by Eurýbiades; and made sail with them immediately for the Eubœan shore, with the hope of impeding the passage of the Persian fleet through the neighbouring straits. Here the conduct of the Athenian leader was characterized by the adroitness which had previously distinguished him. Eurýbiades, the Spartan Admiral, in contradiction to the proposed plan, had refused to remain longer on this station; and the Eubœans, fearful of being given up to the ravages of the Persian army, applied next to Themistocles, and presented him with thirty talents, as a reward for his interference on their behalf. Themistocles hesitated not to accept the money. Five talents he gave Eurýbiades, and thereby induced him to pursue his first plan. With the sum of three talents he bribed Adiamanthus, the Corinthian Commander, who, under strong suspicions of having been influenced by treasonable motives, was the only officer who now insisted on weighing anchor. By these expedients, Themistocles was at once enabled honestly to perform what he had undertaken on behalf of the Eubœans, and to devote the remaining sum of twenty-two talents to the general interests of the expedition. Indeed, during the whole period of their stay on this coast, Themistocles distinguished himself in all the arrangements of his squadron; and, in several slight engagements with the hostile fleet, which lay near Artemisium, his prudence and bravery were the admiration of all the allies. On leaving this station, Themistocles recommended an artifice which was readily adopted, and proved of no little service to the common cause. Certain stones were set up on the coast of Ionia, with inscriptions, entreating the Ionians, on the remembrance of their Grecian origin, to desert from the Persian Tyrant, and join those who might be considered as their brethren, and who were then actually fighting for the common property, liberty, and political existence of the Grecians; or, if they could not accomplish this, they were implored to baffle the plans of Xerxes by their coldness and tardiness in his cause.

449.Debate of
the allies
respecting
their course.

The address concluded by reminding these people, that the Athenians, by protecting the revolt of Ionia against Darius, first brought the resentment of the Persian monarchy upon themselves. This was a stratagem directed not so much to the actual object of obtaining either of the requests thus made to the Ionians, as to the excitement of distrust in the minds of the Persians against them—an effect which, in the end, it fully accomplished.

On leaving Artemisium, another and a stronger diversity of opinion prevailed among the Commanders respecting their future course. Eurybiades the Spartan had been made Chief of the combined fleet; for, although the Athenian ships were superior in number to those of the Spartans, yet, the long-acknowledged superiority of the latter nation had always obtained from their confederates the supreme command of an allied force. But Eurybiades soon evinced himself unequal to this important trust, and appears to have been alike deficient in skill and in courage. On the approach of the Persian fleet, he recommended that the allies should retreat towards Corinth and join the land-forces there, a proposition in which he was supported by many others of the Grecians, who, provoked by the ravages which the army of Xerxes was committing on their dearest possessions at home, deemed it unadvisable, and indeed useless, to risk their combined strength in attacking the maritime forces of Persia. Although there might be, they admitted, a greater probability of success at sea, yet how little would it avail them, compared with their daily losses by land? On a debate concerning the conduct to be adopted, Themistocles recommended an immediate action at sea, when Eurybiades, in relation to the supposed imprudence and impetuosity of our hero, observed, that "such as rise up before the rest to start at the Olympic Games are generally lashed for their temerity." To which Themistocles quickly answered, "True; but let us recollect, Eurybiades, that those who are left behind in the race are never crowned with victory." The Spartan, provoked at the freedom of this reply, is said to have lifted up his staff, and to have prepared to strike the speaker; when Themistocles, with the utmost calmness, exclaimed, "Strike, but hear." This mixture of calmness and earnestness in his cause produced the desired effect, and Eurybiades gave instant and serious attention to the arguments of his competitor. But although their Chief could thus subdue the characteristic pride of his Country, of which, notwithstanding his pusillanimity, he possessed his full share, Admyantis, another of the Lacedæmonians, at last roused the indignation of Themistocles, by observing, "that it did not become those who had neither home nor Country themselves, and therefore nothing to lose, to control others, by their advice and their conduct, from returning to their habitations." "We have, indeed, base men," replied Themistocles, "abandoned, in this exigency, our houses and our walls, because Athenians would not become slaves for the sake of those things which possess neither life nor soul; yet know that our city is the greatest of all Greece. Behold it in the number of our ships!—all of which are here ready to defend you, if you yourselves please to assist in the war; but if you shun the fight, and leave the Athenians to themselves, you will soon discover that we can find as large

and as free a city as that which we have left." At length the party of the Athenians pressed so many just arguments upon their confederates, that the most judicious of the leaders were brought over to their opinion. Yet the Greeks in general were so alarmed at the destruction of the city of Athens, which had now taken place, and at the ravages committed upon the Athenian territories, that a bold and final stratagem of Themistocles alone kept their naval force together. By means of a Persian prisoner in the Grecian fleet, named Sicinus, who was an admirer of Themistocles, and protected by him, he ventured to open a communication with the camp of the enemy, and sent a private message to the Persian monarch, importing that he preferred his favour to the command of the Grecians; and had sent to inform him that the allied fleet were about to disperse and to seek their safety in flight. This he advised the King not to permit, but to take advantage of their present confusion, and attack them forthwith in the bay of Salamis. Xerxes, completely duped by this message, which he received with the greatest marks of satisfaction, immediately sent two hundred of his ships to block up the Straits of Salamis, and thus at once compelled the Grecian fleet to unanimity, and to the adoption of that bold measure which ensured, eventually, the safety and success of the allied cause. On the arrival of the news of the Persian position at Salamis, every heart beat in unison with the plan of this sagacious leader; the determination to conquer or die was universal; and Themistocles had the honour of receiving, with the general plaudits of his Countrymen, the approbation of Aristides, to whom alone he had communicated his daring plan on this occasion.

Both sides now prepared themselves for the memorable battle that ensued. The confederated Greeks were animated by the speeches of their leaders, amongst whom Themistocles appeared, with all the acquirements of his youth, matured and sobered by his long experience. He argued alternately as the soldier and the citizen, the commander and the commanded; he represented to them that they were about to fight for all that was dear to parents, to husbands, to men; that the present liberties of all the States of Greece were suspended on the issue, with the happiness of their remotest posterity. Xerxes, on the contrary, who, in the exultation of his heart, had assured himself of the destruction of the Grecians, erected a high throne on the shore near Salamis, and commended the attendance of Secretaries to record the events of his triumph as they successively occurred. The battle was begun by the Grecians, who sailed from their anchorage early in the day, and attacked the Persian line of blockade. Archbishop Usher fixes the date of the battle in the first year of the seventy-fifth Olympiad, or a. c. 480, Oct. 20. The advantage of the Persians consisted in the immense number of their ships, according to Herodotus, upwards of 1000 sail; and that of the Grecians, who mustered but about three hundred and eighty vessels, in their superior knowledge of maritime affairs, (for which they were greatly indebted to the judicious advice and indefatigable exertion of Themistocles,) their courage, and the skill of their Commanders. If a Persian galley were sunk, the warriors which it contained were utterly lost; on the contrary, if the like misfortune happened to any of the Grecian ships, the crew plunged into the

to

(ingra) by sea, and swam with ease either to the shore or to another ship. The event was such as might have been expected, and proved decisive in favour of the allies. The Persians lost about two hundred galleys, which were sunk, and an immense number which were taken; the loss of the allied Grecians amounted only to about forty ships. On the side of the Persians the slaughter was immense, while the Greeks lost but few men, for the majority of the crews of those ships which were destroyed effected their escape to their companions in arms, as before stated. In this contest, sustained with great glory by the Grecians, the Athenians were allowed to bear the most distinguished part: and it is not a little remarkable, that the Æginetans, almost the open enemies of Athens, alone emulated them, on this occasion, in their efforts to repel the common enemy, and won the second honours of the day. After the battle was decided, the Athenian fleet maintained a vigorous pursuit of the flying Persians towards the coast of Attica, and there destroyed their scattered ships almost at will. The Æginetans were also very serviceable in this chase; for their ships being lighter, and of swifter sail than those of the other States of Greece, they ran out to sea, and, gaining the wind of the Persians, suok or took the vessels which attempted to leave the coast, and thus to escape the heavier galleys of the Athenians. Never was a victory more complete with means so disproportionate; because, perhaps, a reverse could never have been more desperate in its consequences to the weaker side. The confederacy was now strengthened and felt in all its value; the "Great King" of the Persians, disappointed in his most confident anticipations, was obliged to solace himself with the reflection that his army was yet unbroken; and that that fleet was not altogether annihilated which had so lately rode the sea triumphant, and struck a terror throughout all Greece.

It was now proposed by Themistocles, that the allied fleet should make for the Hellespont, and destroy the famous bridge, nearly a mile in length, which Xerxes had thrown across the sea at that place. The effect of this measure would have been to have cut off all communication of the Persians with Asia, and to have enclosed their army in Greece itself, so that it might afterwards have been destroyed as time and circumstances should dictate. Some Historians say that this plan being communicated to Aristides, that Patriot opposed it, although his reasons are not mentioned. Others, with more probability, attribute this opposition to the Spartan Eurybiades, from a wish not to drive the enemy to desperation, and thus to reserve some honours for himself. But the motives of Themistocles himself appear, on this point, very dubious. He soon perceived that the proposal he had made was more acceptable to the Greeks than he wished it to be. He either became fearful of the consequence of thus enclosing the enemy in the heart of Greece, or, as others suppose, he now wished to secure to himself the friendship of the Persian monarch as likely to afford him an asylum in times of adversity and disgrace, of which he could not but foresee the probability, from his knowledge of the glibly and ungrateful temper of the Athenian people. At this distance of time, however, we may look in vain for any correct views of his object; but his conduct is recorded. He again ventured to communicate with Xerxes on the operations of the combined forces, and sent a specific account of their intention to

VOL. IX.

break down his bridge and cut off his retreat. He also said once more to have offered his advice to the King respecting the Persian policy, and to have prescribed his immediate return into Asia, whilst he promised to amuse his Countrymen with various projects, and to delay their purposed destruction of the bridge as long as possible. In what manner Themistocles, after his recent conduct, could have obtained credit with the Persian monarch for any thing but his bravery does not appear; but Xerxes did not fail immediately to follow his advice, and hastily withdrew his army. Thus ended the second Persian expedition into Greece. Some writers allege that all the exertions of Xerxes to reach the Straits in time to prevent the breaking of his bridge proved vain; that he himself was obliged to recross the Hellespont in the boat of a common fisherman; and that his army, diminished and scattered by pestilence, famine, and the harassing pursuit of the Greeks, reached Asia in small and detached parties, and by such methods as chance and the kindness or good fortune of individuals presented. But at this time, it is certain, Themistocles not only threw every obstacle in the way of the proposed destruction of the bridge, but afterwards advised the Athenians to discontinue the pursuit of the Persians, and to return home and rebuild their city; a proposal too grateful to their feelings to be rejected—too important to the interests of all Greece to be opposed by the other States of the confederacy.

Relieved from the immediate presence of the invasion, Themistocles and the Athenian fleet levied contributions on all the islands around that had taken part with the Persians, and then returned to Salamis, the scene of victory, there finally to meet their confederates, and to share with them the spoils of the expedition. It was afterwards resolved that a general meeting of the Greeks should be held on the isthmus, at the Temple of Neptune, where, in a solemn assembly of the different chieftains, this important question was proposed, *Who best was deserving of the merit of valour?* Each General, in turn, was requested to write down the name of him whom he deemed most worthy; and, as every man first wrote down his own name, and afterwards inscribed that of Themistocles, the result was, that the Athenian leader numbered the decided suffrages of almost all Greece. Of Aristides we find nothing particular recorded during this war, but are told that his general behaviour was wise and brave, and that he was ever ready to assist Themistocles by his councils. Thus deservedly clothed with the chief honours of the war, Themistocles now visited Lacedæmon, where additional applause awaited him. The pride of the Spartan people, indeed, would not suffer them to assign in public the first place of honour to any one but their own Chief, Eurybiades; but it was evident that they privately regarded Themistocles as his superior; and, while the prize of valour was awarded with great pomp to Eurybiades, that of prudence was given, with distinguished ceremonies, to Themistocles. The Spartans crowned him with a wreath of olive; they presented him with the most magnificent chariot in Sparta; and, finally, escorted him home to Athens by a chosen troop of five hundred horsemen—an honour never before or afterwards bestowed upon a foreigner.

The Athenians, now repossessed of their Country, Athens applied themselves to erecting another city on the ruins rebuilt, of that which had been destroyed by the late invasion.

Persian
movements.

 Public
honours
decreed to
him.

Biog. Hy. No sooner, however, did they find themselves at rest from foreign annoyance, than the same spirit, which prompted their gallant defence against the Persians, began, as formerly, to show itself in discontents and tumults within themselves. They now discovered that their hero Themistocles had become too great a favourite, and had submitted to bear too much honour, from their rivals the Lacedæmonians. In his defence, the Athenian Chief took occasion to represent to his fellow-citizens the necessity of union between the different States of Greece, and the importance of the assistance of the Lacedæmonians to the general cause; "for the war," he observed, "was not at an end, whilst the mighty power of the Persian King remained with little perceptible diminution." Nor was it long before the foresight of Themistocles was again called into practical exercise. Mardonius, the Persian General, was still at the head of a powerful army amounting, as some say, to 800,000 men, chiefly composed of those who had escaped the ravages of the last campaign, and were therefore inured to hardships, and more serviceable for future war. With this immense force Mardonius rested on the frontiers of Thessaly, and still threatened the Grecian States. Perceiving, however, the magnitude of the enterprise contemplated by his master, and the great proportion which the State of Athens bore to the whole power of the Grecian confederacy, he determined to endeavour to detach that State from the general cause. With this view the Persian General employed Alexander, King of Macedon, (who, although a tributary to Xerxes, was a great favourite with the Athenian people,) as an ambassador to Athens, in the name of Xerxes himself. On the arrival of the Macedonian Prince, he was received with great state by the Athenians, and with all the hospitality due to a decided friend; but on their learning that he was intrusted with an embassy of importance from the Persian monarch, they delayed to give him audience until Deputies from the Lacedæmonians could attend the opening of his commission. Meanwhile the embassy and its purpose was rumoured abroad throughout Greece, and the Lacedæmonians, not a little alarmed at the danger of losing the Athenians as allies, hastened their representatives to Athens. The Athenian people were at length assembled, and the ambassadors on both sides attended, prepared to explain and to urge their different wishes. Alexander the Macedonian was permitted first to speak; and he promised, in the name of Xerxes, "the Great King," that, if the Athenians would consent to abandon the cause of the Grecians, his master would remit every past offence, rebuild their houses and temples at his own expense, enlarge the boundaries of their Country, and hold their liberties and their accustomed laws and privileges untouched and sacred. On the contrary, if they rejected this offer and refused his alliance, he represented to them that, even although the army then under the command of Mardonius should fail of attaining its object, other armies and fleets could easily be raised and equipped, and that, in the extensive dominions of the Persian King, the losses that had already taken place, or that their most sanguine hopes might yet contemplate as possible to happen, would scarcely be felt, while it would not be possible for the Grecians long to withstand the overwhelming forces ready to pour upon them. Alexander concluded his speech by a strong

recommendation to the Athenians from himself, in personal friendship, to comply with the offers of Xerxes, as the only method by which they could save themselves from destruction. The Spartan ambassadors now rose, and endeavoured to show, in the first place, how unjust a thing it would be if the Athenians, who had been the authors and the cause of the war with Persia, should now forsake the common interest; they reminded their allies of the fame of their ancestors, who had not only been renowned as defenders of their own liberty, but had been ever ready to uphold the liberties of others; they assured the Athenians of their sympathy for the loss of their city; offered in future to protect their wives and children, and such of their citizens as could not march to the war, and to maintain them safely in Sparta; and concluded by expressing their confident hopes that the Athenians, a free nation themselves, would never degrade themselves by becoming at once the slaves of a Tyrant, and consenting to become the means by which their allies might be enslaved. The answers to these different speeches were such as might be anticipated from a people enthusiastic as were the Athenians in the cause of liberty. To Alexander, the Athenians, in the name of his Countrymen, replied, also, that so long as the eternal sun should hold his course they would never enter into alliance with Xerxes, but resist his forces by every effort of their own; and they desired Alexander himself, whom they respected as a friend, to become the bearer of no more such messages, for they would not assure him of safety who could submit to bear such insults to an indignant and an angry people. Turning then to the Spartan Deputies, he assured them they would never enter into the Persian, nor abandon the Grecian confederacy; and that they were even sorry the Spartans could for a moment admit the fear of their no doing: they thanked their friends for the offer concerning their wives and children, but hoped they should not have cause to trouble them with such a burden; he then begged them to hasten their supplies to the threatened war, for they believed the Barbarian Persians to be on the alert, and ready to begin the attack as soon as they should have received the present answer to their embassy; and only requested, in return, that the Spartans, and their other confederates, would consent to meet the Persian troops in Bœotia, rather than suffer them again to ravage the city and territory of Attica.

Mardonius was no sooner made acquainted with the failure of this embassy than, pursuant to his orders, he marched from Thessaly direct upon Thebes. The inhabitants of that city strongly advised him to desist from his enterprise, and represented the difficulty, if not the impossibility, of subduing, by force, a people who would abandon their houses and the temples of their gods to destruction, rather than submit to a power which they could not resist. They sarcastically, or seriously, recommended a system of bribery to be adopted; and told him that, when he had detached from the common cause the principal citizens of each of the most powerful Grecian States, the armies of each might be led into false movements, and be overcome with comparative ease. But Mardonius was too much exasperated at the late contemptuous refusal of his offers to listen to this advice; he prosecuted his march, and, by signals of fire, lighted on the islands as he

Aristides and Themistocles.

The Persians again appear in great force.

Embassy of Alexander the Macedonian.

The Persians advance into Greece.

Biography. advanced, he gave Xerxes, who was now lying at Sardis, to understand his movements. As he entered Attica, he wasted the country around with tenfold fury, leveling with the ground every stone which he found standing upon another, whether of the most venerable erections of antiquity, or the recent buildings of the Athenian citizens. In this manner he approached rapidly to Athens itself; and the Spartans were so slow in sending their succours, that the Athenians were forced to retreat to Salamis, and again left their city a prey to the Persians. Here they formed an army of their citizens, already assembled in considerable force under Aristides; and they received another messenger from Mardonius, who repeated the offers which had been before made to them by Alexander. It was hoped that the extremities which the Athenians had now suffered would have softened that spirit of pride and independence which dictated their former answer, but the Persian embassy found them rather exasperated than subdued; and they did not hesitate to stone to death one Lycidas, a Senator, for basely proposing that the message of Mardonius should be taken into consideration; whilst his wife and children (as in the case of Cysitius) suffered the same death from the women. The Spartans were, in the mean time, so dilatory in their movements, that it was judged necessary to send ambassadors to urge their appearance in the field, and to assure them that, unless the succours they promised should soon arrive, the Athenians would think of themselves alone. On their arrival at Sparta, the Athenian Deputies were astonished at the selfishness of their allies; they found no symptoms of the intended succours to the common cause; but the Spartans had been evidently employing the previous time of this delay in throwing up walls and fortifications athwart the Peloponnesian Isthmus to protect their own district, whilst that of Athens was already destroyed, its inhabitants driven from the country, and pursued from place to place by the victorious and revengeful Persians. At length, however, the Spartan army, consisting of about 10,000 men, about half of them from the city, and the rest from the adjacent country, together with about 7000 Helots, or slaves, put themselves in march toward the Persians, and halted at the Isthmus. Thither also came the Athenian army from Salamis, and all the confederate force of the Greeks, making together about 100,000 men.

The Greeks now compel the Persians to retire. Mardonius learning the approach of this force, and having now lost all hope of detaching the Athenians from the general cause, thought it most prudent to quit Attica; which, from the inequality of the ground, formed strong obstacles to the evolutions of the cavalry and light troops, in which the great strength of his army consisted. And, although the Persians outnumbered the confederate Greeks in the proportion of three to one, (some writers, indeed, say five to one,) Mardonius retired as they advanced, until both armies reached the Cithæron mountains in Boeotia, where they halted for some time in presence of each other. Sparta being still considered as the superior power amongst the Greeks, Pausanias, their General, was Commander-in-chief of the allies, and he soon found that in Mardonius he had to contend, not only with an enterprising warrior, but with a man well skilled in the use of the peculiar resources at his command, and especially in the influence of superior riches. The gold of Mardonius

was daily producing desertions from the Grecian camp, and furnished every way a strong motive to the allies for immediate combat. On the other hand, they were deterred from it by the intelligence which they had obtained of the Persians being much straitened for provisions. The deliberations occasioned by this dilemma were interrupted by Mardonius despatching a party of horse to surprise the Grecians in a council, and some skirmishes ensued, wherein the Megarens of the confederate army were deeply engaged, but were brought off by a select party of three hundred Athenians, and the officer, Masistrus, who commanded the Persian horse, was slain. A sharp contest now took place around the body of the chieftain, both parties being equally eager to obtain this trophy of early success. New succours of the Persian horse came gradually forward into the engagement, and almost all the Grecian forces, until the latter were ultimately successful, and bore the body of the slain in triumph around their camp. Immediately after this affair, the confederates, however, retreated from the spot, and at length pitched their camp upon the territories of Platæa, the Persians steadily following them, and the cavalry of Mardonius continually harassing their rear. A Council of war is now said to have been held by Mardonius, which resulted in the celebrated and decisive Battle of Platæa. For although Artabazus, a Persian Commander of high rank, insisted strongly on the prudence of not engaging the Grecians, and proposed that the army should retire to Thebes, while the power of the Persian gulf, already so successful, should be still tried, rather than that of the sword, upon the heterogeneous forces of the Greeks, Mardonius, tired of the desultory warfare which had been so long pursued, and anxious to strike a blow which might redeem his reputation, determined to risk the engagement. It was resolved, therefore, that the Persians should commence the attack immediately, a determination that was quickly known in the Grecian camp. The Athenians, in the present position of the confederated army, stood opposed to the Boeotian and Thessalian allies of the Persians, but they requested that the Spartans would exchange situations with them, by which the Athenian force would stand confronted with the Persians themselves, and the Spartans with the Thessalians and Boeotians—enemies with which, respectively, they were most accustomed, and so best enabled to engage. The bribes of the Persians, however, soon brought this intended movement to the ears of Mardonius, and he instantly took measures to render it of no avail. These and other skillful and harassing movements of the Persians compelled the Greeks again to strike their camp, and to retreat to the neighbourhood of the Temple of Ceres, on the river Moloë, still followed by the Persian horse. On the ensuing day the famous Battle of Platæa took place. Mardonius, encouraging his men, by representing the Greeks as flying before them, pressed forward with his cavalry upon the Spartans and Tegeans near the Temple of Ceres, where the Spartans turned furiously upon their enemy. The Athenians and other Greeks brought the allies of the Persians to action, and the fight became general and severe. Ever in the heat of the battle, Mardonius was mounted on a white charger, surrounded by his choicest troops, and becoming thus an object of peculiar note, was slain in a charge made

Biography. upon him by the Tegerana. On the death of their General, universal disorder and a total rout took place amongst the Persian horse, a small remnant of whom alone escaped, under the conduct of Artabazes, and found refuge from the revenge of the Greeks in a strong position near the Hellespont. On the other side of the field, too, the Persians had been beaten, but had made good their retreat to their fortified camp. Here the Corinthians, the Megareans, and the rest of the Greeks, animated by the success of their friends, furiously attacked them, and the Spartans shortly afterwards came up to their assistance; but the enemy defended themselves with resolution and success, until the appearance of the Athenians decided the fate of the day. Accustomed to the tactics of the enemy, they broke into the entrenched camp in various places, and a tremendous slaughter of the invaders followed on every side. The sumptuous pavilion of the fallen General was amongst the spoils of the enemy; and it is computed that (excepting that body of horse which fled under the conduct of the prudent Artabazes) out of the 300,000 men, which composed the army of Mardonius, not 3000 remained alive. Of the loss of the Grecians, the best authorities give us various and incredible accounts: Herodotus mentions it at only about 100; Plutarch at nearly 1300; and Diodorus at the number of 10,000 men. Certain it is, however, that the loss of the confederates was small in proportion to that of their enemy, and that the battle proved as destructive to the Persian power as any that had yet been achieved. Two nations of the confederated Greeks, the Mantinians and the Eleans, had the misfortune to arrive on the field after the close of the action; and, as they returned in their home parkers neither of the spoil nor the glory, they are said to have banished their leaders from the soil, as the authors of their disgrace. Both Aristides and Themistocles were sharers in this noble achievement; for, although the former was engaged (as we shall see afterwards) in an eminent command elsewhere, both he and his compatriot Themistocles were active in those councils which produced these events, and which proved of so much importance to the safety and the welfare of their Country. This great victory was obtained on the 22d of September, *a. c.* 479.

Battle of Mycale.

It is remarkable that, on the very day of the victory of Platea, another defeat of the Persians took place, equally important in its consequences, and in the bravery with which it was accomplished, the naval battle of Mycale, near Samos. This was chiefly won by the valour of the Spartans, instigated by the example of Themistocles at the Straits of Salamis, and supported by the great personal services of Aristides. The Persian fleet had been drawn together under the promontory of Mycale, very near to the temple of the goddess Ceres, and had strongly secured themselves on the side of the sea by a kind of mole, composed of great stones, trunks of trees, and such other materials as could be procured. Leuctychides, the Spartan King, at this time Admiral of the combined Grecian fleet, aware of what had been done, and that it had rendered the enemy inaccessible by shipping, determined to attack them on the land. He, therefore, disembarked his forces, and proclaimed aloud, by his herald, an invitation to the Ionians to join the Greeks, or, at least, to withdraw themselves from supporting the Persians, as Themistocles had done before at the Battle of Sala-

mis. This being the evening of the day on which the Battle of Platea had already been gained, the report of that important victory had now, it is said, reached the Grecian army; but, considering the distance between Platea and Mycale, it is a more probable opinion that this event was, by a bold and fortunate conjecture, anticipated by the Grecian Generals, for the purpose of producing enthusiasm amongst their troops. It is also remarkable, that the victory of Platea had been achieved near the Temple of Ceres in Bœotia, and, it is added, that the report of this circumstance also not a little augmented the spirit of the Grecians, who were superstitiously taught to believe that the same goddess was alike to behold, and was expected to be alike propitious, to another and a similar combat at Mycale, in Samos. Thus encouraged, the confederates advanced towards the Persians on the plain by the sea-shore, and charged them so desperately, that they were soon obliged to retreat to their camp. Nor were they here protected from the impetuosity of the assailants, who rushed through the fortifications, and soon proved victorious on all sides. They penetrated to the fleet and destroyed it, whilst the army of the Persians, and Tigranes, their General, with an immense body of their troops, were slaughtered, either in the camp or on board their ships.

By this conquest, the Ionians were enabled to declare themselves in favour of their ancient allies the Greeks, a circumstance which gave occasion to some disputes between the Athenians and the Spartans. The latter, according to the general severity of their disposition, insisted on punishing the Ionians for their revolt, either by refusing all offers of their alliance, and giving them up to the mercy of the Persians, or, at least, by transporting them from their own Country and landing them on those shores, the inhabitants of which had taken part against the Greeks, and which were now considered as forfeited to the conquerors. The Athenians were inimical to both these proposals. They could not forget that Ionia had been formerly a colony belonging to their own State, and both the schemes of the Spartans respecting it were equally destructive of the advantages which had formerly been derived by Athens from the Ionians, and might again be reaped. They were, besides, jealous of the interference of the Spartans, who properly were an inland Power, in the affairs of the colonies. So urgent, therefore, were their arguments against the Spartan propositions, and so necessary was their co-operation considered against the common enemy, that the cause of the Ionians prevailed; they were received into the confederacy, and promised such assistance from time to time as should effectually secure their territories and their Independence. On the settlement of these affairs, the Lacedæmonians retired to Laconia; but the Athenians, under the command of Xanthippus, and, as some say, by the advice of Themistocles, determined to push their fortunes further. Partly instigated by the hopes of plunder, and partly by the desire of revenge, they crossed over to the Chersonesus, and invested the island of Samos, which had taken part with the Persian invaders. The siege proved long and laborious; but at length the resolution and the skill of the Athenians prevailed; they sacked the island and took its Chiefs, Oebazus and Ariyetes, prisoners. Here they reaped immense spoil, and returned home laden with every variety of treasure.

Aristides and Themistocles.

From A. M. 3515. *a. c.* 489, to A. M. 3555. *a. c.* 449.

Ionia declares for the allies.

Biography. From these transactions, in which Aristides and Themistocles acted only general parts, as members, although ever leading members of the whole Commonwealth, we again revert to those no less interesting events in which their particular and individual actions were more prominent, and that develop more characteristically their respective dispositions.

The freedom of Greece appeared now to be established on a firm foundation. The splendid and decisive victories of Plataea and Myræa had not only weakened the power of Persia and elevated the confidence of the Greeks, but had likewise impressed upon their enemies an idea of their strength, their courage, and their skill, which confounded and almost destroyed the future hopes of every invader. Although a desultory war was still continued, the Greeks now became in turn the aggressors, and were left in comparative peace. After having brought home their wives and children, the Athenians began to rebuild their city, now twice destroyed, and twice triumphant.

By the advice of Themistocles, they accomplished this object with a degree of magnificence hitherto unknown, and, whilst their walls were rising in strength and elegance, neither the people nor their leaders were negligent of their laws and Constitution. Themistocles still aided every project which would throw additional power into the hands of the people, and Aristides himself now accommodated his principles to circumstances. Although generally attached to the Aristocracy, yet, from the full experience he had obtained of the genius of his Countrymen, and from the difficulty he had found in convincing them of what he yet thought to be truth, this great and honourable man coincided with most of the practical schemes of his rival; he proposed, that in the Athenian government every citizen should in future hold a full share, and that the high magistracy of the Archons should be henceforth chosen, without preference of persons or distinction of rank, from amongst the body of the people. Thus another important concession was made to the power of the Democracy, whilst the higher ranks, awed and excited by the example of Aristides, the man whom, of all others, they most venerated, either freely complied with his counsels, or found it prudent to suppress their complaints.

But the restless spirit of Themistocles now became directed to another object. He chose this moment of repose and concord to suggest a resolution that the city should be immediately fortified, and, concealing the whole of his motives, alleged that it might prevent the destruction of Athens in case of any future invasion. Unaware of the full importance of the measure, and of any of its attendant disadvantages, the people were sufficiently influenced by the motives assigned to adopt the proposal, and they eagerly began the fortifications. But their former rivals, the Lacedæmonians, were more quick-sighted. When the report of the intended scheme reached Sparta, they anticipated in its accomplishment not only the future safety of Athens from the attacks of an external enemy, but her gradual independence of Lacedæmonian aid; and that she would soon become the principal city of Greece, a rank which was now undisputedly given to Sparta. Stimulated by these envious forebodings, the Lacedæmonians immediately despatched ambassadors to divert the Athenians from their purpose. These Deputies opened their business with professions of disinterested zeal for the

general welfare of Greece as the only motive of the Spartans in their especial objections to the projected fortification of Athens. They represented this measure as pregnant with danger to the confederated States; for their common enemy, the Persians, who were now only inactive for the purpose of husbanding their strength, would, on any future invasion of Greece, gain possession, as heretofore, of Attica, and, throwing a strong garrison into any fortified town of that district, keep an effectual check upon the entire Country. But the Athenians, with Aristides and Themistocles within their walls, were not to be convinced by these arguments; and the Spartan Deputies, observing that the work proceeded with increased rapidity, had no resource left in the exertion of that long-acknowledged authority which had been hitherto accorded to their Countrymen by all of the States of Greece. They absolutely and peremptorily forbade the work to be continued; an interference which occasioned considerable confusion and tumult amongst the people. Themistocles took the lead on this occasion with his usual address; he recommended to the citizens to temporize with Sparta; and, as they were not yet in a condition to carry on a war and to erect a fortress at the same time, to complicit their rivals with a temporary submission; observing, that when their walls were once erected they would be enabled to defy the encroachments of that Power with which they might now reason in vain. He proposed to satisfy the Lacedæmonian ambassadors with promises, and thus dismiss them from the situation of honourable spies, which they now filled in Athens. The Athenians readily followed this ignoble policy, and the ambassadors returned to Sparta with a solemn assurance that the proposed work should not proceed, until, by a counter-embassy, which the Athenians would hereafter commission, full reasons should be given for the adoption of the proposed fortifications, and a general conviction of their propriety should prevail amongst their allies.

Themistocles, the adviser of the promised embassy, was the first to offer his services on the occasion, and to be nominated by the people to this duty. He immediately left Athens for Sparta, but recommended to his Countrymen to delay sending off the rest of the ambassadors, whilst he should divert the attention of the Spartans from the business of the fortifications, which, notwithstanding their former engagement, he urged the Athenians forthwith to finish. These disavowable suggestions were not lost upon his Countrymen. To complete their walls, neither houses, sepulchres, nor temples were spared; almost every building of stone was put in requisition for materials, to expedite the work; the labour was continued night and day, and the citizens, on this occasion, mingled their exertions with those of their slaves and strangers; while even the women and children were compelled to assist in the business. Under these extraordinary exertions, the work was soon so far accomplished, that, in a few months, Athens presented remains of superior strength, and was enabled to bid defiance to all external tyranny. The citizens now sent off the remaining ambassadors to Themistocles, in expectation of whose arrival that politic Statesman had, from time to time, delayed the proposed assuasive with the Lacedæmonian government. But tidings of the Athenian breach of faith had reached Sparta before them, although the

completion of the walls was not known; and the ambassadors were soon summoned before the Ephori, the highest and most powerful magistracy in the Spartan State. Themistocles and his colleagues were here warmly upbraided with the treachery of their Countrymen, to which they replied by a bold denial of the alleged facts; Themistocles enforcing this additional violation of truth by appealing to his compere, so recently arrived from Athens. This positive and joint asseveration produced the desired effect upon the Lacedæmonian government. For a time they fully credited these solemn pledges—indeed, until Themistocles had been assured of the full accomplishment of his projects at home. It then became his object to provide for the safe return of his compere and of himself. To effect this, he again resorted to that sinister policy for which he was distinguished as a Statesman, (taishel, however, with a magnanimity and a carelessness of his own safety that cannot but be admired. To the Ephori he loudly declaimed against the folly of listening to the flying and unauthenticated rumours which were abroad, and he advised them to send certain Lacedæmonian Deputies back to Athens, together with the Athenian ambassadors, his colleagues, whom he doubted not but that they would be undeceived with regard to the reports so injurious to the good faith of their allies the Athenians. So firmly did he appear assured of this, that he offered himself to stay at Sparta as a hostage for the truth of his assertions. Themistocles then privately instructed his companions, that when, upon their return to Athens with the Lacedæmonian Deputies, the deceit could no longer be concealed, they should boldly detain the latter until the Lacedæmonian Government should give him up, who was to remain as a hostage for their faith—a faith which would then be known to have been broken. His advice was exactly pursued; and, when the Athenian leader received the tidings of the arrival of his colleagues, he demanded an audience of the magistrates of Lacedæmon, and at once avowed and justified the conduct of his Countrymen. "By my advice it was," said he, "that the Athenians acted, when, conformably to the general law of nature and of nations, they secured their public and private property within a wall; nor can this be a disadvantage, but rather a benefit to the other States of Greece, for Athens is their bulwark and defence." As to the falsehood which he had practised, he replied by the declaration, "that for our Country all things were lawful;" and concluded by advising them to send him home in peace, if they wished the safe return of these Deputies who had just been sent to Athens. Not less vexed at their own credulity, than irritated at the duplicity of their rivals, the Spartans could yet find no remedy from the consequences, and were reluctantly obliged to comply with this insulting advice.

He returns to
Athens.

Themistocles returned in triumph to Athens; he had placed his Country in security from any foreign attack by land, and seems to have matured in his absence a variety of other plans for her aggrandizement, which he now represented as ripe for disclosure. Adimantus was Archon; and it was in the seventy-fifth Olympiad, when, in a public assembly, this able Statesman made a long Oration to the people, and proposed that series of measures, which, in its consequences, rendered Athens the mistress of the Grecian States.

He alleged to the assembled citizens, that it would be imprudent to make public the whole of the projects he had formed for their prosperity; and appealed to late experience to show the danger of it. He entreated them, therefore, to select two persons of eminence and shrewdness to whom he might impart his plans; and contented himself by simply impressing upon the citizens that trade produced wealth, and that wealth was the sure source of power. Their port, called Phalerum, he observed, was very narrow and inconvenient for trade; and he advised that the Piræum port should be made the principal one of Athens. The assembly now immediately named Aristides and Xanthippus as his coadjutors, and to them Themistocles freely communicated his mind. He told them that he proposed to widen the Piræum port into a capacious harbour for vessels of burden, and then to join it to the city by strong and extensive walls; considering it preferable for this purpose to the other port, as being already larger, as well as further from the city; a circumstance important to the morals and subordination of the people. He pressed upon his coadjutors the necessity of increasing the Athenian navy, if they wished to retain the freedom, or continue any protection to the Ionians, (originally sprung from the same ancestry as themselves,) or to obtain any decided influence in the islands of Greece, which could only be annoyed or defended by those who were masters of the sea; and exhorted them to look to that element alone as affording the greatest facilities for Athens to become hereafter the first and most powerful of the Grecian States. These suggestions he satrated the delegates, Aristides and Xanthippus, (whatever might at first be their opinions,) to keep entirely secret, for he was convinced that if the Spartans once discovered his plans, all their efforts would be exerted to crush and frustrate them.

Aristides* and Xanthippus, equally zealous for the Athenian glory, listened with eager admiration to the schemes of Themistocles, and in their turn assured the people that his projects might at once be executed with the greatest facility, and would prove eventually of the greatest consequence to the State. But the jealous Democracy were not so easily satisfied; their suspicions of an ambitious combination in these chiefs were suddenly roused, and they declared that Themistocles should be provided with the necessities for completing his designs, only upon their being approved by the Senate of Five Hundred. In consequence of this resolve, Themistocles now addressed himself to the Senate; and so convincing were his arguments, that that venerable body came also immediately into his views, and recommended them to the citizens with considerable warmth; when Themistocles was enabled, by public decree, to provide every thing for the execution of his extensive plans. The improvement of the port was first undertaken, and a concil-

* Ptolemy relates, that in this conference Themistocles communicated to Aristides a plan for burning the fleet of the confederates as they lay at anchor in the bay of Pagus, in Macedonia, and thereby to render the Athenian the only naval Power in Greece. Aristides, says this Historian, in reference to this proposal, answered to the assembly, that, in his opinion, nothing could be more advantageous to the people than to pursue the advice of Themistocles, but nothing more wicked; and the scheme was therefore abandoned. As this story is not corroborated by any other ancient Historian, and is generally disbelieved, we have thought proper to omit it in the text, preserving it only in annotation.

Biography. Estory embassy despatched to the Lacedæmonians, to urge the advantages likely to result from the Greeks possessing a large and commodious sea-port, in case of a future inroad of the Persians; while, in times of temporary inactivity, it would always be useful as a place of security for the allied fleets, from which the operations of the common enemy might be accurately observed. The Lacedæmonians seem to have been silenced by these arguments, and, before the extent of the work was thoroughly known at Sparta, the harbour of Pyraeum, by the uncommon exertions of Themistocles, was enlarged, fortified, and finished; and the foundation laid in Athens of that supremacy amongst the States of Greece, which it was reserved for his rival and compeer Aristides to carry forward and sustain.

Council of
the Amphic-
tyons.

About this time was held a Council of the Amphiclyons, the general and sovereign assembly of all the States of Greece, wherein it was proposed that all the cities which had not resisted the Persian invasion should be, in future, deprived of their right of sending Deputies to the Council. This measure Themistocles decidedly opposed, as tending entirely to frustrate all his own plans for Athens; for if Argos, Thebes, and other cities, devoted to the cause of his Country, but which had been inactive in the late contest, should now lose their voice in the Council, it was clear that the Lacedæmonians would rule the whole. He represented to the Deputies, that out of the multitude of Grecian nations there were but thirty-one States that had yet joined in the Persian war, and that, if those only were to send Deputies to the Grand Council, its numbers would be so reduced as to render it altogether insignificant in itself and dishonourable to Greece; whilst the measure would, at the same time, be detrimental to their general interests, for by its means two or three great cities only would be left to form the Amphiclyons, and to govern the confederates without control. Convinced by these arguments the assembly rejected the decree; and Themistocles thus furnished another proof, that, however devious his general principle of policy, he never yet lost sight of one great object—the welfare of his Country.

But the Greeks, although so much occupied with these important transactions amongst themselves, found time and means to continue the war with Persia. The defeat of Platæa and Mycænæ had disabled the enemy from again invading Greece, and it was now the fortune of the confederates, in their turn, to become the assailants. The Grecian fleet, consisting of thirty galleys of Attica, and twenty belonging to Sparta and the other Peloponnesian States, was commanded by Pausanias, the Lacedæmonian chieftain, who had distinguished himself at Platæa. Aristides (in conjunction with Cimón, the son of Miltiades) commanded the Athenian fleet under him: with this force the confederates invaded Cyzicus, where they took and destroyed many towns; and then proceeded to ravage Byzantium, another colony belonging to the Persians. This haughty and imprudent conduct of the Lacedæmonian leader, on this expedition, contributed of itself, in a great measure, to ripen the schemes of Themistocles; while the equity, the moderation, and the wisdom of Aristides irresistibly commanded the admiration of the fleet, and were highly calculated to promote the designs of the Athenian leaders. Pausa-

Aristides in
command
of the Athe-
nian fleet.

nia suffered no one to participate in his authority or to share in his plans. He scarcely deigned to converse with any other of the Greek commanders; and from this, as well as other causes, was strongly suspected of secret intentions in favour of the enemy. He insisted, at the same time, upon maintaining the rigid Spartan discipline throughout the whole fleet; and allowed no man of the confederates to receive his pay, or his rations of provisions, until every Spartan had first been served. The authority of such a chieftain could not but prove highly irksome to the minor States of Greece, whilst the character of Aristides shone in full contrast before them; and, independently of their wishes to obey the Athenian rather than the Spartan Chief, they now began to see clearly that Athens was the more powerful State by sea, while her late fortifications would enable her also to cope with Sparta by land, should a struggle become necessary. Impelled by these motives, the leaders of the colonists solicited Aristides to interpose his mediation, if not his authority, with Pausanias; or to request of the Spartan a decided change of conduct; and with that part of their requisition which implied the use of gentle means he undertook to comply. An interview between the Spartan and the Athenian Chiefs, however, ended only in a direct insult to Aristides, from all of whose remonstrances Pausanias turned abruptly and haughtily away. Irritated by this behaviour, the colonists no longer hesitated to seek a milder way. Uliades, the Samian Chief, and Antigonos of Chios, leading the way, all the Captains of the minor States applied directly to Aristides, entreating him to receive their submission on the part of his Country, and offering, if he would uphold them in their resolves, thenceforth to acknowledge Athens as the principal city of Greece. Aristides, in the first instance, declined their request; yet with such reasons, and holding out such prospects, as still further fomented their discontents and strengthened their resolutions. He replied, that he saw clearly not only the fitness but the absolute necessity of their proposition; for that the general cause of Greece could never prosper under a discipline so tyrannical as that of the Spartans. He alleged, however, that his duty forbade him to hazard the safety and the honour of Athens by attempting that in which he had no positive assurance of support, and in which success must therefore be doubtful. "Perform," continued he, "some public and decided act, by which you may demonstrate your sincerity; and such as may irrevocably fix your future conduct beyond the possibility of recalling it. Do this, and the protection that can be afforded by the Athenian arms is yours." To the discontented Grecians this declaration was rather an additional encouragement than a refusal. Uliades and Antigonos seized an immediate occasion to run their ships against the galley of Pausanias, as she rode in the station of honour at the head of the fleet, off Byzantium. Pausanias, in return, threatened to punish them severely, for this act of insolence and rebellion to himself and to his Country; but these leaders undauntedly replied, that he had better be silent with regard to them, and thank Fortune for her favours at Platæa; for to her, rather than to his own talents, was even that victory owing. The remembrance of that great action only, they now declared, restrained the confederated Grecians from avenging his past tyranny; and thence-

Pausanias, astonished at this unexpected boldness, had scarcely time to pursue his inquiries respecting it, when the declaration was confirmed by all the colonists, who now ranged themselves under the command of Aristides, and left the Spartan no other resource than to complain to his Country of his supposed wrongs. So imprudent, however, had been the conduct of this leader, that the Lacedæmonians themselves could not resent the insult, nor regain what he had lost for them. Ashamed to vindicate his conduct, they were not sufficiently powerful to revenge the disgrace which his folly and pride had brought upon his Country; and the magnificent designs of Themistocles were thus daily hastening to their accomplishment, while his compeer Aristides aided them forward with the whole weight of his character, and essentially contributed to the raising of Athens to the supremacy of all Greece.

Aristides' plans of finance.

Aristides, on his return to the Capital, found himself at the very summit of popularity. The Athenians had almost forgotten the share of Themistocles in the late successful projects, and looked only to him who carried them into final effect; but Aristides too well knew the precarious tenure of these favours to regard them in any other light than as the means of further service to his Country. This great man foresaw that the war with Persia was likely to be of long duration, and that all the skill and resources of Athens would be required, on various grounds, to maintain it. She had now a peculiar interest in the war, and a double honour to support—her own supremacy amongst the confederates, and her safety from the common enemy, to whom the Athenian territories were particularly exposed, as they formed the frontier of all Greece towards Persia. For this war Aristides foresaw a speedy and extensive want of money. This had been hitherto raised as immediate occasion required, in too large a proportion from Attica itself, and out by any settled and permanent system. The necessity of a regulated scheme of finance throughout the different States of Greece was therefore evident; but the difficulty of accomplishing it amongst nations of interests so various, and who were agreed in no one point lung together, was also sufficiently clear. Aristides was determined, however, to devote himself to this purpose, while his popularity was as high amongst his Countrymen as his general reputation throughout Greece. His arguments for a regular system of finance were no sooner advanced than their truth, and the character of the party proposing them, carried conviction to all parties amongst the confederates; and the different assessments of the several cities were left unreservedly to Aristides himself. The almost unlimited trust thus conferred on one man by so many different nations, all of whom concurred in rendering him the absolute disposer of their treasures, is a circumstance perhaps unparalleled in History. Nor did Aristides show himself unworthy of the power with which he had been honoured. He so completely satisfied all Greece with the equity of his conduct in this affair, that his taxation was emphatically named "the happy lot of Greece," although it amounted in the gross to the heavy sum of four hundred and sixty talents. His influence, indeed, was rather increased than diminished by this exercise of it: he persuaded the States, to conclusion of this business,

to a solemn oath of confederation and alliance, which they readily took. Aristides himself personating his Countrymen, and throwing wedges of red-hot iron into the sea, while he denounced curses from all the Elements against those who should violate one article of the confederation.

The fame of Aristides was now complete. To the applauses of the populace he added the esteem of his wise and prudent throughout Greece; his conduct had not only been the source of astonishing success and ascendancy to his Countrymen in war, but he had originated permanent provisions for their unity, security, and peace. Themistocles, however, could not endure the settled fame of a rival. Although, in the adversity of Aristides or of his Country, he could overlook all jealousies, and had nobly extended his hand to his competitor, he was one of those friends whom prosperity rather tries than multiplies. Envy was his weak side, as a crooked policy was his strong one. Now, too, he could not but feel that the origin of the popularity of Aristides was the effect of his good fortune in executing designs which had cost himself all the pain of conception and the hazard of first development. In a general assembly of the people, we find him venturing this remark with all the point and sarcasm of an eloquent jealousy. "Aristides," he exclaimed, alluding to the circumstance of his having kept secret the designs communicated to him by Themistocles, "possesses the merits, not of a man, but of a money-chest, which only preserves safely what must first be deposited." On another occasion, he remarked to Aristides publicly, "that it was the first excellence in a General to be able to penetrate the designs of an enemy;" to which Aristides replied, that "this was indeed a most necessary qualification, but there appeared to him to be another of equal importance—to have clean hands, and not to be a slave to money;" a reflection which is said to have touched Themistocles to the quick, as he began now to be suspected of intrigues with the rich and powerful enemy of the Greeks, the King of Persia.

Amidst these accustomed dissensions and tumults, the Athenians were nevertheless careful to maintain their newly-acquired supremacy over the Spartans, who, although they could no longer openly contest the prize of superiority, were imprudent enough to indulge in menaces which were sufficient to alarm, but failed of terrifying, their rivals; and several stout galleys were built in consequence. Some time after this, the Spartans, professing to be animated by the common cause of Greece against Persia, accused Themistocles of being concerned with their own King, Pausanias, in a treasonable correspondence with Xerxes. For this offence Themistocles, whose popularity had been some time declining, was tried, and, in the agitation of the question, some transactions were brought to light, which proved clearly that, at least, the guilt of Pausanias, had been known to Themistocles, who never appears, however, to have partaken or encouraged the treason. On the contrary, he had strongly urged upon Pausanias the enormity of his crime, and the necessity of his discontinuing the traitorous correspondence. Of the principal accusation, therefore, he was acquitted; but the suspicion of the people having been once aroused, and Themistocles having ventured to tamper with the highest crime of which a citizen can be guilty,

Aristides and Themistocles.

From A. M. 3515, — 0. O. 459, to A. M. 3555, — a. c. 449. Summary of his fame.

Themistocles accused by Xerxes.

Biography. a taint remained on his character which was never afterwards effaced. From this period his enemies rapidly increased, his friends diminished, and Cimon, who now began to be distinguished as a Patriot, took an active part against the fallen favourite of the people. The Lacedæmonians, who found sufficient cause for their aversion to this great man in the part he had taken in the recent loss of their rank amongst the nations of the confederacy, thought this a happy time to inflame the general animosity which existed against Themistocles. Nor were the jealousies against this great Athenian confined either to Sparta or to the democracy of his own Country. Timocreon, the Comic Poet of Rhodes, found him a popular butt for satire, which many instances of his own imprudent vanity continually fed, and hastened on his ruin. Themistocles, in the pride of his heart, had built a temple in the immediate vicinity of his own house, which he dedicated to Diana, to whom he openly gave the title of "the giver of the best counsel," a circumstance which was interpreted as indicating his complete satisfaction with himself, and his utter contempt of the opinion of the people. The powerful engine of the ostracism, by which Aristides, through his means, had suffered, was not forgotten at this juncture, and Themistocles was banished from Athens, never more to return.

Generosity of Aristides towards him. The last public act of Aristides is found in his generous conduct towards his great rival in his misfortunes. He not only expressed his decided aversion from the conduct of his persecutors, Cimon and Alcmaeon, who used their utmost exertions to bring Themistocles to capital punishment, but was now observed, on all occasions, to speak of Themistocles with more respect than he had ever before avowed for him.

Aware of the danger which might arise to his Country from the perversion of his great talents, and the dastardly means employed by Themistocles to accomplish his purposes, Aristides was an enemy to his principles and his policy; but, the Statesman being banished, Aristides was too great a friend to Virtue to continue his enmity to the man; and it was probably through his determined opposition to the efforts of his accusers, that Themistocles was permitted to leave Athens in safety. About four years after this event Aristides died in peace and in glory in that Country to which he had devoted his whole life, and which, at length, repaid his sufferings and his exertions with its full confidence, and with almost unlimited power. The last honourable testimony to his virtues is found in the recorded fact that, although he was at his decease at the summit of his prosperity, he died poor; the expenses of his funeral were defrayed by the State, and suitable portions were awarded to his son Lyimachus and his two daughters. Some years afterwards a grandson of Aristides was reduced to obtaining a livelihood by explaining divinations and dreams in the public streets.

Enmity of the Lacedæmonians to Themistocles. The enmity of the Lacedæmonians against Themistocles did not end with his banishment. To justify their persecution of him at that period, they pretended that new facts relative to his connection with Panisias had been discovered; and the effects of their aversion were felt by the fallen Statesman whenever he sought refuge. After being driven from one Grecian colony to another, he found a temporary

asylum at the Court of Admetus, King of the Molossians. But here, too, the malignity of the Spartans pursued him. They sent ambassadors to Admetus, denouncing Themistocles as a traitor, and threatening the Molossians with the resentment of the whole Grecian confederacy should they continue to harbour their common enemy; threats too serious to be trifled with, although the monarch entertained much personal respect for Themistocles. Unwillingly he dismissed his friend from his Court; and was only able by private means to assist him with money for his escape. Themistocles was now driven to seek shelter where he had least expectation of finding it, and in a quarter which he had hitherto avoided with considerable anxiety—the Persian Court. Xerxes was dead, but his son and successor was sufficiently aware of the situation of this noble Grecian, and of the importance of having such a man in his power. The active persecutions of the Lacedæmonians followed him, however, in this design. In consequence of their representations, Artaxerxes, having learned the intention of the rejected fugitive to hide himself in Persia, issued a proclamation, offering two hundred talents for his head. Themistocles now saw that a personal interview with the monarch was his only chance of escape. He hastened to seek the Court; and his dangers in travelling towards and through Persia, until he reached it, were numerous and imminent. It is said, that at last he owed his safety to the expedient of being enclosed in a litter, and being conveyed to Persepolis by one Niogenes, an Æolian, as a lady of Ionia, belonging to a Nobleman who attended the king's person. Arrived in safety at the Persian Court, Themistocles had yet another difficulty to overcome, and one that required all his talents and all his courage. The well-founded anger of Artaxerxes was to be subdued, and his favour to be propitiated, should he reach the royal presence; but the minions of a Court were more than likely to anticipate their master's mind, on discovering who he was, and to cut off the last chance of success which he could now hope for. Themistocles presented himself to Artabanns, a Nobleman of the Court in attendance, and solicited an audience of the "Great King." This officer requested to know by what name he should announce the unknown Grecian, observing "that he appeared to be an ordinary person." Themistocles answered with promptitude, "No man must know my name before the King himself;" a confidence of manner which procured him instant admission to Artaxerxes, when the following characteristic speech is attributed to the banished hero. Some writers, indeed, assert that this address to the Persian King was originally contained in a letter sent to Xerxes, whom they state to have been living at the banishment of Themistocles; the former is, however, the more probable account. "I am," said he, undauntedly, "Themistocles the Athenian, banished by my Country, and persecuted by ungrateful Greece! To thee, mighty monarch, I fly for refuge in my misfortunes; and the evils I have committed on the Persians ought to be forgiven, in consideration of the many benefits I have conferred upon them. It was I who hindered the Grecians, after the fatal Battles of Platæa and Salamis, from pursuing the full advantages of their victories, and from following your scattered armies to their utter ruin. After having freed my

He seeks shelter at the Persian Court.

Difficulties overcome.

Biography: Country from danger, and found my own highest ambition in making her great amongst her confederates—after being successful in all my designs for the good of Athens. I have been disgraced and banished. Remember, O King, that these very designs have likewise been the means of averting the Athenian arms from Persia, and have enabled me to perform services which must have been highly useful to you, the greatest King on Earth. Since the accomplishment of these actions, all things have conspired to produce and augment my present calamities. Sensible of my distressed situation, I come hither to accept mercy from a great and generous enemy, who hath laid aside his anger, and disdains to remember evils which are past. I implore you, therefore, that (taking the Greeks themselves as witnesses of the services I have done for Persia) you will use this occasion to exhibit to the world the nobleness of your virtue, rather than the greatness of your revenge. By this conduct you will preserve to yourself an humble suppliant; by my destruction you will only shorten the days of a man devoted henceforth to the cause of Persia, and a decided enemy to the Greeks." The immediate reply of the King to this unexpected address is not recorded, but it may be judged to have been favourable from the treatment which the fugitive experienced. In the night following this interview, Artaxerxes is said to have betrayed his joy even in his sleep, by exclaiming thrice, in a voice of exultation, "I have, at length, Themistocles the Athenian in my power." On the next day, the King sent to invite him into his presence, and, with a liberality equal to the boldness and address of his prisoner, he presented him with the exact sum which he offered for his apprehension. "So much," said he, handing him the two hundred talents, "did I promise the man who should bring Themistocles to me; and so much am I in debt to Themistocles himself." The monarch now assured him, by his interpreter, of his future favour; and, with many great promises, desired that he would freely impart to him his sentiments respecting the affairs of Greece, which he was ready to receive through the same channel. This intercourse, however, through a medium which neither party could fully rely upon, the wary Athenian prudently declined, and, by a courtly reply convinced Artaxerxes himself of the impropriety of what he had requested. "Discourse," said Themistocles, "is like a Persian carpet; it never appears to advantage, or is thoroughly seen, except when it is altogether unfitted to the eye: when wrapped up and concealed in the piece, it is not at all to be apprehended." The orator, relying on his own application, and his future powers of eloquence in the language, requested that he might be allowed a year, in which he might employ himself on the Persian Tongue, at the expiration of which time he engaged freely to disclose to the monarch his opinions by his own mouth. This request was readily granted; Themistocles appeared at Court at the appointed time, and then, as well as frequently afterwards, communicated his whole ideas to Artaxerxes concerning the nature of the various governments and nations of the Greeks, their respective characters, resources, and dispositions. So great at length was his influence with the monarch, that his name became proverbial amongst the Persians, as designating a peculiar favourite; and the Kings of Persia, when, in future times, they attempted by promises to

attach any Grecian to their cause, were accustomed to Aristides and Themistocles, and did with Artaxerxes."

The tempting honours of a Court, however, even in his peculiar circumstances, do not appear to have excited Themistocles to any overt act of hostility against his Country. He embraced the worship of the Persians, and submitted to be instructed in the mysteries of their Religion by the Magi, or Priests; and obtained the favour of the Queen-mother as decidedly as that of the King. Riches were profusely showered down upon him from the Throne; and all the secrets and resources of the realm appear to have been confided to him. Three rich cities of the Empire, Magnesia, Myon, and Lampus, were emphatically assigned to him by the King "to furnish him meat, bread, and wine," in reference to the different productions of each. At Magnesia, which brought in yearly a revenue of fifty talents, Themistocles chose to fix his principal residence, and there, in the comfort and gratitude of his heart to his royal patron, living in all the luxury of a Persian Satrap of the first rank, he was said to have frequently exclaimed to his children, "We had been indeed ruined, my little ones, had we not been undone."

Thus splendidly provided for, he died amidst the His death. greatest peace he had ever known, at about the 65th year of his age. Much uncertainty, however, occurs concerning the manner of his death. Ptolemy relates it; thus, and his authority, in this instance, has been generally followed. Artaxerxes, having long planned an expedition against the Grecians, intimated his desire for his friend Themistocles to undertake the supreme command of it; a request which was considered as a positive injunction by Themistocles, who prepared accordingly to assume this important post. But he felt all its awful difficulties. On the one side was a debt of gratitude, which he was now partly required to acknowledge, and which made it impossible for him to refuse to perform this service; on the other, were the recollections of his still-beloved country, against which he was determined never to lift his hand. He therefore made a grand festival, to which he purposely summoned all his friends, when, suddenly, amidst the solemnities of the sacrifice and the accustomed hospitalities to his guests, he is said to have poisoned himself, by swallowing a large vessel of bullock's blood, and thus to have expired, guiltless as to his Country, and (as it was in those barbarous times esteemed) magnanimously and gloriously for himself. Thucydides, who may almost be called a contemporary with Themistocles, speaks doubtfully, however, of the above fact, and says that he died of a distemper, "although," he adds, "some say of poison, voluntarily, aware of his being unable to accomplish what was required of him by the King." At Magnesia, the city wherein he lived, a splendid tomb was erected to his memory; but his remains were conveyed to Athens, by his own express desire; and it must be recorded, as illustrative of his own honour, as well as of that of his Country, that, at his death, the Athenians, forgetting his faults, and mindful of his services alone, erected a magnificent sepulchre over his remains.

The antithesis of character, in the lives of the two great men whose history we have been pursuing, is remarkable, as being exhibited not only in the same general sphere of action, and almost always with the

Reception of Themistocles by Artaxerxes.

Biography. same final object in view, but also in their different modes of conduct, under the very same circumstances. In the banishment of Aristides, we find his mind undisturbed, his virtue unbending, and his patriotism untainted; whilst we see Themistocles, under the like circumstances, acting indeed with a bold, but not with a direct course, his fortitude subdued by the splendour of a Court, and his patriotism itself becoming as dubious as his policy had formerly been. In prosperity, Themistocles gave a loose to the feelings of personal animosity, and by means of his artifices brought a temporary disgrace upon his rival; whilst Aristides, in the height of his popularity, used his power as a shield to his competitor, never deigned to resent his own individual injuries, but looked still directly forward to the

good of his Country alone. Themistocles was bold and enterprising, but restless and vain glorious; Aristides was rather persevering and cautious in action than ready in invention; perfectly indifferent to all personal vanity, and purely and disinterestedly patriotic. Their different characters were formed on totally different principles; but it must not be forgotten, that the right path pursued by Aristides proved, even in the most miserably scene in which he was destined to act amidst the giddy Athenians, his just and final reward; whilst the devious cunning of Themistocles, though deemed expedient by the justice of its object, led to his own disgrace, and the disappointment of that passion of vain glory which appeared to be nearest his heart.

BORN A. M. 3504. B. C. 500. DIED A. M. 3555. B. C. 449.

Biography. THE virtues of Cimón, the son of Miltiades, the Marathonian conqueror, brought him into notice at an earlier age than any other of the Athenian Chiefs of this period. In his youth he was addicted to intemperate and riotous pleasure; but the distresses of his father struck home upon the heart of the son, and awakened that energy of spirit and comprehensiveness of mind for which he was afterwards so eminent amongst his Countrymen. He may be said to have been of royal extraction, for his father Miltiades had been the Sovereign of the Delonæ, and his mother was Hegesippa, the daughter of Olorus, King of Thrace. Although we first hear of him at the period when the ungrateful and unjust Athenians suffered him to remain in prison for his father's debt, being freed by the magnanimity and affection of his half-sister and wife Elpinice, he quickly showed that his patriotism was not deterred by the injustice of his Country. On the second Persian invasion, while the principal citizens of Athens remained yet unmoved by the arguments and remonstrances of Themistocles, who urged them to repair to their fleet as the only means of preserving their liberty, Cimón, then a very young man, convinced of the wisdom of the measure, repaired to the temple, and offered a bribe on the altar of the tutelary goddess of Athens, Minerva, to profess his belief that horses and horsemen were no longer of service in her cause. He then proceeded to remove the portable goods of his family on board the fleet, and induced many of the Athenians to follow his example, until, at length, they all preferred a boundless liberty to a contemptible, though tranquil, slavery under the Persians. It was from the energy he first displayed in this circumstance that Cimón attracted the attention of Aristides. The spirited wisdom and patriotism of so young a man pleased and surprised the philosophic Statesman, and henceforth Aristides took the son of Miltiades under his own immediate tuition and protection. He appears to have discovered in him the early traces of that candour and honesty which he hoped might one day prove a

useful counterbalance against the crafty and devious courses of Themistocles, whose popularity now threatened serious mischief to the State. The hopes and foresight of Aristides were justified in the life and services of Cimón:—even when he became the object of jealousy to the turbulent and envious amongst the Athenians and their demagogues, his integrity was unimpeached by the noblest and wisest of the citizens, and his courage and his talents were held in as high estimation as his honour.

As this noble youth had been bred up in the army, under the experienced eye of his father, he was known to be possessed of considerable military skill, and in the Athenian fleet which achieved the victory of Salamis he sustained a considerable command. We next find his name associated with that of his distinguished friend Aristides in the direction of that important expedition of the confederated Greeks against the Persians, in which the Lacedæmonians lost their ascendancy among the allied forces, and the Athenians obtained it. We have, under the life of Aristides, shown in what manner the virtues of that Statesman contributed to win this honour for his Countrymen, and we must not here forget that Cimón in no small degree aided the plans of his contemporary, by his candour, his generosity, and his courage. Although Aristides, as the older officer and Commander-in-chief of the Athenian force, was the person to whom the irritated and discontented Greeks first officially addressed themselves, it is clear that they considered Cimón, the second in command, as of no little consequence in the furtherance of their object, and Aristides himself was content to share the honour with so noble an assistant in arms and in policy. Returning home in triumph to Athens, the discontent and intrigues of Themistocles against his rival Aristides disturbed the peace of the city, and ended in his own banishment. In this affair the whole influence of Cimón, which now began to be considerable, was exerted in the cause of his friend, believing it to be that of his Country; he equally condemned the mere popular cry, and the sinister means by which Themistocles had so often attained the popular

Cimón.

An antagonist
of Themistocles.

His first
public act.

Biography. favour. With these views, Cimon was the person who, of all others, most steadily required that the whole force of the law should be exerted against his selfish policy; the treachery of Themistocles to Athenians he considered to be clearly proved, and his connection with Pausanias he deemed worthy of death.

On the decision of this case, Athens was left comparatively in peace. She had attained a rank amongst the confederate States, to which she was doubtless entitled by the superior talents of the chiefs whom she had sent to the common war, by the magnitude of the force she had risked, and by the greater severity of her sufferings. It now became the chief duty of her Chiefs to support her liberties and her supremacy from encroachment at home, no less than to defend her territories from outrage or insult abroad. Themistocles was an outlaw, and Aristides, oppressed with a long life of toil, chose rather to promote the increasing power of Cimon, his friend and disciple, than, by again wielding it himself, to risk the well-earned but precarious honours he had acquired. Thus every thing seemed to prepare the path of Cimon to the highest distinction; and, soon after the banishment of Themistocles, we find him in a most important command. At this time the Athenians judged it prudent to fit out an expedition for the relief of those Grecian colonies in Asia which were still under the dominion of their great enemy the Persian King. Such was the ostensible object of their hostile preparations, but it has been justly thought that the real motive was, that they might, under cover of this expedition, still keep on foot a powerful navy, and obtain the immense riches which they were well aware the skill of their officers and the bravery of their troops would win from those Countries upon which they had their eye. Without, therefore, being suspected of any other views than those publicly avowed, the Athenians were, by these means, sustaining their internal power and annoying the common enemy to the partial advantage of all Greece, although they resped in their own State the immediate and most important benefits. As none of the Athenian Commanders was now more eminent than Cimon, and none so active in the equipment of the fleet, to him was given the supreme direction of it; the first uncontrolled military power he ever possessed. He now sailed to Eion, a town of much commercial importance, in the mouth of the river Strymon, where he defeated a considerable body of Thracians, but was disappointed in his hopes of plunder; for the Persian Commander, dreading the revenge of the Athenians for their own burned towns and pillaged Country, set fire to the city, and himself, his garrison, and the principal property of the place, were consumed to ashes, or otherwise destroyed. Cimon, however, made every possible advantage of a devastated country, and rescued not a little spoil from the general destruction. He then attacked and reduced the island of Scyros in the *Ægean sea*, and is said to have brought with great care, from this place, the bones of Theseus, the companion of Hercules and the founder of the Athenian monarchy. On his return to Athens, he caused them to be interred with considerable magnificence, attended by all the public authorities. In these expeditions, as a whole, he must have gained considerable spoil; for, notwithstanding the burning of Eion, and the unimportance and barrenness of the

island of Scyros, he found means, shortly after his return, to increase the number of his fleet to three hundred ships. With this force he sailed direct for Caria, conquering wherever he came, and obtained immense riches. But his attention became attracted by the report that a considerable Persian fleet had been collected by Artaserzes off the Pamphylian coast, and an army on the adjacent shore. So much, however, was the power of the Persian monarch reduced by the late defeats, that this armament seems to have been entirely designed to act on the defensive, and not to have undertaken any active operations against the Greeks; at this time it was understood to be waiting the reinforcement of eighty Phœnician galleys. Cimon immediately determined to attack the enemy in this state of weakness. Upon his appearance on the coast, the Persians at first boldly advanced to meet him; but the renown of the Athenian General, and the remembrance of their own repeated defeats, struck a sudden panic throughout their crews. They hastily retreated towards the shore, abandoned their ships to the mercy of the Greeks, and sought protection amongst the army. Cimon, having first directed his men to take possession of the vessels, now landed in his turn, and attacked the Persians on shore. An obstinate contest ensued; but victory was at length declared in favour of the Greeks; and thus Cimon achieved the singular distinction of having accomplished two victories in one day.

These battles are considered by Historians to have been equal to those of Plataea and Salamis, in the skill and courage displayed on the part of the Athenians, and in the loss and disgrace sustained by the enemy; but it is much to be regretted that every detailed account of them has perished with their authors. Plutarch mentions that, after these signal instances of his good fortune and courage, Cimon captured the eighty Phœnician vessels in a port of Cyprus, remarkably well calculated for their defence, and conducted back to his Country two hundred ships laden with the spoil of his numerous victories.

Immensely enriched by this booty, the Athenians now undertook several Works of public importance, which stood for Ages the monuments of Cimon's valour; while his own share of the spoil enabled this noble chief to give the reins to his unrivalled generosity and magnificence. With the general appropriated spoil of the enemy, the South wall of the city was built, and ample foundations laid for the walls which afterwards vaulted the port to the city. The ground being marshy whereon these latter Works were intended to be erected, immense stones and fragments of rock were sunk to a considerable depth; the expense of these laborious efforts increased as they proceeded, and, had not the public treasury been at this time so unusually supplied, every idea of completing them must have been relinquished. Cimon is said to have undertaken, from his own individual share of the spoil, many other Works for the improvement of Athens. He beautified that part of the citadel which looked towards the South; he adorned the Agora with plantations of palm-trees; and surrounded the schools with various pleasant and sumptuous parades and plantations. To him also was Athens indebted for the first of those buildings known by the name of "porticos," which afterwards contri-

Cimon.

Biography. buted so greatly to the ornament of the city, and the amusement of the citizens. Several of them were constructed, under his direction, in the highest style of Architecture; and, in the general encouragement of this as well as other branches of the Fine Arts, he demonstrated the elegance of his taste, no less than the generosity of his disposition.

In private life this illustrious Athenian is said also to have been distinguished for his liberality. The citizens were reminded of the magnificence of Pisistratus in his manner of living, although his motives were universally allowed to be free from the ambitious views of that Tyrant. He dismissed the keepers, threw

down the walls, and levelled the enclosures of his parks and gardens, permitting every citizen of Athens indiscriminately to partake of their productions. His noble table was open even to the poorest classes; for it was a constant custom with Cimon to invite all those citizens to his supper whom he saw at the Agors unbidden to any other. In his walks through the city he is said to have been attended by young men bearing purses of money for the relief of the indigent; and who were themselves constantly well dressed, for the purpose of changing their clothes with the destitute: sometimes he was even known to give away his own mantle on the spot to particular objects of charity. These generousies were administered with a delicacy that always adapted them to the occasion: he would often take an opportunity to convey money privately into the pockets of individuals, or exchange his own robe, by way of friendship, with that of another. It has been well remarked, that by this conduct he at once evinced that he gained his money well, as he knew how to use it well; and that he so used it, in fact, as to acquire the power of gaining more.

His popularity does not appear, however, to have diminished his independence in point of principle; brought up in the school of Aristocracy, he rigidly adhered to his first principles as a Statesman, now convinced by more experience of their truth; and, amidst all his kindness and profusion to the people, he disdained to flatter their vices, and was ever foremost to repress their power. He thought the Democracy of the Athenian Constitution already far too powerful, and was ever on the watch lest, in still further encroaching on the privileges of the Nobles, it should finally overwhelm the real liberties of his Country. Disciples of the same school, the conduct and characters of Aristides and Cimon were a similar rigidity on these points, although the circumstances under which they enforced them were widely different. The elder Statesman, by his voluntary poverty, showed a haughty superiority over money, and Cimon, in the midst of unbounded riches, at once preserved his integrity, and exhibited his contempt for them from an opposite pole.

It was at this time, and by these means, that Cimon attained the summit of power in Athens. His last expedition had brought so great a mass of wealth into the city, that all the corruptions of indolence and luxury followed, and he himself, of all the Athenians, appeared the only exception to their influence. With luxury, however, came power, which the people now felt so conscious of possessing, that they suffered no indignity from other States to pass unnoted for or unrevenged. No sooner, therefore, was it known at Athens that the Per-

sians had again invaded the Chersonesus, and, by the help of the Thracians, had completely overrun the Country, than Cimon was immediately sent thither to expel them. This expedition he undertook with only four ships, over which the Persians anticipated an easy triumph. But the Athenian leader supplied in skill, and his troops in courage, what they wanted in actual force. He attacked the enemy suddenly, took thirteen of their ships in a few hours, with a trifling loss, and proceeded to the reduction of the Chersonesus. Another contest and another triumph now presented themselves to his arms. The people of Thasos, a small but fertile island in the Ægean sea, had revolted from the dominion of the Athenians, and, in the heat of the Persian war, had seized on the gold-mines which lay between the rivers Strymon and Nyssus, on the boundaries of Macedonia and Thrace.

In preparation for a war against this people, Cimon availed himself extensively of an expedition, with regard to the naval forces of the Greeks, which had already, with little expense, considerably increased the power and influence of Athens. According to the system of alliance perfected by Aristides, the different proportions and number of ships to be furnished for the general defence, by each separate State of the Confederacy, was distinctly mentioned. Now, however, that the Greeks felt themselves free from the immediate pressure of external danger, their exertions to provide against it began to slacken; and, on their contribution to the general force being required, many States were found to offer a sum of money to the Athenians, whom they solicited to furnish the necessary quota in their stead. Cimon was too wise a Statesman to neglect this opportunity of strengthening the naval power of his Country. He generally took the money and built the vessels, dispensing also with the personal services of those of the confederates who were willing to pay for substitutes to the war, whom he gladly enlisted from amongst his own citizens. Thus were his Countrymen inured to hardships and to warfare; and the fleet of Athens, for a considerable time, made superior to that of any other Power in the world. It was thus, as it were, single-handed, that the Athenians now appeared before Thasos, and the revolt of the inhabitants was immediately quelled. Cimon then not only possessed himself of the gold-mines which the Thasians had seized, but planted a large colony of Athenians in the conquered Country, and built a city there which he called Amphipolis, diffusing the fame, and extending the influence and the power of the Athenians even to the borders of Macedon itself. He finally retired from this war laden with considerable spoils, and was hailed by Athens as the most fortunate of her successful Chiefs.

Shortly after his return to Athens, an opportunity occurred to Cimon which enabled him to show at once his generosity to a rival Power, and to demonstrate publicly his own principles of government. The Helots, or slaves of the Spartans, had rebelled against their lordly masters, and had raised a tumult in the State dangerous to its very existence. In this distress the Lacedæmonians applied to Athens for assistance in reducing the revolvers to obedience, a request which occasioned great disputes in the city. The popular party, through their favourite Orator Ephialtes, utterly opposed the grant of assistance. They urged that Sparta had always been, and, from the aristocratic nature of her principles and Constitution, must ever continue to be,

Expedition
to Thasos.

At the sum-
mit of his
power.

Biography. the rival and enemy of Athens; and that the pride and insolent cruelty of her people had driven their slaves into a rebellion which it was neither for the interest nor the honour of a free nation to assist in quelling. On the other side, Cimon, excited by gratitude to the Spartans, who had given him so decided a support in his contention with Themistocles, and his own sense of the true policy of Athens, earnestly pressed upon his Countryman to succour their confederates, designating Sparta as "the other eye of the noble Grecian head." He extolled the virtue and magnanimity of the action, in the present situation of Athens, and so fully convinced the Athenians of the propriety of his views, that they sent the Orator himself, at the head of a powerful army, to yield the Spartans the required succour. This service Cimon performed with his accustomed prudence and success, and returned from the expedition with the applauses of all Greece. A circumstance happened, not long afterwards, which aggravated the dormant spirit of rivalry between Sparta and Athens, and in which Cimon himself did not escape without a considerable share of blame. The Lacedæmonians had engaged in the siege of Ithome, which holding out with unexpected obstinacy, they again solicited assistance from the Athenians, and were successful in their request. Cimon and a numerous body of troops were once more marched off to their assistance. In the mean time, however, and before the Athenian army arrived at the scene of action, the other confederates of Sparta had joined the troops before the town, and the siege was soon brought to a successful termination. The Lacedæmonians, ever proud, and particularly jealous of Athens since her late attainment of ascendancy, dismissed the General and his army without any tokens of respect or gratitude; an affront which struck deep into the minds of the Athenians, and contributed in no small degree to that inveterate hatred which afterwards arose between the two Countries.

Intigues against him. The Athenians now carried on war in two different places, and with two different nations. The contest with Ægina, a powerful State, which ill brooked the new domination of the Athenians, was renewed; and the war with Persia continued with unabated rancour in Egypt, which had revolted from the Persian yoke, and solicited help from Athens. These important affairs abroad did not, however, so completely occupy their attention, but that their domestic disputes ran occasionally as high as ever. Cimon, succeeding to the honours and to the duties of Aristides, was the leader of the Aristocracy of Athens, and ever gloried in their cause; whilst Pericles and Ephialtes, both men of powerful talents, were, at the head of the Democratic party, continually endeavouring to thwart his plans and to increase their own power. The leaders of this party saw at last no expedient so desirable as that of disheartening themselves altogether of him whose virtues, no less than his political sentiments, were the most formidable barriers to their schemes. To the ultimate baseness therefore of Cimon every effort was directed. A specious charge was devised against him, and the desperate and heedless judgment of the ostracism was again resorted to to expel her noblest son from Athens. He was accused of treason to the State, in having received money or presents from the Macedonians, in consequence of which he had declined to push his success so far as he might otherwise have done, after

his obtaining possession of the gold-mines of Thasos in Thrace. The defence of Cimon was noble and simple. He alleged that he had at all times prosecuted the war in Thrace to the utmost of his power, and on all other occasions where he had been honoured by a command; but frankly acknowledged that he had not made inroads into Macedonia, which he could not consider as the enemy of Athens, merely because it was the neutral ally of Persia, unless he had acted as the public enemy of mankind. He avowed, too, that he regarded the Macedonians, as a people, with considerable respect; they were civilized and modest in their manners, rigidly just in their dealings, and strictly honourable in all their past transactions with the Athenians. "If," concluded our noble-minded Orator, "the Athenian people regard this conduct as criminal, I am ready to submit to the punishment they choose to inflict; but their judgment can never alter my conviction of right and wrong." In this trial Ephialtes, the generous rival of the accused, warmly engaged; and condescended to solicit, amongst other of the leading citizens, even Pericles himself on his behalf. But every effort was unavailing with an Athenian populace. The open and candid mind of Cimon had prompted him to avow, on various occasions, his partiality for the Aristocratic principles of Sparta, and her Peloponnesian dependencies; he had even named his eldest son Lacedæmonius, and his two others, Thessalus and Eleia. These circumstances arguing some indiscretion, perhaps, and certainly no illiberal patriotism, contributed to increase the clamour against him. A faint remembrance of former services alone seems to have saved the hero from capital punishment, but he was sentenced to be banished for the usual term of ten years; and the Democracy and their leaders were thus gratified in their envy and released from their fears. Cimon, on his part, retired to a lordship which he possessed in the Chersonesus, a barbarous Country, where he lived perfectly free of access, but keeping up an armed and vigilant household; still also regarding that Country with an anxious eye which was destined to become the scene of his final glory.

The exile of Cimon was the signal long expected by Ephialtes and the Democracy to begin their meditated attack upon the High Court of Areopagus, which, being composed of the nobler and graver citizens, had hitherto kept some check both on the manners and on the power of the people. This Court they considerably limited in its jurisdiction and privileges; and many of the causes of which it had hitherto taken cognizance were transferred to the general assembly of the citizens. But not long had these events left the Democratic party without control, before we find the smothered jealousy between Athens and Sparta once more breaking out into an open flame, which was rapidly communicated to all the surrounding States. When the sudden troops of the rival nations had assembled before Thasos, a town of Ægeia, and had disposed themselves in order of battle, Cimon, the banished Patriot, unexpectedly appeared amongst his friends, completely armed, and ready again to risk that life in the service of his Country which had been disgraced by his decree. Murmurs of discontent immediately arose; his enemies declared that, as his term of banishment was not fulfilled, it was unlawful for him to mingle with the

defenders and champions of his Country; they accused him of a design to join the Lacedæmonians, his friends, and asserted that he came to the field with no other purpose. The prudence of Cimon, ever equal to his valour, alone prevented a complete division in his camp. Aware of the tumult likely to arise between his friends, who insisted upon his remaining amongst them, and his enemies, who execrated his presence, he removed the cause of the quarrel by voluntarily retiring, after having exhorted his immediate dependents and admirers to behave with their utmost valour in the approaching battle. Euthippus, one of his warmest friends, only requested him to confide to them his armour, to be borne before them in the field; and in the arduous contest which followed, unfortunate as the event proved to the Athenians, his renown was well sustained in their use of this trophy. The little band of Cimon's friends, commanded by the valiant and noble Euthippus, performed prodigies of valour throughout the day. They bore the armour of their leader safe, as long as they themselves possessed life, and when they fell, as at length all of them did, the sacred trust of friendship and of patriotism was surrounded with their lifeless bodies.

After this disastrous action, the war between Athens and Sparta became general, and of very fluctuating success. The Democratic leaders, by whose artifices Cimon had been banished, began to be distrustful of their own talents for subduing the storm which they had raised, and well aware of the mutual respect which subsisted between the Spartans and the exiled Patriot, they looked to him as a mediator. The common people, too, were not without remembrance of his minifcence, and the effect of his exhortation and of his gift of honour to his friends at Tanagra was recent in their remembrance. Pericles himself moved for the recall of Cimon from banishment, when only five years of his prescribed term of exile had elapsed; he was invited to his Country by an honourable deputation, and to the immediate direction of its councils.

One of the first duties to which this great man addressed himself was the establishment of Peace. Negotiations were directly opened between the Spartan and Athenian Chiefs; but so violent was the animosity excited, and so numerous were the different parties to be consulted and reconciled, that three years of predatory and intermittent war followed before the preliminaries were adjusted. At length, however, a Treaty, or rather a Truce, for five years, was formally concluded and confirmed between the contending nations. From this time to the death of Cimon the Athenian affairs may be said to be under his direction and that of his former rival Pericles conjointly, and the wisdom and steadiness of the measures pursued proved the union to be most auspicious for Athens. A third wall was added, with considerable expense and labour, to the fortifications which joined Athens to the ports, to prevent an enemy, who should penetrate to the two harbours on that side of the city, either reaching the citadel or seizing the fleet. An important addition to the military strength of his Country was accomplished also at this time, in the re-organization of the Athenian cavalry. The naval strength of Athens her leaders well knew to be her best protection from foreign power, but, in order to oppose internal struggles of influence, it was clear that a land-force also was necessary; and it is

remarkable in the life of this great Athenian, that he who began his military career anxious to devote everything to the augmentation of the navy, now as warily devoted all his energies to restore the just consideration of this her other important arm of strength. He sacrificed a bride to Minerva in youth, and she seems to have restored him one in his age.

In the midst of these exertions for his Country's good and the general progress of civilization, Cimon was destined, however, to feel daily the obloquution which arose to his plans from the re-lesse and fiercer spirits of Athens being, for the greater part, unemployed. Numbers of the citizens, who had formerly subsisted on the spoils of an enemy, were now poor and idle, yet luxurious in their habits, the corrupters of Athenian morals, and the handi of the neighbourhood. Cimon had ever viewed the internal wars of the confederates themselves as a wretched employment of their military power; he had succeeded in his project for planting a large colony of the Athenians on his own Chersonesian territories, and that measure had at once relieved the city from its excessive population in some degree and proved beneficial to his own individual interest; but the increase of the idle and dissolute was yet alarming, and the dominion which Persia, the common enemy of Greece, still exercised over many of the Grecian cities, seems to have pointed out to Cimon the only legitimate object on which to employ them. With these motives he himself raised and manned a fleet of two hundred galleys, assumed the supreme command, and despatched sixty of them, under Amyntes, Chief of the Egyptians of the marches, to enable that officer to maintain his independence against the Persian power. With the remaining part of this force he sailed to Cyprus, and laid siege to the city of Citium in that island, defeating in his way, near Salamis, a Persian squadron of Phœnician and Cilician ships that had the temerity to attack him. The life of Cimon was devoted to close before the walls of Citium, but in death he forgot not the welfare of his Country; conscious of his approaching end, and aware that a scarcity of provisions in his camp was likely to produce disorder or other fatal consequences, he issued a number of preparatory orders to avert or mitigate the calamity, as well as to facilitate the safe re-embarkation of the troops. That these directions might be the better obeyed, he gave positive injunctions that his death should be concealed awhile from the soldiers, and that everything should proceed, as usual, in his name as their General. In pursuance of these instructions, the Athenian army moved towards the sea. On their march, when attacked by the Persians, they totally routed them, and here first missing him personally, they still ascribed the victory to the excellence of the plans of Cimon and the greatness of his renown.

As Marcus Brutus is emphatically entitled in History Character. "the last of the Romans," with equal, or greater propriety may the hero of this memoir be called "the last of the Grecians." With him fell the rigid honour and disinterested patriotism of his Country. If his prototype Aristides was styled the just, Cimon scarcely deserved that epithet less than he. If Themistocles was rapid in action and prudent in design, Cimon not only rivalled him in each of these qualities. The valour of his great ancestor Miltiades was well sustained in his person, and the magnificence of Pausanias without

Biography. his ambition; but in the purity and discrimination of his patriotism we find, perhaps, his highest praise. His attachment to Athens, his own particular Country, was apparent in every action; his philanthropy was not a dilution of his patriotism; it did not teach him to affect a love of all men, until he was useful to none, nor did his patriotism extinguish his philanthropy; but there was room enough in his heart for the faith and friendship which he bore to Sparta and the other

Grecian States; and the rigid justice with which the rights of all civilized and neutral nations, as in the case of Macedonia, were acknowledged and respected by him. Such was the character of this enlightened Heathen; a pattern of excellence to heroes of a better Faith. His triumphant but mournful army carried his relics to Athens, where a sumptuous monument was decreed to their honour, and long known and venerated by the almost sacred name of "Cimonæia."

PERICLES.

SON A. M. 3505. B. C. 499. DIED A. M. 3575. B. C. 429.

Biography. THE life of this celebrated chieftain is connected with no small portion of the History of the Athenian State. By this splendour of his talents he raised himself to an eminence in Athens never surpassed, and at length became almost its absolute master. During his administration the Republic was rendered completely a Dictatorship; his private favourites, and particularly his mistress, Aspasia, disposed of every post of honour or emolument in the State; and the affairs of his Country became most ingloriously and disgracefully a record of his personal actions, and comprised in his life. The little that remained of an Aristocracy in their Constitution was destroyed, during this period, by the Athenians; and, dazzled by his eloquence, they plunged into that fatal war with the Peloponnesians, which, in the event, proved the ruin of their Country.

Pericles was the son of Xanthippus, (the famous Athenian who had been named with Aristides to consult with Themistocles on his secret projects, and who commanded at the Battle of Mycale,) by his wife Agarista, the niece of Clisthenes, who had been instrumental in terminating the tyranny of the Pisistratidae. He had the misfortune to resemble Pisistratus in person, and, from this cause alone, was constrained for a long time to conceal his shining talents; for so violent was the general prejudice against the memory of that Tyrant, that the abilities of Pericles would only have increased the popular jealousy which the likeness of his person to Pisistratus could not have failed to arouse. Though his extraction, therefore, was noble, his qualifications great, and his interest in the city extensive, (for many of his near relations filled the first of the magisterial offices in Athens,) Pericles was constrained to cultivate, in a long retirement, his evident talents for public life; and thus, perhaps, to ensure a more certain and more durable distinction. Meanwhile, he studied politics under Damon, whose profession was that of a Poet and Musician, but whose inclinations and researches were strongly political, and who appears to have been well acquainted with the principles and history of the Athenian government. Nor did his noble pupil omit to acquire, amidst these practical studies, those of a more elegant and engaging kind; for, under the famous Philosopher Anaxagoras, he made considerable proficiency in Astronomy and Natural History, and fully accomplished himself in the Art of Oratory. Thus prepared, an occasion was at last offered to Pericles to emerge from his

obscurity. Aristides was no more, Themistocles in banishment, and Cimon, the invigorating soul of the Republic, was abroad, when the Democratic party, which had been overawed by the authority and the unusual success of Cimon, began, in his absence, to raise disturbances against his character and government. They only wanted a leader to complete their schemes, and Pericles was but too well fitted to become the demagogue of such a people. He had carefully avoided all offices of the magistracy, and become, on that account, the more suitable assailant of the Aristocracy. The turbulent and jealous people saw a man amongst them affecting no superiority, and who had attempted no power, but whose noble birth and high accomplishments would richly have entitled him to both. His first measure, the procurement of a decree for Cimon's banishment, was decisive of his success as an Orator, and indicative of his character as a politician. The whole machinery of a well-managed intrigue was here at once brought into action, and completely over-matched the honest and candid course of Cimon. Pericles, indeed, affected, before the general assembly, to speak lightly of the accusation against his rival, while he secretly fermented and rejoiced at his condemnation; and when Elpinice, the sister of Cimon, solicited him on behalf of her accused brother, he is said to have replied, with a contemptuous lightness, "You are become, madam, a little too old to be employed on occasions such as these."

Some time before the banishment of Cimon, Ephialtes, an Orator of the Democratic party, encouraged, it is supposed, by Pericles, whose time for an attack of this kind was yet scarcely arrived, had disseminated amongst the people various calumnies against the High Court of the Areopagus, but now, on the fall of this last advocate for the Aristocracy, Pericles was determined to pursue bolder measures. The organization and authority of that Court, exercising an unrestricted jurisdiction in the punishment of many popular crimes, were such as to render it a strong check upon the people. None could be admitted a member of this august tribunal who was not universally esteemed as amongst the most noble and most worthy of the citizens; those who had discharged the high office of Archon with honour, or, at least, some other eminent magistracy of the State. Pericles, as we have seen, was of a noble family, but was not qualified to become a Judge of the Areopagus, on account of his not having

Occasion of his first advancement.

Singular resemblance of Pericles to Pisistratus.

Biography. been elected to any office of importance. To his envious desires for this dignity, operating against his inadmissibility to it, historians have attributed his aversion from its existence, and it is certain that this only remaining boundary to the wild tide of popular power was almost entirely beaten down by his exertions. He quickly procured, in conjunction with Ephialtes, a decree to limit the power of this Court, shortly after which the latter was assassinated, and his murder has been, by some writers, imputed to Pericles. In justice to this Chief, we must, however, observe, that historians generally ascribe his death to the revenge of the Nobles, who neglected in him the only party they could reach, and who anticipated, in this diminution of the power of the Areopagus, the total extinction of their influence in Athens.

A war now commenced between the Athenians and the Epidaurians, in which the Corinthians declared themselves in favour of the latter. In this conflict the Athenians gained two victories, and then sent a fleet against their old rivals, the Egineans, on the suspicion of their having secretly assisted the Corinthians. Here, also, the Athenian arms were successful, and their enemies purchased a Peace by an acknowledgment of Athenian supremacy. During these transactions, Pericles was the most popular man at home, commanding all the resources of his Country; and this contest, short as it was, became highly important in its consequences, as it aggravated the rising spirit of internal discord throughout Greece, and was one of the co-operating causes of the Peloponnesian War.

Athens had reached the summit of her glory, when the turbulent and giddy spirit of the people, who, by the efforts of Pericles and Ephialtes, had now become possessed of unlimited power, was no longer to be controlled by any prudence, or by any sense of honour. The supposed insults which the Lacedæmonians had offered to them, from the time of Themistocles until now, were brought before them in inflammatory harangues, and the people and their leader, Pericles, awaited, with like impatience, an opportunity of revenge. In such dispositions neither men nor States are long in finding occasion of quarrel; either the weakness or strength of a rival will furnish it. The Spartans had sent a large army against the Phocians, and being thus, in some measure, unguarded at home, the Athenians chose this as an appropriate time to commence their attack. Collecting the force of the Argives and the Thessalonians, they raised a fleet of fifty ships, sailed direct for the Peloponnesian isthmus, and there landed and encamped an army of 14,000 men, which, seizing the customary passes of the Country, made the return of the Lacedæmonian army from Phocia impossible without a combat. To the encounter, therefore, the Spartans, commanded by Nicias, and consisting of 11,000 men, advanced; but still, in their efforts to avoid an actual battle with the Athenians, they endeavoured to affect a countermarch to Tanagra, in Boeotia. Here the Spartan chief first addressed himself to the Nobles of Athens, who had altogether and from the first disapproved of this expedition of their Countrymen; but the Athenian army, on their side, suspecting such a correspondence, hastened also to Tanagra, and before the walls of that town the rival armies met. A battle now became inevitable; the first action which took place between these two

principal States of Greece, each of whom, whilst they were in alliance, had proved an essential safeguard to the liberties of the other, and those of all the surrounding nations. It was in the preparation for this battle that Pericles and the popular party prevented the noble offers of Cimon from being accepted, although the renown of that great man was increased rather than diminished in the event. It is evident, too, that the Athenian camp was much divided; the Thessalian horse deserted their cause at the commencement of the action, and, adding so much weight to the Spartan side as it took away from the Athenians, contributed, in no small degree, to render the battle long and bloody, and to give the obstinately-disputed victory at length to the Spartans. The Athenians were ultimately obliged to retreat from the Peloponnesus with considerable loss, and the Spartans were glad to return to their city, to recruit themselves after so rude an encounter.

The animosity between the rival nations was rather exacerbated than allayed by these mutual losses, and a fresh pretence for war soon afterwards arose. The Thebans, who, on account of their having allied themselves with the Persian King on his late invasion of Greece, had lost their own independency and the government of Boeotia, now applied to the Lacedæmonians to be restored to their ancient privileges, and promising faithful alliance and obedience to the Peloponnesian cause in gratitude for the favour. This, which the Spartans readily granted, the Athenians, who had been the cause of the degradation of Thebes, took upon themselves to resent. An army was sent into Boeotia, under Myronides the son of Callias; and it is evident that, respecting this second expedition against the cause of Sparta, much internal disagreement again took place in Athens. Notwithstanding the exertions of the popular party, many of those persons who had been elected to serve in the army of Myronides refused to attend; and that General, when urged to halt, in hopes of their ultimately joining him, replied, "That it became not a leader of such a people as the Athenians to wait for those who would at last come unwillingly, if they came at all; for it was to be expected that these would be as tardy in attacking the enemy as they had been in reinforcing their friends; while, with the few who were ardent in the cause, victory might surely be anticipated." Nor were his predictions falsified by the event; for, although a powerful and well-disciplined force of the Thebans sustained an obstinate and bloody combat, the victory was at last as complete on the side of the Athenians as any they had hitherto achieved. The army, though exhausted by this conflict, was still in a condition to march to Tanagra, the scene of their late disastrous contest. This place was now taken by storm, and its walls were levelled with the ground; nor did the troops of the expedition return to Athens until they had ravaged all Boeotia, as a punishment for its connection with Sparta. So great, indeed, was the emulation now excited amongst the Athenians, in the annoyance of their Lacedæmonian rivals, that their natural enemy the Persians appears to have been forgotten in the general tumult; and the success of one expedition against their former allies was only the exciting cause of another. The naval Commanders of Athens, emulating the honours of the land force, requested, through Tolomides, the Admiral, a fleet of fifty galleys, to be manied with 1000 men;

he quickly collected, however, volunteers to the amount of 4000. With this force he sailed for the coast of Laconia, a part of the Peloponnesian territories, and nearer to Sparta itself than any other yet attempted by the Athenian arms. Here the Admiral landed his troops, and took possession of a town called Methone, which, however, he was soon obliged to relinquish on the approach of a Spartan army. He now sailed for Gythium, another sea-port belonging to the Lacedæmonians, which he took by surprise, burned the town, the shipping, and all the naval stores; and, having ravaged the adjacent country, re-embarked, and attacked Zacynthus, and several smaller towns in its neighbourhood, with similar success. In Naupactus, which capitulated to his arms, he settled a colony of Messenians, and then led back his troops, laden with treasure, to Athens, intoxicated with the triumph of their Country. In these expeditions we do not, indeed, find the name of Pericles mentioned individually, but he was certainly the most popular leader of the party which at this time ruled Athens, and directed these measures, whatever were their merits.

Pericles in-
vades the
Pelopon-
nesus.

The second invasion of the Peloponnesus was undertaken by Pericles himself. One thousand men were embarked on board a squadron of ships which lay at the Bay of Pagæ, and the command of this force was given to Pericles, with the general intention of protecting the friends of Athens by the way, and annoying her enemies in the Peloponnesus. Directing his course across the Corinthian Gulf, he immediately landed the troops on the territory of Silyon, where the inhabitants of that place, scorning the protection which their walls might have afforded, marched out at once to give him battle on behalf of their Country and themselves. The Athenian General, however, quickly routed their force, and plundered the country around. Having then recruited his army with a considerable body of Achæans, he re-embarked, and made an attempt upon Enisade, on the Acarnanian coast, in which, although he was unsuccessful, he was rewarded with a large booty, an object which was now become one of principal importance in this desultory and precarious mode of warfare.

On the return of Pericles to Athens, he found the Aristocracy of the Country regaining their influence over the citizens, and warmly advocating the necessity of Peace amongst the Grecian States. The banished Cimon was proposed by them as the only man from whose mediation with the Spartans they could hope for the accomplishment of this object; other circumstances, as we have related in the life of Cimon, contributed to swell the popular voice for his recall, and Pericles, rather, perhaps, in compliance with the wishes of a people whom he must obey if he aspired to govern, than from any conviction or inclination of his own mind, was the person foremost to propose the restoration of his illustrious rival. From the period of Cimon's return from exile in the time of his death, he shared with Pericles the general administration of affairs. The Truce with Sparta, the attack and defeat of the Persian fleet and army, the landing of the Athenians under Cimon at Cyprus, together with the internal improvements which, during that time, took place at Athens, are related under the Life of Cimon. If Pericles, as Historians suppose, had any share in accomplishing these events, although they seem rather to have been dic-

He is as-
sociated with
Cimon in

ment

tated by the wisdom and integrity of his coadjutor, they are strong evidences that a prudent adviser was alone wanting to this chieftain to have made him solidly useful to his Country, in her peaceful as well as in her warlike pursuits. About the time of Cimon's death Pericles was employed in restoring the common federal Government, which had subsisted amongst the several towns in the Province of Phocia over the Treasury and Oracle of Delphi. This the Lacedæmonians, had imprudently destroyed, and awarded the whole possession of the Temple and the administration of the sacred rights to the city of Delphi alone. The force, however, which marched under Pericles into Phocia soon restored the ancient domination, and happily without bloodshed either in the present arrangement or its consequences; for the Spartans, conscious, perhaps, of the wrong they had committed, suffered the Athenians to pass unmolested to their object, to which they, in their turn, strictly confined themselves.

But the death of Cimon was the signal for fresh internal disturbances in Greece, and even amongst the Athenians themselves. To that great Athenian, latterly, Pericles had been contented to assign the palm of superiority; and the good understanding which subsisted, in appearance at least, between these leaders of two opposite factions, satisfied the Nobles and overawed the Democracy. Now, however, some of the principal citizens of Cimon's party ill brooked the authority to which Pericles succeeded. Amongst others, we find Thucydides the Historian standing forward as a leader of the Aristocratical party, which assumed its old distinctiveness, until the two contending factions shook the safety of Athens to its base. Various clouds, at the same time, hung over her from abroad. Whether encouraged by these internal disturbances of their masters, or by the intrigues of the Lacedæmonians, now unwearied by the virtues of Cimon, and uninfluenced by any regard of Pericles for their interests, the Megarians were the first to raise the

sound of war. Megara being in the immediate neighbour-
hood of Attica, and lying close under the in-
spection of the Athenian Government, it argued a considerable degree of courage, and no little impenitence of her sovereignty, that this was the Country which first revolted from it. She implored, by her ambassadors, the protection of Sparta, but too late to avert the punishment of her revolt. The Athenians immediately ravaged their whole country and closely invested their Capital, the only large town they possessed. The Lacedæmonians were now roused, and they made an irruption into Attica, which dealt a corresponding mischief upon the Athenians; when Pericles marched, in person, against the invaders, with whom he determined to try the influence of gold, rather than depend upon the force of arms. Platonax, the youthful King of the Spartans, whom the Athenian chieftain bribed with a considerable sum; and the Lacedæmonian army returned home without attempting further mischief. Pericles is said to have charged ten talents of gold to the public account on this occasion, and to have designated it as expending on a proper but needless service. This account was passed without question; and he was immediately intrusted with a command

Rashness
of the Admiral
Tolmides.

against Eubœa, where the Lacedæmonians had instigated other disturbances.

Whilst Pericles was preparing for this expedition, a circumstance occurred at Athens which reflected no little honour on his judgment, and still more increased his influence with the people. Tolmides, the Admiral, who had been the first to invade the Peloponnese, now persuaded the Athenians to intrust him with a small army, with which, in a very advanced season of the year, he proposed to make an incursion into Boeotia. The experience of Pericles made him clearly foresee the issue of this plan; but he opposed it, in the first instance, altogether in vain. Amongst other expressions of his disapprobation, he calmly answered to Tolmides, who resented his interference, "If you will not, sir, listen to my advice, wait at least till Time shall have given you opportunity to consult him; for let me say, that to such as you he is the best of counsellors."

The expedition sailed, and the event proved exceedingly disastrous. At first, indeed, Tolmides achieved some successes of minor importance, but at Chæronea he was attacked by a numerous host from the confederate cities around, himself slain, and his army completely routed. The Athenians were obliged to ransom their prisoners at an extravagant sum, and formally to renounce all claims of dominion over Boeotia. Nor were the misfortunes of this affair closed even here, for whilst this disgraceful Treaty was pending, time was given, and temptations afforded, for several of the minor States of Greece to revolt from the dominion of Athens.

Pericles had scarcely sailed on his intended expedition to Eubœa, when a new revolt of the Megarenses occasioned his recall. This he quickly disposed of, however, re-embarked for Eubœa, and laid siege to and reduced their principal city Hestiea; where he planted a colony of Athenians, and ejected all the ancient inhabitants. Soon after this the rest of the island of Eubœa submitted to the Athenian arms, and the Lacedæmonians themselves, weary of the war, agreed to a Peace for thirty years. By the Articles of this Treaty, Athens disclaimed any dominion over Nisæa, Acha, Pagæ, and Træzene; and it was jointly agreed between the rival States, that any Grecian city, which had not hitherto joined either party in the war, should be at liberty to offer her submission to that which she herself might choose during the Peace.

An instance of the severity of Pericles' personal administration occurred soon after this event. Corn was always such an object of importance, and frequently so scarce among the Athenian people, that many whole families, in times of dearth, were obliged to sell themselves as slaves, for the sake of their subsistence. Forty thousand bushels of this valuable commodity had been sent as a present to the Athenian citizens from Pammenicus, a King of Libya, or more probably, as some say, of Egypt. This was, by course of law, to be divided amongst the free citizens. In the height of the rivalry which had formerly subsisted between Pericles and Cimon, the former had obtained an unjust and cruel decree, levelled at the case of some children of the latter, by which persons of half Athenian blood only were disfranchised from their privilege as citizens. This law now bore severely on those who had had the inhumanity to enact it, and no less than five thousand persons, who had usually been considered as freemen of Athens, were sold as slaves through the rigid

punctuality of its execution by Pericles. We may diverge from the strict order of events to observe that Pericles himself, the arbitrary author of this decree, was constrained, in after times, to move for its repeal, all his children of the whole Athenian blood having died before him, and only one child of half-blood, a son, taking his own name, surviving to comfort his old age. For the admission of this child to the privilege of an Athenian citizen, the law in question was abrogated.

Towards the end of the eighty-fourth Olympiad, the Athenians took part in a war which had begun between the Samians and the Milesians. Many Historians attribute the interference of his Countrymen on this occasion to Pericles, who is said himself to have been influenced in this business by an obscure quarrel of his mistress, Aspasia, a celebrated courtesan, to espouse whom he had dismissed his former wife, and whose fascinating address had previously captivated Socrates. The immediate pretence of the interposition of Athens is variously related. Thucydides says that the Athenians were appealed to by both parties. Plutarch affirms (what is by no means contradictory to the Historians) that the Athenians having directed both parties to lay aside their animosities, the Samians refused, and thence came the war with that people. Diodorus Siculus differs from both these accounts, and tells us that the Samians themselves revolted from the Athenians, conceiving that their enemies had been assisted by them. From what cause soever the war originated, Pericles was evidently highly interested in the prosecution of it, and commanded in person the force employed on the occasion. He sailed with a fleet of forty sail, and subdued the Samians, who were utterly unable to withstand so great a force; established a Democracy in their city, and took fifty hostages of the Nobles of Samos as a security for their keeping the order of affairs according to his will. Plutarch says, that so strong was the determination of Pericles to establish this mode of Government, and to prosecute his ravage upon the Samians, no inducements could move him from his course. The fifty hostages offered him a talisman per bore for their liberation; and Pisistratus, the Persian Governor of Sardis, promised him ten thousand pieces of gold to desist from his scheme, for the Persians were ever averse from Democracies, and particularly from any in their own neighbourhood. But Pericles scorned even money itself on this occasion, though it was a temptation to which he was not at all times inexorable.

The force of arms to establish a Government against Pericles' the will of a people was soon, however, found to be too inefficient. No sooner did Pericles quit the island of Samos, than the inhabitants threw off the Athenian yoke, expelled, with the assistance of Pisistratus, the garrison which the Athenians had left there, and contrived means, surreptitiously, to carry off the hostages which had been taken to Lemnos. But the determined mind of Pericles was not thus to be thwarted; on his return to Athens he fitted out sixty galleys and a large land-armament to renew the war. In the mean time the Samian fleet had increased to seventy sail; and although Pericles, out of his sixty vessels, had detached sixteen in order to gain intelligence of the Phœnician fleet, and to quiver the operations of his own allies from Chios and Lesbos, he attacked the enemy with the remaining forty-four,

Pericles' attempts to subdue it.

Biography. and utterly defeated them near the island of Tragim. A reinforcement which he received after this action, amounting to forty more ships from Athens, and the auxiliary force of twenty-five vessels, which now joined him from Chios and Lesbos, enabled him to invest Samos both by land and sea. Whilst affairs were in this situation, misled by false intelligence, and leaving the remaining part of his own fleet unsupported, Pericles was induced to sail off the coast with sixty ships, expecting to meet the Phœnician fleet. For the oversight, Plutarch and others, with more after-wisdom than justice, attribute much blame to Pericles; advantage of his absence being immediately taken by the Samians to attack and destroy the besieging squadron, commanded by Tetagoras; a victory which, for fourteen days, made them so completely masters of the sea, that they supplied themselves with provisions and all other necessities for the long protracted siege which Samos afterwards endured. Pericles, however, soon returned to his post off the island, and was shortly afterwards supported by another squadron of eighty ships from Athens. He prosecuted the siege with great vigour; although it was not until after nine months' active warfare that the final conquest of the island was accomplished. The Samians at last surrendered at discretion; but, remembering the difficulties which he had encountered, Pericles was determined to disable them for ever from again rising in arms against the Athenians. He demolished the fortifications of the island, carried off all the Samian fleet, obliged the inhabitants to deliver hostages for their future allegiance, and to engage to pay Athens the whole expenses of the war. On the return of the conqueror to that city, his deficiencies in the conduct of the war were forgotten in its final success; he pronounced one of the finest Orations now extant in the Greek language in honour of those who had fallen in the contest; and so great was the effect of his eloquence, that the ladies of Athens surrounded him with acclamations of joy, and crowned him with garlands of olive, the highest trophy of Grecian honour.

His final success.

Not long after this, and in about the second year of the eighty-fifth Olympiad, arose a second contest between the Corinthians and Athenians, which revived the Peloponnesian war; begun, as heretofore, in the spirit of wanton and restless jealousy on both sides, and terminating in the utter extinction of the political importance of Athens. A contest of little importance between the Corcyrians and the Corinthians was the origin of this disastrous quarrel. The Corcyrians, originally a colony of the Corinthians, had founded a settlement on the shores of the Adriatic, without the licence of the mother-country, which they called Epidamnium. Disputes arising at this latter place, one party applied to Corcyra for assistance and arbitration, and having their petition rejected, by direction of the Delphian Oracle, referred the settlement of affairs to Corinth, to whom they offered the sovereignty of the place; an offer which was immediately accepted, and the required assistance afforded them. The faction of the Epidamnians, thus sided by the Corinthians, now expelled the adverse party from the settlement, and these in their turn sought refuge at Corcyra, the citizens of which resolved to resent the interference of the Corinthians. A fleet was dispatched to Epidamnium to assert their rights, and an action ensued with the

small fleet of the united Epidamnian and Corinthians, in which the Corcyrians claimed the victory, and in this stage of the contest applied to Athens for assistance. At about the same period the Corinthians also sent ambassadors to Athens on the same business. This humble appeal was highly gratifying to the Athenian pride; and was regarded as an acknowledgment of that supremacy over the minor States of Greece for which she had so often contended. She is presented to us at this time as at the height of her glory and her power; and as those who guided her councils had only exercised that moderation in her prosperity which had elevated her to her present situation, doubtless she had long retained it. But the Constitution of the Attic government was totally changed; the power of the Nobles and the wealthy was extinguished; whilst the people and their demagogues wielded, with their violent but unsteady spirit, the whole of her invaluable resources.

The Athenians made a hasty defensive Treaty with the Corcyrians, which ultimately involved them in the whole issue of the war. At first they sent only ten galleys to Corcyra, under the command of Lacedæmonius, the son of Cimon; a circumstance which, together with the paucity of the force employed, is wholly attributed in the jealousy of Pericles, lest the family of his late glorious rival should be possessed of undue power. The opinion of Thucydides, however, is opposed to this construction of the fact. He says that this small armament was sent, because it was the wish of Pericles that the Athenians should rather look on whilst the contending parties were wasting each other's strength, than that they should themselves mingle in the conflict. The reinforcements, however, which afterwards sailed from Athens to this war seem to contradict this opinion; and it is by no means inconsistent with the character of this crafty Statesman, that he should have intended Lacedæmonius, with his small armament, to miscarry in his expedition; and that the after-reinforcement should arrive in time to retrieve the glory of the Athenian name, but not to prevent the first Athenian leader's disgrace.

The war soon became vigorous on both sides. The Corcyrians, with ten Athenian ships, commanded a naval force of one hundred and twenty vessels, while the Corinthian fleet, with that of their allies, amounted to one hundred and fifty sail. When the two fleets came in sight of each other, the Corcyrians complimented the Athenians with the honourable place of the right wing of the battle, and dividing their own force into three distinct squadrons, immediately sailed into action. The Athenians at first appeared to engage but coldly in the conflict, but their allies, the Corcyrians, being nearly beaten, they fell boldly on, and compelled the Corinthians, before almost masters of the day, to turn their attention entirely to their own defence. Both parties ultimately retired from the combat claiming the victory, and prepared for a fresh encounter on the following day. In the morning, accordingly, they again drew out in order of battle, when the Corinthians suddenly retired, making full sail homeward from the scene of action. Soon after, the appearance of a reinforcement of twenty sail, sent by Pericles from Athens, and which had been first discovered by the Corinthians, joined the allies, and well accounted for the flight of the enemy. In the extremely doubtful

Athena at
war with
Corinth.

Biography. issue of this battle it appeared that 1000 prisoners were made, and seventy ships of the enemy sunk by the Corinthians, who lost thirty vessels and very considerable spoils. This action was remarkable as the largest sea-fight that ever took place between the rival States of Greece, for no less than two hundred and seventy vessels were engaged in it.

But the evils of this imprudent interference of the Athenians began now to be seen. In consequence of the Corcyrian alliance, and about the time in which it was completed, the Athenians issued an order to Potidea, a Macedonian town acknowledging their supremacy, to demolish its walls; to send back certain officers whom they had received from Corinth, and to give hostages for their good conduct. Potidea, although an ally of Athens, had originally been a colony of Corinth, and thus arose the jealousy which occasioned these harsh and peremptory orders. Symptoms of universal hostility to Athens now appeared in the States around. The Corinthians and their allies, as may readily be supposed, were much irritated, and prepared means for revenge; the oppressed Potidea were strongly instigated to revolt; and Pericles, King of Macedonia, who had some time since been at open war with the Athenians, now gladly seized on the opportunity afforded by their rashness to distress them, by exciting and assisting the malecontents. The Potideaans, however, deputed ambassadors to Athens to deprecate the harsh orders which had been sent them; but in the mean time, and to prepare for the worst, they also sent messengers to Sparta entreating support; and there they met the Deputies from Corinth, and its ally Megara, on the like business. By these loud and general complaints Sparta was at length roused to head the conspiracy against Athens, and the universal and fatal flames of war shortly afterwards broke forth throughout Greece.

This war resulted in general hostilities in Greece.

Internal state of Athens.

In the mean time, the domestic affairs of Athens present the character of Pericles in no amiable point of view. Avowedly at the head of a violent and factious Democracy, there was yet one man, the celebrated Thucydides, who presumed to contend against his tyrannical exercise of power, and disputed both the legality and the policy of his actions. This patriotic conduct rendered the longer presence of Thucydides intolerable in Athens, and Pericles resolved to punish him by means of the ostracism. The question proposed was, whether Thucydides or Pericles were to be banished, and it was soon decided by the Democracy in favour of their darling leader. A second circumstance happened about the same time to develop and disgrace the character of Pericles. Hermiphus the Tragedian accused Aspasia, the courtesan and especial favourite of Pericles, of impiety to the gods, and of acting as a pander to the libidinous pleasures of her protector, in the seduction of many wives and daughters of the citizens. The day of trial arrived, and Pericles himself, mounting the tribune, spoke at large, and with many tears, in her defence; a circumstance never remarked of him on any other occasion. Aspasia was acquitted by his exertions, but about this time various indications of the decline of his public influence appeared. The storm was gathering over his Country from without, and, irritated and alarmed at the threatening prospect, no little discontent and dissatisfaction with their leaders appeared amongst the

people at home. Anaxagoras the Philosopher, the friend and tutor of Pericles, was the first to feel the popular displeasure. Diopithes (hitherto an obscure individual) moved for a decree to declare it criminal to conceal from the people information of any persons teaching doctrines subversive of the National Religion, under the colour of professing Natural Philosophy. The force of this decree was not designed to expend itself on the master, Anaxagoras, but was evidently levelled also at Pericles, the disciple. To quiet the public mind under these circumstances, Pericles dismissed Anaxagoras from Athens, but attended him to the gates with every mark of personal respect, and professing undiminished friendship for him. Suidas, however, states positively, that the punishment of imprisonment fell upon this Philosopher, and that Pericles pleaded his cause in vain. To this indirect disgrace of Pericles followed the motion of Dracontides, in a public assembly, that the Chief should immediately bring his accounts before the people, which he was fortunately able to do, with the utmost clearness and confidence; shortly after which he was again attacked in the person of a friend, Mecon, a superior workman employed by Phidias, whose intimacy with Pericles was well known, accused that celebrated statuary of having purloined the gold which had been consigned to him for enriching the statue of Minerva. This latter affair involved the integrity of both the friends; for the statuary had worked under the especial direction of Pericles, and had carved on the shield of the goddess the figure of the chieftain in combat with an Amazon. The issue, however, was most creditable to both; Phidias was able to take off the gold from the statue without injury to the main figure, and it proved to be of the full weight and value first delivered to him; thus justifying the selection of his patron, and exhibiting an unexpected triumph of his art.

It is generally supposed that Pericles had been successfully endeavouring to regain some portion of his usual influence over the people, while ambassadors from the different States of Greece were exciting the Lacedæmonians to retaliation and revenge for the late haughty conduct of Athens. Certain Athenian Deputies happening to be at Sparta on other affairs, the magistracy of that State professed to give a fair hearing to both parties. The result of their deliberation was a message to the Athenians, containing the following requisitions: First, that all those Athenians who had sprung from the family of Megacles, a race declared execrable by their own law, on account of the attempted usurpation of Cylon, should now be exiled from their city. This injunction was directly pointed at Pericles, who had been universally denounced as the author of the late Corinthian War, and was, on his mother's side, related to the family of Megacles. Second, that the siege of Potidea, which was now proceeding with great vigour, should be immediately raised. Third, that the Æginetians should be immediately freed from the Athenian domination. Fourth, that the ports of Attica should be open to the Megareans; and, fifth, that all the several States of Greece should be left, in future, free from any pretended subordination to Athens. On the arrival of these demands at Athens Pericles exerted all his eloquence and influence to obtain their rejection. He truly reminded the people that, whatever the Lacedæmonians might pretend respecting their sympathy for

Pericles.

Friends of Pericles disgraced

Message from Sparta.

Biography. the discontented and complaining Greeks, it was evident that the ascendancy of Athens was coveted for Sparta, and was the true cause of their hostile message. They had, he asserted, always hated, and now sought for an opportunity to humble, her power. That it must, however, be the fault of the Athenians themselves, if these envious wishes were to succeed in their object, for that Athens was, after all, much more fertile in warlike resources than were the Peloponnesians with the whole of their allies. He urged upon them, also, to consider, that, if their rivals discovered the least symptoms of fear in their reception of the present application, their demands would, if possible, be hereafter more unreasonable than the present; but that a steady refusal now would repress every future attempt of the kind. To avoid extremities, however, and to assume some appearance of moderation, he proposed to reverse the decree against the Megareans, on condition that the Spartans would permit free ingress and egress to their city on the part of the Athenians and their allies; to release all the Grecian cities from their obedience to Athens, if the Spartans would, in a similar manner, release their dependencies; and to leave all future matters of dispute to a fair arbitration. "This," added Pericles, "is a course both just and honourable; and if, in consequence of a rejection of each term by Sparta, a war is inevitable, let the Athenians undertake it with a vigorous cheerfulness, and they will quickly find the seeming importance of their enemies vanish before them; for from the greatest extremity arises to the State and its leaders, as well as to each citizen, the greatest honour."

The reply dictated by Pericles.

Confession of his faults.

The Spartanising Platon.

Some reasons are stated by Plutarch which will sufficiently account for the peculiar earnestness in which Pericles endeavoured to excite his Countrymen to this war, besides his being almost directly proscribed by the demands of the Spartans. He had been intrusted with public money to a large amount, and had at this time, according to that Biographer, real occasion to seek the cover of warlike preparations, to conceal his profuse administration of it. A family anecdote of Pericles is here related by him, as illustrative of the fact. Alcibiades, then a boy, and the son of the sister of Pericles, inquired one day of his uncle, why he was so melancholy and thoughtful; to which Pericles replied, "Because he knew not how to give an open account of his trusts." The boy, whose naacomm ebriety of intellect, as well as want of rectitude, were, even at that tender age, remarkable, readily rejoined, "Study rather, then, how thou mayest avoid to give any account of it." This story rests upon the authority of Plutarch alone; but it is certain that the second fatal contest between Athens and Sparta was mainly attributable to the exertions of this still popular chieftain.

The first actual rupture was led on by the Thebans. Six months after the Battle at Plataea, and in the first year of the eighty-seventh Olympiad, these allies of the Spartans sent Eurymachus at the head of three hundred men to leave the town of Plataea, the inhabitants of which had been zealous in the cause of Athens. Their force being small for the attack of that place, which was considered as remarkably strong, they first endeavoured to corrupt some of the Platæan guard, who, at an appointed time, opened their gates to the assailants, and in the first confusion of the people enabled them to

seize the walls and the fortifications; but, when the smallness of their number was discovered, the inhabitants rose upon them in the night, slew half of them, and took their Chief and the rest of his force prisoners of war. Not long afterwards a second party, ignorant of the fate of the first, arrived from Thebes before the gates of Plataea, to whom the inhabitants offered to release the Theban prisoners, on condition of this new force forswearing to plunder the adjacent country. In case of their refusal of these terms they threatened to put the prisoners to instant death. Alarmed at this menace, the invading army withdrew from the country, when the faithless Thebans butchered the whole of their captives, alleging that they had never made any promise of liberating them, unless their Countrymen should have concluded a formal Treaty. The news of this attempt on Plataea soon reached Athens, where an arrest of all the Boeotians then in Attica was immediately ordered; and a large supply of provisions was forwarded to the town under a convoy, which was instructed, in case of necessity, to bring the wives and children of the Platæans to Athens; measures which were found well adapted to the prevention of future evil, although success had rendered them useless in their first direction.

A general conflict throughout Greece now approached, of the danger and importance of which every party seemed aware, while the leading States of Sparta and Athens were totally engrossed in preparations for it. Messengers were dispatched on all sides to summon the several allies of the rival; and even their common enemy, the Persian King, was now solicited by each to oppose the ambition of the other. The great majority of the Grecian cities declared in favour of the Spartans, not only because the authority of that people was the more ancient and better established, but on account of the despotism with which the Athenians had exercised their recent power. So universally was this latter argument acknowledged, that the Spartans assumed the title in this war of "the deliverers of Greece;" and amongst their allies they included all the Peloponnesians, except the Argives and part of the Achæans, who professed themselves friendly to both parties. The inhabitants of Peloponnesus, also, ranged themselves, at the beginning of this war, on the side of Sparta, and all the other Achæans joined them shortly after. Beyond the Peloponnesus they had obtained the alliance of the Megareans, the Phocians, the Locrians, the Boeotians, the Ambraciots, the Leucadian, and the Anactorians, Coriouth, Megara, Sicyonia, Peloponnesus, Elea, Leucadin, and Ambracia supplied them with ships for the war; whilst Phocia, Boeotia, and Locria furnished horsemen; and the foot-soldiers were raised from the other allied States. On the Athenian side we find the Chians, the Lesbians, and the Platæans, and those of the Messenians who inhabited Naupactus; most of the Acarnanians; the Cerycians, and the Zacynthians. To these must be added those Carians who inhabited the east-coast; the Dorians, the Ionians, and several other minor towns, particularly those of Threace: the islands lying on the East, betwixt Peloponnesus and Crete, and all the Cyclades, excepting Melus and Thera. The Chians, the Lesbians, and the Cerycians furnishing shipping; and the other States indiscriminately horse and foot-soldiers and money. It must, however, be

noticed that, although this statement is taken from the accurate pages of Thucydides, who himself was contemporary with these events, it omits the States of Eubœa and Samos, which we shortly afterwards find in the Athenian alliance.

The Lacedæmonians were in great haste to assemble their allies on the Peloponnesian isthmus, in first force, not long after the affair at Platœa, and with the avowed intention of invading Attica. Here Archidamus, the Spartan King, and Commander-in-chief, advised the allies to proceed with great circumspection, notwithstanding their immense strength, and to send a herald to Athens, requesting to know if that city still abode by its former haughty propositions. The messenger returned without having been granted an audience, and the invading army advanced for its original purpose;—Archidamus, with the main body, into the heart of Attica, whilst the Bœotians, at the same time, invaded the territories of the Platæans.

On the other side, the Athenians collected their strength to stand on the defensive. Pericles, as he had been the principal promoter of the war, now became its chief director. He caused the inhabitants to convey all their valuables into the city, and to busy themselves, night and day, in fitting out their ships.

Resources of Athens.

He cheered the people with assurances of their resources, stating the yearly revenue of Athens to amount to six hundred talents of tribute only, besides other annual dues and imposts; six thousand talents of silver, he said, lay ready coined in the castle, and five hundred talents more in bullion and plate. Their army be reckoned at 19,000 foot and 1200 horse; 6000 foot archers, and a great number of bow-men on horseback; while their navy comprised three hundred ships ready for sea. With all this array of power, Pericles, however, thought it prudent to keep within the walls. To disarm all suspicion of himself, and fearing that, as Archidamus advanced into the country, that General would be induced, by a former friendship between them, to spare his estates, whilst he ravaged all the rest of the country, Pericles assigned all his lands to the Public, and flattered the people by advocating several extravaganzas and unjust laws in their favour. Complaints against his administration, however, silently spread; his very friends were obliged to acknowledge him the principal instigator of the war, and he was now called upon to attempt a bold effort to regain his reputation, by repelling the enemy from under their walls. But Pericles, aware of the inferiority of his strength, continued firm in his plans, alike amidst threats and entreaties: he still refused to venture a battle by land, and when pressed for his reasons, he exclaimed, "Trees when cut down may sprout out again, but men once lost cannot be recovered." This prudent Chief well knew wherein the best force of the Republic consisted: he equipped a fleet of a hundred galleys, which he despatched with others to ravage the Peloponnesian coasts as occasion offered; and, carrying on a war of retaliation, eventually distressed the enemy by his expeditions more than they could reduce the Athenians by their present mode of warfare. This fleet was shortly afterwards joined by a squadron from Corcyra; whilst another was commissioned against the Locrians. The land force from the latter armament took Theurium, and pillaged Ægina, as one of the principal causes of the war; and, thinking it a convenient station

Cautious conduct of Pericles.

for the future increase of the Athenian power in this direction, they left there a respectable colony of Athenians. Thus the Lacedæmonians, although the first to attack and to distress their rivals, had, at the end of the year, little reason to boast of their success. The immovable prudence of Pericles compelled them to retire from Attica through Bœotia, and here the invaders separated in their several cities. No sooner had this transpired, than Pericles assumed the attitude of a conqueror. Placing himself at the head of his best troops, he made a rapid incursion into Megara, which he considered as the chief fœnestake of the war, and plundered it unsparingly throughout. During the winter, the bodies of those who had been slain in the war were interred with the usual solemnities, and Pericles himself pronounced the accustomed Oratio.

The next year brought with it a renewal of hostilities The Plague between Sparta and Athens, conducted upon the same at Athens, principles as the last campaign. But a truce more direful than war now afflicted Athens. The Plague raged amongst the citizens with the most tremendous fury, sweeping off great numbers of the people daily, and at last reaching the family of Pericles. Yet was this Chief himself reserved awhile, amidst the distresses of his fellow citizens and his own, to guide the councils of his Country with his usual prudence and fortitude. When Archidamus again invaded and ravaged Attica, the Athenians were once more restrained by the influence of Pericles from venturing upon the unequal combat offered them; whilst with a hundred Athenian ships and fifty auxiliary sail, supplied from Chios and Lesbos, he embarked himself for the Peloponnesian shores, and well sustained the honour of the Athenian arms. Archidamus and his invading army, in order to repel these incursions on their own territories, were obliged at length to retreat from Attica without fighting, while Pericles and his armament withdrew as the enemy advanced, and retired unmolested in their homes. He then sent a large force under the command of Agnon and Cleopompus against Chalcis and Potidæa, the latter place having still held out against the Athenian force.

Here the Plague wasted the troops of the Republic to no great an extent, that out of 4000 men but 1500 were returned to Athens. The citizens now sent an embassy to Sparta, praying for Peace, and, being absolutely refused, oppressed with the double attack of war and pestilence, they rose in violent tumult against Pericles, as certainly the cause of the one evil which afflicted them, if not, according to their superstitious opinions, the author of both. The eloquence and the usual artifices of this experienced Statesman could not now, for the moment, avert their rage; they fined him eighty talents, and dismissed him from his offices of trust and honour. The domestic concerns of Pericles became also at this moment most afflictive. His son, Xanthippus, a profligate youth, quitted his house, and renounced his authority because he could no longer be supplied with money for his extravagancies, and gave out, to conceal the true cause of the quarrel, that he could no longer bear to see his own wife contaminated by the vices of his father. The Plague, which still raged in Athens with unremitting fury, ended this unusual dispute and the life of the thoughtless Xanthippus by the same stroke. Shortly after, and by the same disease, perished the sister and the greater part of the family of Pericles, and, lastly, his only remaining legitimate

His ravages in the camp.

And in the family of Pericles.

Biography. son, *Pericles*. The afflicted parent is said to have burst into convulsive grief on placing the accustomed chaplet of flowers on the head of the corpse, and his noble spirit seemed now utterly overwhelmed. Then it was (and the measure, perhaps, is partly accounted for by the sympathy of the citizens for the calamities of this distinguished Chief) that he was restored to the honours of which he had lately been deprived, and succeeded to more absolute power than ever. By the persuasions of Alcibiades and others of his friends, he came forth from the retirement to which he had despairingly abandoned himself, again to receive the ready acclamations of the people; and a proof of his undiminished influence is afforded by the law which was immediately passed, permitting him to register his son of half Athenian blood amongst the free citizens of Athens, in his own name, in contradiction to the decree formerly proposed by himself.

The Peloponnesian War proceeds. During these transactions in Athens, the Peloponnesians sent a fleet of one hundred galleys against the enemy, and overran the island of Zacynthus. The Lacedæmonians also deputed ambassadors to entreat assistance from the King of Persia, and to Sytales, King of Thrace. *Padocur*, the son of this latter monarch, being a citizen of Athens, ventured to break, on this occasion, what had hitherto been considered as amongst the most sacred laws of hospitality and civil polity—he seized the Spartan ambassadors, and delivered them over to the Athenians, who immediately slew them, in alleged revenge for the slaughter of some of their citizens, who had been put to death by the Lacedæmonians while pæcably employed in the Peloponnesus. During the winter of this year the Athenians sent a fleet of twenty ships, under *Melesander*, to *Caria*, *Lycia*, and some other places, to collect resources, in which expedition this officer was accidentally slain. It was about this period too that *Potides*, wearied not with famine, at length equitulated to the Athenian arms; the men of the town being allowed to leave the place with one garment each, and the women with two. The city, being emptied, was replenished with a colony from Athens, and thus closed the second year of the Peloponnesian War.

Third year of the war. The third year of this fatal conflict was consumed in the tedious and ineffectual siege of *Plataea* by the Peloponnesians. *Archidamus*, with a large army, invested the town, and laid waste the country round it. The *Plataeans*, at one time, offered to capitulate, but as they were required to abandon the city and the cause they had undertaken, and not to return to their Country until the termination of the war, they consulted their allies, the Athenians, on the subject, by whom they were strengthened in their determination to continue an obstinate defence. *Archidamus*, on the refusal of these terms, reëmboldened his efforts of attack, and succeeded in setting fire to the town, the greater part of which was burned to the ground; but the *Plataeans*, making several sallies, and having cut off many of the besieging army, *Archidamus* turned the siege into a blockade, and, leaving a sufficient number of troops to man the entrenchments, returned with the remainder of his force to Sparta.

In the latter end of this summer, the Plague which had so severely afflicted Athens proved fatal to its Ruler. *Pericles* sunk under it, in the unusual manner of a slow consumption. The affecting circumstances of his death have been carefully preserved by *Thucydides*. Some of his elder friends, the first people of Athens, attended him at its approach, and conversing him, in the last extremity, to be insensible of their conversation, talked freely with each other on his character, and mentioned several circumstances in his praise. The dying *Pericles* suddenly appeared to recover, and interrupted them, by expressing his surprise that they should insist upon those actions of his life which were rather vain-glorious than useful, and in which fortune had so large a share, whilst they had forgotten to mention the greatest feature of his administration, that no citizen of Athens ever had cause to put on a mourning garment through him. These were the last words of this great Athenian.

As a Statesman and a warrior, the talents of *Pericles* have never been questioned; as a man of learning, and a patron of the Fine Arts, he was equally eminent. Swayed principally, perhaps, by private interest, he appears to have induced his Country to begin a war fatal in its issue; but for the events which occurred after his death he cannot be thought responsible, and they only proved that the man who advised the measure was he alone who was capable of directing it. With the literature of the day he was eminently acquainted, from his early studies under *Anaxagoras*; and an anecdote has been preserved respecting his scientific knowledge, which is not without its interest. On the embarkation of a certain naval force, commanded by *Pericles*, the pilot, terrified by what he deemed the unlucky omen of an eclipse of the sun, prognosticated defeat and misfortune. The Chief, perceiving this dismay to spread, suddenly pulled off his cloak, and, muffling the pilot's face with it, asked him if that were terrible and disastrous? "No," said the seaman. "What difference then," said *Pericles*, "do you make betwixt one darkness and the other? they both proceed from a like cause; only that which shades the sun is a larger body than the cloak which covers your eyes." This plain remark aroused the spirits of the pilot, and of the crew, and the expedition proceeded without interruption. The friend and patron of *Phidias*, he won the title of *Olympius* from his magnificence and splendour in the Fine Arts. But these great and shining qualities were sullied by prominent vices. *Pericles* was sensual and dissolute in his pleasures, vain-glorious, envious, and devoid of integrity in his politics, and frequently mean and selfish in domestic life. In his prosperity he is said to have abandoned *Anaxagoras*, his tutor, until that Philosopher, in despair, took the resolution of starving himself to death. It must, however, be confessed that, although he wanted the firmer virtues of *Aristides*, and the nobler soul of *Cimon*, *Pericles* yet threw a splendour of meretricious greatness about his very vices, and exercised the power with which he was invested with moderation and with great dignity.

In presenting to our readers such details as are to be collected respecting the Sculptors and Painters of ancient Greece, we shall not enter into a scientific examination of the Arts of design, nor pursue, with antiquarian minuteness, their history. These objects will be most properly reserved for the general Essays on SCULPTURE and PAINTING, while it will be necessary here only to trace the progress of these embellishments of life, and to develop their principles so far as they have been affected by the national feelings of the people among whom they were first practised, or have influenced and moulded the character of mankind.

Although the Fine Arts are not necessarily progressive after they have attained a certain degree of excellence; and although, after they have become the modes of the development of genius, their advances are singularly rapid, we shall find their first hints and beginnings rude, and bearing scarcely any resemblance, even in kind, to that excellence to which they have afterwards given occasion. Painting and Sculpture scarcely bore any appearance of Fine Arts until long after their origin. The earliest traces we can discover of them have reference, indeed, to the purposes of Religion, to the preservation of mystic truths, or to the solemnities of burial. But although the Arts were employed on the most serious and interesting occasions, they were nevertheless, prospective of objects intrinsically trifling or gross. The first, the very simplest nature they assumed, and the direction they were intended to embody, often occasioned the completion of monstrous and unwholesome forms. So long as nations are destitute of a refined and delicate sense of the beautiful and the harmonious, the representations by

which they perpetrate or boldly forth the ideas of their Superego or Philosophy will in themselves be merely grotesque, if not harsh and revolting. Even the most elevated truths will give occasion to the most hideous images, if a previously-formed taste do not provide for them elegant and graceful memorials. Thus the Indians have employed a figure with three heads to express the three great operations which they ascribe to the Divinity—creation, preservation, and destruction. Abstract Truth, however noble, will not become visible in the form of beauty, without the aid of a plastic imagination to trace out its nice resemblance to the exquisite in the material world, and to mould images which may become its glorious vehicles. On the contrary, the imaginative faculties triumph by lending grace to the most gloomy views of humanity, making sorrow gentle, affliction serene, and death seem placid, and life itself immortal. Mortality, when personified as a beasty spectre, has been represented under the most beautiful forms—as a pale, but lovely female—as a smiling angel of deliverance—and by a Poet of the boldest and gentlest imagination, as “a shadow thrown softly and lightly from a nascent cloud.”

We find scarcely any traces of the Arts of design in the remains of the vast monarchies of Assyria and Babylon. The wonderful buildings, of the extent of which we read so much that borders on the incredible in the accounts of their Capital cities, do not appear to have been adorned with any peculiar taste, but were grand rather than from their massiveness and apparent durability than from the character of their ornaments, or the exactness of their proportions. Even amidst the luxuries of the Persian Empire, Painting and Sculpture

Arts of
design in
Assyria and
Babylon :

Biography. ture seem to have made very insignificant advances. That rich and prodigious monarchy, with all its stores of wealth, and the profusion of its barbaric magnificence, was compelled to yield to the small Republics of Greece, as truly in the production of beautiful forms of Art as in deeds of military prowess.

Far richer in the curious, at least, if not in the beautiful, are the obscure annals of Egyptian Art. The wisdom of that wonderful people who inhabited the fertile banks of the Nile—the ideas of the Divinity and of the destinies of Man, which had been gathered either by traditions from the sons of Noah or from the deep meditations of Sages—the early discoveries of the Astronomers, and the wild dreams of Magicians—and the great events of their far-reaching History, were all expressed in some strange, yet appropriate symbols, which remained the objects of mysterious wonder or of superstitious adoration when their primitive meaning was forgotten. These, as far as we can trace any vestiges of their form, had little of intrinsic beauty. The strong and vigorous imaginations of the elder time impressed the stamp of reverence on the most uncouth, and even frightful symbols, and required no grand or harmonious forms to inspire veneration. But, perhaps, the choicest and most curious of Arts in Egypt are to be found in the repositories of the dead. It seems to have been the popular belief that the spirit, when separated by death from the body, previously to its passing into other forms, hovered round its former tenement so long as it could be preserved from corruption, but quitted it as soon as it was reduced to dust. Anxious, therefore, to preserve even this frail and partial link of connection between their earthly and their spiritual nature, the Egyptians not only embalmed their dead, with a skill which is now lost amidst the ravages of time, but placed them in costly sepulchres, arrayed them in curious vestments, and exerted all the Arts of which they were possessed to adorn and dignify their last abode. Their corpses, after undergoing the process of the embalmers, were wrapped in costly coverings, on which were depicted their own portraits in the freshness of life, surrounded often with the emblems of decay, or representations of the instruments by which the mortal part was for Ages to be preserved entire. These were depicted on a chalky kind of paste, which at once served to dress and adorn the corpse, and to keep from it all influence of the air from without by which it might be affected. Above these were various ornaments and devices—ribbons and fillets, hieroglyphical representations and ancient figures of some deep meaning, with a covering of linen over the breast, in various folds, on which emblematical forms were painted. The coffin also, enclosing the whole, was curiously carved and adorned with hieroglyphical forms expressive of the course pursued by the deceased in his lifetime, of religious rites, or of philosophical mysteries. The Arts thus employed seem to have been known even before the slavery of the Hebrews. Pliny informs us that the Egyptians boasted that the Art of Painting had been practised among them for six thousand years before it engaged the attention of the Greeks; and, although this assertion was manifestly exaggerated by national pride, it may serve to show that the origin of the Art was of so high an antiquity that no vestige remained of its beginning or of its founders. The Patriarch Jacob, as we are informed in Holy Writ, was embalmed by the

physicians; and of his pious son we are more minutely told, that "they embalmed him, and he was put into a coffin in Egypt." It cannot, indeed, be hence concluded, that all the Arts of adorning, as well as preserving the dead, were then practised as in later times; but we may, at least, discover the early traces in the concise memorial of the Hebrew sojourners. We find, from Herodotus, that the ancient modes of interment, or rather of preservation, were lost at the time of the expedition of Cambyses, in the year of the world 3430, by the forcible introduction of Persian manners, and the total extirpation of the Priesthood, to whom the knowledge of the Arts of burial was sacredly confined. All the bodies, therefore, which have been discovered in modern times were deposited previously to this early period, and have, with their fantastic but significant ornaments, withstood the desolations of Time, to which the mightiest structures have yielded. It is worthy of observation, that there is a nearer approach to the beautiful in the flowers of mortality thus surrounding the dead, than in any other relic of Egyptian ingenuity and wisdom, as though the mind had been involuntarily directed to soothing and gentle fancies, by the tenderest and softening recollections which the instances of our common destiny revive within us.

In the Old Testament we find very early mention of the graven as well as molten images. Of the latter de Jova, scription, it is probable, were the gods of Laban concealed by Rachael, and the idols of Terah. We have no means, even of conjecture, as to the degree of symmetry preserved in these efforts of superstition, the nature of the moulds in which they were cast, or the instruments by which they were fashioned. The children of Israel, during their bondage in Egypt, doubtless became acquainted with the Arts then in use, which were not exclusively employed in the services of Religion or in the rites of burial. In the wilderness, their workmen were immediately inspired by God to complete the marvellous symbols of his worship, and the seat which he designed to honour with his immediate presence. The more stately and gorgeous Temple of Solomon also was built after the pattern prescribed to David by Jehovah. Thus the Arts of Architecture and of Sculpture derived, in a peculiar manner, a right to be regarded as divine; but we are not, therefore, to conclude, that the works thus directed by the finger of Heaven were, in themselves, the most exquisite productions of Art. They were designed for loftier objects than the mere exhibition of material beauty;—they referred to things unseen and eternal. Hence grace of form was regarded as subordinate to the secret meaning, or rather became totally insignificant when compared with the vast designs of Almighty wisdom, which the ceremonials were intended to prefigure. Who could think of the workmanship of the ark, or the forms of the cherubim, when the glory of God was vainly resting over them?

The Arts of design, with other ornaments of life, were doubtless introduced into Greece by the early settlers from Phœnicia and Egypt. It is perfectly manifest that Sculpture must have been practised in the Age of Homer, as we find allusions even to minute and curious workmanship in his Poems. Of this kind the most remarkable instance is the description of the shield of Achilles, which some, however, have considered as an interpolation by a more recent hand. Reference is

The early Sculptors of Greece.

From A. M. 3004, to B. C. 1000, to A. M. 3604, to B. C. 400.

Introduced from the progress of Greek Sculpture.

Biography, often made in the embroidering of figures in tapestry, and even to the representation, through this means, of a whole series of events, as the siege and destruction of Troy. Shields and bucklers, if we regard the testimony of the Poets, were constantly adorned with various figures in bas-relief, even in the Heroic Ages. Virgil represents *Æneas* as being deeply affected by observing, at Carthage, representations of the fortunes of his Country; but he would scarcely have suppressed a beautiful episode because it was inconsistent with the manners of a remote Age, after the more striking instances in which he has ventured to deviate from æsthetic History.

As the desire of bodying forth abstract ideas in symbolic forms tended to produce scarcely any images but those of deformity among the Egyptians, we may probably conjecture that the first efforts of the Greeks in Sculpture, who derived all the principles of their knowledge from Egypt, were retained by similar causes. In the poetry of *Hesiod* and *Homer*, we are started occasionally by mythical representations, in themselves, if realized, disgusting, which had reference to philosophical views of the Moral or Physical world. *Briareus*, with his hundred hands, the emblem of activity and strength,—the odious fable of *Saturn* devouring his children, by which it was intended to shadow forth the perpetual decay and renewal of the foliage and the verdure, by the constant operation of nature,—the passage in the *Iliad* where *Jupiter* refers to a chain by which the united deities could not drag him down, but by which he could raise them to *Olympus*, which has reference in the mysterious connection that links all creatures to each other, and the universe to God,—and that in which *Juno* is reminded how she was once suspended from the firmament, with hands bound and weights affixed to her feet, in which *F. Schlegel* supposes the vaulted covering of the sky to be personified, and the Poet to refer to some hieroglyphical carving in one of the Temples,—have been adduced, by the author just mentioned, to prove that symbolical images are hostile to the beauty of imitative representations.* They will also serve to show that such attempts at mere personification, with regard only to philosophical purposes, had an unfavourable influence on the plastic Arts in the earliest Ages of Greece. But the genius of that happy land soon triumphed over every obstacle. Its exquisite faculties were rapidly unfolded into the fullest and the richest bloom. The old Mythology, in so far as it was rugged and anguine, was moulded into beauty, and a soft yet rosy hue of youth diffused over it. A people who were as fitted to enjoy as they were to conquer—whose eyes were ever eager to drink in new loveliness—whose ears were open to the most delicate of creation's harmonies—whose sense of delight was ever unsated, and fresh for the reception of the keen and shivering raptures which the glorious efforts of genius were capable of imparting—would scarcely be satisfied till that poetical atmosphere was unsullied from which they imbibed earthly joys. In *Sophocles*, therefore, whose life comprised the era when Grecian freedom, literature, and Art were all in their utmost perfection, we do not find a single image which breaks the harmony, or even unduly raises a single emotion to the injury of

the general and pervading sentiment. We have seen already how Poetry became the pure and living mirror of the statuary's Art,* and the causes which thus influenced the creations of the bard even more directly incited those of the Sculptor. Indeed the triumph of the latter was more complete, because Poetry, in becoming allied to the plastic, lost in perspective, while it gained in precision; but Sculpture, confined in its very nature within exact boundaries, obtained the most splendid and undimmed victory.

The Grecian Sculptors not only derived the highest advantages from a Religion which disposed men to embody all the charms of nature in definite forms, and from a cast of mind requiring for enjoyment the distinctness of beauty rather than the visionary and the dim, but had all the benefit of studying the human frame in its most perfect freeness, elegance, and grace. Not only were the Greeks beautiful by nature, but the course of their lives, even from earliest infancy, was calculated to improve the form. The public exercises gave, in addition to the polished manner and elevated attitude of a citizen of the most glorious State on Earth, something of the wild and airy grace of an Indian bounding in the chase, or of a stag delicately pacing through his native forests. The women, although too barbarously confined to domestic employment to excel in the expression which mind alone can kindle up in the features, were of a high and pure style of beauty, noble in outline, glossy and ethereal in complexion, and perfect in the finishing. The materials for the workmanship of the artist were of the most appropriate and beautiful kind. Earth and clay, at first employed in framing statues, soon gave place to the white marble of *Paros*, and this yielded, in its turn, to that which was veined and spotted, and to jasper. According to *Pliny*, the artists had the power of even mingling different metals to produce fine and delicate shades, and thus to assist in expressing various passions and sentiments by a diversity of colours.

Admirable, however, as the models which nature afforded to the Grecian artists were, they did not rest contented with taking exact representations even of the most august or beautiful forms. Their sense of the beautiful lay too deep to allow them to be satisfied with any thing visible in the world of external nature, and they thought and brooded over the idea of perfection in shape, which they found in their own imaginations, till they were capable of presenting it palpably to "enchant the world for ever. Hence their noblest productions have given intimations of a beauty more complete than Nature herself, in the fairest of her works, has supplied. This triumph of Art is one of the most striking proofs of the natural immortality of Man—of the high origin and glorious destiny of our species. We have left us monuments that can never perish, which show that in the human soul there is a sense of loveliness, beyond even that everywhere exemplified in the wonderful embellishments of this our material abode—that, admirably as the Earth and the human frame are constructed, there is in the heart of Man a reaching forth after beauties and sublimities, still more astonishing and harmonious than are to be found in these stupendous works; and that so far is our nature

Biography. from partaking only of the qualities of matter in its grosser sense, that it has a power of forming and moulding its particles into symmetry and grace, which no individual object of nature can rival. In the highest works of Art, the goodness and the power of Him who formed the soul of the workman are, to a philosopher's contemplation, more signally displayed than in those things of which He is the more immediate author; because these are manifestations of that genius which He has breathed into the spirit, and which evinces, in all its aspirations, a constant struggle towards that state which shall reveal the eternal and un fading beauty of the soul, which, even here, entices occasional glimpses. But it is time to advert to the personal history of those artists of Greece, whose wonderful achievements have called forth the preceding reflections.

Dædalus is the first name we meet with among the Sculptors of Greece. The adventures and the works attributed to him are so marvellous, that it is exceedingly difficult to ascertain how far any statement respecting him is worthy of reliance. As he flourished in the remote period of 1000 years before the Christian era, it is probable that his inventions so astonished the ignorant spectators of their effects, that they believed him something more than mortal, and readily gave credit to every wonderful tale related concerning him. We are told that he was descended from Erectheus, King of Athens. From the intimations which can be collected respecting his works, there seems no reason to conclude that they were distinguished by peculiar symmetry or grace, or, indeed, that they were admired for any of those peculiar excellences which were so conspicuous in the later style of Grecian Statuary. He was a mechanist rather than a Sculptor—at least so far as the latter term implies a possession of the loftier inspirations of the Art. We are not told of the monuments of his skill as exquisite in beauty or as awful in grandeur, but as astonishing from the curious mechanism by which they were constructed. He was less celebrated as the framer of goddesses and of heroes, than as the contriver of moving statues, the architect of labyrinths, and the inventor of wings. He is said to have discovered the properties of the wedge, and other important instruments, to have applied glue in purposes of building, and to have given masts and sails to ships. It is, however, scarcely probable that all these great improvements in the most useful Arts were made in the space of a single life, but it is rather to be supposed that, as the Greeks are said to have attributed the sets of many ancient heroes to Hercules, so they have ascribed the inventions of a train of artists to Dædalus, especially as we find no celebrated name in the annals of the plastic Arts for Ages after him. The details given of his life are evidently, in a great measure, fabulous. He is said to have become jealous of his nephew, who seemed fast advancing to an equality with himself in ingenuity and skill, and to have been guilty of the crime of putting him to death by throwing him from a widow. For this offence he was condemned by the Court of the Areopagi, at Athens, but whether to death or only to exile authors are not agreed. In consequence of the sentence, however, he fled, with his son Icarus, to Crete, where he was hospitably entertained by Minos, the reigning Prince, and was employed in the exercise of his favourite Arts. Here he erected the celebrated Labyrinth, which afterwards became his prison;

for, in consequence of his having lent assistance to the Queen, Pasiphaë, in her scandalous amours, he was confined there, with his son, by order of the King. He is said to have effected his escape from this place by wings, made of feathers and wax, by the aid of which he, together with Icarus, took flight from his summit. The latter, soaring too near the sun, found his waxen pinions melt, and fell into the sea, which, from his death, was denominated Icarian. But Dædalus, more prudent, arrived in safety at Cumæ, where he erected a temple, and thence departed to Sicily. In this island he was courteously received by Cocalus, King of part of the Country, and repaid his hospitality by adorning the cities with his works, some of which were remaining in the time of Diodorus Siculus. Minos, in the mean time, resolved that the object of his revenge should not ultimately escape him, and, therefore, commenced warlike operations against Cocalus for having afforded him an asylum. This step succeeded; for the Sicilian King, afraid of the power of Minos, caused his guest to be murdered, in order to deliver his Kingdom from the impending danger. The false respecting the mole of the flight of Dædalus from Crete has been explained to signify, that he escaped by means of a vessel with sails, which, if misused before, might, in that Age, well be regarded as a description of wings. That part of it which relates to the death of his son is manifestly invented by the Poets.

It appears that Dædalus wrought, for the most part, in wood. He seems, however, to have occasionally made use of metals, which were employed as materials of Sculpture in very early periods. Pliny informs us that he left two brazen figures of youths drying themselves after bathing. He is said to have introduced quicksilver into the cavities of some of his images, so as to cause them to assume grotesque notions and attitudes, which would, of course, be attributed, by those who were unacquainted with the artifice, to supernatural powers. It appears that, in comparatively modern times, there were works ascribed to Dædalus in existence. A noble portico to the Temple of Vulcan at Memphis was shown as his workmanship. Pausanias affirms that nine of his pieces were remaining in Greece in his age, which were rude and destitute of grace, but had an impress of divinity upon them. The chief of these seems to have been a wooden Hercules, which is repeatedly alluded to by Pausanias. As there are several small bronzes now in existence which represent this hero, with every appearance of the rudeness of great antiquity, it is not impossible that they may be copied from this old relic of the earliest of the Grecian Sculptors. A horn, in white stone, of youth and girls dancing hand in hand, was alleged by the Gossians, who possessed it, to be his work, and the same is mentioned in the eighteenth book of the Iliad. Endeus, his pupil, made a statue of Minerva, which Pausanias saw in the Acropolis at Athens.

After Dædalus and Endeus, scarcely any celebrated name occurs in the annals of Grecian Art for a very long period. At length, **Dryander** and **Styllis**, both natives of Crete, in the year before Christ 776, are said first to have executed works in marble. Before this time, statues were, for the most part, made of clay or of wood, though it is certain that the Ancients had previously made use of more costly materials. Dædalus, we have seen, sometimes wrought in brass,

and Styllis

Biography. and even in stone; and from the Odyssey it is certain, that, at least in the Age of Homer, men had begun to carve out ornaments in ivory. Up to this period, the plastic Arts seem to have made very little progress towards perfection. All the first statues had the air of savage nature: the limbs appeared muscular and turgid, the loins narrow, the lips thin, the eyes small, the chin pointed, the corners of the mouth turned upwards, and the lower limbs in an advanced position; but the whole animated with a kind of wild and rude energy, the expression of bodily power and a resolute uncultivated spirit. Many of these inclinations of the infancy of the Art seem to have marked the productions of the first artificers in marble. The figures were of the same rude cast, the draperies fell in perpendicular folds, and the whole appeared destitute of ease; but there was great nicety observed in the finishing of particular parts, especially of the curls or knots, in which it was usual to represent the hair as confined. Diponius and Seyllis went to Sicily, to exercise their Art, as that place was the great workshop of Greece. Here they were employed in framing images of the gods for the ornament of the public Temples; but, after they had made considerable progress, they disputed with the magistrates who employed them respecting the terms of their remuneration, and consequently left the statues unfinished, and repaired to Eolus. Shortly afterwards, Sicily was afflicted with famine, and the people sought advice from the Oracle of Apollo, at Delphos, as to the means they should use to avert their fate. They received for answer that Diponius and Seyllis must finish the images which had been begun, and they immediately sent entreaties to the artists for aid, offering them the most liberal remuneration if they would help them. Thus incited, they returned and completed the statues of Apollo, Diana, Hercules, and Minerva; the last of which was afterwards struck by lightning. It is said, by Piny, that the works of Diponius abounded in Ambrosia, Argos, and Cleone, "in which cities a man could not see a corner without them."

Bupalus
and
Anthemius.

At the distance of forty years from the time of Diponius and Seyllis, Bupalus and Anthemius, brothers, of the Isle of Chios, became celebrated for their workmanship in marble. They seem to have descended from a family of Sculptors, as their great-grandfather Melas, their grandfather Micules, and their father Anthemius, all practised the same Art. Of their ancestors we know nothing but the names. The brothers seem, for the most part, to have wrought in concert, and to have succeeded in framing many celebrated statues. Among their joint productions was a ludicrous representation of a contemporary Poet, Hippanax, who was greatly deformed in his person, and who is said to have revenged the insult by so bitter a satire on the caricaturists, that they put an end to their lives by hanging themselves in vexation. But the account given of these artists by Piny disproves the story of this tragical catastrophe, as he represents them as not only surviving the attack of their poetical foe, but as subsequently employed in framing several famous pieces of statuary. One of these was a figure of Diana, in the Temple of Chios, which, being placed in a very elevated position, seemed to wear a frowning aspect to those who were entering, and to smile on those who were quitting the portal. These statues appear to have formed a high estimate of their own and of their

father's skill; for they placed inscriptions on numerous pieces of their workmanship, in Delos and islands adjacent to Chios, intimating that Chios was not only remarkable for its vines, which yielded fruit of peculiar excellence, but for Anthemius and his sons who made so many beautiful and curious images. They wrought, for the most part, in Parian marble. It is said that, in cutting asunder this substance in the quarry, a perfect image, as of Sileasus, was discovered by some of the ancient workmen. Bupalus, however, framed statues in gold of the Graces, which were placed in the Temple of Nemesis, at Smyrna. At Janus, a Diana was exhibited which was the workmanship of the brothers. Some of their works were in the possession of Attalus, and others were placed at Rome, on the Palatine hill, where they adorned the Temple of Apollo.

After these Sculptors, a long and dreary interval occurs in the History of the Art. We are unable to trace its slow progress until that period when a single mighty genius not only was able infinitely to surpass all that was done before him, but to raise the Art itself to a height of which his predecessors could have entertained no conception. Indeed Phidias, of whom we are now to speak, not only by his fame eclipsed the faint glimmerings of renown which attended the names of those who preceded him, but rendered all inquiry into their exertions matter rather of antiquarian curiosity than of philosophical investigation. He was the Ezechias of the plastic Arts. Like the great Tragedian, if he did not actually invent his Art, he first discovered in it capabilities for the highest expression of mental sublimity, and made it a vehicle for the development of the noblest ideas and loftiest conceptions. His forerunners appear to have done little more than to have framed the weapons, by the aid of which he was able to manifest the most awe-breathing sublimity of thought which human skill has been able to embody in definite and circumscribed forms.

This wonderful artist flourished about 450 years before the Christian era, at Athens. Nothing authentic is related respecting his early days. We find him exerting his Art at the time when Grecian freedom was in its freshest bloom, after the overthrow of the Persian invaders. It is said that he first practised the Art of a painter, and probably derived from this circumstance that nice judgment respecting effect for which he was afterwards conspicuous. He brought indeed to his profession a knowledge of all the finer parts of Science which could tend to dignify and enhance it. With the most exquisite harmonies of Poetry, and the most gorgeous fictions of Mythology, he was no less familiar than with Geometry, Optics, and History. From Homer, whose Works he must have deeply studied, he drew those images of greatness which he afterwards moulded to earthly materials with a kindred spirit. His skill in Optics is attested by a curious circumstance in his life. It was intended to place a statue of Minerva on a column of great height; and both Phidias and a contemporary artist, named Alcamenes, were employed in framing images for the purpose, the best of which was to be chosen by the citizens. On inspection, the preference was universally given to the work of the latter, which appeared neatly and elegantly finished, while that of the former appeared rude and sketchy, with coarse and ill-proportioned features. When, however, at the

Phidias
and his
School.

Genius of
Phidias.

Biography. request of Phidias, the two statues were successively exhibited on the elevation for which they were destined, all the minute beauties of his rival's work disappeared, together with the seeming defects in his own, and that image, which was before despised, seemed perfect in its proportions, and was surveyed with delight and wonder.

The genius of Phidias was highly, if not duly, appreciated by his fellow-citizens. He was employed in the delightful office of forming a statue from a block of marble found in the camp of the Persians after the Battle of Marathon, which they had brought with them as materials for a trophy of the victory they anticipated as certain. In the true spirit of a Greek, he framed hence a most animated figure of Nemesis, the goddess of vengeance, in commemoration of that disgraceful overthrow with which the impious attacks on freedom had been so gallantly visited. From the spoils taken from the same invaders, he also made a statue of Minerva for the Plataeans, the body of which was formed of gilded wood, and the face, hands, and feet of the marble dug from the Pentelic hill in the Athenian territory.

But the circumstance which, by a singular felicity not often accorded to genius, elicited the powers of Phidias, was the coincidence, in point of the time of the full maturity of his talents, with the magnificent administration of Pericles. The city of Athens having been, in a great measure, destroyed by the Persians, the opportunity was eagerly seized by this magnificent projector, of adorning it with far more splendid edifices than those which had been overthrown by the violence of the invaders. Intent on this great national design, he saw with eagerness, in the genius of Phidias, the means of giving form, shape, and completeness to the most glorious of his conceptions. He accordingly appointed this great Sculptor the general superintendent of all the public works then in progress, both of Architecture and statuary; and well, indeed, did the event sanction his choice. The buildings reared under the direction of Phidias, though finished within a short period, seemed built for Ages; and, as observed by Plutarch, had the venerable air of antiquity when overly completed, and retained all the freshness of youth after they had stood for centuries.

Of these works the most celebrated was the Temple of Minerva—the guardian deity of Athens—which was built in the Acropolis. This edifice had been previously called the Heptompedon, from the circumstance of its having measured a hundred feet square; but, after it was rebuilt, was denominated the Parthenon, being now of much larger dimensions.

Plutarch, after stating that Phidias was appointed to the general superintendence of all the public works, informs us that the Temple of the Parthenon was rebuilt by Callicrates and Ictinus. He further states, that the long wall of the city, which Socrates says he heard Pericles propose to the people, was built by the former of those Architects. It has hence been inferred by some that Phidias had no personal or immediate concern in any parts of the workmanship, but that he is excluded from a share in the work of Sculpture by the express language of Plutarch. This inference, however, seems scarcely warranted by the text, and is contrary to other evidence. It is true that the professions of statuary and Architect were frequently united in Greece, especially in the earlier times; but it is

exceedingly singular that, had this been the case with Callicrates and Ictinus, and especially had they been the authors of works so exquisite as those which adorned the Parthenon, their names should never have been mentioned by Pliny among the celebrated Sculptors of the Age of Phidias. Ictinus seems to have attained a higher eminence in his Art than Callicrates, and was employed in constructing the Temple of Phigalia while his contemporary builder was engaged in raising the wall of Athens, a work necessarily of much more massiveness than taste. The marbles of the Phigalian temple have been regarded by the most competent judges as inferior to the metopes of the Parthenon, now deposited in the British Museum, and are probably executed by a different hand. But there is no evidence that Ictinus framed even these; and, therefore, no inference can hence be drawn in favour of the hypothesis that he completed those which adorned the Temple of Minerva. It cannot, however, for a moment be supposed that all the ornaments of the latter edifice were entirely the workmanship of Phidias. It is most probable that he formed the designs for the whole: that Callicrates and Ictinus carried into effect the architectural part of them; and that Alcamenes and others, his pupils and contemporaries, executed the larger part of the Sculpture, while he occasionally touched and finished the more important figures, and overlooked the process by which his noble conceptions were embodied and rendered immortal.

All writers agree in regarding the statue of Minerva, which was erected within the Temple, as the entire production of Phidias. It was, indeed, the most celebrated of all his works, if we except the Olympian Jupiter, at Elis. Independently of the workmanship, it was of noble dimensions and of the most costly materials. It was twenty-six cubits, or thirty-nine feet in height, and formed of ivory and gold, being most probably composed originally of the former, and overlaid, at least in parts, by the latter. The goddess was represented in a noble attitude, erect, clothed in a tunic reaching to the feet. In her hand she brandished a spear, and at her feet lay her buckler and a dragon, of admirable execution, supposed to represent Erichonius. On the middle of her helmet a sphinx was carved, and on each of its sides a griffin. On the ægis were displayed a Medusa's head and a figure of Victory. This work was not only grand and striking in itself, but contained on its various parts curious specimens of minute sculpture in bas-relief, which Phidias is said to have brought to perfection. On the convex part of the shield was represented the contest of the Athenians with the Amazons—on its concave the Battle of the giants and the gods—the slippers were carved with views of the fight between the Centaurs and the Lapithæ—and on the base was figured out the fable of the birth of Pandora, with images of twenty deities. Cicero, Pliny, Plutarch, Pausanias, and other illustrious writers of antiquity, in whose times this noble piece of workmanship was in existence, speak of it with unqualified repute. After the execution of such a statue, the artist could not expect to enjoy repose at Athens. The flattering envy and hatred, which almost uniformly attended excellence in that city, speedily attended him. He was charged by Menon, one of his pupils, or workmen, with having embezzled part of the forty-four talents of gold with

The Parthenon.

Biography. which he had been furnished to decorate the statue of Minerva in the Parthenon. But Pericles, foreseeing the danger to which his superiority would expose him, had advised him so to employ the gold, that it might readily be separated from its place; and, on its being taken down and weighed, it was found perfectly entire. (See PERICLES.) This, however, was not the only charge with which Phidias had to contend. According to Plutarch, he had engraven his name on the statue in the Parthenon; but Cicero informs us, that, not being permitted to inscribe his name upon its base, he introduced his own figure among the decorations of the shield. It appears, indeed, from Plutarch's *Life of Pericles*, that he carved his own figure and that of his munificent patron on the shield, representing the former as an old man, bald headed, lifting a stone with both his hands, and the latter fighting with an Amazon, and so raising his arm, to throw a javelin, that part of his face was hidden. This circumstance was brought forward as a serious accusation against him, and, according to Plutarch, he was, in consequence, thrown into prison, where he died, as some supposed, a natural death, but, as others conceived, by poison. At least, the latter hypothesis was supported by those who wished to throw odium on Pericles, by causing it to be suspected that this event was accomplished by his connivance. The whole story, however, appears, from the greater number of authorities, to be founded in mistake, and from these it seems that the artist withdrew, in disgust, to Elis, where he framed the Olympian Jupiter. Menon, his base accuser, was exempted from taxes by a public decree, and the Generals of the Republic were ordered to afford him their especial protection. The conduct of the Athenians on this occasion, although it admits of no excuse, may be explained, in some degree, on the supposition that their envy of surpassing genius and success was heightened by their disposition to extend to Phidias part of that odium which at one period fell on Pericles. Indeed, the artist had been previously accused of suffering his house to be made the scene of the debaucheries of his patron;—though, for the honour of genius, it is to be hoped that the charge was destitute of foundation.

Animated rather than subdued by the ingratitude of his Countrymen, Phidias laboured to surpass the greatest works with which he had adorned Athens. With this view he framed the statue of Jupiter Olympius for the Eleans, and completely succeeded even in excelling his own Minerva in the Parthenon. Lucian informs us that, in order to render this work as perfect in detail as it was noble in conception and outline, he exposed it, while in progress, to the public view, and, concealing himself near it, heard every criticism made by the spectators, and profited by every suggestion which he considered as useful. This statue was sixty feet in height, and in represented, in the enthusiastic descriptions of those who saw it, as embodying the sublime picture which Homer has given of the monarch of the heavens. It is said, indeed, that when the artist himself was asked whence he had derived the idea of this grand effort, he replied by reciting the verses of the Poet, in which he represents the Divinity as assenting to the request of Thetis:

Ἦν αὖτ' ἀνέστης ἰὸν ἰππῶν νότον Ῥαῖον.
 Ἀφ' ἑλίου δ' ἄρα κέρως τριγυρῶντα δόρυ
 Ῥαῖος ἄν' ἀνέστην πρὶν δ' ἰδὼν ἄλλοιαν.
 Iliad. A. 517.

Never was bard illustrated by so noble a commentary! Of this mighty work Pausanias has left us, fortunately, a minute description. It represented Jupiter as seated on his throne, which was made of gold and ivory; his brows surrounded with a crown of olive; his right hand holding a figure of Victory, of ivory and gold, bearing a small fire; his left wielding the sceptre, on the top of which was the golden eagle; his robe of massive gold, curiously wrought with various figures, especially of lilies; and his sandals of gold. The throne was inlaid with all kinds of precious materials—ebony, ivory, and gems, and adorned with various pieces of sculpture. In the front of the throne was a representation of the Sphinx carrying of the Theban youths; beneath these, that of the fate of Niobe and her children; and on the frame, joining the feet, the contest of Hercules with the Amazons, embracing twenty-nine figures, among which was one intended to represent Theseus. On the hinder feet of the throne were four Victories, as treading in the dance. On the back of the throne, above the head of the Divinity, were figures of the Hours and Graces; and on the seat, Theseus warning with the Amazons, and lions of gold. Its base, which was of gold, represented various groups of the Divinities, naming which were Jupiter and Juno, with the Graces leading on Mercury and Vesta; Cupid receiving Venus from the sea; Apollo with Diana; Minerva with Hercules; and, below these, Neptune, and the Moon in her chariot. The whole was encircled by a wall, on which were painted various grand and mythical pictures by Panæus, the brother of Phidias. On the base of the statue, as if in reproach of the Athenian jealousies, was the inscription—*Phidias, the Athenian, the son of Charmides, made me.* Of the whole work Quintilian observes, that it even added new feelings to the Religion of Greece: *etiam pulchritudo adjecisse aliquid etiam receptæ religioni videtur, adeo majestas operis eam æquavit.* It was confessedly without a rival in ancient times, all writers speaking of it as a work which none would dare even to imitate. The Temple prepared for its reception seems to have been not unworthy of the work. It was built in the Doric style, by Libon, an Eleian. In the front pediment was a representation of the contest in the chariot-race between Pelops and Œnomaus; on the back, the fight of the Centaurs and Lapithæ, with the suppliants of Pirithoüs; and in the interior were many works of Alcamaenes, depicting the labours of Hercules. With this, his masterpiece, the great artist finished his labours. The manner of his death, if the account of Plutarch be rejected, is altogether unknown. The place at Elis in which he had wrought was long after preserved with care, and visited by travellers with deep veneration; and the Eleans, grateful for the honour which he had conferred on their Country, gave a perpetual salary to his descendants, on condition that they should preserve the work they so highly valued from every description of injury.

Besides these most celebrated works of Phidias, several very distinguished compositions are mentioned by other ancient writers. He made a statue of Minerva, in brass, so beautiful that it was regularly named by the distinguishing epithet of *Καλλιστοφρον*. He also formed another image of the same goddess, which Æmilius Paulus dedicated in the Temple of Fortune at Rome. A figure of a key-bearer, two images in cloaks or mantles, and a naked Colossus, were also attributed

Phidias.

Biography. to him. He framed likewise a figure of an Amazon, called Eucnemion, from the extreme beauty of the leg. A doubt has been raised by some whether Phidias ever wrought in marble; but there seems little reason for this surmise, for Pliny not only expressly numbers him among the gravers in marble, but represents him as having been the Sculptor of a celebrated statue of Venus, in the Forum of Octavius, at Rome. It is asserted also, by the same authority, that he was the instructor of Alcámenes, whose works in marble were exceedingly numerous at Athens, and were supposed to have been, in many instances, touched with the hand of the great master.

Phidias appears to have been the first Sculptor who raised his works to the ideal. Cicero philosophically eulogizes him for this excellence, by which, in reality, he raised Sculpture almost from a mechanical drudgery to share in the glories of the most exalted Poetry, and even to mould and influence the national imagination of Greece: *Phidias cum faceret Jovis formam aut Minervæ, non contemplabatur aliquem à quo similitudinem duceret: sed spiritus in mente insidabat speciem pulchritudinis eximia quandam, quam intus, in cæcis deflexis et illius similitudinem, artem et animam dirigebat.*—Cic. de Orat. 9. In the whole character of his works, Phidias seems to have borne a striking resemblance to Æschylus, which is observed by W. A. Schlegel. Like the boldest of the Tragic Poets, he not only formed the vastest conceptions, but chose for his groundwork the grandest materials. Like him, also, he excelled rather in the representation of gods than of men, and threw all his conceptions at a vast distance from the world of ordinary existence. The repose of his figures was that of conscious omnipotence. He aimed not at expressing the passions of humanity, or at exhibiting the charms of beauty in motion, but directed all his exertions to the embodying ideas of the sternest grandeur. His whole soul was filled with the gorgeous visions of the elder time—the dark tales of old gigantic strength—the feelings of a power and a glory departed. He caught the spirit of Ages long before his era, to transmit it to generations after him by the most durable of earthly memorials.

Alcámenes. The principal Sculptors of the Age of Phidias or rather of the earlier part of it, whom it is probable he employed in adorning the public works at Athens, were Alcámenes, Agoracritus, Critias, Nestocles, and Hegias. There are, however, occasional inconsistencies in the accounts given by Pliny respecting the precise time when some of these flourished; as, although he expressly makes Alcámenes contemporary with the earlier part of the Age of Phidias, he represents him as having been his pupil, and hence draws an inference that Phidias wrought in marble. If we suppose this to be the same Alcámenes whom Phidias overcame in the contest by his superior skill in Optics, as we have related, the circumstance will tend to shake the assertion that he was the pupil of his adversary, although made so positively by Pliny. For it seems most probable that the circumstance occurred at the commencement of the career of Phidias, before his genius had been fully developed, and certainly before he was appointed to superintend all the public works by Pericles. Hence it is scarcely to be believed that he had completed the instruction of a disciple, so as to enable him to enter into competition with himself, or that, had he done so, he would have neglected to impart to him that portion

of his knowledge which related to the alteration in the appearance of objects which distance and position produce. It appears, however, from every authority, that Alcámenes was one of the most distinguished of the contemporaries of Phidias. We have seen that part of the decorations in the Temple at Eli, so renowned as containing the Olympian Jupiter, was from the hand of this artist. His most celebrated work was a statue of Venus, called Aphrodite, which was placed without the walls of the city of Athens, to which Phidias is supposed to have given the finishing touch. Besides his works in marble, he also made a Panthelon, in brass, which was called Eucnemion. As we are told by Pliny that a great number of his works was remaining in Athens, it is very probable that he had a large share in adorning the Parthenon, under the direction of Phidias.

Agoracritus was, according to Pliny, a pupil of Phidias, and exceedingly beloved by his master, who carried his affection for him so far, as to allow some of his own pieces to be regarded as the productions of his favoured disciple. He was a Parian by birth, and wrought in the marble for which his native island was famous. He had a contest with Alcámenes, who is represented by Pliny as having been his fellow-pupil. Each of them endeavoured to produce the most excellent statue of Venus, and the latter was declared to be successful—not on account of the real superiority of his work, but because the Athenians chose to favour their own citizen rather than a native of Paros. Indignant at the result, the unsuccessful candidate is said, when he disposed of the statue made on the occasion, to have annexed to the sale the condition that it should never be placed in the city of Athens. In further revenge, he named it Nemesis, and allowed it to be placed in a village called Rhamnus, within the territory of Attica. M. Varro prefers this work to all other statues. Its Sculptor was also celebrated for an excellent image of Cybele, placed in a temple at Athens, dedicated to the mother of the Divinities.

Of Critias, Nestocles, and Hegias, little is known. The last named made statues of Minerva, of Castor and Pollux, which were placed before the Temple of Jupiter the Thunderer; and figures of youths called Celestizontes. In the latter part of the Age of Phidias, a considerable number of artists arose of great excellence, the chief of whom were Polykletus, Myron, Agelides, Callion, Gorgias, Phingmon, two Sculptors named Pythagoras, Læon, and Purlæus. Of these Polykletus appears to have been the ruling spirit.

POLYKLETUS was born at Sicyon, the great School of the plastic Arts, and flourished about four hundred and thirty years before the Christian era. As Phidias has been denominated the Æschylus, this artist may have with propriety, be regarded as the Sophocles of Sculpture. He perfected that which his great predecessor had invented. He did not possess the grandeur of imagination of Phidias, or even attempt, like him, to create the images of the most powerful deities. It seems, indeed, that he excelled less in representing the robust and manly graces of the human frame, than in the sweet, tender, and unconscious loveliness of childhood. In his works, however, he manifests an equal aspiration after ideal beauty with that of Phidias. He seems to have laboured to render his statues perfect in their kind, by the most scrupulous care in the finishing. Hence he is said to have observed, that "the work

The early Sculptors of Greece.

From A. M. 3004. — B. C. 1000. to A. M. 3604. — B. C. 400.

Polykletus.

Biography. becomes most difficult when it comes to the nail." He framed a statue of a Persian life-guard so marvellously exact to its proportions, and so exquisite in its symmetry, that it was called the *Rule*, and became the model from which artists drew their Canons of Criticism, which determined the correctness of a work. He executed also an image of a youth binding a fillet, of so perfect a beauty, that it was valued at the immense price of a hundred talents. Another of his celebrated works represented two children playing at dice, which was regarded with the highest admiration at Rome, where it was in the possession of the Emperor Titus. His Mercury belonged to Lysimachus, and his figure of Hercules lifting Anteus were placed in Rome. He also produced an image of a Voluptuary, languidly reclining on a couch, which was held in the highest esteem.

It seems that Polykleitos, during his lifetime, was preferred even to Phidias. This appears from a similar circumstance to that by which Themistocles was shown to be entitled to the highest honour among the Greeks who fought at Salamis. It was resolved to place several statues of Amazons in the Temple of Diana, at Ephesus, and all the great artists of Greece were consulted as to their opinion who among them had the highest merit. Each named himself first, and the man whom he regarded as the next in desert, second,—and he who was found to have most of these second votes was declared victorious. By this mode of ascertaining the relative degree of renown enjoyed by each, Polykleitos obtained the first place, Phidias the second, and Ctesias and Cylon the third and fourth. We can scarcely, however, regard this judgment as decisive. The Athenians were always jealous of the loftiest degrees of excellence, and it is not probable that the immediate competitors for applause in the same Art should have been impartial. If we form a judgment from the allusions by the Orators and Poets of antiquity to the works of ancient Art, we shall, undoubtedly, find that Phidias made the deepest impression on those minds which may well be supposed to have had the truest sense and feeling of beauty and grandeur.

Polykleitos himself, on one occasion, showed how little deference he felt for the fickle judgment of his fellow-citizens. Being employed in framing a statue, he freely permitted every one to inspect it, and to give advice as to the form and disposition of every part, and followed the counsels thus offered him. In the mean time he privately completed another figure on the same subject, according to his own unbiased opinion, and, when both were completed, exhibited them together, and asked which of them was the finest. All joined in approving the latter, and condemning the former, when the artist triumphantly replied, "*That which you reproach is your own work, that which you admire is mine.*"

Polykleitos is said to have carried alto-relievo, which Phidias invented, to perfection. He discovered the balancing of figures on one leg, and is said to have been so partial to this mode of representing the human form, that he almost invariably adopted it in his statues. He is accused by Varro of too great uniformity in his figures, and the constant repetition of the same idea. Nothing could exceed the exactness of symmetry with which he framed his statues, but it seems that they were destitute of passion, sentiment, and expression. It is singular that, notwithstanding the refinement, the

extreme polish, and exactness of finishing with which his works were in general elaborated, he represented the hair in knots, after the fashion of the ancient Sculptors. These defects, however, seem to have derogated but little from his fame, either in his own Age or in after times.

Myron, the pupil of Agelides, was not so remarkable for any one style of composition as his predecessors and contemporaries, but appears to have been of a lively and versatile genius. He was a native of Eleutheria, but regarded as an Athenian, because his Countrymen had sought and been allowed the protection of Athens. He wrought both in brass and marble. He seems to have been able to give to his works an air of great facility and ease; for it is said of him, by Statius Papius, that he played rather than wrought in his materials. The particular work which contributed the most to his renown, was a brazen heifer, which became the subject of numerous Greek Epigrams, some of which are preserved in the Anthology. The other statues by him, which were most celebrated, were the Discobolus, ascertained by an antique gem, and the description of Quinestian, who apologizes for its forced attitude, and of which there is an ancient copy in the British Museum; the Tomb of a grasshopper and locust, in brass, mentioned by Erinna, the Poetess; Perseus slaying Medusa; a Satyr admiring the music of the pipes; Sawyers, called *Pristis*; the figure of an old drunken woman, in marble, made for the people of Smyrna; and held in the highest estimation; a statue of Minerva; the Delphic Panthali and Pancerlaste; a Hercules, which was afterwards conveyed to Rome, and placed in the Great Circus of Pompey; and an Apollo, which Marc Antony took from Ephesus, and Augustus Caesar restored, in consequence of receiving a warning to that effect in a dream. Pythagoras of Rhetium is said to have surpassed Myron in the figure of a Pancerlaste, for the Temple of Apollo, at Delphos.

Pythagoras of Samos was another celebrated Sculptor of this period. He is said to have been originally a Painter, and hence acquired the faculty of giving accurate resemblances of individual faces, in which he was singularly successful. He made a figure of an old man, and seven naked statues of the goddesses, which have been spoken of in terms of high eulogy. Respecting the other Sculptors of this time we have scarcely any distinct information.

SCOPAS, though enumerated by Piny among those Scopas, &c. who, in the latter part of his life, were contemporary with Phidias, seems, according to the best authorities, not to have flourished till a somewhat later period. He united the professions of Architect and Statuary, and was equally eminent in each. He was a native of the Isle of Pharos, which seems to have been almost equally productive in artists as in the materials of Sculpture. It was his fortune to be employed as one of the four artists who were engaged by Artemisia, Queen of Caria, in framing that splendid monument to the memory of her husband, Mausolus, in the city of Haliarnassus, which was ranked among the seven wonders of the world. Each of the builders chose one of the sides, which he undertook to complete: Bryaxis chose the North; Timotheus, the South; Leochares, the West; and Scopas, the East. Before the work was completed, Artemisia died, but the Architects determined, for the sake of their own fame, to finish it. A fifth, indeed,

Myron, &c.

Biography. came, to crown the whole, with his assistance. This was Pylus, who carried up the sides in a pyramidal form, and placed at the top figures of a chariot and four horses. The circumference was, however, only a hundred and eleven feet, and the height a hundred and forty; so that it must have been the exquisite beauty of its ornaments, rather than the massiveness of its size, which rendered it an object of so high admiration. Scopas was appointed also to contribute one of the columns to the Temple of Diana, at Ephesus, and that which he framed was regarded as the most beautiful of the whole. He seems, indeed, to have been scarcely, if at all, inferior to Polyclitus or Myron. His statues were numerous; among the most remarkable of them were the images of Venus, Pythos, and Phaeton, which were held in the greatest veneration by the Samothracians. Many of his compositions were among the noblest ornaments of Rome in the days of Pliny. An Apollo of his workmanship stood on the Palatine Mount: a Vesta seated, with two female attendants sitting on the ground beside her, adorned the gardens of Servilius; and a group of the same description, as well as a virgin bearing on her head a basket of relics, were preserved in the Collections of Asinius Pollio. His statues also of Neptune, of Theseus, and Achilles, of the Nereids riding on the mightiest monsters of the deep, great fishes, tritons, and a whole train of marine creatures attending Phæneus, were highly prized, and placed in the Chapel of Cæsar Domitius, in the Flaminian Circus. A colossal image of Mars, and an exquisite statue of Venus, were also greatly admired at Rome; the latter was preferred to a similar statue by Praxiteles, which has been thought to have furnished the original idea of the Venus de Medicis. It is uncertain whether the celebrated group of the Niobe be the production of Scopas, or belong in a later Age. It is one of the sweetest manifestations of that deep and intense feeling of beauty which the Grecian artists delighted to preserve in the midst of suffering. The internal harmony of this divine work has thus been developed by a celebrated critic, who seems to have caught the true spirit of Grecian Poetry and Art.*

"In the group of Niobe there is the most perfect mixture of terror and pity. The pained looks of the mother, and the mouth half open in supplication, seem to accuse the invisible wrath of Heaven. The daughter, elating in the agonies of death to the bosom of her mother, in her infantine innocence, can have no other fear than for herself; the innate impulse of self-preservation was never represented in a manner more tender and affecting. Can there, on the other hand, be exhibited to the senses a more beautiful image of self-devoting heroic magnanimity than Niobe, as she bends her body forward, that, if possible, she may alone receive the destructive bolt? Pride and repugnance are melted down in the most ardent maternal love. The more than earthly dignity of the features are the less disfigured by pain, as from the quick repetition of the shocks, she appears, as in the fable, to have become insensible and motionless. But before this figure, twice transformed into stone, and yet so immitably animated—before this line of demarcation of all human suffering, the most callous beholder is dissolved in tears."

* Schlegel *Lectures on the Drama*, lecture iii.

The associates of Scopas, in adorning the tomb of Mausolus, were celebrated not only as Architects, but as Sculptors. Timotheus was the framer of an admirable statue of Diana, preserved in the Temple of Apollo, on Mount Palatine, the head of which had, however, in the time of Pliny, been restored by Aulianus Evander. Bryaxis was renowned chiefly for his statues of Esculapius and Seleucus. The soft and tender had now taken the place of that sublimity to which Phidias had so nobly aspired, and some relaxation may soon be observed in the severity of Sculpture. When Grecian freedom expired under Philip and Alexander, the Art lost something of the high idealism it had formerly developed, though it was advanced in all the delicacies of form by Praxiteles and Lysippos. These great artists must, however, be considered hereafter.

Happily for us, we are not left to gather all our ideas of the freeness, the grace, and the majesty of Sculpture in the vestiges of Greece from the statements of Historians. If the Jupiter Olympian and the noble statue of Minerva, in the Parthenon, are totally lost, we have, in our own Country, ample vestiges, from which we may form conceptions not altogether inadequate of the grandest of these astonishing works. We allude to the sculptured marbles brought by Lord Elgin from Athens, which were purchased by Parliament, and are now open for public inspection in the British Museum. The chief of these, consisting of a statue of Hercules, or Theseus; of an Iliac, or river god; of horses' heads; of fourteen metopes, in alto-relievo; and of the frieze, representing the grand procession for celebrating the Panathenæan festival, were taken from the ruins of the Temple of the Parthenon, with a number of less perfect fragments. These pieces have been almost universally regarded by our greatest artists and men of taste, to be of the very highest order of Art. Mr. Nollekins stated in his evidence before the Committee of the House of Commons, appointed to consider the expediency of purchasing the collection, that the marbles were "the finest things that ever came to this Country;" that the bas-reliefs were "among the first class" of that species of Sculpture; and that the Theseus was as fine a Sculpture as the Belvidere Apollo. Mr. Flaxman regarded the Theseus as somewhat inferior to the Apollo, because the latter statue partook more of ideal beauty; but expressed the most enthusiastic admiration of every part of the collection. Mr. Westmacott considered the Theseus and the river god as "infinitely superior to the Apollo Belvidere," and observed, that "the back of the Theseus was the finest thing in the world, and that the anatomical skill displayed in the front of the Iliac was not surpassed by any work of Art." Mr. Chantry, Mr. Rossi, Sir Thomas Lawrence, Mr. Day, Mr. Wilkins, Mr. West, and the Earl of Aberdeen, all speak of them as among the noblest relics of ancient genius, though differing in some minor points respecting them. It is also the opinion of these gentlemen that the works are of the Age of Phidias; though, of course, how far that great artist himself assisted personally in their execution can only be matter of reasoning and conjecture. Mr. Payne Knight, however, expressed, in some respects, a different opinion, both as to their antiquity and their value; he placed "the finest of them in the second rank," and thought that most of them were added by the Emperor Adrian, but considered the best of the

Biography. metopes no of the first class of high relief, and the frieze of the procession as of the best order of low relief, in existence. With respect to the different estimate of the highest merit of these works, as the matter entirely depends on feeling and taste, we can only state the opinions of those who may certainly be presumed competent judges. But the question of antiquity being a matter of fact, depending, in some measure, on external evidence, may be fairly made the subject of discussion. Now, the only reason offered by Mr. Knight in support of the hypothesis, that part of the works are of the Age of Alcibiades, is, that "Spon and Wheeler thought one of the heads to be of that Emperor, and later travellers having found no symbols of any deity upon it; also for the draped trunk, which seem to be of that complicated and stringy kind of work which was then in fashion." But the observations of Spon and Wheeler are admitted to be loose, if not inaccurate; and the conclusions they drew from them are, in some instances, undoubtedly erroneous. Thus these travellers, misled by a false view of the description given of the Parthenon by Pausanias, mistook the subject of the eastern, for those of the western pediment, and vice versa, and strove, with perverse ingenuity, to discover the birth of Minerva in the contest for Attica, as has been indisputably shown by the Chevalier Vissconti. Little reliance is then to be placed on their supposition, had they really advanced it. In the absence of all proof from History that the works are of later date than the Temple, their style may surely be received as evidence of their ancient origin. They are in the purest and simplest manner of Grecian Sculptures; they have nothing of the theatrical air about them which distinguishes the statues of later times; they are grander, indeed, than common nature, but their innate divinity reposes on its own powers, and does not appear to put itself forth for the admiration or reverence of spectators. Canova has passed on them the warmest eulogies, and declares that he "should feel perfectly satisfied had he come to London only to view them." Surely, then, it is no unreasonable supposition that they are part of the original decorations of the Temple where they were found, over the whole of which Pheidias presided, and that they are from his designs, if not touched by his hand.

All the eulogiums, however, which have been passed on these admirable works, and even the belief that the greatest benefit to the Arts would arise from their public exhibition in our metropolis, would not reconcile us to their removal from Athens, if the charges brought against Lord Elgin for his conduct in procuring them were well founded. Nothing could justify the measure of attempting to take them from their old position, but the certainty that they could not remain there without the utmost hazard of sustaining irreparable injuries. They can never be regarded elsewhere with that feeling with which they were surveyed at Athens. They cannot have the same atmosphere of sentiment about them. Nor, while a spark of old enthusiasm continued alive in the breasts of the Athenians for these relics of the glory of their fathers, could they in common justice be deprived of the objects of their reverence, even though, as works of Art, they could neither appreciate

nor enjoy them. But it appears that the most valuable Sculptures in Lord Elgin's collection were not removed from places in which they were open to inspection, but were found, after much toil, amidst neglected ruins. For Spon and Wheeler represent the eastern pediment of the Temple as having fallen down, and the figures which were yet visible as so far distant from any place where they could be distinctly seen, that no particular drawings were made of them. But the most important fact stated by Lord Elgin is, that when he was preparing to make an excavation in a spot where some of the principal statues had probably fallen, the Turks informed him that they had pounded all the marbles he expected to find there to mortar. Indeed, it appears that the most wanton aggressions on the marble were constantly permitted, or winked at, all travellers being ready to give some recompense for permission to remove relics, in which they frequently committed more injury than they derived advantage. A comparison of the most perfect parts of Lord Elgin's collections with the accounts and drawings of travellers in various times, will show how rapidly the Sculptures have been lessened and defaced. Between the time of Spon and Wheeler to Athens and the arrival of Lord Elgin, an old Temple on the Ilissus had disappeared, a Temple in the neighbourhood of Elia and Olympia had been taken away, and thirteen columns at Corinth had been reduced to five, as pieces were constantly broken off by travellers. According to the evidence of Mr. Wilkins, of ninety-two metopes, which must have adorned the Temple, two and thirty must have been removed, and probably destroyed, before the operations of Lord Elgin. This gentleman also observed, that "at the time that Lord Elgin was at Athens, there existed among the Turks a great desire to deface all the Sculptures within their reach;" but adds, that now a disposition is shown to preserve them, in consequence, no doubt, of the profit arising from the sale of the permission to remove them. The testimony of the Earl of Aberdeen is exceedingly explicit with respect to the danger of great part of the marbles, had they remained at Athens. It does not appear that any unpleasant sensation was created by their removal, but rather the reverse, in the minds of the natives. Some few of the articles, and these the least important, might, perhaps, from their situation and from their position, have been left with safety; and it is to be regretted that these have been taken from their places. On the whole, however, we think it is satisfactorily established, that the far greater part of the glorious works which we now possess would have perished by the hands of the ignorant, had they not been preserved by our ambassador; who, so far as pecuniary considerations are involved, paid highly for them, and who stands, we think, acquitted by the necessity of the case, on the more sentimental grounds of accusation alleged against him. We have, then, obtained them, we believe honestly, and we cannot too highly estimate the value of their possession. Not only must they form an admirable School for our artists, but diffuse among the people at large that sense of high and pure beauty, which will add to their noblest pleasures, and render even their moral feelings more gentle and more exalted.

Biography. PLINY, in his inquiries into ancient Painting, attributes its invention to a period long after that in which Sculpture was commonly practised both among the Egyptians and the Greeks; for he asserts that it was altogether unknown until after the destruction of Troy, and that even lineary portraiture, or the drawing of the mere outline of a figure, was first practised by Ardicus of Corinth, and Thelephanes of Sicyon. But this opinion is refuted by the testimonies of other writers, who speak of the ancient practice of the Art in Egypt, and by the chests of mummies which are still in existence. Plato speaks of Painting as having been practised by the Egyptians for ten thousand years; which assertion, though manifestly extravagant, is sufficient to prove that the Art had been known by them for a long period. Probably it was neglected about the era of the Trojan war, and afterwards revived in Greece by those who are represented as its inventors. It would be strange if Sculpture had by many Ages preceded the mere marking of outlines on a flat surface, in which all testimonies agree that Painting originally consisted. In the time of Homer, it is evident that the idea, at least, of representing persons, groups, and events in colours, prevailed, because we find in his Works repeated allusions to the working in tapestry the Pictures of grand and varied transactions. It is probable, therefore, that lineary Painting must have been known in preceding Ages. The first Painters, indeed, in Greece were mere drawers, and appear not to have practised colouring. This circumstance must be attributed to that simplicity of taste which is so manifest in the ancient Sculpture, and that strong bias which existed in the national feeling to singleness of delineation arising from the tendencies of the Religion. We have already seen how they were led to cast every thing into a set and definite form, and to substitute in their Poetry beautiful human figures for the objects of inanimating nature. Hence their Painting was not only very simple in its beginnings, but even in its perfection partook of the qualities of Sculpture. Most of their Pictures were either single portraits of individuals, or historical groups consisting of a few simple figures, and rarely exhibited any attempts at perspective. Hence the deficiency of shading, which would be found needful for the accurate delineation of a single figure, was carried to a high degree of perfection, while other parts of the Art were in their rudest beginnings.

According to the testimony of Pliny, the first Painters of Greece used no other instrument than a coal to mark out their outlines. The first who made use of colour

was Clephantus of Corinth, who had no other colour than red, which he produced by grinding some kind of brick or earth to powder. Eumarus, a Painter of Athens, first distinguished the sexes in his Pictures, and gave to male and female their proper lineaments. Cimon the Cleonean, who followed Eumarus, first invented the mode of representing faces as looking on one side, and the folds of vestments and inequalities of surfaces. He seems to have excelled in the knowledge of Anatomy, representing, with accuracy never before attained, the knitting of the joints and the various grouping of the figures. The time at which these artists flourished cannot be ascertained with precision. There are manifest contradictions in the account given by Pliny. While, in one place, he ascribes Painting to have been totally unknown at the time of the Siege of Troy, in another he asserts it to have arrived at perfection in the time of Romulus, because, about that period, Candaules, King of Lydia, bought of a Painter, called Bularchus, a Picture for as much gold as it weighed, and hence infers, that "evident and apparent it is that the origin and beginning of the Art was of much higher antiquity, and those Painters who used it not but one colour lived a long time before, although it is not recorded in what Age they flourished." Candaules was a contemporary of Minos, and Minos in Greece before the Age of Phidias. Soon after this, however, the Art advanced with great rapidity, and several most distinguished artists appeared contending for the highest point of excellence.

Phidias himself, as we have seen in his life, was **Paragon** originally a Painter. After he had left this Art, for the exercise of that in which he was more renowned, his brother, **Panxrus**, continued to excel in picture. One of his most celebrated works represented the Battle of Marathon, and contained the figures of Miltiades, Callimachus, and Cynegyrus, on the Grecian side, and of Datis and Ariapernes on that of the Persians. He was employed in decorating the wall which surrounded the statue of Jupiter Olympian at Elis, and an account of the subjects of the Painting which he executed on that occasion is preserved in the ancient descriptions of the statue. These were, Atlas sustaining the heavens and the earth, with Hercules relieving him of his burthen; figures of Theseus and Pirithous; emblematic figures, representing Greece and Salamis, the latter holding a vultum; Ajax under the reproach of Cassandra; the strife of Hercules with the Nemean lion; Hyppodamia, daughter of Ceneus, with her mother; Prometheus, chained, with Hercules

Biography. advancing to his assistants; Prometheus delivered by Hercules; Achilles supporting Penthesis dying; and the two Hesperides bearing golden apples. To the time of this artist, prizes were given at Corinth and Delphos for excellence in Painting; for one of which he contended with a Painter named Timagoras; but it does not appear which of them obtained the victory.

But **PALTYNORUS**, who flourished about four hundred and twenty years before the Christian era, just in the dawn of the Age of Zeuxis, Parrhesias, and Timanthes, seems to have contributed more largely to the advancement of his Art than all preceding Painters. Before his time, the countenance was represented as destitute of animation and fire, and a kind of leaden dulness pervaded its features. His triumph it was to kindle up expression in the face, and to throw feeling and intellect into the whole frame. He was the Prometheus of Painting. He also first painted the mouth open, so that the teeth were displayed, and occasion given to use that part of the face in the expression of peculiar emotions. He first clothed his figures in light, airy, and transparent draperies, which he elegantly threw about the light forms of his women. He was, in short, the author both of delicacy and expression in the Paintings of Greece; but his style is said to have been hard, and his colouring not equal to his design.

This excellent artist was the son of Aglaophon, himself a Painter, and born in Thasos, an Island of the *Ægean sea*. He followed, for some time, the Art of Sculpture, but soon devoted himself exclusively to that for which his genius was better adapted. His great works consisted of those with which he decorated the *Psekiely*, a grand Gallery and place of exercise at Athens, so denominated from the great variety of its embellishments. For this place he executed a series of paintings, representing the principal events of the Trojan War. For his labours on these works, he refused to receive any remuneration from the Public, while Mycon, a contemporary artist, who was employed in adorning another part of the same building, was liberally paid for the exertions of his genius. **Polygnotus**, however, was not without his reward. The Sacred Council of the Amphictyons, the representatives of all the States of Greece, offered him solemn expressions of gratitude on behalf of the whole Commonwealth, and decreed that wherever he should travel he should be entertained at the public expense. One of his Pictures, on a tablet, was preserved at Rome, in the Gallery of Pompey, representing a man on a scaling-ladder, with a target in his hand, so contrived that it was impossible to tell whether he was going upwards or descending. Pliny informs us that, besides the Mycon who assisted in painting the *Psekiely*, there was another Painter of the same name, whose daughter, Timonthe, excelled in the Art professed by her father.

APOLLODORUS further prepared the way for the best efforts of Painting in Greece. He was the first who carried the disposition of light and shade and chiaroscuro to any degree of perfection. His genius was calculated to astonish and to rivet the attention. Pliny informs us, that no Painter before him could succeed in holding the spectators of his works in the long contemplation of their excellence; *Neque autem eum tabula ullius extenderit que tenet oculos*. One of his most celebrated Pictures exhibited a Priest at his devotions, "breathless with adoration;" and another,

Ajax struck with fire from heaven. The latter was preserved at Pergamos. It may be observed, that the subject is more bold than any recorded to have been previously chosen by a Painter.

ZEUXIS, who, with Timanthes and Parrhesias, carried ancient Painting nearly to perfection, was born at Heraclea; but whether at the city of that name in Macedonia, or that near Crotona, in Italy, does not certainly appear. He studied either under Demophilus or Neseas, artists respecting whom nothing is known, but that one of them was his master. Soon, however, he far outstripped his instructor, as Apollodorus intimated, in verses expressive of his indignation that Zeuxis should have moulded to his own use all previous inventions, and stolen the graces of the best masters; thus paying a fine involuntary compliment to his highly-gifted rival. Apollodorus, having first practised chiaro-oscuro, could not endure that his glory should be eclipsed by a younger artist, who availed himself of his improvements to rise to a higher degree of excellence. Zeuxis seems to have rapidly arisen to the highest distinction in Greece, and to have acquired, by the exercise of his Art, not only renown but riches. Of the latter advantage he was more vain than became a man of exalted genius. He appeared at the Olympic Games attired in a mantle on which his name was embroidered in letters of gold, a piece of most absurd display in one whose name was deeply impressed on the hearts and imaginations of those by whom he was surrounded. He does not, however, seem to be chargeable with avarice, or, at least, this passion, if it existed, was subservient to his pride; for when he had attained the height of his fame, he refused any longer to receive money for his Pictures, but made presents of them, because he regarded them as above all pecuniary value. In the earlier part of his career he was accustomed, however, to exhibit his productions for money, especially his most celebrated Painting of Helen, where the figure was denominated, "Helen the courtesan." The truth seems to have been, that the ruling passion of Zeuxis was the love of pomp, an ever-restless vanity, a constant desire and craving after every kind of distinction. So far as money assisted in procuring this, he stooped to obtain it, and refused it when he could most successfully assume dignity by refusing further recompense.

Very little is known respecting the events of the life of this celebrated Painter. He was not only successful in securing wealth and the applause of the multitude, but was honoured with the friendship of Archelaus, King of Macedonia. For the Palace of this monarch he executed numerous Pictures. *Ælian* informs us that Socrates, referring to this circumstance, observed, that "Archelaus had expended large sums of money on his house, but none on himself; whence it was that numbers came from all parts of the world to see the Palace, but none its owner, unless such as were allured by his presents, who were not among the most virtuous of men." *Cicero* informs us, that the inhabitants of Crotona prevailed on Zeuxis to come to their city and to point there a number of Pictures, which were intended to adorn the Temple of Juno, for which he was to receive a large and stipulated sum. On his arrival, he informed them that he intended only to paint the Picture of Helen, with which they were satisfied, because he was regarded as peculiarly excellent in

Apollodorus.
From.

Biography. embody in a single piece all the wayward and contradictory passions and feelings, the stupendous greatness and the singular weaknesses, the admirable tastes and contemptible jealousies, of that most strange, yet most interesting people. Of this great performance, Pliny says, *Pinxit et Damonas Atheniensium, argumenta quoque ingeniosa. Volabat namque varium, transivendum, injunctum, inconstanter; eundem vero errabilem, eludentem, misericordem, cavillum, gloriosum, humilem, ferocem, fugacemque et omnia periter cedere.* (lib. xxxiv. c. 10.) It seems impossible that all these varied characteristics could have been expressed by a single figure; probably a variety of groups were depicted in one large piece, to attain the object of the Painter.

Besides this grand piece, Parrhasius painted two celebrated groups on different tablets, the one containing the figures of *Aeneas, Castor, and Pollux*; the other *Telemachus, Achilles, Agamemnon, and Ulysses*. He excelled in delineations of childhood and tender youth, as, his nurse with an infant in her arms; a Priest, attended by a child with a censer; and two boys, with a peculiar expression of innocence, unconsciousness, and freedom from care in their countenances, abundantly proved. A naval captain, armed with a corselet; Bacchus, with *Virtus* standing over him; and two excellent figures, one of a man in armour, running and appearing to labour beneath its weight; and the other, of a person taking off armour, as fatigued with past exertions, were among the most famous of his productions.

His Picture of *Theseus* procured for him the freedom of the city of Athens, and was afterwards placed in the Capitol at Rome. Another of his pieces, *Arethusa*, was in the possession of the Emperor *Tiberius*, who kept it in his bedchamber, and regarded it as worth sixty thousand sesterces. A grand heroic Picture by his hand, representing *Meleager, Hercules, and Perseus*, was preserved at Rhodes, where it was regarded not only with the admiration due to its excellence, but with superstitious veneration, from a story that the tablet on which it was painted had been three times struck with lightning, but that the colours did not receive the least injury. This tale Pliny calls a miracle, and says it adds greatly to the credit of the Picture.

Parrhasius, like his rival, is accused of great ostentation and vanity. He spoke of himself as the Prince of Painters, and as having brought his Art to perfection. He added new epithets to his name to express his dignity. He even announced himself to be a lineal descendant from *Apollo*, and affirmed that his Picture of *Hercules* was an actual portrait of that Hero, who used to appear to him in visions, in order to give him the opportunity of taking an exact resemblance of his person. In public he appeared dressed in rich and costly garments of purple embroidered with gold. Worse things than these pompous follies are, however, objected to him. Pliny tells us that he was accustomed to relax his mind from his nobler pursuits by framing small Pictures of a loose and immoral character. Seneca the Rhetorician brings an atrocious charge against him. He affirms that Parrhasius, being desirous of representing the tortures of *Prometheus*, caused an Olynthian captive to be put to a lingering death by torture, while he drew from his agonies the vivid representation of his hero's sufferings. But we are happy to disbe-

lieve this story, as *Olinthus* was not taken until *Parrhasius*, if living, must have been very far advanced in years. Our readers will remember a similar tale in the annals of Italian Art.

Parrhasius, who conquered *Zeuxis*, himself was overcome by *Timanthes*; and in a fair trial of merit than that in which he obtained the victory. On this occasion, the rival artists painted pieces on the same subject—the indignation of *Ajax* on the judiciousness of *Achilles* to *Ulysses*,—and that of *Timanthes* was thought exceedingly superior. Parrhasius consoled himself by affecting to lament the fate of *Ajax*, a second time overcome by his inferior.

TIMANTHES has not been so much brought forward in the annals of Art as *Zeuxis* and *Parrhasius*; but, as far as we have means given us of judging, he was, at least, inferior to neither in genius. He seems to have thrown a large share of intellect and thought into his productions. He appears to have been unequaled both to ingenuity and feeling, of which we have some curious examples. One of these was displayed in the Picture on the noble subject of the Sacrifice of *Iphigenia*, in which he represented the tender and beautiful virgin standing before the altar awaiting her doom, and surrounded by her afflicted relatives. All these last he depicted as moved by various degrees of sorrow, and grief seemed to have reached its almost expression in the face of *Menelaus*; but that of *Agamemnon* was left—and the Painter, heightening the interest by confessing the inadequacy of his Art, covered the head of the father with his mantle, leaving his agony to the Imagination, and regarding it as too sacred for the gaze of spectators. Of this piece *Quintilian* says, *Cum in Iphigenia immolatione pinxit tristem Colcham, tristiorum Ulyssum, addidit Menelaum quem summum poterat ars efficere marorem; consumptis affectibus, non reperire quod dignè modo patris vultum posset exprimere, velavit eus caput, et suo cuique animo dedit ostendendum.* (ii. 13. 13.) On another occasion, having painted a sleeping *Cyclops* in an exceedingly small compass, yet wishing to convey the idea of his gigantic size, he introduced a group of *Satyrs*, with poles, taking the measure of his thumb. A deep meaning was to be discovered to every work of his pencil; yet the tendency to expression and significant delineation did not detract from the beauty of the forms which he created; for his figure of a Prince was so perfect in its proportion, and so majestic in its air, that it appears to have reached the utmost height of the ideal. This Picture was preserved in the Temple of Peace at Rome.

Of *Eupompos*, another Painter of this time, who acquired considerable reputation, we know even less than of *Timanthes*. Before he acquired his renown, we are informed that there were only two great styles of Painting, or rather distinctive names bestowed on the Painting of different regions—the *Heladiao* and *Asiatia*. But *Eupompos*, being a native of *Sicyon*, so exalted the fame of his Country for the Art, that the *Heladiao* was divided, and the *Sicyonian* and *Attic* became the terms for the two Schools of the artists in Europe, while that of the cities of Asia was denominated by the general term of *Ionian*. One of the most celebrated works of this Painter was the naked figure of a conqueror in the Public Games, holding in his hand the

Comparis-
on of ancient
and modern
Painting.

PAMPHILUS appears to have given the deepest attention to the principles of his Art. He excelled all his contemporaries in the knowledge of general literature, and was well acquainted with mathematical lore, without which he thought that no one could become a perfect Painter. He was, therefore, peculiarly qualified to instruct others in the Art of Painting, and valued his lessons highly, since he received no pupil for a less sum than ten talents of silver, for which he gave instruction during ten years. On these terms, Melancthus and Apelles became his disciples. He was a native of Amphipolis, a city upon the borders of Macedonia and Thrace, but established his School at Sicyon. There he first procured for Painting a rank among the liberal Sciences, and caused a law to be passed, whereby all free citizens were to be taught its principles in their youth—a measure which was afterwards adopted throughout Greece. No slave was permitted to practise the Art, nor even to become an engraver; a restriction which, while it shows the high esteem in which Painting was held, evinces the haughty and exclusive spirit with which the Republicans of old strove to debase human nature and human genius, in order to render themselves the sole depositaries of virtue and of wisdom. The most celebrated of the Pictures of Pamphilus were, a Picture of a family, the battle before Philus, and the victory of the Athenians, and Ulysses on the seas in a small vessel. He was the last of that cluster of Painters who preceded the more decisive and splendid success of Protogenes and Apelles.

We have unfortunately but slender materials which can lead us to form a correct judgment of the degree of excellence in which the Grecian Painters were able to attain. Their Pictures, although painted on solid and durable substances, as larch, box-wood, or fir, the ceilings and walls of buildings, and sometimes even on marble, have almost entirely perished. This cannot excite wonder, when we remember that the use of oil in Painting was probably unknown to the Ancients, and that their varnishes, before distillation was invented, were necessarily imperfect, and could not long prevent decay. If the grandest works of Phidias, although statues of colossal size, are entirely lost, it could scarcely be expected that the Pictures of Zeuxis would survive. We can entertain, however, very little doubt that there were some excellencies in which the Grecian Painters arrived at a high degree of perfection. For if we consider the grandeur and the beauty of the works of statuary which, in their time, were placed in every Forum and Temple, it is impossible to believe that Painting could have been held almost in equal esteem with Sculpture, unless some of the noblest capabilities of the Art had been developed by its followers. The Apollo Belvidere, the Venus de Medicis, and the Laocoon, have for Ages been regarded as the highest possible models of excellence, which modern artists have been contented to admire, without hoping to rival. And even of these the two former are probably mere copies, and the latter is certainly the work of an Age when the purest severities of earlier times were no longer attained by the Sculptor. The Elgin marbles, though the works of the best Age of Grecian Art, were

only the inferior ornaments of that Temple in which the Minerva of Phidias was revered; and, astonishing as they are in easy majesty and natural grandeur, were produced by the hands of artists not, in their own days, comparable with the mighty framer of the principal statue. After the contemplation, therefore, of all these relics of ancient genius which time and the chances of the world have spared, we have doubtless a very inadequate idea of that more than earthly sublimity which the masterpieces of Greek Sculpture displayed, of the high divinity with which they were "instinct," or of the sweet graces with which every minor part was touched, softened, and perfected. Surely, then, the Art which shared the admiration of the Athenians with Sculpture, must have put forth no common or unfinished specimens.

Still there is great reason to believe, that if, in some respects, the ancient Painters attained the highest excellence, there were others in which they were far inferior to the Moderns. According to Pliny, Apelles himself, who flourished after the artists alluded to in this section had acquired great renown for their profession, used no more than four colours. Hence we may conclude that the chief excellence of the Greeks lay in the design, and in the strictly grand style of their delineations. It will be observed, that all the Pictures enumerated by Pliny consist of a single figure, or of groups of figures representing the human form, though that form is almost always of the grandest or sweetest cast, and is made to shadow forth the valour of heroes or the divinity of gods, or the loveliness of woman and the cherubic beauty of childhood; landscape was rarely, if ever painted; and it may be doubted if the first artists understood, with any degree of accuracy, the first principles of perspective. Painting, indeed, was brought as nearly as possible to Sculpture; its object and its excellencies were the same. This arose, in some degree, from the singular beauty of the forms which artists had constant opportunities of studying, but more from the general taste of the Greeks, which led them, on all occasions, to personify objects of nature, to embody the thoughts of mind, to catch the most airy and fleeting ideas of beauty and grace, and to shape out from them distinct and vivid images. They had no perspective of mind. Their Poetry was that of satisfaction, not of desire; and, for the same reason, their Painting gave no ideas of remoteness. They revelled in the present; or, if they looked backward, they saw only grander and more stately forms in the demi-gods and regal champions of the Heroic Ages.

The superstitions of Greece were, for the most part, gay and joyous; the images of its gods were models of earthly beauty; its Religion was a continued festival. As there was little of solemnity in the most elevated thoughts of its people, there was little of deep-shadowing or of awe-breathing gloom in its Paintings. A different spirit prevailed in those Ages in which the Italian masters were formed to excellence. Life had ceased to be a mere course of unthinking gladness; a soberer hue was shed over the colouring of existence. Religion, in its purity, while its light so far penetrated beyond the grave as to reveal the fact of another life, clearly displayed nothing but the mighty outlines of eternal being, leaving its solemnities covered with a

Biography. sacred darkness. A new and boundless expanse was opened for Imagination to soar in, but the mighty objects it contained lifted only their gigantic forms through clouds and mists, in the dimness of which their grandeur was felt rather than seen. Depths also were opened in the human soul, which Man himself could not fathom, nor look into without trembling. The feelings which arose from these new worlds of mystery, affected all kinds of imaginative productions. Even the human form was represented with a more pensive beauty; its hopes seemed to come from afar; its looks were of angels; its smiles were brought up from joys in the depths of the soul. The mind became accustomed to grasp a larger space, and the Painter strove to represent vastness and distance. At the same time the Muses, the Nymphs, the River-gods, the Cupids,—all the personifications of qualities, powers, and the works of the material creation, vanished—and Nature in her own free loveliness burst freshly in upon him. The romantic manners, too, and the gloomy superstitions of the Middle Ages, gave new subjects for the pencil, which were happily adapted to display the effects of the new, deep, and solemn emotions with which the spirit had been

awakened from its holiday dreamings. Hence the introduction of perspective, the cultivation of landscape painting, and the mingling together of divine expression with human sweetness in the Madonnas and the holy Children. Hence the heavenly sweetness of Raphael, the delicious expansion of Claude, and the wild passion and terrible sublimity of Salvator Rosa. It was as impossible, from the texture of the public mind, that the Greek Painters should have portrayed the sentiments and the feelings expressed by the Italian masters, as, from the infancy of mechanical discoveries, that they should have forestalled them in variety of colouring. In perfection of outline, purity of style, and grandeur of form, the Ancients were, doubtless, beyond imitation; but they must necessarily have been defective in variety, thought, sentiment, and destitute of the mingled charms of those divine figures, in which the Italian masters have appeared to blend the eternal with the earthly—in which the expression has been lighted up from brighter worlds, and the colours have seemed fresh from a brush dipped in the dews of heaven, and directed by the finger of an angel.

FLOWERED FROM A. M. 3519. B. C. 485. TO A. M. 3540. A. C. 464.

Biography. At the close of the life of Darius (p. 360) we related, after Herodotus, the dispute between Xerxes and Artabanus for the succession to the Throne, and the ground of their father's decision in favour of Xerxes. Of this transaction there is a different, and not uninteresting account, which rests on the authority of Plutarch and Justin, and properly belongs to the commencement of this reign. It is at the close of Plutarch's *Treatise on Brotherly Love*, and to the following purport:

The story is worthy of our attention, respecting a dispute between two brothers, not concerning a small portion of land, or the possession of a few servants or cattle, but for a prize not less than the kingdom of Persia. On the death of Darius, some claimed the succession for Ariamenes, (Artabanus, in Herodotus,) as the eldest son; others for Xerxes, the son of Darius by Atossa, the daughter of Cyrus, and born after the commencement of Darius's reign. Ariamenes went into Media, not in a hostile manner, but peaceably to await the determination of the question. There Xerxes had begun to exercise the royal authority; but, on the arrival of his brother, he put off his crown and robes of royalty, and approached him with a friendly greeting. He now sent him presents, and charged his servants with this message: "Thus your brother Xerxes honours you; and, if the Persians should declare me King, I will place you next to myself." Ariamenes replied, "I accept your gifts, but presume that I am entitled to the throne of Persia. Yet for my brothers I shall have posts of distinction, and for Xerxes the first."

VOL. IX.

to the Crown, the Persians appointed Artabanus, Darius's brother, to make the decision. Xerxes excepted against this appointment, and would rather have depended on the popular voice. His mother reproved him, encouraging his reliance on the justice of Artabanus, brother of Darius, whom the Persians had appointed umpire in this dispute. She is said (very probably, considering her ambitious character) to have reminded Xerxes, that, at the worst, he would still be next the Throne, and called the King of Persia's brother. Xerxes yielded to her reproof, and Artabanus, after some discussion of the opposite claims, adjudged the Kingdom to him; upon which Ariamenes rose up immediately, did homage to his brother, and placed him on the Throne. This account was received as authentic by the Emperor Julian, who remarks (*Opera. Orat. i. p. 33*) that, "after the death of Darius, there were disputes for the succession to the Crown, but those who aspired to it chose rather to decide their differences by the comparative justice of their claims, than by an appeal to arms."

However Xerxes attained the succession to the sovereign dominion over the mighty Empire of Persia, he is King, reputed, according to the most probable chronology, to have ascended the Throne in the year a. c. 485. Of the transactions which occupied his reign of twenty-one years very little is known, except what has been recorded in the three last books of Herodotus, who was born at Halicarnassus, in the second year of his reign. From those books, as containing nearly contemporary information, we shall collect our materials, unless where we refer to other authorities.

The first object of the young Monarch was to punish

Xerxes.

Biography. the revolt of the Egyptians. For this purpose he completed his father's preparations for an expedition into Egypt. He also now confirmed to the Jews the decrees and grants which Darius had made in their favour. On this occasion, Josephus (*Antiq.* b. xi. c. 5) has quoted (if he did not invent) an Epistle from Xerxes to Ezra, in which he permits the return to Jerusalem of all Jews of whatever description. They are also allowed, out of the treasury of the Empire, the cost of all the vessels of silver or gold which they desire to consecrate to the divine worship. "That God," adds the King, "may not be at all angry with me, or with my children, I grant all that is necessary for sacrifices to God, according to the law, as far as an hundred cori of wheat." In consequence of this indulgence, the Historian relates, that not only the Jews in Babylon, but those "that were in Media—many of them came with their effects to Babylon, as very desirous of going down to Jerusalem; but the body of the people of Israel," he adds, "remained in that Country." These, consisting of "the Ten Tribes, are beyond Euphrates, and are an immense multitude, not to be estimated by numbers." These Israelites have been supposed by Sir Wm. Jones to have been the ancestors of the AFRIANIANS. See our vol. xvii. p. 192.

The Ten Tribes.

Subjugation of Egypt.

Xerxes prepares to invade Greece.

Alcanda.

Paisistratides.

Xerxes consults his lords.

The preparations for the reduction of Egypt being now finished, Xerxes led thither an army, of whose operations we have no account, except that the revolt of that Country was soon overcome, and the subjugation of Egypt rendered more complete than by the conquest of Cambyses, or the political regulations of Darius. The government was now committed to the King's brother Artabanus, who was afterwards slain (under what provocation does not appear) by Isarus, a Lybian, the son of Psammetichus.

The following three years of his reign were employed in preparations for the invasion of Greece, which Xerxes regarded as an easy acquisition. "He refused," says Plutarch, (*Apophthegm.*) "to eat Attic figs that were brought for sale, waiting till they became his own, by the conquest of the Country that produced them." Mardonius, the son of Gobryas, desirous of recovering the military reputation which he had lost by his early misadventures, had urged Xerxes, immediately on his accession to the throne, to retaliate the wrongs which Persia had received from the Athenians. He also represented the beauty and fertility of Europe, which rendered it worthy to become the sole possession of the Great King, especially as it abounded in all kinds of trees, of which some parts of Persia are remarkably destitute. Messengers also arrived from the Alcanda, Princes of Thessaly, who entreated the King to march against Greece, and employed every argument in their power to persuade him. The survivors of the fallen family of the Paisistratides, who had found a refuge at Susa, joined their solicitations. To aid the same design, Oaomacritus, a famous Priest, who had been formerly banished from Athens, of which he was a citizen, recited some oracular verses. Omitting every thing unfavourable to the Persians, he selected whatever was encouraging. He particularly assured the King, speaking of his marching as army into Greece, how the Destinies had determined that a Persian should throw a bridge over the Hellespont.

This was the resolution of Xerxes excited by the entreaties of the Alcanda and the Paisistratides, and the flattering predictions of the expatriated Athenian

Priest. He now determined to pursue those designs against Greece, which he had already commenced, by recovering the dominion of some neighbouring tributary States which had revolted from the Persians, Being thus prepared to lead an army against Athens, the King summoned an assembly of the principal persons in his Court to hear their opinions and communicate his own pleasure. He professed that he designed by this war to imitate his illustrious predecessors, to punish the insolence of the Athenians in their attack upon Sardis, to revenge the disgrace incurred by the Battle of Marathon, and to gain possession of a rich and beautiful Country, not inferior to Persia; these objects he was also pursuing in compliance with the well-known purpose of his father Darius. Then, after expressing his hope to overrun all Europe, and acquire unlimited dominion, he proposed munificently to reward him who should bring to this expedition the greatest number of well-appointed troops; concluding this address to his Nobles, according to our Historian, with the following coadescending declaration: "Consider now what is proper to be done, nor think that I would consult only my own judgment. I charge you to deliberate, and let each freely declare his opinion." The close of this royal harangue, in Valerius Maximus, (*lib. ix. c. 5.*) is far more in character: *Ne viderer meo tantummodo usus consilio, eos contrari. Ceterum mementote parandum magis vobis esse, quam suadendum.* (That I might not seem to follow only my own judgment, I have called you together; but remember that you are rather to obey than to persuade.)

Mardonius, as might have been expected, was eager to second the opinions of the King, and, thus to promote his own wishes, again to engage the Greeks; these he affected to disparage, while he described the Persians as the first of men in military accomplishments. With Xerxes at their head he would not believe that the Greeks could be so audacious as to oppose them. Thus Mardonius paid his master the homage of echoing back his sentiments. A profound silence now ensued, no other appearing prepared to express approbation, and no one daring to oppose the sentiments and evident inclinations of the King.

According to *Ælian*, (*Var. Hist.* l. xii. c. 62.) there was a law in Persia, that if any one ventured to give advice in opposition to the opinion of the King, he did this standing on a golden tile. If his advice were approved, he received the tile for his reward. Yet he was beaten for presuming to contradict the King. On the present occasion, however, Xerxes had commanded the opinion of his counsellors, and at length Artabanus, son of Hyetaspes, and uncle of the King, deriving confidence from this relationship, ventured to interrupt the silence, by a harangue of some length, according to our Historian, but of which the following is the substance:

"O King! it was my advice to Darius, your father and Advice of my brother, by no means to war against the Scythians, Artabanus, a people who had no fixed habitations. He disregarded my admonitions, and returned, after having lost a large part of his army in the vain attempt. Those whom you would now invade are far superior to the Scythians, and equally prepared to combat by sea or land. You prepare to throw a bridge over the Hellespont, and thus lend your army through Europe into Greece. But our enemies are reported to be valiant, and if the Athenians, when unsupported, could rout

Xerxes.

Biography. the numerous armies of Datis and Artaphernes, we cannot be considered, by sea or land, as perfectly invincible. Should they now be victorious in a naval engagement, and then, sailing to the Hellespont, destroy your bridge, the narrow consequences may be apprehended, such as were narrowly escaped in your father's Scythian expedition. Listen then to my advice; do not court unnecessary hazards. And as to you, O son of Gobryas, (addressing Mardonius,) ill does it become you to calumniate the Greeks, and thus excite your Sovereign to a war, which is your favourite project. Yea, if it must be undertaken, let the King remain in Persia, and our children be answerable for the wisdom of our counsel. If the Persians conquer, as you promise, let me perish, with my children. But should those disasters happen which I forbode, let your children be thus treated, with yourself, should you survive the expedition."

Anger of Xerxes. Xerxes soon discovered how little he had designed to encourage freedom of speech among his courtiers, and how incapable he was of improving this rare advantage of possessing a friend, disposed to inform rather than to flatter him. The King neglected Artabanus, in an angry tone, and bade him impute his escape from punishment only to his relationship to the Throne. He threatened to leave him at home in the company of the women, whilst, at the head of the Persians, he pursued his victories. Yet, at night, the representations thus freely given by Artabanus awakened in his mind some serious reflections, and he at length determined to abandon, as rash and impolitic, the projected expedition. Falling asleep, he dreamed, as the Persians reported, that a man of uncommon size and besuty stood before him, and urged him to pursue his first resolution. The King, however, disregarded this vision, and, in the morning, again convened his Council, before whom he apologized for his anger towards Artabanus, and declared himself for his opinion. The second night the vision reappeared, reproaching Xerxes for his disobedience to the former injunction. In the morning, the terrified King sent for Artabanus, and proposed that, on the next night, he should assume the throne and royal robes. To Artabanus the same vision soon appeared, severely threatening him, unless he ceased to dissuade the King from his proposed expedition. Artabanus, as might be expected, now advised the war, and presently the King saw a third vision, which, according to the interpretation of the Magi, portended for Xerxes universal Empire. He appeared to be crowned with a wreath from an olive-tree, whose branches covered the whole Earth, though presently the wreath disappeared. This interpretation of the Magi being declared, the Governors hastened to their several Provinces, to execute, with all possible despatch, the orders they had received, each hoping to gain the promised reward.

Remarks. On these pretended visionary scenes, we cannot offer any remark more amiable than the following, by the learned French translator of Herodotus: *Si j'allois révoquer en doute cette vision, ou du moins, si j'allois dire que c'étoit un tour de Mardonius ou des Pisistratides, je ne dirois sans doute rien que de juste. Mais je crois devoir laisser ces sortes de réflexions à la sagacité des lecteurs.* Larcher, v. 283. (Should I call in question these visions, or, at least, describe them as contrivances of Mardonius or the Pisistratids, I should

doubtless speak nothing but truth. Yet such reflections should rather be left to every reader's sagacity.)

While Xerxes was thus preparing for the conquest of the Greeks, he engaged the Carthaginians to attack their colonies in Italy and Sicily, as we have already related in this volume (p. 225.) He likewise drew his boats, like his father Darius, from all the nations of that vast continent which owned the Persian sway. Thus, according to the Prophet Daniel, (xi. 2.) "By his strength and his great riches he stirred up all against the realm of Greece." Our Historian says, "What nation of Asia did not Xerxes lead against Greece? What waters, except great rivers, were not exhausted by his armies? Some of the people furnished ships, (and the whole have been computed at more than three thousand,) others raised infantry, and others cavalry. Some provided transports for the horses and the troops, or long vessels to form bridges, while others even brought stores of provisions and vessels to transport them." The place of rendezvous for this naval armament was Elaeus, in the Chersonesus of Thrace. Thence, if we credit our Historian, detachments were sent to execute the prodigious labour of cutting a canal through Mount Athos, now Monte Santo, or rather through the isthmus behind it. These detachments relieved each other at regular intervals, and were urged to labour by the strokes of the whip, according to the military discipline of the Persians; on which Larcher well remarks that *un soldat ainsi traité ne peut-être sensible à l'honneur.* (A soldier thus treated must become insensible to honour.) Herodotus has minutely described the expedients employed to dig this canal, a work which he attributes to the King's vain desire of displaying his power and of leaving a monument to posterity; as with far less trouble he might have transported the vessels across the isthmus. This vanity imputed to Xerxes appears, indeed, to have been a favourite theme of Antiquity. Thus Plutarch (*de ira coh.*) imputes to the haughty Persian King the following frantic Epitaph to the mountain: "Athos, whose top now reaches to the skies, I charge thee not to interrupt my workmen with stones which cannot be cut saunder, lest I cut thee into pieces, and whelm thee in the sea."

Yet Xerxes has been vindicated from the imputation of this folly, by a very reasonable diabolical of the improbable story, and a recollection that Herodotus is not always a *Historian*, "or," as Whiston remarks, that he "sometimes prefers what is marvellous, to what is best attested as really true." Juvenal, the contemporary of Plutarch, (s. 174.) ridicules the credulity which

*Velificatus Athos, et quicquid Græciæ mœnibus
Adulet in Historiâ,*

(the voyage through Athos, and other daring fictions of the fabling Greeks) could not stagger. Modern travellers have sought in vain for any evidences of this stupendous work, which is said to have occupied, for three years, a vast multitude of labourers. M. Belon, a French traveller in the sixteenth century, who has a place in Mr. Ray's curious collection of *Travels into the Eastern Countries*, could not discover, according to Rullin, on passing near Mount Athos, any traces of this canal. Such was also the report of a later observer, our learned Countryman Pocock. But Mr. Richardson, who is among the first modern authorities on Oriental questions, concludes, from the following

Extent of
the King's
prepara-
tions.

Biography. considerations, that the tale of *Athos* is incredible. "This promontory was no more than 200 miles from Athens; and yet Xerxes is said to have employed a number of men, three years before his crossing the Hellespont, to separate it from the Continent, and make a canal for his shipping. Themistocles also, who, from the time of the Battle of Marathon, had been incessantly alarming the Athenians with another Persian invasion, never endeavoured to support his opinion by any allusion to this canal, the very digging of which must have filled all Greece with astonishment, and been the subject of every public conversation." *Dianct.* p. 312.

Xerxes, having completed his preparations, began his march from Susa, with the troops which accompanied him from Persia. At Critalis, in Cappadocia, which is supposed to have been the Archelais of the Romans, and the modern Ereklis, the rest of the troops which were to compose the land army were assembled to attend the King, who now proceeded on his march to Sardis. At Celasus, the metropolis of Phrygia, Xerxes and his whole army are said to have been entertained by Pythius, who is represented to have been only second to the King in wealth, and to have lived with him in munificence; though at length his generous offers were recompensed by an extravagant cruelty. Pythius, during the march, having requested that the eldest of his five sons, who were all in the army, might be left as the support of his old age, Xerxes, as if he would imitate Darius, in the case of Cebasus, after venturing his indignation at the father, ordered this eldest son to be cut asunder, and the severed parts of his body to be placed on each side of the road through which the army was about to pass. It is remarkable that the late Mr. Beloe, in a note to his translation of Herodotus, (iii. 466,) should have taken this occasion to declare, that "no two characters could well afford a more striking contrast to each other than those of Darius and Xerxes," to the former of whom he attributes, we know not on what authority, "various instances of the tenderest humanity." We must, however, add, that the story of Pythius, though Plutarch (*de virtutibus mulierum*) has adopted and enlarged it, appears, on reflection, very improbable. What could the greatest man in Phrygia be, but the Satrap of a Province? And could such a man be suffered to amass wealth, only inferior to the royal treasures, while his name and his magnificence, as Herodotus pretends, were utterly unknown to Xerxes?

The King now proceeded through Phrygia to Colossus, and entered Lydia, at a place where Croesus had erected a pillar, to fix the boundaries of the two Countries. On his arrival at Sardis, he immediately sent heralds into Greece, with the exception of Athens and Lacedæmon, to demand the homage of earth and water; thus Xerxes occupied the winter of the fifth year of his reign. He had previously ordered, according to our Historian, vast preparations for passing the Hellespont; and upon a temporary disappointment of his scheme, discovered a childish petulance, which has made this King a theme for satire through all Ages.

He had ordered a bridge to be constructed across the Hellespont, for the passage of his army into Europe. The workmen commenced at the side next Abydos, the Phœnicians using (to connect the vessels) a cordage made of linen, and the Egyptians one made of the

bark of the hyblus. This bridge was no sooner completed at the narrowest part of the strait, which was nearly a mile over, when a violent tempest dispersed the whole. Enraged by the knowledge of the disaster, Xerxes sentenced the Hellespont to be whipped to the extent of three hundred lashes, and ordered that a pair of fetters should be thrown into the sea, which made Juvenal (x. 183) extol the King's lenity—

— *quod non est attingit dignum*

Credidit.

(that he had not branded the sea with a hot iron.) Xerxes, however, who had written to Mount Athos, now sent the following vituperatory Epistle to the Hellespont, to be delivered by the flagellators: "Thou salt and bitter water, thy master thus punishes thee, because thou hast offended him without provocation: Xerxes the King will insist on passing over thee: no one should offer thee a sacrifice, since thou art deceitful and of an unsavoury flavour." After thus punishing the sea, this *tragi-comedy* concluded by beheading those who had constructed the bridge. Another was presently undertaken, or rather two bridges were contrived, one for the soldiers, and the other for the baggage and beasts of burden. These works were at length executed in a manner which Herodotus has minutely, yet not very clearly described.

The army, which had wintered at Sardis, left that city early in the Spring, being terrified at the moment of their departure by a sudden darkness, probably an eclipse. Immediately after the baggage-train marched troops of all nations, an undistinguished multitude, comprising more than half the army; at some distance followed a thousand cavalry, selected from the whole Persian army; then a thousand chosen foot, armed with pikes trailing on the ground; after these came ten Nisamu horses superbly equipped; following these appeared the sacred car of Jupiter, drawn by eight white horses; behind these, on foot, was the charioteer holding the reins, for no mortal was permitted to mount the car; then appeared Xerxes, in a chariot drawn by Nisamu horses; by his side sat the charioteer, a Persian named Patimaphes, the son of Otanes. Thus Xerxes departed from Sardis at the head of his Persian forces.

Having proceeded along the banks of the Caicus, they at length reached the Scamander, the first river, says our Historian, which failed to supply a sufficiency of water for the troops and beasts of burden. Here Priam's Xerxes is said to have ascended the citadel of Priam to survey the plain of Ilium, and to have sacrificed a thousand oxen to the Trojan Minerva, whose Temple was in the citadel, while the Magi offered libations to the Hero-gods of the Country. How this citadel should have survived the glory of Ilium for so many centuries, or how Xerxes, under the guidance of the Persian Magi, should have honoured a Temple by a costly sacrifice, we cannot understand.

The army, however, arrived at Abydos, on the Asian shore of the Hellespont. Here Xerxes gratified his desire to survey his land and naval armament, in its prodigious extent. There was placed on an eminence a throne of white marble, from which he is said to have beheld these myriads of troops, and this multitude of vessels, at one view, and to have been further gratified by the exhibition of a naval combat, in which the Phœnicians of Sidon were the victors. The first feeling

of the Great King was that of self-gratulation, on viewing the vast assemblage of which he was the sovereign lord. But soon, to borrow the language of Leonidas, (b. iii.)

— as down

Th' immeasurable ranks his sight was lost,
A momentary gleam o'ercast his mind,
While this reflection filled his eyes with tears:
That, soon as time a hundred years had told,
Not one of all those thousands should survive.

Yet, as Seneca well remarks, (*De Brev. Vit. c. xvii.*) "the very man who shed these tears was about to destroy quickly that multitude whose death, within a hundred years, he now professed to deplore." Artabanus, the uncle of Xerxes, appears, on this occasion, to have entertained his former apprehensions as to the event of the expedition, and to have repeated them to the King. His remonstrance was now received with extraordinary forbearance, and he was courteously dismissed to Susa, under the pretence of superintending the internal government of the Empire.

Passage of
the Helles-
pont.

After calling an assembly of the principal Persians to receive the King's last commands on passing over into Europe, the next morning, before sunrise, they burned on the bridge a profusion of perfumes, and strewed the road with branches of myrtle. At the rising of the sun, Xerxes poured a libation into the sea from a golden cup, and prayed the sun to avert every calamity which might interfere with his subjugation of Europe to the farthest limits. He then threw the cup into the Hellespont, as also a golden goblet and a Persian scymitar. "I cannot decide," says Herodotus, and his language may assist us to appreciate some marvellous passages in his History. "I cannot decide whether, in throwing these things into the sea, Xerxes designed an oblation to the sun, or if, repenting of the chastisement he had inflicted on the Hellespont, he intended to appease that sea by his offerings."

Xerxes and his army appear now to have passed the bridge, nearly in such an order as that in which they had marched out of Sardis; except that the King, as soon as he had set foot in Europe, had a view of his troops, for seven days and nights, driven over by the lashes of the whip. The army having all passed over, and, according to our Historian, been alarmed by prodigies not worthy to be here related, Xerxes directed his fleet, on sailing from the Hellespont, to coast along the shore, and to rendezvous at the promontory of Sarpedon, while the army advanced to Doriscos, a spacious plain of Thrace, where was a fortress, in which Darius, in his expedition against Scythia, had placed a Persian garrison. This being a place suited to his purpose, Xerxes here determined to arrange and number his forces. This he effected by first collecting 10,000 men, and enclosing with walls the exact space they were found to occupy. Successive bodies of 10,000 men each were then admitted into the enclosure, till the whole army was numbered.

Remarks.

The amount of the land forces, Herodotus reports to have been 1,700,000, or rather, upon the whole, 1,500,000, a statement which may justly excite no small doubts of the veracity, in this instance, at least, of the reputed *Father of History*. Mr. Richardson regards his statement as absolutely fabulous, and is led to doubt whether "the paramount Sovereign of Persia" ever undertook this expedition into Greece. He rather

concludes it may have been the project of some feudatory Prince, or Viceroy of the western districts of that Empire. M. Larcher, on the other hand, justly alleges the enlaved condition of the immense population of the Persian Empire, all, without distinction of rank or occupation, forced to become soldiers at the command of the Sovereign. To the computations of later writers, Ctesias, Diodorus, Ælian, Pliny, and Justin, who, though varying, have all greatly diminished the numbers of this army, Larcher opposes the statement of Herodotus as almost a contemporary, who, at Olympia, must have found, to listen to his recital, many Greeks who had fought against Xerxes. Yet it is obvious that the sanction of Persians to his veracity had been far more satisfactory. For what exaggeration would not the Greeks have excused, to gratify their hatred of the Persian power. Major Rennell offers what is probably the best solution of this difficulty, when he says, that "the Persians may be compared, in respect to the rest of the army of Xerxes, with the Europeans in a British army in India;" where, as at the siege of Seringapatam, 30,000 regular troops have been attended by a mixed multitude of more than 100,000. Of the military dresses and weapons of this army Herodotus has given a minute description, of which we shall here subjoin a short account.

The Persians and Medes, for the Historian sees these terms indifferently, wore on their heads woollen tiaras. Their dress was a parti-coloured tunic, adorned with plates of steel, in imitation of the scales of fishes. They bore a shield called *gerza*. Their spears were short, their bows large, with arrows made of reeds. On the right side they wore a dagger. The Assyrians had brass helmets of a barbarous form. Their arms resembled those of the Egyptians. They had also clubs pointed with iron, and linen cuirasses, (or war-jackets, as Major Rennell conjectures,) which would resist the stroke of a sabre. To omit numerous descriptions, which cannot now give any interest, we add the following.—The Arabians wore large folding vests, which they call *sira*; their bows were long, flexible, and crooked. The Ethiopians were clad in skins of panthers and lions; their bows were of palm, and not less than four cubits long. Their arrows were short, and made of reeds. Instead of iron they were pointed with a stone, with which they used to cut their seals. They had also spears armed with the limus of goats, shaped like the iron of a lance; and also knotty clubs. It is the custom of this people, when they advance to combat, to dash one-half of their bodies with gypsum, and the other with vermilion. (l. vii. c. 49.) Of the cavalry, "who formed a body of 80,000," (a most disproportionate number,) "exclusive of camels and chariots," the most remarkable appear to have been "the Sagartii, a body of 8000. These people led a pastoral life, were originally of Persian descent, and used the Persian language. They had no offensive weapons, except their daggers. Their principal dependence in battle was upon cords, made of twisted leather. These cords, having a noose at the end, they threw out, and, thus entangling their enemy, easily put him to death."

Whether the Jews were comprehended in one of the numerous divisions of this army has been a question difficult to decide. They could scarcely have escaped a general call upon the Provinces of the Empire, and Josephus

Biography. (*Contra Apioo*. l. i. s. 28) declares for the affirmative. He concludes that they are designed by the Poet Cherilus, a cotemporary of Xerxes, who says, that "at the last there passed over a people, wonderful to be beheld, who spake the Phœnician Tongue. They dwelt in the Solyman mountains, near a broad lake." Pridæus says, "Jerusalem having also had the name of Solyma, (by abbreviation for Hierosolyma,) and all the country therabouts being mountainous, and lying near the great lake Asphaltites, commonly called the Lake of Sodom, this description seems plainly to suit the Jews, especially since it is also mentioned that they spake the Phœnician language, the Syriac being then the vulgar language of the Jews. But Scaliger, Cunæus, and Bochartus, understand it of the Solymi, in Pisidia. However, Salmonus maintains the contrary opinion, and justifies Josephus in it; and it must be said, that it is not at all likely that, when Xerxes called all the other nations of the Persian Empire to follow him to this war, the Jews alone should be excused from it. And therefore, whether these whom Cherilus speaks of were Jews or not, it must be taken for certain that they also did hear a part in this expedition." (Pl. i. b. iv.)

Military Commanders.

To the command of this armament twelve Generals were appointed for the land forces; the first of whom was Mardonius, who now hoped to retrieve his lost military reputation; another of these leaders was Megabyzus, the son of Zopyrus; Hydarnes commanded the 10,000 Persians who were called the *immortal band*. The cavalry had separate Commanders, and four Generals were appointed for the fleet, which at first consisted of 1200 vessels of war, and the number was increased by those States in Europe which the power of Xerxes had inclined to solicit his alliance. These Commanders of the fleet are named by Herodotus, but none of them distinguished themselves except his Countrywoman Artemisia, Queen of Halicarnassus, who attended Xerxes with five ships, the best appointed of all the fleet. She is celebrated as well for her courage in battle as for her prudent counsel.

Xerxes reviews his forces.

Xerxes, having numbered his forces of every description, proceeded, according to the narration of Herodotus, to review the immense multitude which the Historian assigns to this expedition. Mounted on a car, the King passed through every rank of the different nations, proposing suitable questions to each, attended by his Secretaries, who wrote down the answers. He then seated himself on the deck of a Sidonian vessel, under a cloth of gold, and thus gratified his curiosity in passing through the fleet. The King then sent for Demaratus, the exiled Spartan Prince, who attended him in this expedition, and had probably witnessed the review. Demanding of the Spartan whether he thought the Greeks would venture to resist such a force, Demaratus prudently inquired whether his royal patrol were disposed to hear the truth, or to be flattered. Xerxes requiring his opinion without apprehension or disguise, Demaratus assured the King that the Greeks, or at least the Lacedæmonians, would resist, even though they could master only a thousand men. He then closed a conversation of some length, by a flattering wish that the expedition might succeed according to the King's desire. This success, however, he had endeavored to prevent, by the intelligence which he had communicated to the Greeks,

being, according to Justin, *amicior patriæ post fugam, quam regi, post beneficia*, (more friendly to the Country which had banished, than to the King who had entertained him.)

Xerxes now traversed the territory of Thræce, which his fleet coasted, to supply the necessary provisions for the army, except when they were furnished by the cities on his march, as at Abdera; where a citizen, according to Herodotus, proposed to thank the gods for their escape from total ruin, as Xerxes had exacted only one meal in a day. On the banks of the Strymon, as the Historian relates, the Magi, for the purpose of divination, sacrificed white horses, the appearance of whose entrails contained the happiest prognostications of a successful expedition. Of the manner of such a sacrifice, Strabo, (l. xv. p. 1063, B.), as quoted by Larcher, gives the following description:

"When the Persians arrive at a lake, river, or fountain, they dig a trench, over which they slay the victim, carefully preserving the adjacent water from being defiled by the blood. They then dispose of the flesh on branches of myrtle or laurel, to which they set fire with slender wands, frequently chanting hymns, and making libations of oil, mixed with milk and honey; but these they pour out neither on the fire nor on the water, but on the earth. In this sacrifice the Magi soon added a horrible cruelty. Having crossed the Strymon, they came into the Country of the Edonians; understanding that the district, through which they were passing, was called the Nine Ways, they seized nine boys, and as many girls, natives of the Country. These they buried alive according to the manner of the Persians; and, as Herodotus conjectures, for a sacrifice to the subterranean deity."

Xerxes proceeded on his march, receiving the submission of the Countries through which he passed, and from these he continually augmented his forces. His march was in the following order. One of the three bodies, into which the army was divided, proceeded along the shore, and was commanded by Mardonius and Masistes; another, led by Tritanactes and Gergis, marched through the interior of the Country; while the third took the midway between the other divisions. Here Xerxes commanded, and had Smerdones and Megabyzus under his immediate directions. In this order the army arrived at Therma, afterwards called Thessalonica, and now, by the Turks, Solomki, situate on the gulf which bears that name. Here Xerxes appears to have remained a considerable time, and the Historian attributes to him the project of diverting the course of the river Peneus. Here, however, he waited the return of the heralds whom he had sent to all the States of Greece, except Athens and Lacedæmon, to demand the homage of earth and water. The principal of those who submitted were the people of Thessaly and the Lœrians, both justly dreading the approach of the Persian forces.

Of the various preparations to accomplish these mighty projects of the Great King, the Greeks, and Lacedæmonians, had not been isositive observers. The talents called forth by this crisis of their affairs, and the manner in which those talents were now exerted, occur, with interesting particular, in our biographies of the great men who adorned this splendid period of

Xerxes.

Convention
of Grecian
States.

A convention of Deputies from the several States of Greece was held at the isthmus of Corinthus, to provide for the common safety. The Spartans took the further precaution of inquiring of the Oracle of Delphi, where a Priestess declared the cruel alternative, that either a King, the descendant of Hercules, must sacrifice his life, or Lacedæmon be destroyed. On this sacrifice Leonidas immediately resolved, and determined to defend the pass of Thermopylæ with only 300 Spartans. These, however, with the troops of some allied cities in Peloponnesus, and of the Thebans, Thespians, and states near Thermopylæ, composed an army of 8,000 men. There they awaited the advance of the army of Xerxes, that "world in arms," at the pass, which Raleigh describes as "a narrow passage of half an acre of ground, lying between the mountains which divide Thessaly from Greece, where, some time, the Phocians had raised a wall, with gates, which was then for the most part ruined."

Persians at
Thermo-
pylæ.

The Persians now approached the pass. "If we may believe Herodotus," says the same Historian, "the army of Xerxes, being reviewed at Thermopylæ, consisted of 5,283,290 men, besides landraces, harlots, and horses." We need not repeat the *historic doubts* which this extravagant enumeration cannot fail to excite. There can be no doubt, however, that Xerxes disdained to expect a moment's opposition when his army should appear, though he had heard while in Thessaly, that a small body of troops, commanded by Leonidas, determined to dispute the passage. He first sent a horseman to reconnoitre, who returned after having observed only the Lacedæmonians. These he found engaged, some in gymnastic sports, while others were combing their hair. The King appeared surprised that they were so much at their ease; but Demaratus assured him that when they were about to expose their lives in battle, they carefully adjusted their hair. He also ventured to repeat the unaccountable opinion, that the Lacedæmonians would resist to the last man. But the King, as might have been foreseen, was incapable of profiting by good counsel.

Battle.

After a delay of four days, during which he expected that the Greeks would fly and abandon the defence of the pass, Xerxes sent a detachment of Medes and Cissians, with orders to bring them prisoners. They, however, repulsed the invaders, who were continually reinforced, till, at length, the confession was extorted from Xerxes, that he had many men, but few soldiers. The Medes were now superseded by the immortal band of Persians, commanded by Hydarnes, who vainly advanced as to an easy victory. After a desperate struggle, in which the Lacedæmonians evinced their superior skill and bravery, the immortals were forced to retire. So arduous had been the conflict, that Xerxes, who is described as a spectator of the combat, is said to have thrice leaped from his throne, "fearing," says Raleigh, "the apprehended destruction of his army, by one handful of those men whom not long before he had utterly despised."

Treachery
of a Greek.

Treachery, however, succeeded where force had been unavailing. For, after a second engagement had proved equally unsuccessful, "a renegade Grecian," says the same Historian, "taught him a secret way, by which part of his army might ascend the ledge of mountains,

and set upon the backs of those who kept the straits. Then," he adds, "did Leonidas, with his 300 Spartans and 700 Thespians, with admirable courage, not only resist that world of men which charged them on all sides, but, issuing out of their strength, made so great a slaughter of their enemies, that they might be well called vanquishers, though all of them were slain upon the place." Such, indeed, was the glorious end of the 300 Spartans, for Leonidas had sent away his allies. According to Diodorus Siculus, who is followed by Plutarch, the Spartans demanded to be led against the Persians before those who were about to fall upon their rear could make the circuit of the mountain. Leonidas and his chosen band now attacked the Persian camp, where they made a great slaughter, penetrating even to the royal pavilion, from which Xerxes had narrowly escaped. Of that Prince, Pausanias has left the remark, that he "had never beheld Greece, or laid Athens in ashes, had not his forces under Hydarnes been conducted through a path over Oeta, and by that means encompassing the Greeks, overcame and slain Leonidas." According to Herodotus, he had lost in these combats two of his brothers and 20,000 men, whose numbers he vainly attempted to conceal, by giving the customary burial to only 1,000, and heaping the remainder in pits, which were immediately covered with grass and leaves.

Xerxes had no sooner passed Thermopylæ, than he laid waste Phocia and the adjoining States, the inhabitants flying at his approach. A detachment of his army also marched to Delphi, with a design to pillage the temple of its immense riches, of which, says Herodotus, the King had a more minute description than of the furniture of his own palaces. The storied prevention of this pillage by a dreadful tempest, while rocks, severed from the mountain, crushed the Persian troops, must be regarded as one of the ornaments of Grecian History. Another detachment of the Persian army entered Attica, and marched to Athens, which they found nearly without inhabitants; for the Athenians, by the advice of Themistocles, who had probably procured the oracle which he persuaded them to obey, had embarked on board their galleys, to meet the enemy at sea. A few indeed remained, too indigent to sustain the expenses of the embarkation, or who had literally interpreted the exhortation to trust in their wooden walls. These walls they bravely defended till all of them were slain; for Xerxes stormed the citadel and reduced it to ashes. Of his success against Athens, he immediately informed his uncle and uncourtly counsellor, Artabanus, by a courier despatched to Susa, charged also with those invaluable spoils, the Statues and Pictures of Greece.

While Xerxes had been delayed at the pass of Thermopylæ, his fleet had rendezvoused at Aphetæ, a port of Thessaly, at no great distance from Artemisium, a promontory of Eubœa, nigh which the Grecian navy waited their approach. The fleet of the Persians had suffered in a storm, yet they were able to detach two hundred ships, with orders to sail round the island of Eubœa, and encompass the Grecian fleet. These having intelligence of the design, set sail in the night, for the purpose of attacking the Persian detachment at daybreak. Missing them, they bore away to meet the main body, and brought on the obstinately disputed Battle of Artemisium, on the very day of the last desperate conflict which had opened to Xerxes the pass of Thermopylæ.

Battle of
Artemis-
ium.

Biography. The Battle of Artemisium was by no means decisive, though the Greeks had generally the advantage: yet their ships were shattered, and to rest them they retired to the straits of Salamis, where they were reinforced till their vessels amounted to more than three hundred. Thither the Persians followed them, contrary to the opinion of Artemisia, who recommended the invasion of the Peloponnese by the land-army—a counsel as obviously prudent, as that Queen's behaviour in the naval engagement, which she would have prevented, was singularly heroic. But Xerxes was devoted to counsels more flattering to his own opinion, and encamped his army on the shore, pitching his tent on Mount Egaleus, opposite to the island of Salamis, where he might witness the conduct of his Commanders, and employ the Secretaries who attended him to record their deeds.

Battle of Salamis. The Greeks taking advantage of that narrow sea, which prevented the Persians, whose ships were more numerous, from extending their front, determined to engage them; or, according to another account, by the policy of Themistocles, they were placed in a situation where an engagement was indispensable. In this Battle of Salamis the Persians suffered a great overthrow, two hundred of their ships being destroyed, and the rest driven to the coast of Asia, from which they never ventured to return into Greece. It is well remarked by Raleigh, that "the scribes of Xerxes had a wearisome task of writing down many disasters which befall the Persian fleet; which ill acquitted itself that day, doing no one piece of service worthy the presence of their King or the registering of his notaries." Xerxes no sooner witnessed this disaster, than, fearing lest the victors should reach the Hellespont before him, he hastened the march of his army out of Europe, leaving Mardonius with 300,000 men to carry on the war. On this march, for which there had been no preparation, great hardships were endured during the forty-five days which it occupied. At length the King, impatient to escape, left his army, and hastened with a small retinue to the bridge, which he found almost destroyed by a tempest. He was thus reduced to cross the Hellespont in a skiff: *Erat res spectaculo digna, says Justin, (lib. ii. c. 13.) of estimations sortis humanæ, rerum variatæ mirandæ, in cæcis lateribus videtur navigio, quem patib antè sis æquæ omne capiebat; cærentiam omni errorum ministerio, cæcis exercitibus, propter multitudinem, terris grævas erant:* (It was a spectacle fitted to afford a just estimate of human greatness, and to discover the instability of every thing earthly, when he was stealing away in a small boat, almost destitute of attendants, whose fleets had lately covered the sea, and whose armies, by their vast multitude, had exhausted the land.) Xerxes waited for his army at Sardis, and thus ingloriously concluded the sixth year of his reign. To add to the King's disappointment, his allies, the Carthaginians, were about the same time defeated by Gelu, the King of Sicily. He slew 150,000, and sold the same number, till all Sicily was filled with Carthaginian captives. Of their fleet, only a rock-boat remained, in which a few escaped to carry the dismal news to Carthage.

Flight of Xerxes.

Mardonius passed the winter in Thessaly and Macedonia, and early in the Spring marched into Boeotia. Thence he sent Alexander, King of Macedonia, with flattering proposals of accommodation to the Athenians. He offered to reinstate whatever the Persians had destroyed on their invasion, to restore, and even to extend their possessions, to guarantee their own laws, and, in short, to render them the most favoured tributaries of the Persian Empire; but the Athenians were deaf to these proposals. The enraged General marched into Attica, desolating the Country through which he passed, and destroying, at Athens, now a second time deserted, every thing which had escaped the former devastation. In the mean time, the Greeks assembled their forces at the isthmus of Corinth, and drew Mardonius back into Boeotia, where he encamped on the river Æsonus.

Upon this the Greeks marched to attack the Persians. Pausanias, King of Lacedæmon, and Aristides the Athenian, commanded the allied forces, which amounted to 120,000; the Persians are computed, by Herodotus, at 350,000, and by Diodorus Siculus at 500,000. The armies joined battle near the city of Platæa, when Mardonius was slain, and the Persian army almost entirely destroyed. Artabazus, indeed, who had early apprehended the ill fortune of the day, escaped with 40,000 men under his command. By hasty marches he reached Byzantium before the news of the battle, and thence passed into Asia. Besides these, it was computed that not 4,000 of the Persian army survived the Battle of Platæa, and it was the last army of Persians ever seen on the European side of the Hellespont. On the very day of that battle happened the engagement at Mycæ, a promontory on the continent of Asia; this, according to the remaining accounts, was rather a land than a naval engagement. The Persians, on the approach of the Grecian fleet, had drawn up their ships on the shore, where they had 100,000 land forces; they also formed a strong rampart to defend their navy: but the now irresistible Greeks defeated the army, forced the rampart, and utterly destroyed the ships.

Carthaginians defeated in Sicily.

Xerxes, when apprized of these accumulated disasters, left Sardis precipitately, as he had fled after the Battle of Salamis. He, however, gave orders for the destruction of all the temples in Asia Minor, either from zeal for the Magian Religion, or to wreak his vengeance on the Asiatic Greeks. "The same conduct he observed when passing through Babylon, on his return to Susa,—perhaps, as Prideaux conjectures, to recruit his finances by the immense treasures which the Temple of Belus contained. Thus, adds that pious and learned author, (Con. pt. i. b. iv.) "was fully completed what the Prophets Isaiah and Jeremiah prophesied many years before—*All the graven images of her gods hath he broken to the ground. I will punish Bel in Babylon, I will bring forth out of his mouth that which he hath swallowed. And I will do judgment on all the graven images of Babylon. Bel is confounded, Merodach is broken in pieces, her idols are confounded, her images are broken in pieces.*"

While the Greeks were pursuing their advantages, by delivering many of the cities of Asia from the Persian yoke, Xerxes was solacing himself by the indulgence of his criminal passions, and preparing, in his own family, a horrible tragedy. He had sought to seduce the wife of his brother Maestres. That wretch utterly rejecting his unworthy suit, he hoped to conciliate her by marrying her daughter Artayntis to his eldest son Darius. This marriage had no influence to

Xerxes to Persia.

Xerxes to Persia.

Biography. corrupt the wife of Masistes; and at length Xerxes attempted, and prevailed over the virtue of her daughter Artaynta, whom he had just married to his son. In the process of this scandalous intrigue, Artaynta became possessed of a rich mantle, which Hamestris, the Queen of Xerxes, had wrought for him. This she displayed in public, when the Queen, confirmed in her suspicions of what had happened, meditated revenge; but considering the mother of Artaynta as the instigator of the whole affair, on her side determined to wreak a cruel retribution. On the birthday of the King it was customary for him to grant the most extravagant requests of those about him, and the vindictive Queen had not long to wait for this favourable opportunity of requesting the wife of Masistes to be given up to her disposal.

Xerxes long hesitated to comply with her demand; aware at once of his own share in the dishonour already brought upon his brother's family, and of some barbarous outrage being now meditated by the Queen. He is said, at last, to have sent for his brother to persuade him to sacrifice his innocent consort, and to accept of one of his own daughters in her place; an offer which Masistes rejected with great firmness, reminding Xerxes not only that he was well contented with his present alliance, but that his wife had been the mother of three noble sons, as well as daughters, one of whom had married the son of the King; and "would you after this," said he, "have me marry your daughter? I esteem your proposal, O King, as the highest honour, but I cannot accept it." Xerxes broke off this conference in great anger; but Hamestris, in the interim, by means of the guard, had seized her unhappy victim. Having first mutilated her person in the most horrible manner, she sent her home to her husband in that mangled condition. Masistes, highly exasperated, determined to revenge himself by revolting from the King, and hastened, for this purpose, to his government of Bactria. Here the Sace, a most warlike and powerful tribe, who had distinguished themselves both at Plataea and Marathon, and were afterwards concerned in several considerable revolutions in their neighbourhood, had undoubtedly been ready to avenge his injuries, for he was much beloved throughout the whole Province which he governed. Xerxes, however, sent after him a party of horse, by whom Masistes and all

his family were destroyed. And thus, unless Herodotus has egregiously failed, to gratify the resentment of the Greeks, Xerxes appears a slave to the worst passions, vainly seeking an unlimited rule over other men while he had no command over himself.

We have now passed through nine of the twenty-one years attributed to the reign of Xerxes, according to the accounts generally received; though some, on the authority of Thucydides, have given nine of the latter years to the reign of Artaxerxes. The Greeks, during those years, continued to employ their naval ascendancy in freeing the maritime Countries of Asia Minor from the dominion of Persia. In the interior of that Empire nothing appears to have occurred worthy of remembrance, except those extraordinary events which are elsewhere detailed—the resort of Themistocles to the Court of Persia, and his favour with the Great King.

The end of Xerxes was worthy of the public and private life which history, at least that of the Greeks, has assigned to him. He was slain by one of his guards, who afterwards slew his eldest son Darius, on a false accusation, and thus raised Artaxerxes to the throne. Some, however, suppose that he had shared the government with his father from the twelfth year of his reign. (See Mr. Lauchlane Taylor's Observations in his *Essay on the Revelations*, p. 191, and Priestley on the *Harmony of the Evangelists*, 1780, sec. iv. p. 24.)

Of Xerxes, scarcely any thing would now be known, His character but for the chapters of Herodotus, which we have so often quoted. Whether the Father of History justly described or occasionally misrepresented the character of the inveterate foe of the people for whom he wrote, he has certainly held him up to all Ages as an object of contempt rather than of admiration. Nor has any name been more frequently employed

To point a moral, or adorn a tale.

In the judgment of Fenelon, when he was instructing a young Prince by the examples of antiquity, in his *Dialogues des Mortes*, the life of this King eminently discovers, that *La sagesse et la valeur rendent les états invincibles, et non pas le grand nombre des sujets, ni l'autorité sans bornes des princes.* (Wisdom and valour render states invincible, rather than numerous subjects or the boundless authority of princes.)

tion of
Xerxes.

LUCIUS JUNIUS BRUTUS.

FLOURISHED ABOUT A. M. 3495. A. C. 509.

Biography. In tracing out the illustrious course pursued by Lucius Junius Brutus, we have to contemplate the mighty change in the government of Rome, from the Regal to the Consular state, in which he took so striking and heroic a share. The peculiar qualities of the Roman citizen, which now had assumed a marked distinctiveness of character, would scarcely have suffered the long duration of the Kingly power, even though it had not been tyrannically exerted. The stern and savage virtue of the early Romans would have prompted them, at no distant period, to require a larger share in the direction of their Country, for whose glory they were alone contented to live, and in whose defence they thought it happiness to die. The oppressions, however, of Tarquin and his sons a little precipitated the great revolution which the fierce and warlike spirit of the people had been silently preparing.

His family misfortune. Lucius Junius Brutus, who awakened his Countrymen to a sense of their injuries and their rights, was descended from an ancient and noble family. His father, Marcus Junius, was one of the most distinguished of the Patricians, for his ample estate and his personal virtues, and had been honoured with the hand of a daughter of the elder Tarquin. These circumstances rendered him peculiarly obnoxious to the haughty monarch, who obtained the throne by the murder of Servius, and, conscious of the atrocity of his own proceedings, thought it could be rendered secure only by the removal of all the chief men in the State whose virtues might silently reproach him. Excited by this apprehension, and anxious to secure the princely fortunes of his victim, Tarquin caused Marcus Junius to be assassinated, together with one of his sons. Lucius Junius would, doubtless, have shared the fate of his father and his brother, had he not counterfeited idiocy, and thus procured himself to be regarded as harmless, while he cherished in secret the intention, on the first favourable occasion, of revenging the death of his murdered relations.

Counterfeiting idiocy. In the mean time, the King enjoyed the patrimonial estate of Lucius Junius, who, from his apparent deficiency in understanding, received the appellation of *Brutus*, and was suffered to become a companion of the Princes. While Tarquin was engaged in completing the great public works at Rome, and in sending colonies to Seguin and Circum, a dreadful pestilence broke out in the city, and a serpent was observed to glide from a wooden pillar, and spread terror throughout the palace. Alarmed at these events, the monarch despatched his sons, Titus and Aruns, to the Oracle at Delphos, in order that they might inquire the proper mode of appeasing the anger of heaven. On this long and perilous expedition they were attended by Brutus, from whose idiocy they expected to gather materials for laughter. Like his companions, he carried with him an offering to

Apollo, which appearing to be nothing but a common staff of wood, excited universal derision. In reality, however, he had concealed a piece of gold within it, so that the derided present was not only of intrinsic value, but an expressive symbol of the donor's condition, who possessed a high and noble mind beneath a contemptible exterior. On their arrival at the shrine, the youths having fulfilled their commission, inquired of the Oracle which of them should succeed to the Crown, and received for answer, that he should have the supreme authority in Rome who should first kiss his mother. Titus and Aruns, understanding the reply literally, determined to conceal it from Sextus, and either cast lots which of them should fulfil the Oracle, or agreed to embrace the Queen at the same moment on their return home, that they might reign jointly on the death of their father. But Brutus, conceiving the meaning of the response to be allegorical, pretended to fall by accident as he left the shrine, and kissed the Earth, the common mother of all things. The incident, if true, serves to prove that, during the whole of his assumed idiocy, he meditated the revenge of his own private injuries and the deliverance of his Country from oppression.

A new outrage, committed by one of the Royal House, soon afforded a fit occasion for the accomplishment of these designs. Finding his treasury almost exhausted by the erection of magnificent edifices, and the people discontented with being so long employed in the drudgery of mechanical labour, Tarquin resolved to lead his forces against Ardea, a city of the Rutuli, **Siege of Ardea.** about twenty miles from Rome, where a rich booty might be expected. He first attempted to take the place by storm, but, meeting with a vigorous resistance, was compelled to blockade it. As the siege was protracted, he was obliged to lay fresh imposts on the citizens to provide for the expenses of the army, instead of regaining their affections by a division of plunder, and thus caused their minds, already inflamed, to be more alienated from him. The young Princes and Patrician officers who were engaged in the siege spent much of their time in revelling. On one of these festal occasions, a dispute arose in the tent of Sextus Tarquin between the sons of the King and Collatinus, the grandson of Egerius, who was nephew to the elder Tarquin, respecting the comparative merits of their consorts. Inflamed by wine, they resolved to determine the contest by instantly riding to their homes and discovering how their wives were employed during their absence. In pursuance of this intention, they first proceeded to Rome, where they found the ladies of the Princes engaged in festal amusements, and little pleased at the sudden return of their husbands. But when they arrived at Collatia, the residence of the family of Collatinus, they found his wife Lucretia spinning among

Brutus.

Biography. her maidens, and ready to give them, notwithstanding the lateness of the visit, a polite and cheerful reception. Her beauty, rendered more attractive by the softness of her manners, incited in Sextus the determination to seduce her, which, although he could not execute on this occasion, he did not resign. A few days after this visit, the Prince took an opportunity of leaving the camp before Ardea, unknown to his comrades, and arrived at Collatia, attended only by a single slave. There he was instantly entertained by the unsuspecting Lucretia as the friend of her husband, and in the evening conducted to his chamber. Hence he stole, in the dead of the night, to the apartment of his victim, with his sword drawn, and awakened her by placing his hand on her bosom, and declaring that he would instantly put her to death if she dared to cry out for succour. He then declared his passion to the astonished lady, mingled the most terrible threats with the most vehement entreaties, and strove alternately by flattery and terror to influence her to yield to his desires. Finding at last, that none of these arts had the least power to shake her resolution, he declared, that if she continued her resistance he would not only kill her, but dispatch one of her slaves, and place him beside her on the couch, that it might be believed he had put them to death to revenge the injured honor of her husband. The dread of infamy prevailed over a mind upon which the fear of death had no power, and Lucretia yielded. In the morning the infamous ravisher left her for the camp, exulting in his guilty triumph.

Outrage on Lucretia.

Tanocent as Lucretia had been in intention, she was unable to survive the indignity she had been compelled to endure. The stern prejudices of her Roman education prevented her from justly discriminating between Physical and Moral pollution. She wrote immediately to her husband and father, entreating them to hasten to her, with a few chosen friends, as she had a terrible misfortune to relate. She then dressed herself in mourning, and, according to Dionysius Halicarnassus, proceeded to Rome; although Livy informs us, that she awaited at Collatia the arrival of those to whom she had dispatched her summons. Her request was immediately complied with; and her father, Collatinus, with Lucius Publicola, and other illustrious Patricians, assembled with great anxiety to hear her complaint. They found her sitting pensively in her chamber, and observed her burst into tears on their arrival, on which her husband eagerly demanded if all was well. "Oh no!" she passionately exclaimed; "for what can be well with her whose chastity is gone? A stranger, my dear husband, has defiled your nuptial couch! But this body alone has been violated; my soul is unspotted, as my death shall testify. Give me your hands in solemn pledge that this crime shall not be unrevengeed. It was Sextus Tarquin who last night spurned the sanctities of hospitality, and by force obtained the gratification of his lust—deadly to me—and to himself! alas, if ye dare to act like men!" All present immediately plighted their faith to avenge the wrong, but strove to console her by assurances that she herself was guiltless, and ought yet to live to see justice overtake the sole author of her sorrows. Their consolations and remonstrances were in vain. "I leave you," she replied, "to visit the crime on Sextus; for myself, although I am free from the guilt, I will not avoid the consequences of my

fall; no woman, in future times, shall ever survive her chastity, and point out Lucretia as her example." With these words she suddenly drew a poniard from beneath her robe, which she plunged into her bosom, and fell lifeless amidst the astonished assembly.

The father and husband of the heroic lady immediately gave way to the bitterest affliction. But Brutus, finding that the moment of retribution so long waited for had arrived, seized the dagger from the mortal wound, and solemnly raising it to heaven, exclaimed, "I swear by this blood, most chaste till defiled by royal infamy, and call you, O gods! to bear witness, that I will pursue Tarquin, his accursed wife, and all his polluted family, with fire, sword, and every instrument of vengeance; and I will never suffer them or any other person to wear the Crown of Rome!" He then delivered the bloody dagger to Collatinus, Lucretius, Valerius, and all who were present, who bound themselves by the same oath, amazed to find Brutus, hitherto regarded as an idiot, inspired by so high and noble an energy. Like him, they changed their grief into an aspiration for revenge, and followed him as their leader in the great enterprise of destroying the regal power. At his direction, the body of Lucretia was brought into the Forum, where, by virtue of the authority of Tribune, or Master of the Horse, which Tarquin had bestowed on him, because he supposed it impossible that he should use it against the royal authority, he ordered the Comitia to be assembled. The people naturally ran in crowds to see the melancholy spectacle, which aroused in their minds not only sympathy for the departed, but the remembrance of those individual wrongs which each attributed to the House of Tarquin. On Brutus they looked with amusement, as on one inspired by the gods; and on the venerable and childless father with burning grief, which nothing but revenge could alleviate. By consent of the latter, whom the King had left Governor of the city, the gates were shut, and a guard placed upon them, that no intelligence might be conveyed to the camp of the tumult at Rome. Brutus, in the mean time, standing beside the corpse, addressed the people in a passionate speech, calculated to inflame them against the monarch and his family. He not only set forth, in glowing colours, the atrocious outrage which had caused the lamentable tragedy before them, but glanced rapidly at all the tyrannous acts of the King, from the murder of Servius; set before them the inhuman barbarity of Tullia, who drove, to meet her husband, over her father's corpse; dwelt on the oppression which had degraded the conquerors of all their foreign enemies to the low drudgery of mechanics; and incited them, by vivid pictures of all the deeds of injustice imputed to the reigning family, to root out their name and their power for ever from among them. This discourse was received with acclamations and demands for arms; and a decree, hastily passed by the Senate, was solemnly confirmed by the people, which deprived the King of his authority, declared him and his family perpetual exiles, and pronounced a dreadful curse against any Roman who should, by word or action, attempt to recall them.*

Addresses
the people.

* Tullia, finding that it was in vain to oppose the feeling so highly excited, left the palace in dismay, and fled through the city, without experiencing any personal violence, but followed by universal execrations.

Biography. Brutus now gave arms to a number of noble youths, who offered their services in the cause of freedom, and, leaving Rome to the government of Lucretius, marched with them for Ardea, in order to incite the army to join him. The King, having, in the mean time, heard of the transactions at Rome, set out for that city, in order to suppress the tumult; so that, according to Livy, Brutus passed him on the road, having turned aside to avoid an encounter. On his arrival before Rome, he found the gates shut against him, and learning that himself and his family were condemned to exile, retired, without endeavouring by force to obtain an entrance. Brutus, meanwhile, was received in the camp with the most lively expressions of joy, and the sons of the King were compelled to fly, while the troops united in the work of freedom with their fellow-citizens.

Thus did Brutus, by a single stroke, and without the least effusion of blood, put an end to the monarchy of Rome, after it had subsisted for two hundred and forty-three years. The revolution appears to have taken place precisely at the most favourable juncture for the rising grandeur of the State. In the earlier times, the citizens being collected from various regions, and unused to social regulations, would have been incapable of joining in the domestic contentions incident to a Republic, without producing the total disorganization of the whole, and returning almost to a barbarous condition. Beneath the fostering influence of the regal power they became gradually united, and those common feelings grew up among them which all the tumults of party were unable to destroy. That ardent and exclusive patriotism which ultimately became the means of subduing the world, had gathered strength in successful wars and in glorious peace, till it became an impulse so grand and inspiring, that those who cherished it had too lofty a consciousness of their own personal worth to endure the yoke of a Sovereign. Had the Romans now learned to repose beneath a pacific monarchy, and to rest satisfied with their conquests, the energy which aimed at universal sway must have perished, and Rome have remained one of the smallest Kingdoms of Italy.

Of the oppressive acts of Tarquin and his sons, which were the immediate causes of the revolution, we can scarcely judge with impartiality, from the colouring thrown over them by the Roman Historians. These writers, even though they flourished when the liberties of their Country had decayed, seem to have written with quenchless ardour respecting them; and to have given vent to the feelings they dared not express on present transactions, in dwelling on the glories of the past. Even from their representations, however, it is manifest that Tarquin was not destitute of great talents, nor of spirit to employ them in magnificent designs. "His conduct," observes Montesquieu, "before his calamities, which it is evident he foresaw, his gentleness and humanity towards the conquered, his beneficence to the soldiers, the arts by which he engaged such numbers to attempt his preservation, the edifies he raised for the public use, his courage in the field, the constancy and patience with which he bore his misfortunes, a twenty years' war, which he either carried on, or caused to be carried on, against the Romans, though deprived of his Kingdom, and in great

poverty—these things, and the resources he perpetually found, prove manifestly that he was no contemptible person."

The family of Tarquin being expelled from the city, the Romans were called on to choose the form of government by which they would be ruled. In this important choice they appear to have been determined by the wisdom of Brutus. He proposed that two persons should jointly be entrusted with the supreme power, that they might check injustice and ambition in each other, and that, still further to prevent the abuse of their authority, the office should last only for a year. This proposition was adopted by the people assembled by Curia; the new Governors were called *Consuls*; the new form term *Kingdom* was changed to *Republic*; and the title of King, no longer bestowed on a temporal magistrate, was given to a Priest of high rank, who was termed *Res sacrorum*, and enjoyed dignity inferior only to the *Pontifex Maximus*. As the Kings had been accustomed to perform some of the public ceremonies of Religion, this officer was appointed to discharge that part of the regal duties, and to preserve the venerable name which had been consecrated at the foundation of the city, without being permitted to interfere with the Civil rights of the people. Indeed, so jealous were the Romans of the title which their prejudices would not suffer them wholly to abolish, that they absolutely prohibited the individual who bore it from all interference with the public concerns, so that, in the Comitia of the people, in which he presided at the opening sacrifice, he was compelled to withdraw the moment that solemnity was concluded.

The form of government thus fixed, Lucretius, who had governed the city during the interregnum, caused the people to be summoned to the Campus Martius, to the first election of Consuls. On his proposition, Brutus, and Collatinus the husband of Lucretia, were chosen to the new dignity, and immediately entered on its exercise. They are said, by Livy, to have possessed all the authorities, and to have been surrounded by all the emblems of power which had been assumed by the Kings, excepting that only one of them at a time was attended by the Lictors with the fasces, an honour which they enjoyed alternately for a month during the Consulate. As Brutus had been most active in abolishing the Kingly power, his colleague readily conceded to him Brutus the right of being first attended by the Lictors. In the mean time, Titus Herminius and Marcus Horatius, who had taken the command of the army before Ardea on the expulsion of Tarquin and his sons, made a Truce for fifteen years with the inhabitants of that city, and led the troops to Rome to take part in the solemnities by which their Countrymen sought to secure and to consecrate their freedom. On their arrival, Brutus and Collatinus again convened the people, by Centuries, in the Campus Martius, exhorted them to union, and procured the confirmation of that decree by which, a few days before, Tarquin and his family were condemned to exile. Still further to bind all orders of men to the lasting exclusion of royalty, they, on this occasion, took solemn oaths before the altars that they would never recall the Tarquins or invest any one with the Kingly office, and their example was followed by the Senators and the people. At this assembly, the first *Res sacrorum* was also elected, and the citizens were gratified

Brutus appears next to have directed his attention to the supplying those vacancies in the Senate which had been occasioned by the jealousies of Tarquin. Considerable difference of opinion has existed on the question whether these renovations were directed by the will of the Consuls, or the votes of the people in Centuries, the chief magistrates merely advising and superintending the election. Some have contended that, even during the regal state, the Senators were always elected by the citizens—first in the Curie, and afterwards in Centuries, as directed by the institutions of Servius. Others suppose that the Senate was always filled up by the monarch, and that this authority being transferred to the Consuls, was exerted by them on this occasion. The words of Livy, taken literally, imply the latter; and those of Dionysius of Halicarnassus, though not so express, do not contradict the hypothesis, which, on the whole, appears the most probable. In after-times, indeed, when the ranks of the Senate were filled, for the most part, from those who had passed through the train of offices from Quæstor to Consul, the people might be said virtually to choose those who attained Senatorial power; but as no Historian of this period has given any account of a popular election, it seems most likely that, as yet in the infancy of freedom, the ruling spirit of the time assumed the right of making those arrangements which they thought necessary for the peace and welfare of the new Republic.

The Conscript.

The Senators now added to the body were selected from the Equestrian order, and called *Conscripti*, in contradistinction from the elder members, who were originally denominated *Patres*; whence the term *Patres conscripti* was subsequently employed to designate both classes of Senators. Dionysius, indeed, applies the epithet to the first Senate of Romulus, but he is, in this respect, at variance both with Plutarch and Livy. It is, however, by no means certain whether the term *Conscripti* was given to those who were added by Tatius, the Sabine King, and to those who were created by Tarquin the elder, or was first applied, on the establishment of the Republic, to the elders who were supplied from the choice of the people or the nomination of Brutus.

While these important regulations were forming in the city, Tarquin was not inactive. According to Livy, he first retired with two of his sons to Cære, a city of Etruria, while Sextus, the immediate author of his family's ruin, endeavoured to find a retreat at Gabii, of which he had once treacherously become master, and fell a victim to the vengeance of the people. Other authors represent the father as seeking refuge among the Gabii, and as retiring thence into Etruria, in the hopes of finding the friends of his mother's relations ready to espouse his cause. Dionysius speaks of Sextus as surviving the expulsion of his family fourteen years, and falling, at the end of that time, in the Battle of Regillus. We shall leave, however, these contradictory statements, and pass over the inconsistencies of the Historians respecting the number and fates of the exiled princes, to relate the formidable conspiracy at Rome in favour of the Tarquins, which gave occasion to that triumph of stern patriotism over

paternal love in the conduct of Brutus, which Historians, Painters, and Poets have delighted to celebrate.

The austerity of the new government, under which nothing but Virtue could hope for distinction, was naturally felt by many of the Patrician youth as an intolerable evil. The honour of rank and fortune commanded respect no longer. Failings which royal favour had been well contented to pardon, while they rendered the monarchy more secure, could obtain no indulgence now. The young men, addicted to pleasure, remembered with affection their princely companions who were doomed to exile, from whom they had received those courtesies which the station of their friends rendered peculiarly grateful. Aware of the existence of these feelings, Tarquin sent ambassadors to Rome, who were apparently charged with the moderate request that he might be permitted to enjoy his patrimonial fortunes. But while the Senate were hesitating as to their reply to this demand, which they at length referred to the people, by whom it was granted, the emissaries of the King found means to engage some of the noblest youths of Rome, among whom were three Noblemen of the Aquilius family, nephews of Collatinus, two of Vitellius, and Titus and Tiberius, the sons of Brutus, in a conspiracy to restore the Tarquins. These met together in the house of one of the conspirators, and bound themselves to fidelity by a dreadful oath, confirmed by touching the entrails of a man newly slain and drinking his blood. At one of their assemblies, however, a slave, named Vindicius, overheard the whole of their discourse, and hastened to give information of the discovery he had made—according to Livy, to the Consuls; but, as others assert, to Valerius, as he feared the ties of natural affection would induce the chief magistrates to spare the traitors. Certain it is that they were immediately seized, the letters which they had given for Tarquin to the ambassadors secured, and preparations made for their immediate trial. Early on the following day, the culprits were brought before Brutus and Collatinus, who were seated on the tribunal. The sons of the former were first arraigned, and their guilt proved by the testimony of Vindicius, and the production of their letters. With unbroken firmness, Brutus three times demanded if they had any defence to offer, but they replied only by their tears. All the spectators were moved by commiseration for their inexperienced youth, and called upon the father to spare them; but he, rising from his seat with the same unshaken constancy, directed the Lictors to perform their office. Upon this dread command, the youths, in the fervour of agony, implored their judge to save them, and the people joined their entreaties; he alone remained unmoved, and saw his children scourged and beheaded without a sigh. But Collatinus was little prepared to follow his example. He made an effort to save his nephews, which appears to have been frustrated by the firmness of his colleague, though the Historians differ considerably respecting the circumstances under which his merciful intentions were defeated. Vindicius was rewarded with a sum of money, his emancipation from slavery, and the privileges of a citizen of Rome. The ambassadors were dismissed from reverence to the sacred character which they bore, though they had

forfeited their claim to its protection; and the property of the King, now confiscated for his treachery, was divided among the people, who were thus bound by an additional motive to resist all attempts for his return. The Campus Martius alone was reserved for the public use; and having been consecrated to Mars, was devoted to those exercises by which the Roman youth were prepared for victory. Livy relates, that as the people thought it unlawful to use the corn reaped from this field, they threw it in bundles into the Tiber, where it floated in the shallows, and, mingling with other substances, became the foundation of an island, which, in after-times, was covered with temples.

Procure
the relics of
Collatinus.

The zeal of Brutus for the complete abolition of all the relics of the Tarquin Race, seems to have become a passion which not only overcame his dearest affections, but perverted his sense of individual justice. He was unable to endure the continuance of his colleague in the supreme power, who bore that name which he desired that all should hold accursed. The people, indeed, were not destitute of the same feelings, and murmured against Collatinus as favouring the exiled King. Observing these emotions in the populace, Brutus convened a public assembly, in which he read the oath taken by the people against the real of their late Sovereign, and called on them scrupulously to guard those liberties which they had confirmed by so august a sanction. He observed, that he addressed them with grief on account of Collatinus, to whom he referred, and that nothing but the love he owed to his Country should have induced him to break silence. But the people felt that while one of the Race of Tarquin remained, and held high office, they were unable completely to enjoy their freedom. Then, addressing himself to his astonished colleague, he exclaimed, "Of your own accord, O Lucius Tarquin, remove these inquietudes from us; we have not forgotten that you cast out the Tyrants; complete your claim on our gratitude; deliver us from the name of the Kings we have rejected. I will advise the citizens not only to leave you all your possessions, but if needful, liberally to augment them. Depart in nudity and peace; deliver your Country even from groundless fears. We shall feel that we are free indeed, when the last member of Tarquin's House has departed from us." At this address Collatinus was bewildered with surprise, while the chief men in the city pressed around him and entreated him to retire. At last, on the entreaties of Lucretius, the father of his heroic wife, he resigned the Consular dignity, and retired to Lavinium, where he died, after a peaceful life, at an advanced age. Livy places this incident before, and Dionysius after, the exhibition of the inflexibility of Brutus on the guilt of his sons. The latter Historian relates the circumstances in fuller detail, and represents the conduct of Brutus in still harsher colouring. He puts into his mouth a vehement harangue against the object of popular resentment, and makes him declare that Rome might select between himself and Collatinus, as both should never continue Consuls. According to this authority, the people were so incited by the furious discourse of the popular orator, that they were about to depose Collatinus with ignominy, when Lucretius interposed, entreated his son-in-law voluntarily to retire, and besought his adversaries not

to heap disgraces upon him. There is a great inconsistency in the latter part of the statement of this Historian. He informs us that the illustrious Exile retired, calling on the gods to witness the ingratitude of his friends, and immediately after represents him as accepting twenty talents from the public treasury, and five from the private fortunes of Brutus. The account of Livy, which we have followed, appears the most consistent with itself, and the least unworthy of the parties to whom it relates. From the little we can gather respecting Collatinus, his virtues seem to have been of too gentle a cast for the stern Republicanism of Rome. He doubtless made a happy exchange of the turbulence of contending factions for the repose in which he spent his days. It is greatly to his honour that he never united with the enemies of his Country, like Coriolanus in after-times, in order to revenge his private wrongs. He left, if not a glorious, at least an unspotted name.

If, in the banishment of Collatinus, Brutus had manifested an indifference to private feeling, his subsequent conduct at least proved that he was not instigated by personal ambition. He immediately converted the people to the election of a Consul, who might rule jointly with him in the room of the Exile. On this occasion they voted in Centuries, and their choice fell on Publius Valerius, whose subsequent conduct in extending the rights of the people procured for him the name of Publicola. He was a man of great eloquence, generosity, and benevolence, addicted from the earliest age to the studies of Philosophy, and filled with a deep sense of the rights arising from the common humanity of all. He was no sooner chosen, than a general amnesty was decreed to all who had followed the fortunes of the exiled Prince, on condition that they should, within twenty days, return to the city. This prudent measure caused many noble Patriarchs to join the Republic, who had, at first, retired from the belief that the revolt against the Tarquins would shortly be dissolved, and bring ruin on those who had assisted in its progress.

But Tarquin, though deserted by most of his friends, did not resign his hopes of regaining his throne. He forgot his sorrow for the defeat of his schemes in the fervent desire of vengeance; and resigning all plans for subverting the Commonwealth by treachery, resolved to attack it in open war. In order to procure the means for this contest, he appeared as a suppliant in the cities of Etruria, and urgently besought the Velientes and Tarquinenses to assist in his restoration. He besought them, with the most pathetic entreaties, not to suffer a King, united to them by ties of blood, after enjoying such a Kingdom, to linger in poverty and exile, and to see his children perishing around him in the bloom of their youth. He reminded them, that while others had been sent for from foreign regions to fill the Kingly office at Rome, he had been driven thence by an accused conspiracy of his relatives, in the midst of his exertions to adorn the city; contended that the supreme power had been divided because no one was found worthy to enjoy it, and that his goods had been distributed among the people that all might participate in the injustice and crime; and declared his resolution to recover his throne, and to take vengeance on the ungrateful citizens. He further incited them to join him, by calling them to revenge, at the same time, their individual wrongs, the

Biography. defeats of their armies, and the loss of their territories, of which Roman cupidity had deprived them. His exertions were successful: the Veientes joined him in the hope of recovering the lands they had been compelled to resign in former wars, and the Tarquinianes from affection to a family sprung from among them, and the ambition of seeing one exercising supreme power at Rome with whom they could claim kindred. The combined forces of these States speedily entered the territories of the Republic, and the Consuls, at the head of the troops, advanced to give them battle. The cavalry were under the direction of Brutus, and the infantry, drawn up in a square battalion, were commanded by Valerius, his colleague. As Brutus was proceeding, Aruns, the son of Tarquin, who was at the head of the horse-soldiers of the royal army, observed him, surrounded with the Lictors, and exclaimed with fury, "There is the man who has driven us forth to exile! There is he, proudly decked in those ensigns of dignity which he has spoiled us! O gods! the avengers of injured Kings, assist me!" With these words, he set spurs to his horse, and rode fiercely to attack the Consul. Brutus, inflamed with equal animosity, rushed to meet him. Both combatants were inspired by so terrible an ardour, that each lost all thought of self-defence in the eager hope of destroying his adversary, and thus each desperately rushed on the spear of his foe, and fell at the same instant. The issue of the battle which followed was at first doubtful; the Veientes were overcome by the Romans, and the Romans opposed to the Tarquinianes were defeated. The latter, however, speedily retired, and left the field to their foes. According to Livy, they were panic-struck by hearing a voice, in the night, come from a wood, which was thought to be that of Silvanus, shouting that the Etrurians had lost one man in the battle more than the Romans had, therefore, that the latter were victorious.

Death of
Brutus.

The body of the fallen hero was brought with the spoils to Rome, and there honoured with as splendid a funeral as could be prepared in those rude and simple times. Valerius delivered an oration in his praise over his remains; whence the custom arose at Rome of paying this tribute of respect to departed greatness. But the most touching mark of lamentation for his death was afforded by the matrons, who were mourning for him a whole year, in gratitude for the noble vengeance he had exacted for their insulted honour.

Thus fell Brutus, at the moment when he seemed to have attained his utmost desires. His public life, from the hour when he threw off the appearance of an idiot, was but a few months in duration; but his conduct during that period decided the fortunes of his Country, and affected the condition of the civilized world for Ages. Not only was he the instrument of effecting a mighty change in the institutions of Rome, but he stamped for ever on her character that stern and savage grandeur to which every adversary was compelled to yield. He had seen his aged father and his brother slain, his estate confiscated, and himself treated as a mark for derision; and during years of contumely and disgrace, he had existed but for vengeance. One emotion—a burning hatred to tyranny—took entire possession of his soul. His tender affections, all his attachments but this for his insulted Country, withered and died away within him. His course, therefore, was as decided as his energy was sublime. As he was placed in the most conspicuous point of the Roman Annals, his sacrifice of all human emotions to his Country's freedom became the grand model which a nation of warriors delighted to imitate. From his example the impulse was given to that illustrious succession of heroes who were "navies of their mighty souls" in the service of a State resolved on Universal Empire.

CAIUS MARCIUS CORIOLANUS.

FLOWERED ABOUT A.M. 3514, B. C. 490.

Biography. The family of Caius Marcius was one of the noblest and most venerable in Rome. He was descended from Ancus Martius, the fourth of the Roman Kings, and numbered many illustrious Patricians among his ancestors. He lost his father in his early childhood; but this misfortune seemed almost compensated by the care of his mother Volumnia, who not only devoted her life to his education, but strove to inspire him with that martial ardour which alone could lead to the highest distinctions. He returned her love with the most respectful yet devoted affection; and the hope of adding to her joys was the strongest impulse which animated him in his career of victory. He learned early to excel in all the robust exercises which were preparatory to the exploits of the field; and acquired in these so great an excellence, that scarcely any one of the youths of his own age dared to enter into competition with him. From this decided superiority, so early recognised, it is probable that unbend-

ing pride and stern spirit of defiance had their origin, which threw so dark a shadow over his character in maturer years.

Marcius was early permitted by his heroic mother to encounter the dangers of battle. He soon had an opportunity of displaying those great qualities with which he was endowed, in the fiercest engagement in which Rome had yet conflicted for the preservation of her freedom. Tarquin, unsubdued by his numerous misfortunes, prevailed on the Latins to espouse his cause; and although exceedingly old, marched with the army, which was commanded by Mamilius. The Romans, under the conduct of Posthumus, the Dictator, hastened to meet them, and hearing that the exiled King and his sons were among the hostile forces, rushed with uncommon ardour to give their enemies battle, and met them on the borders of the lake Regillus. Here a combat the most sanguinary and ferocious ensued, in which the Generals, carried away by

their ardour, fought hand to hand among the soldiers. Tarquin himself, feeble with age, concentrating all his energy for a single effort, spurred his horse to attack the Dictator, but received a wound in his progress, and was borne from the field by his allies. Both Mamilius and Valerius were killed, after performing the most astonishing feats of valour. At length, the Roman fortune prevailed, and the Latins fled, after a resistance in which scarcely a soldier escaped un wounded. In this mighty contest the prowess of young Marcius was conspicuous. As he saw one of his comrades struck down at a little distance from him, he rushed between his Countryman and his foe, and maintained the combat till he slew the aggressor. For this exploit, Posthumus crowned him with an oak leaf garland—the reward of him who preserved a citizen. On his return to Rome, after this success, he married, but continued to reside, together with his wife and family, in the house of his revered and beloved mother.

It would have been well for Marcius had his mind been devoted entirely to the acquirement of additional fame in defending the State in foreign warfare, and the enjoyment of those domestic pleasures, in the intervals of combat, of which he was so well deserving; but the high-born pride of his spirit, and his disdain of the populace, were unfortunately developed in the contests between the Senate and the people, by which the Commonwealth was now distracted. It will be proper to take a concise view of the origin of these struggles, in which he took a share so ruinous to his happiness and so blasting to his honourable fame.

When the regal government was abolished at Rome, its place was supplied by an Aristocracy, which allowed but a small share in the direction of the State to the people. This, however, was not the principal grievance of which they had to complain. The law respecting debtors, which allowed the creditor to treat the insolvent as a slave, and even to whip and torture him, pressed on them most severely; especially as wealth was distributed with great inequality, and the most exorbitant interest was exacted for the loans which extreme poverty often compelled them to request from the Patricians. Their sense of this oppressive regulation was aroused by the appearance of an aged man in the Forum, covered with bruises, and in the most piteous condition, who related the story of his wrongs and his sufferings. He alleged, that while fighting the battles of his Country, he had lost all his little stores by the incursion of the foe; had been forced to borrow money to pay the taxes imposed on him; had given up his paternal estate to satisfy the enormous demands of his creditor; and, after all, had been seized, in his age and sorrow, and tortured in a dungeon.

Dispute
between the
debtors and
creditors at
Rome.

Moved by this tale and by the miserable appearance of the speaker, the people ran tumultuously through the city, and when the Consuls, Appius Claudius and P. Servilius, attempted to appease them, burst forth into expressions of vehement indignation against their oppressors. They demanded that the Senate should immediately assemble to redress their wrongs, and when they found the greater part of that body absent from terror, they became still more incensed and tumultuous. At length the Senators, thinking it safer to meet the danger than to neglect it, repaired to the place of deliberation, as the populace had required. But here the opinions were far from unanimous as to

the course it would be proper to take in this important crisis. Some, with Appius, recommended the seizure of the most active in order to terrify the rest into submission; while others, with Servilius, were inclined to soothe and conciliate the unruly. In the midst of the discussion, news arrived that an army of the Volscians was advancing to besiege the city, which the people received with joy. The Commons now determined to obtain revenge for their wrongs by totally refusing their services. This course decided the Senate to lay aside their animosities for the present, and to empower Servilius to forbid the detention of any citizen in prison or in chains, so as to prevent him from joining the Consular levies, and to prohibit the seizure of the lands or arrest of the families of any who should take up arms during their absence. This measure had the effect desired, since a great number of debtors availed themselves of the protection offered, and, in the battle which ensued, exerted themselves with more energy, as they were inspired by the broken state of their fortunes. The Truce between the contending parties of the State was occupied by a brilliant succession of victories. The Volscians, after an ineffectual attempt on the Roman encampments, were completely routed, and the city of Suessa Pomatina, to which the fugitives from the battle escaped, was taken and given up to plunder. An army of the Sabines, which had suddenly advanced to ravage the open country, was overtaken, and cut in pieces in a single day. The Aruncians, who had sent Deputies to demand that the Romans should withdraw from the Volscian territories, and whose legions, at the same time, set out to enforce the negotiation, were arrested by hands who rushed forth eagerly to destroy them; and before the Senate could be regularly consulted, or an answer given to the ambassadors, the army was defeated, and the war terminated by the Roman prowess. And the Etruscans, terrified by the successes of the Romans, sent an embassy to sue for Peace, which was granted only on the cession of their lands.

The people, whose valour had gained these signal triumphs, naturally expected that the return of Peace would bring them a solemn investigation and redress of their grievances. They were, therefore, highly indignant when they found, not only that this duty was entirely neglected by the Senate, but that the old laws respecting debtors were enforced even against those who had been protected from the grasp of their creditors when the danger of the Republic required that they should be at liberty to hazard their lives in its service. Those who fought under the banners of Servilius, when they were seized, applied to him to assist them and redeem his plighted faith, accused the hardness of their fate, and displayed the wounds they had received when supporting him in battle. The Consul, although he was disposed to render them justice, remained irresolute, through fear of Appius and the Senators, who were determined to resist all the demands of the people. Thus he so lost their affection, that when it was referred to the Commons to nominate a person who should have the honour of dedicating a temple to Mercury, they elected M. Lætorius, the first Centurion of a legion, for the purpose of irritating Appius, whom they had cause to hate, and Servilius, whom they began to despise. After this conduct of the Plebeians, the breach between the higher and lower orders continued.

Biography. rapidly to widen. When a debtor was arrested, he was constantly rescued by force, and the Consuls' decrees were prevented from being heard or obeyed, by clamour and tumultuous risings. While this state of disturbance continued, the Sabines threatened the city with war, and the people, remembering the rewards of their former exertions, refused to shed their blood for the defence of those who had shown themselves ungrateful. At this juncture, the year of Appius and Servilius expired, and A. Virginus and T. Volusius were appointed to the Consular dignity. The new magistrates, urged by the Senate to violent measures, ordered one of the leaders of a tumultuous assembly to be apprehended, but not only saw their Lieters repulsed by the people, but a contest ensued, which, although not deadly in itself, was of a nature to excite the most serious alarm. The Senate immediately assembled to great confusion, and it was long before the Consuls could restore that order which was necessary even to the appearance of deliberation among the members. Three opinions were then asserted with great zeal; Virginus, the Consul, proposed that effect should be given to the promises of Servilius, and all those soldiers released who had fought under him. Thus Larcius urged the justice and expediency of a total abrogation of debts, as the only mode of healing the divisions; and Appius violently insisted that the sedition arose not from oppression, but from too much freedom, which the right of appeal secured, and that the only mode by which the Senate could preserve its dignity, was the adoption of firm proceedings and the appointment of a Dictator. The latter recommendation was adopted; but, happily for the peace of Rome, the author of the measure was not chosen to that office, on which the salvation of the State depended. The choice of the Senators was prudently fixed on M. Valerius, brother of the man who had assisted in expelling the House of Tarquin, and who had given to the people those laws by which all those rights were secured that they were still allowed to enjoy. As the memory of his relative was still dear to them, they listened to his promises, when he made them the same offers as those by which Servilius had beguiled them; and enlisted in such numbers that an army of ten legions was raised, being a greater force than the Romans had ever yet been able to embody. All the troops were, however, needed; for three powerful foes appeared at once in arms—the Æqui, the Volsci, and the Sabines; all probably expecting to find great advantage to the intestine divisions of Rome. The first had made incursions on the territories of the Latins, who entreated the Romans either to protect them, or allow them in arms against their invaders; and as the former course was judged the most prudent, Veturius, the Consul, was sent to their assistance, and soon drove their faces into the fastnesses of the mountains. The other Consul marched to attack the Volsci, whom he found ardently desirous of a battle, as, from their superior numbers, they were confident of obtaining the victory. As they rushed forward with shouts and acclamation, the Romans waited in silence to receive their charge; and then, being fresh and unfatigued, returned the attack with so much vigour, that the Volsci, exhausted with the anticipations of success, fled to great disorder. The victors followed them closely, drove them from their camp to the city of Velitra, and entered that place, together with the defeated batta-

lions. After great carnage, the few who survived threw down their arms and received the mercy of the conquerors. The Dictator, in the mean time, obtained a great victory over the Sabines, who were the most formidable enemies of Rome. And the Consul Veturius, being incited by the clamours of his army to the bold attempt of dislodging the Æqui from their mountainous position, struck so great a terror into the foe by the boldness of the act, that when they might have attacked him with every probability of success, they deserted their camp and fled into the valleys. A rich booty was thus obtained without effusion of blood, and the army returned in triumph.

Immediately on the return of the soldiers, Valerius, anxious to redeem the pledge he had given, proposed a law for the relief of those who were insolvent. The proposition was unhappily rejected, and the virtuous Dictator retired from office to disdain, amidst the acclamations of the people whom he had vainly endeavoured to serve. Marcus now appears to have taken a decided part against the popular requisitions. He contended that the grievances respecting debtors were the mere pretext of a seditious spirit, which must be crushed, by resolution, in its infancy, or it would totally destroy the rights of the Senate and Patricians. These counsels, however, were frustrated by a new mode which the people adopted to make the Nobility feel how much they were dependent on those whom they affected to despise. Conducted by Sicinius, they left their employments, and peaceably entrenched themselves, according to some authors, on the banks of the Anio, and to others, on the Aventine hill, taking nothing but those things which were necessary for the supply of their immediate wants. This measure struck more dismay into the hearts of the Patricians than they had felt to the most violent tumults, and soon produced a resolution to concede any thing which might induce the people to return. For this purpose, Menenius Agrippa, a man of excellent character, and endowed with that rude species of humour which is always acceptable to the populace, was sent to treat with them; and, in order to show the folly of their secession, related to them the celebrated fable of a sedition by the members of the body against the stomach, in which, though they succeeded in starving the object of their aversion, they found that, in their success, they lost all their own energy, and were brought near to destruction. The adaptation of this happy fable to the state of parties among the Romans had its desired effect, and the seceders agreed to treat for a reunion. At length they consented to return, on condition of being allowed five Tribunes, to be chosen from their own body, who were to protect them against the powers of the Senate and Consuls, whose persons were to be esteemed sacred, and who were to be allowed a *sacrosanctum verbum* on every proposition, before it became a law to bind their constituents. These officers had, however, no voice in the Senate, no share in the administration of justice, and no splendid nor august habit to distinguish them from their fellow-citizens. But shortly after their appointment, they obtained the consent of the Senate to the appointment of two functionaries, to be their assistants, who, in subsequent times, were called Plebeian Ædiles, and had the care of the public buildings and many other duties confided to them. Sicinius and Brutus, two of the most vehement opponents of the

Brave con-
duct of
Marcus at
Corioli.

Marcus witnessed these concessions with regret, but saw that it was in vain to oppose them. He shortly found a more congenial sphere for the development of his energies, in the war against the Volsci, who seem to have risen from every defeat with unabated resolution and prowess. He attended the Consul Cominius to the field, against these formidable adversaries, and having shared in defeating the Antiates and capturing Longa and Polusca, proceeded to assist in the siege of Corioli, a strongly-fortified town, which the enemies regarded as their Capital. Animated by the danger of their principal city, the Volsci collected a large force, with which they resolved on attacking the besiegers from the rear, in the hope of compelling them to retire. To meet this detachment, Cominius drew off a great part of his forces, and left Titus Larcus to command those which still lay before the town, among which was Caius Marcus. On this movement the troops within the city sallied forth on the diminished battalions, and drove them to their entrenchments. At this critical moment, the spirit of Marcus burst forth to save and conquer; while he desperately opposed himself to the pursuers, he called to the Romans, with a voice like thunder, to turn on them, and roused their courage, while he struck dismay into the troops which had hitherto been victorious. Not satisfied with repulsing the foe, he hastily followed them; now struggling with the enemy, now animating his own battalions, and calling out to them that Corioli was theirs. With astonishing enterprise, followed only by a few soldiers, he burst with the fugitives into the city, and rushed through the streets, putting hosts of enemies to flight, who were so confounded at his surprising valour, that they thought not of cutting off his retreat, nor of steadily opposing his progress. While he thus seemed to burst like lightning through the city, Larcus had time to enter without opposition, and to secure the conquest which Marcus had achieved, almost as swift as thought, by the might of his single arm. The soldiers immediately began to disperse themselves throughout the city, for the purposes of plunder. But Marcus, sternly rebuking them, called to them to follow him instantly to the assistance of Cominius, who might even then be struggling with hosts of their foes. Only a few noble spirits obeyed him, and with these he hastened, without a moment's pause, to join the Consul. He arrived at the very moment when the armies were about to engage; scarcely told the issue of his exploits, and covered already with dust and blood, eagerly seized on the post of the greatest danger, carried defeat and terror wherever he moved, and forced the Volsci, with great loss, to retire. Even yet he refused to listen to the entreaties of those who besought him to take repose. As if gifted with more than mortal powers, he led on the pursuit of the fugitives, and never stopped till all the troops were routed and the camp of the Volsci taken. On the day after these wonderful successes, Cominius, after giving thanks to the gods, rapturously eulogised Marcus, attributing all the glory to him alone, and entreated him to accept a noble horse, and to choose a tenth part of the spoils. The hero received the praises bestowed on him with graceful modesty, accepted the horse offered by the Consul, and, whittly declining any share of the booty,

requested only, as his reward, that a Volscian who had once hospitably entertained him might be allowed his freedom. This moderation and generosity gave a finishing grace to his triumph. The assembly, as he refused all the more substantial gifts they desired to shower upon him, unanimously gave him the surname of CORIOLANUS, in memory of his astonishing valour. At ROME he was received with the warmest admiration, as the Consul, with eminent magnanimity and justice, had given him the whole merit of the war, and delighted to set forth his praises.

Coriolanus.

The peace which ensued, however, was dangerous to Rome and fatal to the glory of Coriolanus. At first, indeed, all animosities seemed buried in the common joy; a new Treaty of Peace was made with the people of Latium, and a third day added to the *Feria Latina*, in commemoration of the happy reunion of the Senate and the Plebeians. But the death of Menenius Agrippa, whose qualities ensured him the respect of all, removed one great support of the public harmony. This excellent person died without leaving sufficient property to defray the costs of a public burial. As his relatives were about to inter his remains in private, the people, to whom he had greatly endeared himself, raised a fund, by the payment of a *sextans* each, for the purpose of bestowing on him splendid obsequies. When the Senate heard of this intention, they refused to allow so noble a Patrician to be buried at the cost of the Plebeians, and decreed him a magnificent funeral from the public treasury. The people, however, refused to take again their subscriptions, but persecuted them to the children of Menenius, to comfort them in their poverty, and stimulate them to the cultivation of virtue. Soon after the death of this popular Senator, a famine, which arose from the want of tillage during the secession of the people, occasioned fresh commotions at Rome. The people, with that misdirected passion which their extreme misery alone could excite, reviled the Senate as the authors of the scarcity, which manifestly originated from natural causes. All the exertions used by this body to purchase corn having afforded only temporary relief, they were disposed to assent to a request from the citizens of Velitrae, to send a colony thither to replace the greater number of its inhabitants who had lately been cut off by a terrible pestilence. When, however, they directed a number of the common people to set out for the desolate town, the Tribunes, Sicinius and Brutus, incited the latter to great discontent, by affirming that the place was infected, and that the Patricians only sent them there as to a lingering *Dispectus* grave. On this occasion, Coriolanus was unable to express his feelings of disgust, and openly inveighed against the Tribunes, and the spirit they succeeded in arousing. In this instance the Senate prevailed, and dispatched colonies both to Velitrae and Norva, a city of Latium, but were entirely disappointed in the hope that this measure would render the city tranquil. The tumults continued under the direction of Sicinius and Brutus, who took advantage of the general distress to procure a law forbidding any one to interrupt the Tribunes while speaking, under grievous penalties. The Senate and the people continued to act in political opposition, each refusing to confirm or acquiesce in the decrees and resolutions passed in the assemblies of the other, and many accepted the invitations of neighbouring States, and emigrated from Rome. At length the

Biography. Fathers resolved on sending an army against the Volsci, in order to employ and amuse the turbulent and miserable citizens. But they followed the advice of the Tribunes, and refused to take arms. On this, Coriolanus, indignant, set forth on the expedition, attended only by his own dependants, a few noble Patrician youths, and a small number of Plebeians, who joined him when they observed the spirit with which he was actually departing. This enterprising party advanced to the gates of Antium, collected large spoils, with abundance of cattle and food, and returned with the booty, which the generous leader divided, without reserve, among his followers. After this expedition, Coriolanus became candidate for the office of Consul. At first the people were inclined to forget his opposition to their cause, in his noble qualities and splendid success, but the Senate supported him with so injudicious a warmth, that they withdrew their suffrages from him, and chose Minucius and Sempronius to his exclusion. Conscious of his own merits, he deeply felt and bitterly resented this injury; and he had unfortunately too soon an occasion for displaying the rancour which he condescended to cherish.

Is rejected
as Consul.

Corn arrived from various quarters, nearly at the same time, for the relief of the distresses in Rome. Not only had considerable stores been purchased in Italy, but the fleet which had been dispatched to Sicily returned heavily laden with grain, half of which had been purchased on low terms, and half freely presented to the State by Gela, the King of Syracuse. As these timely provisions were at the disposal of the Senate, the question was earnestly agitated in that body whether they should be gratuitously distributed among the people, or on what terms they should be allowed to enjoy them. On this occasion, Coriolanus took the opportunity vehemently to inveigh against the Plebeians and the Tribunitary power, and intimated that the exiguities of the time should be improved to abolish those privileges which had been so unwisely conceded. Many of the young and langhty Patricians, who felt an insuperable distaste to the vulgar harangues of the popular orators, strongly supported these declarations; but the more mild and aged of the Senators opposed them, sensible either of the impolicy of provoking a tumult, or of the want of generosity which would be shown in compelling the people to resign their privileges in order to obtain the means of satisfying hunger. While the matter was eagerly debated, the Tribunes, who were present, burst into the most severe invectives against Coriolanus, calling out on the Fathers to condemn him to death or exile, and threatening that, in case they refused, they themselves would wreak their vengeance upon him. Unspalled by these denunciations, Coriolanus defied their power, and threatened, unless they desisted, himself to exhaust their insolence. As they found the majority of the Senate inclined to support the object of their hatred, they hastened to the assembly of the people, whom they alarmed by apprehensions that the abolition of the Tribuneship was intended, and persuaded them to send into the Senate-house for Coriolanus to come and be arraigned in their presence. The messenger was dismissed with scorn. At length the Tribunes, with a body of their most resolute supporters, surrounded the doors of the Senate-house, in order to seize their great adversary at the close of the discussions. When, therefore, he appeared, attended with many noble

youths, who greatly admired him, the Ædiles were ordered to seize him; a fierce contest ensued, which the Consuls were scarcely able to appease. Both parties, at length, quietly departed, and Coriolanus returned home in safety.

Early the next morning the Tribunes assembled the people, and the city was disturbed, in every part, by tumultuous proceedings. The Senate, after long debate, resolved on conciliatory measures, and desired the Consuls to soothe the people, and entreat them to carry no further their animosities against Coriolanus, whom the Patricians seemed determined not to resign. With these views, Minucius made a long and very judicious speech, in which he assured the assembly that there was not the slightest intention of depriving them of any of their privileges, or of withholding from them the corn which had been procured for the relief of their distresses, and proved to them the injustice of their desiring to call a Senator to account as a criminal for advice he had given in his legislative character. He even implored them, that, if they thought they had powers to try Coriolanus, or a disposition to punish him, they would pardon him in consideration of his gallant services, or as a favour to the Patricians. This address inspired gentler thoughts in the people; but the Tribunes insisted on hearing Coriolanus make his own defence and apology before they would consent to absolve him. He came forward, therefore, to speak, and was received with deep attention. Instead, however, of pursuing the course which Minucius had marked out for him, he refused to submit to be questioned by the Plebeians, and sternly inveighed against the whole policy of his accusers. This bold and imprudent course secured to the Tribunes all the advantage they were on the point of losing, and caused the fiercest uproar. Sicinius availed himself of the popular rage, condemned the accused to death, and ordered the Ædiles to seize and east him from the Tarpeian rock. He stood unmoved, still breathing forth defiance and contempt on his judges. His friends protected him, and the whole body of the Nobles threw themselves among the crowd and resisted the execution of the sentence. In this commotion, the consuls interfered, and so great was the veneration which their presence inspired, that the contending parties retired, and Coriolanus was once more rescued from the foes whose malice, but for his pride and fierce demeanour, must have been weak as it was pitiful.

Although the immediate danger was thus appeased, the Tribunes insisted on the appointment of a day for the trial of Coriolanus by the people. The Senate hoped, at first, that an incursion of the Antiates would have diverted the popular attention till animosities had in some degree subsided, but in this they were disappointed, as Peace was restored before the time which had been named for the formal accusation of the illustrious Senator. Earnest debates took place among the Fathers whether they should suffer the premeditated Applius Claudius strenuously urging them peremptorily to forbid it, and Valerius as forcibly entreating them to yield. During the discussion, Coriolanus demanded of the Tribunes of what they intended to accuse him; and as they were afraid in the Senate-house to allege against him the speech which he had made within its walls, they replied, that they charged him with aiming at tyranny. Conscious of his own integrity on this point,

Coriolanus.

trial.

Biography. he consented to yield to the investigation required, on condition that his accusers should confine themselves to this single accusation. Livy, indeed, is intently silent on this consent, as well as on all the circumstances alleged by Dionsysius and Plutarch to have taken place between this period and the retirement of Coriolanus from Rome; and, on the contrary, affirms that he altogether refused to acknowledge the authority of those who presumed to try him, and was condemned to banishment in his absence. This account seems far most probable, from his character; and there are several inconsistencies in the statements of the more minute Historians, which incline us to give credit to Livy. We shall, however, state the substance of the particulars which Plutarch and Dionsysius have related.

When the time appointed for the trial arrived, a fresh dispute arose, whether the people should give their votes by Centuries or Tribes; a highly important question, because, if the voices of the people were collected by the first means, the Patricians were certain of success; whereas, if the latter mode were agreed to, they were reduced to their numerical strength, having no more votes than the lowest of the Plebeians. After a fierce contention, this point also was conceded to the Tribunes; and when the Senate acquiesced in the demand, the cause was virtually decided. The Patricians, indeed, condescended to entreat and to supplicate the people in behalf of the man whom they wanted either the courage or the power to defend; and seem still to have entertained hopes that their prayers and the memory of his own noble actions would secure for him an acquittal. At length the expected day arrived, and immense multitudes were collected in the Forum, in anxious expectation of the issue. Minucius first addressed the assembly, entreating them to waive the trial as a boon conceded to the entreaties of the Senate; and, finding that he could not obtain this favour, reminded them that they were bound to confine their allegations to the support of the charge of tyranny. If, however, the Tribunes did not in terms relinquish this accusation, they continued, in their harangues, to bring forward all the political offences of Coriolanus as proof of a constructive treason. After they had apparently exhausted all their invectives, the party accused, with a noble assurance, presented himself to the crowd; and scarcely condescending to notice the particular complaints brought forward by his foes, recounted his exploits in the service of the State, even from his boyhood; displayed the crowns which he had won by his astonishing valour, especially in preserving the lives of the citizens, and uncovered the wounds which he had received in battle; and then triumphantly appealed to the audience, whether he could have intended in Peace to destroy those for the preservation of whose lives he had a thousand times periled his own? The people, who came resolved to condemn, felt abashed before him, and cried out for his acquittal. But Decius, one of the Tribunes, now brought forward a new charge, which was totally unexpected, that he had divided the spoils he had taken among his soldiers, to conciliate their affections, instead of bringing them to the public treasury. It is said that Coriolanus was unprepared to reply to this accusation, which was calculated to rouse the animosities of those who had envied the troops those riches which they had dearly won. Pursuing their advantage, the Tribunes collected the

suffrages, and Coriolanus was condemned to exile by a majority of three votes, twelve having voted against him, and only nine in his favour. All these proceedings were, however, the appearance of Historic fiction. It is not probable that, on such an occasion, the Senate would resign all material distinction between themselves and the people, by abandoning the ancient right of voting in Centuries; it is unlikely that Coriolanus would consent to recognize what he regarded as innocent encroachments, and submit to be tried by the people, merely because he thought his adversaries had taken a ground which they could not maintain; still less is it to be believed that he would condescend to exhibit his scars and his trophies before those whom he held in inexpressible disdain; or that he should be confounded by a charge which he might so readily have turned on his accusers. Certain, indeed, it is, that he was condemned to perpetual exile; but it seems most probable that the people were exasperated to this injustice by his steady refusal to appear before them.

As soon as the result was known, the Patricians were struck with the deepest sorrow. Coriolanus alone betrayed no symptom of regret; but the injury smelt into his inmost soul. He embraced his wife and children, and the mother whom he had so tenderly revered, and, after exhorting them to bear their distresses with constancy, left Rome, attended by a few clients only, who resolved to share his misfortunes. Many of the Senators followed him to the gates, but he received the expressions of their grief with a haughty silence. After a few unquiet days spent in the country, during which he was divided between his love for Rome and his desires of vengeance, the feelings of resentment assumed the complete mastery. In pursuance of his determination to make his enemies feel his power, he resolved to throw himself into the arms of the Volsci, to whose defeat he had obtained the most signal renown. For this purpose, he covered himself with a habit which disguised him, and proceeded, in the evening, to the house of Attius Tullus, the most celebrated of the Volscian Generals, whom he had repeatedly overthrown in battle, and whom, therefore, he supposed to cherish a great animosity against him. He entered the hall of his rival without being discovered, and placed himself on the hearth sacred to the household gods, which all the States of Italy feared to violate. The servants, awe-struck by the grandeur of his form and the majesty of his deportment, hastened to call their master, who was at table, that he might question the mysterious stranger. Tullus immediately entered the room, and demanded to know his name and purpose; when Coriolanus, throwing off his disguise, replied, "If you remember me not, I must declare to you that my name is Caius Marcius—the bitterest foe of the Volsci—to which my surname, Coriolanus, would witness. That is all which is left me now. The envy of the people, and the cowardice of the Senate, have banished me from Rome, and forced me to become a suppliant here—not for life, but for vengeance. If you will accept my services against my ungrateful Country, this affliction of mine may become the means of your triumph; if not, I desire to live no longer. My fate is in your hands; destroy one who, if you receive him out into friendship, cannot exist but at your peril." Astonished at his magnanimity, Tullus gave him his hand in pledge of faith, assured him that ne would

His banishment determined.

Seeks refuge with the Volscian General Tullus.

Day of trial.

Biography. receive the highest respect from the people among whom he had sought refuge; and conducted him into the inner apartments, where he was hospitably entertained, and consulted as to the best means of renewing the war with Rome, in which he might satisfy his desires of revenge.

In the mean time, the Romans were engrossed in superstitious observances, little suspecting the danger preparing for them. An old man, having procured himself to be conveyed in a couch to the Senate, declared that Jupiter had appeared to him in a dream, and signified his displeasure at the person who had danced before the Public Games, and that these must be celebrated afresh, or the Republic must dread the anger of heaven. He added, that he had at first neglected this intimation, and in consequence, by disobedience, had lost one of his sons, while his sleep had been haunted by the same vision, threatening him with further evils if he refrained from making the disclosure. He affirmed, that while he still hesitated, he was seized with a severe distemper, and lost the use of his limbs, so that he could only be brought to the Senate-house in a litter. While he delivered this discourse, it is said that he gradually recovered his strength, and, at its conclusion, walked home, leaving the Senate astonished at the prodigy. On inquiry, they found that a slave had been whipped by his master through the Forum, on the morning of the Games, which they presumed had given offence to the Gods; and having set a fine on the offender, they prepared with great magnificence again to celebrate the festival.

Tullus resolved to take advantage of this occasion, to inflame his Countrymen against the Romans, especially as the Consuls chosen for the ensuing year, by the influence of the Plebeians, were known to be men of no talents for war. For this purpose, he encouraged a number of the Volsci to repair to Rome, to witness the approaching solemnities; and then gave secret intimations to the Senate that he expected some disorder would ensue from their presence. On receiving this communication, the Fathers ordered all the Volsci to depart from the city, who were met on their journey home by the treacherous instigator of their dismissal, and incited to regard it as an unparalleled outrage. The Volsci, however, on the advice of Coriolanus, sought a more plausible reason for breaking the Truce then subsisting between the nations, and sent Deputies to Rome to demand the restoration of the cities and the land which had been wrested from them. To this demand the Senate indignantly replied that if the Volsci would be the first to take up arms, they would be the last to lay them down. As the Volsci expected this answer, they were prepared to act on it, and having chosen Coriolanus and Tullus to command the forces, immediately took the field.

The army was divided into two portions, each of which was led by one of the Generals. Tullus, with his battalions, invaded the territories of the Latins, to prevent them from affording succor to their allies; while Coriolanus burst immediately into the Roman domains, and acquired great spoils. The former having also taken considerable booty near Latium, remained to guard the frontiers, while the latter advanced to meet the Consuls. These magistrates did not, however, seem eager to contend with their injured Countryman, who continued to ravage the country without opposi-

tion, entering Circum without resistance, and retaking not only Satricum, Longula, Polusæ, and Corioli, which he had so recently contributed to subdue, but a number of cities belonging to the Latins, who in vain supplicated the assistance of their usual protectors. In his progress, he spared the estates of the Patricians, either from old friendship, or a desire to raise jealousies between that order and the Plebeians. Such was, at all events, the consequence of his forbearance; and the Senate were even charged with having secretly encouraged the Exile to make war, for the abolition of the Tribunial Power. All was confusion within the city, as the parties distrusted each other, and feared both the abilities of their foe and the incapacity of the Consuls. In the mean time, Coriolanus was rapidly advancing, and having taken Lavinium, pitched his camp at the Cloilian trenches, within five miles of the city. The people, who had doomed him to exile, now in terror besought the Senate to meet him; but, with a truly Roman spirit, they refused to sue to him as a master, whom they had strenuously defended as an equal. When, however, they found that he had broken up his camp, and was actually preparing to invest the city, they consented to send Deputies to him, to negotiate for Peace. Minucius, Cominius, and three other Senators of Consular dignity, were appointed to conduct this important mission. They entreated him, by the memory of their former love, to forget the past, and to return to the city, which would be most joyful to receive him. He replied, with austerity, that he would consent to Peace only on condition that the Senate would restore all the possessions they had taken from the Volsci, and grant to that people the same rights of citizenship which they had conferred upon the Latins. For himself, he expressed his astonishment that he should be requested to return to a people who had so injuriously treated him, and against whose future vengeance he could never be secure. He granted, however, a Truce of thirty days, that they might have time to consider the offers he made them, as General of the Volsci; and, in the mean time, drew off his troops from the city, and employed them in taking possession of several other towns in the territories of Latium.

Although the greatest apprehension prevailed at Rome, the Senate resolved never to submit to the terms proposed by the invader. At the close of the period allowed them for deliberation, they sent ten of their number to Coriolanus, charged to assure him that the Romans would never yield to demands thus enforced, and, at the same time, to entreat him to withdraw his troops, and afterwards to negotiate for a union. On hearing the speeches of these Deputies, he replied, that the Senate had no alternative but restitution or conduct of war; and though, as General of the Volsci, he had no other answer to return; as one of the citizens of Rome, he would advise them to ask no longer terms to which he could never listen. He yet allowed them three days to decide on the course they would finally adopt. Their resolution, however, on this point, seems never to have wavered, though they were afraid even to send forth an army to oppose the enemy's progress. Still hoping to move Coriolanus to a compliance with their wishes, they dispatched the Priests and ministers of Religion, in their sacred vestments, to conjure him to retire. He heard their entreaties, and without relaxing his determination, dismissed them. As a last hope,

all now exerted themselves to the utmost, to prepare for that siege which was instantly to be expected. The women ran distracted about the Forum, clinging to the statues of the gods, and the sacred altars, and imploring in agony the assistance of heaven. Suddenly, Valeria, the sister of Valerius, ascended the steps of the Temple of Jupiter, in the Capitol, and called these wretched suppliants around her, as if inspired with a divine energy for their relief.

She assured them that one hope of saving their Country yet remained through their means, and exhorted them to entreat the mother of Coriolanus, who had devoted her life to his happiness, to join with them in a last effort to prevail on her hitherto inexorable son. Having persuaded them to accede to this proposal, she conducted them to the house of Volumnia, whom she found in the deepest affliction, and earnestly entreated her assistance. The noble matron, after expressing her fear that nothing could shake his soul from its purpose, agreed to make the attempt if the Senate would afford it their sanction. After some opposition from those who feared that Coriolanus would detain the ladies in his camp, the opinion of those who knew that they were secure in the honour of his character prevailed, and the train set forth, in mourning habits, without any guard, in chariots provided by the Consuls.

Coriolanus observing the melancholy procession, sent to inquire its meaning. When he heard that his mother, wife, and children, with the noblest of the Roman matrons, were coming towards the camp, he resolved to deny their request with as firm a resolution as he had done that of less moving embassies, and called the chief of the Volscian officers around him to witness his firmness; but when they came into his presence, the feelings of nature, in spite of his determination, rushed back upon his heart, and he was melted to tears. He first embraced and supported his mother, then fondly revived the spirits of his wife, and caressed his children. Volumnia then took advantage of this moment of tenderness to urge her request. She entreated him, by the most sacred considerations—by his duty to that land where he had been nurtured in childhood—and by his gratitude for her maternal care, to withdraw his troops, and grant a Peace for a year, during which period a solemn Treaty might be agreed on and ratified. She assured him that if he would persist in ravaging and destroying the Temples of his Country, she would never live to be reproached with having given him birth, but he should pass by his unnatural triumph over the corpse of her who had borne and nourished him. He listened to this speech in silence, torn by contending emotions. At length Volumnia, perceiving that he was moved, added still more urgent supplications, besought him to recompense all her love by one sacrifice, which would, indeed, save him from eternal reproach, and breaking off with passionate sorrow, threw herself at his feet, together with his wife and sons. Affection then became triumphant: he raised his mother, and pressing her hand, said, in a solemn tone, "Oh, my mother! you have gained a victory, indeed, for your Country, but it is to the ruin of your son!" He then took them apart, and after consenting to all that they required, suffered them to return. The news of their success was received at Rome with unbounded joy. Crowds came out to meet and conduct them to their houses; and the people were

at a loss to find adequate expressions of their delight and gratitude. All the Temples were thrown open as on a splendid victory. When the Senate offered to their deliverers any recompense they would demand, they only requested permission to erect a temple to Female Fortune, which should afterwards be provided with sacrifices and Priests from the public treasury. This modest request was readily granted, but the Fathers insisted on defraying the whole expense from the national funds; upon which the ladies added a statue at their own cost, which was believed, by the superstitious, to have uttered an exclamation expressive of their matchless virtue. Plutarch, after a laborious investigation of this prodigy, rejects it as beyond belief; for though he thinks the deities might suffer statues to perspire, or drop blood, in manifestation of their will, he cannot think they could make them utter articulate sounds without organs to pronounce them.

On the day after the interview with his relatives, Coriolanus retired with his forces. Although he liberally retires.

Coriolanus retired with his forces. Although he liberally divided all his spoils among the soldiers, it soon appeared that the apprehensions he had expressed to Volumnia, when he granted her request, were not unfounded. Tullius, who had long since been led to repent of his generosity towards him, by envy of his superior fame, was resolved to make this abandonment of the siege the occasion of his downfall. When, therefore, Coriolanus arrived with the army at Antium, he charged him with treason against the people who had succored him, and required him to resign his command preparatory to his trial. He replied that he was willing to lay all his conduct before the general assembly of the nation, from whom he had received his powers, but refused to yield to the sentence of the Antiates alone, over whom he knew that his rival had peculiar influence. At length Tullius, not choosing to wait the legal decision even of his own Countrymen, sent a summons to Coriolanus to appear in the public assembly and make his defence, and procured a number of his partisans to assassinate him before he could be heard. On the day appointed, the accuser set forth his charges against Coriolanus in glowing colours, and tried by every art to rouse the passions of the auditors against him. When he rose to reply, the greater number, however, were disposed to hear him with respect; but the friends of Tullius rushed forward to prevent him, exclaiming that he was a traitor, and overwhelmed him with stones till he fell. No sooner was it discovered that he had expired, than

present, even those who had contrived his destruction, were touched with remembrance of his noble qualities, and filled with remorse for his murder. The Volsci honoured him with a splendid funeral, and built a magnificent tomb over his remains. Dionysius affirms, that on the arrival of the news of this catastrophe at Rome all the people put on mourning; but Plutarch describes the Romans as receiving the intelligence without any indication either of sorrow or joy, but granting the request of the women that they might wear mourning for the space of ten months, in token of regret for one whose death had been occasioned by yielding to their entreaties.

Although both Dionysius and Plutarch represent Coriolanus as having thus fallen, on his return to Antium, Livy appears to have entertained a different opinion respecting his fate. He quotes Fabius, whom

Volscians.

Biography. he speaks of us by far the most ancient of the Roman Historians, as affirming that this hero lived to old age, and, in his declining years, was accustomed to complain that exile, always grievous, was most oppressive to the aged. From an expression of Cicero, in Lælius, it appears to have been his opinion that Coriolanus terminated his days by his own hand.

His character.

There is no hero, perhaps, of ancient Rome who fills so large a space in our Imaginations as he whose life we have so often been relating. He seems to have been cast in Nature's grandest mould. The effects of his power in rallying defeated armies, striking panic into his foes, rushing from battle to battle, and carrying victory for ever with him, give us an impression of a firm, voice, and energies, more than mortal. Nor are his moral qualities—his contempt for wealth—his generosity in rewarding his soldiers—his noble frankness, and unshaken resolve, less worthy of admiration than his physical resources. To all these elements of a sublime character he added a filial reverence and a conjugal love which seem to give the finishing grace to his more brilliant virtues. One fatal defect he had, which not only obscured the lustre of his rare endow-

ments and heroic deeds, but rendered them the instruments of his ruin. He wanted that wisdom which sees excuses for the deficiencies of less noble natures, and traces out the good and kindly feelings which are blended with the errors and the vices of men;—and the absence of this sweetener of greatness destroyed him. A man of less intellectual grandeur could better have afforded to be destitute of this nice lack of humanity. Qualities like his required the attendance of more than ordinary gentleness to the failings of others, to prevent them from seeming to place him beyond the sphere in which men could claim kindred with their possessor. Holding the populace in contempt, he felt compelled, by his noble openness, to express his emotion, which they were unable to forgive. He was exempted, at least, from the faults of an ordinary ambition. He acted from simple impulses which he chose never to disguise; careless of any approbation but that of his own thoughts, and almost rejecting any other, as far as one but himself and his mother were worthy even to applaud him. He was "himself alone." He would have been the greatest and most perfect hero of antiquity, had he only learned to love and respect his species.

LUCIUS QUINTIUS CINCINNATUS.

FLOURISHED ABOUT A. M. 3544. B. C. 460.

Biography.

LUCIUS QUINTIUS CINCINNATUS, who, of all the ancient Romans, has left behind him the most spotless fame, does not appear to have taken any prominent part in the affairs of the State until he had passed the meridian of life. We do not find him mentioned in the repeated disputes respecting the Agrarian laws, to which Cassius had first given occasion, and which were not extinguished by the violent death to which they brought their author. Equally passive does he appear to have been during the violent contests respecting the conduct of the Consuls to Volero, and the law for substituting the *Comitia Tributa* for the *Comitia Curiata*, in the choice of popular officers, proposed by that spirited Plebeian. During all the earlier struggles between the Senate and the People, he seems to have declined taking a decided part, although known to favour the Patricians. From the nature of his influence, when afterwards called to active exertion in the service of his Country, it appears that his daily life and deportment were distinguished by excellences which all parties agreed in revering.

While the Consuls were absent from Rome on an expedition against the Æqui and Volsci, whom they completely overthrew, a most important proposal was made by Terentilius, one of the Tribunes: he complained, in the assemblies of the People, that the rights of individuals were protected by no certain laws, as, with the exception of a few sacred books, to which none but the Patricians had access, no written regulations existed, but all depended on the judgment of the Consuls. He, therefore, demanded that five men, the most worthy of the office, should be chosen to

frame a code, in pursuance of which the magistrates should be compelled to administer justice. The Senate feeling that the adoption of this measure would greatly limit the powers they at present exercised, vehemently opposed it, and by the address of Q. Fabius, the Tribunes were prevailed on to defer its discussion till the return of the Consuls. When, however, Lucretius and Veturius had enjoyed their Triumph, and their successors, P. Volumnius and S. Sulpicius, had entered on the discharge of their duties, the Tribunes unanimously pressed for the speedy compilation of settled laws, and required that ten of the most venerable citizens should be deputed to frame them. The Patricians seem to have resorted to superstition in order to terrify the people from their design, as strange prodigies are said to have intervened; and, when these failed of success, they pretended that the Æqui and Volsci were about to invade the territories of Rome, at which the Tribunes did not conceal their derision. Violent contents frequently took place in the public assemblies, where the most daring of the Patrician youth, with no small degree of pride and imprudence, opposed the Plebeians. The most distinguished of these was Cæso, son of Cincinnatus, a man of great corporal strength, courage, and eloquence, who exerted all these faculties with equal zeal in opposition to the Tribunes. By his acts of violence, he rendered himself so obnoxious to the populace, that they insisted on his being brought to trial. Upon the day appointed for the investigation, he was defended by his uncle, F. Quintius, and his father, neither of whom either denied or excused the acts of impetuosity of which he was accused; but

Cincinnatus.

Conduct of Cæso, son of Cincinnatus.

Biography. the former attempted to procure his pardon by setting forth his noble qualities and early prowess in the field, and the latter by imploring the People to treat the errors of youth with compassion, and to absolve his son as a favour to him, whom none of the men had reason to accuse. The assembly, which felt the deepest respect for the virtues of Cincinnatus, was inclined by these entreaties to acquit his son; but Virginius replied, that he had no doubt the father himself was ignorant of the atrocities of the man for whom he was pleading, which were only heightened by his having disregarded the example of such a parent. He then called on a person in attendance, named Volscius, who affirmed that Cæso, returning from an entertainment with riotous companions, insulted his brother; and, receiving a merited retort, proceeded to strike him to the ground, and an bruised him, when in a state of imperfect recovery from the disease then prevalent, that death was the consequence of his injuries. On hearing this charge, the People rushed on the party accused, to kill him, without hearing his defence, but were restrained by the interposition of the Consuls. Virginius demanded that he should be secured in prison till he could be brought to trial on this accusation, which affected his life; but the other Tribunes proposed, that on giving security for his appearance, he should be suffered to remain at large during the interval. Two sureties were required, and the Senate fixed the sum for which such should be bound at 3,000 aæres. This security was given, (the first occasion such a proceeding took place at Rome,) and Cæso withdrew on the same evening and retired into Etruria, not choosing to hazard the event of a trial. As the sureties were then called on for the sums which they had engaged to pay in case he refused to appear, Cincinnatus, resolving they should not suffer for their kindness to his son, sold the chief part of his little estate, and retired, with virtuous constancy, to a small cottage on the banks of the Tiber, where, with his own hands, he cultivated the small plot of ground which this act of justice had left him.

Paternal
sacrifice of
Cincinnatus.

While Cincinnatus continued in this honourable retirement, contentions still divided this City. The Tribunes continued resolutely to demand the law which should define the rights of the People and the limits of the judicial power, and were resolutely opposed by the young Patricians, whom the exile of Cæso seemed rather to incite than to terrify. Thus baffled, the popular officers had recourse to various stratagems to effect their purpose; they affirmed, that Cæso was actually concealed in the City, ready to strike some blow against their rights, and even, according to Dionysius, forged a letter warning them of a plot by some of the Roman Senators and Knights, to murder all who had exerted themselves in behalf of the Commons, and sought, by the absurd device, to procure a decree from the Senate giving them judicial powers against the conspirators. This last incident, however, is not alluded to by Livy, and has all the appearance of fiction. While the contentions between the Orders of the State remained unappeased, the Senate was thrown into the greatest alarm, by the bold and sudden seizure of the Capitol by a Sabine, named Herdonius, at the head of a numerous band of outlaws and slaves. This desperate chieftain, having put to the sword all who refused to join him, except a few who escaped to give the alarm,

marched into the City, proclaiming liberty to the slaves, demanding the recall of the Exiles, and threatening to bring the Sabines and Volentes to assist him, in case the Romans should oppose the execution of his purposes. The Patricians were struck with dismay, since on the one hand, they dared not arm the populace, and, on the other, expected the States which yet smarted beneath their defeats, would take this opportunity to obtain vengeance. A rising among the slaves, who had often too much cause for retaliation, was also to be expected. In the mean time, the Tribunes increased the confusion, by loudly declaring the whole invasion an artifice projected by the Senate, in order to prevent the People from obtaining the laws which they were determined to exact. In this exigency, the Consul Valerius rushed into the Forum, and passionately conjured the People to forget their intestine divisions until the Temples of the Gods and the sanctuaries of their fathers were recovered from the foe; and solemnly demanded that they should follow him to this sacred enterprise, on pain of being treated as the open enemies of Rome. To all these remonstrances, they at first answered only by repeating their demand. At length the earnest persuasions of the Consuls prevailed, and the citizens agreed to enlist for the recovery of the citadel, on the promises of Valerius that he would never interfere with the popular assemblies. Before, however, the great effort was made to expel the sacrilegious intruders, an army from Tusculum appeared in the City to aid the Romans in their peril, and joined the ranks of the citizens. The combined forces then with great ardour forced their way up the ascent, and after a sanguinary struggle, in which Valerius was slain, retook the Capitol by storm. Herdonius fell in the contest, the Tusculans received the thanks of their allies, and the Temples were purified by solemn lustrations.

After the deliverance of the State from this danger, the contests between the Senate and the People were revived, as Claudius seemed unwilling to perform the engagements of his late colleagues, and to suffer the proposition of the Agrarian law. The Patricians earnestly desired that Cincinnatus should be chosen to the Consulate in the room of Valerius, and by great exertions he succeeded. The new Consul, relying on the veneration felt for the austere simplicity of his character, began his administration with vigour. He reproached, with equal freedom, the irresolution of the Senate and the turbulence of the People. "It is your fault, O Fathers!" exclaimed he, in addressing the Senate, "that the same Tribunes, year after year, hear absolute sway over the distracted City, as in a house given up to ruin, by their speeches and their crimes. With my son Cæso, all valour, all constancy, all the qualities which can adorn youth in War or in Peace, have been utterly banished from Rome. You suffer the most low and seditious talkers, for a second and a third year, by the basest arts, to rule with the authority of Kings. What! does A. Virginian deserve less punishment for not being to the Capitol, than Herdonius for seizing it? If we look upon his conduct rightly, he merits severer vengeance. Herdonius was, at least, an open foe, who warned you to take up arms, whilst the Tribune took away our weapons, and exposed us naked and defenceless to Exiles and slaves. Why—with reverence for Claudius and the deceased Valerius I ask it—why did you march to expel your foes from the Capitol before you had

Consul.

driven those hither enemies from the forum? How are we disgraced before earth and heaven, that when a leader of exiles and slaves was in the citadel, when the sanctuaries of Jove were polluted, when all things dear and sacred were given up to profanation, the Tusculans should have been aroused before us!—that it should be matter of doubt whether a Tuscan general or the Roman consuls wrested our citadel from the invaders!—that we, who once would not suffer the Latines to arm in their own defence, should now, but for the spontaneous assistance of these Latines, have been taken captive and blotted out from among nations! Is this, O tribunes, the succour you afford the people, to give them up unarméd to be slaughtered by their foes? What! if one of the lowest of your plebeians—of those whom you have broken off from the rest of the commonwealth, and formed into a distinct order—if one of these should tell you that his house was surrounded by an armed force, you would instantly afford him help: and yet, when Jupiter, the first and best of beings, was encircled with troops of the basest slaves, you thought him unworthy of your assistance! You would surround your own persons with an inviolable sanctity, which ye deny to the Gods. And do you think, immersed as ye are in crimes against man and God, that ye shall this year obtain the law you would extort? If this could be endured, accursed would be the day on which I was made consul; more accursed and calamitous than that on which Valerius fell. No! my colleague and I will lead our forces against the Æqui and the Volsci, since, from what cause I know not, the deities are more propitious to us in war than in peace. We had better have merely to imagine what we should have endured from these nations, had they known that our capital was in the possession of a desperate band, than actually to feel it."

Effect of his address

The senate began to take courage at this display of firm resolution in the consul; but the tribunes treated him with derision, and asked whence the soldiers would be procured for the campaign, since they were resolved to prevent a levy. "We need none," was the prompt reply of Cincinnatus; "the troops who enlisted under Valerius for the recovery of the capitol, are bound by a solemn oath to assemble at the command of the consuls, and never to lay down their arms without their permission. On the obligation of this oath, we command every soldier by whom it was taken to meet us to-morrow at the lake Regillus." This line of conduct on the part of the consuls, threw the tribunes into confusion, though they endeavoured to prevail on the people to evade the oath, by contending that, as Cincinnatus was not consul at the time when it was taken, it could not bind them to obey his orders. The consciences of the people were not, however, thus to be satisfied; and so great was the respect with which they regarded the sanctity of an oath, that they abandoned all thought of setting aside the orders of the consuls by any other means than that of prevailing on them by concession, not to force them to a winter campaign. At length a compromise was agreed to, whereby the tribunes waived the proposition of their law for the year, and the consuls laid aside their design of calling the army to the field. After this, the tribunes, notwithstanding the remonstrances of the senate, who passed a decree, declaring it inconsistent with the public welfare that the same individuals should,

year after year, fill magisterial offices, were re-elected by the people. The patricians then, that they might stand on an equality with the commons, proposed to continue Cincinnatus in the consular authority for another year. But this the virtuous senator refused, with expressions of indignation and disdain. "Can I waver," said he, "that your authority is set at naught by the people, when you yourselves destroy it? What! because the commons have broken your decree by continuing their magistrates in office, must you set it at defiance, that you may not be outdone in temerity? It is more pitiable folly to trifle with your own laws than those made by others. You, conscript fathers, are imitating the inconstant mob that you despise, and following, instead of setting an example. But, for myself, I will not stoop to mimic the tribunes, nor suffer myself a second time to be chosen. And I admonish you C. Claudius to drive away this licentious spirit from Rome; and rest assured that, so far from offending me by opposing my nomination, you will truly increase my renown, and preserve me from that envy which I must endure, were I to be re-elected consul." The senate, convinced by this address, immediately decreed that no one should nominate Cincinnatus on the approaching election for the consulate, and that, if any one persisted in offering his suffrage in his favour, the vote should be rejected. Cincinnatus then once more retired into private life, after having, by the firm consistency of his actions, obtained the esteem even of those against whom his efforts were directed.

In the succeeding consulate of Q. Fabius Vibulanus and L. Cornelius Maluginensis, war again broke out between the Æqui and Volsci and the Romans. While Fabius with an army, of which one-third only were Romans and two-thirds Hernici and Latines, completely defeated the main army of the foe near Antium, a detachment of the Æqui took possession of the Tusculan citadel by surprise. This incident caused the war to be protracted for several months; but, at length, famine compelled the besieged to submit, who were forced to pass under the yoke, and afterwards cut off by Fabius. The other consul, who had remained at Rome, then marched into the enemy's country, and both he and his colleague returned laden with spoils. After their escapes, a treaty was concluded with the Æqui, by which they were left in possession of their cities, on condition of paying tribute to their conquerors, and furnishing them with troops when they should require their services. During this time, the tribunes did not openly bring forward their measure, but procured themselves to be a fourth time elected to the office. In the next year, when L. Minucius and G. Nautilus were consuls, they resolved to propose the Agrarian law, but consented to allow two months to the consuls, during which period they might state fairly to the people the objections they entertained against it. Before this interval had expired, the Æqui revolted, and the Sabines invaded the territories of the republic at the head of a numerous army. Nautilus marched against the latter, and not only compelled them to retire, but followed them into their own domains, and obtained considerable plunder. But his colleague, Minucius, who was sent to oppose the Æqui, met with very different success. Either from terror, or rashness, he suffered himself to be completely surrounded by the

Disasters of
the Romans.

Biography. enemy, so that he had no means of escaping or of obtaining provisions, and anticipated nothing but an unconditional surrender. When the news of his critical situation arrived at Rome, the senate resolved on the appointment of a dictator, who might take such strong and decided measures as the exigency of the case demanded. Nanius, who had been sent for on the oars, immediately proposed that Cincinnatus should be chosen for this arduous service, and his nomination was confirmed with ardour by the unanimous voice of the senators.

Cincinnatus called from his farm to the dictatorship.

The man thus selected to the absolute control of the state, was, at this time, engaged in cultivating with his own hands, the little remnant of his patrimonial estate. When the deputies, sent to apprise him of the decision of the senate, arrived at his farm, beyond the Tiber, they found him, either following the plough, or digging a ditch, with a spade, and covered with perspiration occasioned by toil. After the common salutations had passed, they requested him to put on his toga and hear their commission, which they prayed might be attended with favourable auspices. Having eagerly inquired whether all was well in the city, he desired his wife Racilia, to bring his toga from the cottage; and, after wiping the dust from his face, attended to their errand. They informed him of the peril into which the army of Minucius had fallen, saluted him dictator, and entreated him immediately to accompany them to Rome, and prepare for the execution of his high functions. He yielded directly to their wishes, and was conveyed across the river in a vessel dispatched by the senate to receive him. On landing upon the opposite shore, he was received with great joy by his three sons, his intimate friends, and a long train of patricians, and preceded by four-and-twenty lictors to his abode. The commons ran in crowds to see him, but scarcely looked on him with cordial affection, as they remembered his former sternness towards them, though they were we-stricken by the majesty of his virtues.

Early in the morning the new dictator repaired to the forum, and with characteristic discrimination, appointed for his master of the horse a patrician named L. Tarquinius, who was esteemed the bravest of the Roman youths, though from his great poverty, he had always served as a foot soldier. With this associate, he mounted the rostrum, commanded a suspension of all business, and of all judicial proceedings throughout the city, and ordered all who were capable of bearing arms to attend him before sun-set in the Campus Martius, each with provisions for five days, ready dressed, and twelve stakes for a palisade. He also directed every man whose age rendered him incapable of active service, to prepare the food for the soldier who lived nearest to him, while he employed the interval in procuring stakes and completing his armour. These commands were implicitly obeyed, and the Roman youths having taken stakes wherever they could be found, without requiring permission, met the dictator at the place appointed, in the evening. The arrangements for the hurried march were soon made, and the troops completely equipped, left the city in good order, commanded by Cincinnatus and Tarquinius. One general desire to deliver their fellow citizens, and obtain vengeance on their foes, animated the whole. The leaders incited the troops to hasten on, by reminding them that a Roman consul and his army were in a

state of siege, that they had been three days invested, and that a night, even an hour, might determine their fate, beyond the power of redemption. The soldiers, at the same time, called on the ensigns to proceed faster, and incited their comrades to follow them. By these exertions they arrived, by midnight, at the Algidus, within a small distance from the enemy.

Cincinnatus having desired his army to halt, and taken the best view of the camp of the Equi which the darkness of the night permitted, drew up the lines so as to enclose the trenches of the foes, in the same manner as they had done those of Minucius. The soldiers then, by his commands, raised a loud shout, and, in good order, began to dig a trench, and raise up a palisade before them. The Equi, finding a new enemy had arrived, and were endeavouring to protect themselves by fortifications, hastened to prevent them from completing the work, and hoped to fall on them in confusion. But, in the mean time, the shout of the dictator's forces had reached the camp of Minucius, where it was not only heard with joy, as the signal of approaching deliverance, but was considered as the cry of actual battle. Encouraged, therefore, by the belief that his countrymen were charging the besiegers from the other side, the consul hastened, on his part, to attack them, and thus kept them engaged during the night, while the entrenchments of the dictator were completed. At day break, Cincinnatus led his forces from the lines to actual combat, while the consular army continued to harass the foe. The Equi, finding themselves entirely surrounded, threw down their arms and entreated the conquerors to spare them. Cincinnatus, after ordering them to evacuate the city of Corbio, and to send him their general, Gracchus Clesius, and their chief officers, in chains, informed them that he had no desire to take their lives, but would suffer them to depart after passing under the yoke, in token of their subjection. To this hard condition they assented, and two spears being fixed in the ground, and a third laid across them, the whole army passed beneath this symbol of disgrace, and retired without further injury.

When the dictator met the troops whose deliverance he had thus happily accomplished, he reproved them in severe terms for suffering themselves to be thus encircled, and addressed their leader in terms of peculiar severity. He gave all the booty to his own soldiers, absolutely refusing to the consular bands any share of the spoils, and commanded Minucius to abdicate the authority of consul, of which he had shown himself unworthy, and remain with the legions in the capacity of lieutenant-general. This command seems to have been obeyed without a murmur, and Quintus Fabius soon after arrived from Rome, to supply the place of the unfortunate consul. Indeed, so great was the influence of the character of Cincinnatus, and so deep the sense of his justice as well as valour, that the battalions whom he had reproved and excluded from all share in the plunder, presented him with a crown of gold, and, on his departure, saluted him with the title of Preserver. On his return to the city, a triumph was decreed him, which was celebrated with all the rude magnificence of that early period. His chariot was Triumphant, preceded by the military standards and the captive chiefs, and followed by his victorious army, laden with their spoils. All the citizens gave themselves up to joy; entertainments were spread in the streets which

were gladdened by festive songs, and concluded with dancing. On the same day Mamilius, the Tuscan general, who had so nobly assisted in recovering the capitol from Herdonius, was presented with the freedom of Rome. According to Livy, before Cincinnatus resigned his office, he caused Volscius, the accuser of his son Carus, to be brought to trial for perjury; when he was convicted and banished to Lanuvium; but this circumstance seems contrary to the tenor of other historians. Certain it is, that though the dictator had been chosen for six months, he laid down his authorities at the termination of sixteen days, and hastened to resume his daily labours in the cultivation of his little farm, from which he had been taken.

Again re-
turns to pri-
vate life.

After the acts of this short dictatorship, we find no mention of Cincinnatus in the Roman story for nearly twenty years. Although this period was eventful, comprising fresh contests between the senate and the people, the appointment of the Decemviri—the establishment of the laws of the twelve tables—the tyranny of Appius Claudius and its tragical close, in consequence of the death of Virginia by the hand of her father—the establishment of military tribunes—and the appointment of a censorship, he does not appear to have taken any active share, either in foreign or domestic politics. Age stole on him in his happy retreat, without impairing his energies or diminishing the veneration and gratitude of his country. At length, he was once more called from his farm to assist the state by a last effort of his decision and virtue.

In the year *n. c.* 438, when Proculus Geganius Marcius and Lucius Menenius Lanatus were consuls, Rome was afflicted with a terrible famine. Each party of the state accused the other of having given occasion to this calamity; the people attributing it to negligence in the consuls, and want of foresight in the senate; and the patricians imputing it to the indolence of the people, who choose rather to spend their time in revelling and listening to the inflammatory harangues of the tribunes, than in tilling the lands. At length Lucius Minucius, a man of great integrity and zeal, was appointed, by the consent of both parties, to procure and superintend provisions for the relief of the distressed citizens. His endeavours for a long time appeared fruitless. The misery which had been a little relieved by a small supply of corn from Etruria, appeared daily to increase. Many of the people, in despair, threw themselves into the Tiber, in order to avoid the horrors of a lingering death by hunger. Soon, however, the cause which had frustrated the efforts of Minucius became apparent. Spurius Maelius, a Roman of great wealth, of the equestrian order, had conceived the idea of raising himself, by means of the distresses of his country, to the supreme power. For this purpose, at the beginning of the scarcity, he had bought up all the grain he could procure in the neighbouring provinces, and, when the wants of the people were the most urgent, distributed his stores, with great profusion, to those whom he thought likely to favour his designs. At first he appears only to have aimed at the consulate; but, as he found that he could not obtain this dignity, except in open defiance of the patricians, he resolved on aspiring at once to be absolute master of the state, which he thought would require scarcely greater energies, or a more daring spirit of enterprise. When, therefore, the elections for the new consuls arrived, he

does not appear publicly to have advanced his pretensions, and Titus Quinctius Capitolinus, brother of Cincinnatus, and Agrippa Menenius, were chosen. Maelius continuing to acquire fresh popularity by his largesses, prepared for exerting his influence to attain his object, by collecting arms at his house, and holding frequent assemblies there of all on whom he could prevail to favour his purposes. At this time Minucius, who had long watched his proceedings, for which the nature of his office afforded him opportunities, acquainted the tribunes with his conspiracy, and even charged the tribunes of the people with having been bribed to assist him in reducing his country to bondage. On this disclosure, the senate began to censure the counsels of the past year, and those who were then in office, for their remissness in permitting a plot of so dangerous a kind to assume so formidable a character before its suppression. To this reproach, Quinctius replied, that the blame ought not to be attached to the magistrates, but to the laws, which limited their power, since any steps they could take against a popular traitor might be frustrated by an appeal to the people. He, therefore, earnestly recommended the appointment of a dictator, who would have power to dispense with the laws, as the only means by which the plans of Maelius could be overthrown, and the offender brought to justice, and advised the election of his brother Cincinnatus, as the senator best fitted to meet and overcome the danger. Universal approbation followed this proposal; but, when the wishes of the senate were communicated to Cincinnatus, he entreated that he might be allowed to decline the office, as being now past eighty years of age, he feared he should prove too feeble for the performance of his duties. When, however, he was assured that the citizens had far more confidence in his wisdom and courage than in that of all other patriots, he consented to give them his services; and having implored the gods that they would not permit the commonwealth to suffer through the infirmities of her guardian, once more left his cottage and appeared at Rome.

No sooner was he appointed dictator, that he chose C. Servilius Ahala, as his master of the horse, and actively prepared to crush the designs of Maelius. He placed guards in all parts of the city, as if he expected the invasion of a foreign enemy. In the morning, he repaired to the forum and while the people were inquiring with astonishment, what new danger had caused the appointment of a dictator, and called forth a man in extreme old age, to direct the state, he ordered his master of the horse to lead to Maelius, and command him to appear in his presence. Struck with terror at the idea of confronting the virtuous dictator, Maelius entreated the protection of his friends to cover his retreat, and when an officer laid hold on him to compel his obedience, they rescued him by force from his hands. He then ran through the forum, entreating the people to defend him, who was persecuted by a senatorial conspiracy because he had relieved the wants of the commons in their greatest need. While he spoke these words, Servilius Ahala rushed on him, and slew him; and then, returning to the tribunal of Cincinnatus, sprinkled with the blood of the slain, he reported that Maelius, having refused to obey the summons, and attempted to raise an insurrection, he had summarily executed justice upon him. "You have done bravely

As some of the people murmured at the sudden destruction of Melius, Cincinnatus convened a public assembly, and there developed the treasons of the slain, and justified the conduct of his officer. He affirmed, that even had Melius been innocent of the offences imputed to him, he would have been justly killed for setting at naught the august authority by which he was commanded to appear at a tribunal, where he would have met with an impartial trial. He set before the people, in glowing colours, the offence of which the traitor had been guilty, in attempting to enslave a city which had forcibly banished its kings; which had seen the sons of its first deliverer put ignominiously to death, for conspiring to restore the regal authority, and had seat Collatinus into exile merely because he bore the name of the family who had occupied the throne. He reminded them of the fall of Cassius, and the Decemviri, for striving to establish tyranny, and represented the deeper dye of his offence, who, without the pretensions of birth, or high exploits, and from the mere recommendation of wealth, hoped to attain absolute power. He declared the crime to be of so aggravated and monstrous a kind, that nothing which had been used to accomplish it, ought to be permitted to survive; and therefore decreed, that

the house where the conspirators had assembled, should be destroyed, and the goods which had been amassed to purchase empire, forfeited. This order was carried into prompt execution. The house of Melius was levelled with the ground, his goods sold, and the proceeds given to the treasury; while the corn found on his premises was sold to the people at a very low price by Minucius. This officer, who had contributed so much to the destruction of the conspiracy, was rewarded, according to some writers, with an ox with gilded horns, and to others, with a statue. His duty thus performed, Cincinnatus once more laid down his powers, and retired to spend his few remaining days in honourable repose. We are unacquainted with the particulars of his death, which was probably gentle. His vigour, both of body and mind, preserved by a course of healthful labour and an unassailed conscience, seems to have been undiminished till his long life was nearly concluded. If he inclined too decidedly to the senatorial party against the plebeians, he erred only from honest prejudice. His character, if somewhat hard, inflexible, and severe, stands almost alone in ancient annals for venerable simplicity, calm decision, and an energy of virtue, which alone had power to inspire the despairing with confidence, or abash the most resolute in their crimes.

Death and
character.

MIDAS;

COMPRISING AN ACCOUNT OF THE PHRYGIANS.

Biography. As the name of Midas is the most considerable in Phrygian history, and belongs in fact to several rulers of that ancient people, it is conformable with our general plan to throw together the chief incidents which concern them under this name.

Of Phrygia. PHRYGIA formed a part of that portion of Asia Minor called Asia Proper, which besides comprehended Mysia, Caria, and Lydia. The origin of the name is altogether uncertain: the same may be said of its precise boundaries. According to Ptolemy, it was included within the 37th and 41st degrees of N. lat. and extended in lon. from 56 to 62 degrees. It has been celebrated in common with the whole of Asia Minor, for its fertility and the general salubrity of the climate.

Origin, &c. The origin of the Phrygians is unknown, but they always considered themselves as having the highest claims to antiquity of any people in the world. They are said to have been extremely superstitious in their sentiments, and voluptuous in their character. In their government they were monarchical, and, till a period approaching the Trojan war, the whole country was under the dominion of a single prince, as Nannacus, Midas, Manis, Gordius, and his descendants; but afterwards they became divided into petty sovereignties or provinces.

Nannacus. Ninnacus, or Nannacus, who is also called Annacus, or Cannacus, was the first king of Phrygia of whom we possess any account, and indeed the first whose

name is transmitted to us in the records of history. *Midas, &c.* He is said to have lived before Deucalion's Deluge, and his times were proverbially referred to as descriptive of any thing of remote or uncertain antiquity. He lived to a great age; but the report ought probably to be considered as fabulous, that he attained to upwards of three hundred years, when, it is said, he inquired of the oracles how long he should live, who replied, that at his death all things were to perish. Instantly he repaired to the temples of the gods, accompanied by the chief of his subjects, and uttered the most lamentable cries and groans to procure a change of this awful decree; from which circumstance originated the expression "to weep like Nannacus," as indicative of excessive grief.

From another king named Manis was derived the Manis phrase "Manic achievements," which, among the Phrygians, denoted such as were very extraordinary and heroic; for this prince is represented as eminent for military valour and for virtue.

Gordius was remarkable for having ascended from Gordias the plough to the throne. The story, as given by the historians, is in its chief outlines, as follows: Perhaps the reader may be amused with it as a fable, founded, however probably, in some basis of fact. While engaged, on one occasion, in his rural employment, an eagle settled upon the yoke, and continued perched there the whole of the day. This, of course, produced alarm in a superstitious mind, and, considering it as

Biography. something portentous, he went to a city in Lydia to consult the soothsayers. On entering Telmisseus, the celebrated resort of diviners, he met a beautiful girl, who answered to his inquiries after the sages he sought, that she was herself well skilled in the art, and that the prodigy he related was designed to intimate his elevation to a kingdom; and with more of ambition, it must be admitted, than of modesty, she proposed to him to share the royalty to which he was born, by becoming his wife. Gordias, however, was by no means so scrupulous as to deny her request. Soon after this, a sedition having broken out, the oracles unanimously advised the choice of a king, and, upon a second application to them to point out the favoured individual, asserted that the first man who visited the temple of Jupiter in a cart, after their return, was appointed by the gods to that office. In this manner, the lot fell upon Gordius, who was the person so circumstanced, and in gratitude for his elevation, he consecrated the cart to regal majesty in the temple, which was afterwards, both by them and other nations (as the blindness of man), adored as a goddess. He fastened a knot to the beam of the cart, so curiously perplexed, that the oracles promised the dominion of the world to whosoever untied it. Alexander, having attempted, like others, in vain, at last cut it through with his sword—a circumstance which has given birth to a well known proverbial saying.

Midas. MIDAS was the son and successor of Gordius. Plutarch (in Vit. Caesaris) says, that he was born of the goddess worshipped under the name of Bona Dea, by the Romans. Several circumstances are related of him, some of which savour of the fabulous antiquity when they were invented, or of the overweening credulity of the historians by whom they are told. When he was asleep one day, in his childhood, a swarm of ants is reported to have been busily engaged in conveying their stores of wheat into his mouth. This, of course, required a consultation with the all-divining oracles, who were pleased to intimate that it imported immense riches. This prediction, if such it really was, proved in the end to be correct, for his great opulence is the theme of all the ancient writers. He is said to have obtained large treasures from the mines of metal on Mount Bermius, and which, in all probability, were discovered during his reign.

Conon (ap. Phot. Bibl.) mentions his having found a treasure, and becoming in consequence very rich, and, his having, by various artifices, obtained the royal dignity among the Brygians. It is affirmed, that in his reign Silenus appeared on Mount Brime. Whatever he touched is declared to have turned immediately into gold; and availing himself of this superiority, he induced his subjects to remove from Europe into the country on the Hellespont, and settling in Mysia, he exchanged the original name of his subjects from Brygians to Phrygians.

Orpheus is represented as the instructor of Midas in the mysteries of religion, or, as we should rather say, in the absurdities of the existing superstitions; and so devoted was his mind to the subject, that he was not contented with the dulness of mere learning, but aspired to the glory of invention, introducing into Phrygia new deities, new temples, new rites and ceremonies, and orders of priesthood. The custom of mourning over the dead in solemn dirges and lamenta-

tions, is attributed to him as its inventor. He also set a pre-eminent example of this mode of rendering funeral honours, by annually mourning over his departed mother. This, according to Suidas, led the people eventually to pay her divine reverence as a goddess.

Of his works of public utility, we have an account of his building the city of Ancyra; and Pausanias relates, that in the temple of Jupiter in that place, was to be seen an anchor which he had contrived.

In person Midas is represented as very comely and attractive; a singular eminence is attributed to his wife, who is moreover celebrated for wisdom. She is stated to have instructed the inhabitants of Cyme in the art of coining money. They had several children. The Greek proverb, *Μίδας ἐννύδρα*; that is, "Midas has asses' ears," has rendered his name peculiarly notorious. In a trial of skill, as the poets have it, between Pan and Apollo, who rivalled each other in music, Midas pronounced in favour of Pan, which so incensed Apollo, that he fixed a pair of asses' ears on his head, as a badge of ignorance. This disgraceful appendage, however, he contrived to conceal under his diadem, till it was at length detected by his barber, who treacherously disclosed the vexatious secret. Others, with equal probability, affirm, that Bacchus, upon some affront, metamorphosed him into an ass.

Midas is said to have reigned over Dardania as well as Phrygia; but this is uncertain. Cleobolus Lyndias composed an epitaph for his monument, which has been mistakenly ascribed to Homer.

After Gordius had succeeded Midas, without leaving Ancharras behind him any thing recorded, excepting the surrounding of Gordium with a wall, Ancharras, his brother, followed, who is remarkable for having performed a similar self-sacrifice with that which afterwards gave such celebrity in Roman story to the name of Curtius. During the reign of his father, Midas, a considerable part of the city of Celzema is said to have been destroyed by an earthquake, which left a permanent chasm. The cracks, upon being consulted, gave intimation that the earth would not close up again till the most valuable thing in life were thrown into it. Immediately upon the report of this answer, the inhabitants volunteered their gold, silver, and jewels; but without effect; till Ancharras, taking the resolution to sacrifice life itself, as the most valuable of all considerations, and that life his own, bade an affectionate farewell to his father and his wife Timothea, and rode on a horse at full speed into the chasm, which instantly closed.

Otreus, the next in succession, is scarcely known to Otrea, Lityerses, is known only to be yemas, despised for his gluttony and drunkenness, except by the Phrygian labourers in the harvest field, in which he himself is reported to have worked. It is added, that he compelled reapers to join him, and then cut off their heads, to bind in the sheaves, a species of cruelty which is scarcely credible, since it would expose himself to extreme danger; and accordingly Hercules is stated to have dispatched him on account of these enormities.

Midas II. reigned over all Phrygia; but his parentage is unknown. He had no better title to the throne than usurpation; in which he succeeded thus—having given out that he should offer a sacrifice to the gods, he

Biography. marched out of the town of Gordium with a large party, with great pomp and concealed daggers: the citizens following in vast multitudes, were suddenly attacked, and the city seized by the conspirators.

Gordius III. Gordius III. appears to have succeeded the former monarch; and after him, came his son Midas III. of whom it is recorded, that he presented the Delphian oracle with a royal seat, or tribunal, of exquisite workmanship.

Midas IV. Midas IV. reigned about a. c. 635, when the Cimmerians, invading Asia Minor, after their expulsion from Europe by the Scythians, took possession of Sardis, and pressed hard upon the Phrygians, as well as the Lydians and Paphlagonians. Midas, in despair of being extricated from his difficulties, poisoned himself with bull's blood. He had two sons, of whom Adrastus was sent into exile by his father, for having accidentally killed his brother. He was, however, received into the Court of Cræsus, the Lydian king; where, strange to relate, after having been entrusted with the education of his patron's favourite son, Atys, he killed him also accidentally at the chase; and in consequence, though Cræsus forgave him, he put an end to his own life. Phrygia henceforth became a province of Lydia, till Cyrus reduced the whole under his dominion.

Phrygia Minor. PHRYGIA MINOR was a small territory comprehended between the 40th and 42d degrees of north latitude, with a trifling extent of longitude. It included the maritime tract called Hellespontica, and the Mediterranean, termed Egeæus. Part of the former was called Troas, or Troad. In general, Phrygia Minor, may be said to have had for its boundaries the Propontis on the north, the Aegean sea on the south, Mysia on the east, and the Hellespont on the west. The inhabitants acquired the appellation of Trojans from the chief city, called Troy or Ilium, a place which the poems of Homer and Virgil have immortalized.

Origin, and other particulars. They were undoubtedly a very ancient people; but of uncertain origin. It is supposed by Bochart, that the lesser Phrygia was founded by the eldest son of Gomer, because of the resemblance perceptible between his name (Ashkenaz) and several of the lakes, rivers, islands, cities, and inhabitants. Monarchy seems to have been their earliest and settled form of government. At first, they consisted of petty principalities; but these gradually subjoined into the general dominions of the Trojan kings. Very little information can be communicated respecting these people; but the ancients describe them as eminent amongst the polite and civilized nations of that remote period of time. That they addicted themselves early to trade and navigation, is apparent, from their settlements in Thracia, Peloponnesus, Sicily, Italy, Egypt, and Africa. Their religion, generally speaking, if religion it may be called, resembled that of the inhabitants of the Greater Phrygia. Among their deities, however, one was remarkable. His appellation was Apollo Sminthius, from a Phrygian word, signifying field-mouse; and the tradition is, that mice have committed such ravages in their fields, that the inhabitants deemed it necessary to have recourse to the oracle at Delphos, and received for answer, that they should be debarrassed from that plague, if they sacrificed to Sminthian Apollo. They obeyed accordingly, and erected and dedicated a temple to their deliverer in Amaxito, a city of Troas. Others, however, state, that their worship of mice, originated in their

having obtained a complete victory, on one occasion, Midas, &c. over their enemies, in consequence of these vermin-coadjutors having gnawed the bow-strings of their enemies, and thus disabled them for battle. The worship of Sminthian Apollo was introduced into other countries; Strabo refers to a temple dedicated to this mouse-god in the isle of Tenedos.

Teucer is usually considered as the first Trojan king. Teucer. He was the son of Scamander and Ida; but some historians represent him as the last of a series of sovereigns, among whom Cynthis is named. It is difficult and unimportant to ascertain the precise fact; and even with regard to Teucer, little more can be discovered than that he was fortunate in all his enterprises, of which none are recorded, and imparted his own name to that of the country over which he reigned.

Dardanius we believe to have succeeded Teucer, Dardanius. though some authors represent him as his predecessor. He was the son of Corytus, king of Samothrace, which kingdom he inherited; and after his ascent to the throne of his ancestors, erected a temple, and instituted religious ceremonies in honour of Pallas, and other divinities. This proceeding enhanced his reputation for wisdom and piety so much, that Teucer, inviting him into Phrygia, gave him his daughter in marriage, and appointed him to be his successor. During his reign, he extended the bounds of his dominions by conquest, being engaged in war with the Paphlagonians. He built two cities, of which one was named after himself, Dardania; and paid great attention to the adjustment of civil and religious regulations. The Palladium, or statue of Pallas, was brought by his orders into Phrygia. Some affirm there were two, and that the oracle declared that neither of the cities in which they were kept, should be exposed to any calamities.

Eriethonius, the son and successor of the former, Eriethonius. imitated the illustrious example of his father, and acquired, in consequence, a similar respect from his subjects. The great object of his life was to maintain an uninterrupted peace with the other states, and this furnished him with the means of enriching his own kingdom. His reign was prolonged to the period of at least forty-six years; or, according to some, to seventy-five: the latter, however, was more probably his age.

Eriethonius had only one son named Troas, who Troas. took possession of the throne upon his father's decease. At the commencement of his reign, he laid the foundations of the city of Troy, which has since become so illustrious in the annals of history. All the neighbouring princes, excepting Tantalus, were invited to attend the dedication of the city. The neglected prince soon resented the offensive treatment he had received, by detaining and ill-using Ganymedes, the son of Troas, who was passing through the territories of Tantalus with presents to Jupiter European. The young man died of grief, and soon afterwards his father followed him to the grave, in consequence of the double affliction he suffered for the loss of his favourite child, and the failure of the war into which his resentment had instigated him to engage. He is said to have reigned forty-nine, or, according to some authors, nearly sixty years. He left three sons, Ius, Ganymedes, and Assaracus; and one daughter, Cleomestra. She had one son, named Lyersus, the father of that Antenor who was much celebrated for his sagacity. He was sent by Priam as ambassador into Greece, to demand his sister

Hector, who had been carried captive by Hercules, and borrowed on Talamon. He was, however, improperly treated, which provoked him on his return to excite Priam and his sons against them; but when the ambassadors of Greece were sent to demand Helen, he generously entertained and laid the plan of their safe conveyance out of Troy, from the disguise of Priam's sons. Upon being dispatched upon a second embassy into Greece, he is believed to have acted a traitorous part, as Priam would not listen to any conditions of peace for which Antenor was solicitous. When the city was captured, it is certain the Greeks spared and protected Antenor; but Livy and others, consider this kindness as resulting solely from their recollection of his former hospitality. The prejudices of the Trojans who remained, compelled him to withdraw from Troy, and the Hætti, who were forming a new settlement, chose him for their king. Having gone up the Adriatic gulf, they landed among the Euganei, whom they expelled, and settled under the name of Veneti, in their territory. The town which the refugees built was called Troy. Antenor had several sons, some of whom are said to have reigned in Phrygia, till driven out by Hector's sons.

Ilus. Ilus was successor to his father Troy, and reigned forty years. He pursued the war against Tantalus with much rigour, that he eventually dispossessed him of his kingdom, and annexed it to Phrygia. Ilus has the character of a good prince, having applied himself to the framing of useful laws, and the construction of stately edifices. On one occasion, he rescued the Palladium from the temple of Pallas, which had been set on fire by lightning; but he lost his sight by his zeal, which was afterwards happily restored.

Laomedon. Ilus left two sons, Titonius, who, at his father's death, was employed in foreign war, and Laomedon, who assumed the government. He built the citadel of Troy by means of the treasures lodged in the temples of Neptune and Apollo. Hence he was said to have been aided by those deities. Several inundations and a plague occurred in his time, which were considered as the effects of Neptune's and Apollo's anger on account of the profanation of their temples. Having treated Jason and the Argonauts in so inhospitable manner, Hercules afterwards returned and plundered the city. In this war Hercules slew Laomedon; and at last all his five sons, excepting Priam.

Priam. Podarces, the only survivor, has acquired the surname of Priam from a Greek term, signifying *to ransom*, as he had been ransomed, together with his sister Hecuba, from the captivity of Hercules, and restored to his ancestral throne. He began his reign by building a wall round the city of Troy, and afterwards he constructed towers, castles, aqueducts, and other works of public utility. Most of the neighbouring states were subjected to his authority, which was acquired and maintained by a large standing army. It was in the reign of this prince that the ever-memorable war between the Greeks and Trojans occurred, the exploits of which history and poetry have celebrated. It originated in the rape of Helen, by Paris, the son of Priam by his second wife Hecuba. Helen is represented as the most beautiful woman of Greece, and Priam supported his son in an action too general at that period, but justly reproached by all civilized nations. She had before been seized by Theseus, and her father, as Thu-

cydides relates, in order to prevent the recurrence of a similar disaster, induced her suitors, who consisted of the most eminent princes of Greece, to take an oath to rescue her in case of her being taken from Menelaus, the husband of her choice. This occasioned the combination which existed in her favour, to which Agamemnon, the brother of the injured husband, united; and in a general assembly, war was resolved upon against Troy, and Agamemnon appointed commander in chief. According to the best historians, the Greeks employed at least a thousand ships in this contest,* and the average amount of men may be reckoned at from eighty to eighty-five to each ship; which does not seem very great, considering the extent of the confederacy; but Thucydides remarks, that they were apprehensive of being distressed for provisions. Troy, however, proved no easy conquest, but resisted the assaults during no less a period than ten years; but the greatest part of Asia Minor espoused their quarrel. Aware of the opposition they were likely to encounter, the Greeks began their operations by attempting to negotiate for the restoration of Helen, and the treasures which Paris had carried off with her; but Menelaus and Ulysses, the ambassadors, returned without accomplishing their mission.

It is related by Herodotus, from an Egyptian tradition, that Paris, when returning with Helen, was driven by stress of weather to the coast of Egypt, and landed on the Canopian side of the Nile. Some of the slaves fled for refuge to a temple of Hercules, and reported their master's conduct to Thonis, the governor of the province, who reported the tale to Proteus, the reigning monarch. He immediately resolved on detaining Helen and the treasures, with the view of restoring them, and ordered Paris to quit the country in three days. Hence when the Greeks sent to demand Helen and the treasures in question, the Trojans are said to have replied, that neither were in their possession, but in the power of Proteus. This reply was looked upon as an evasion; but when the city was reduced, the Trojans persisting in their former assertion, Menelaus went into Egypt, where he was kindly received, and regained his wife.

The first eight or nine years of the Trojan war were employed by the Greeks in pillaging the coasts, and reducing the islands or cities that were in the opposite interest; but at length they united in one compact body and approached the city. Soon after this investment, a plague broke out in the camp, occasioned by their being in the midst of fens and marshes, and beneath a burning sun. This was followed by a quarrel between Agamemnon and Achilles, the latter of whom withdrew with his forces to the ships: in the interval several severe battles were fought. Patroclus was slain by Hector; but Hector himself fell by the hands of Achilles, who returned to the war. Achilles was, in his turn, fatally wounded with an arrow, shot by Paris. The city was at length taken in the night; but it is uncertain whether by assault or treachery. The poets say it was accomplished by the stratagem of a wooden horse, crowded with soldiers, which has been thought to signify that the Greeks entered by the Scæan gate, over which the statue of a horse was placed: others are more disposed to interpret it literally, and to give the Greeks credit for an ingenious contrivance.

* Homer enumerates 1186; Thucydides calculates them at 1200.

Biography. Their success was dishonourably employed in the practice of innumerable cruelties upon the vanquished, and the total destruction of the city. The date generally assigned to this transaction is a. c. 1184. Such of the Trojans as escaped settled in different countries. *Æneas* fixed his residence in Italy, and founded the kingdom of Alba. The Roman emperors boasted of their descent from this illustrious personage. A degree of doubt, however, exists upon this point; and by some authors *Æneas* is represented as having collected his dispersed countrymen, and rebuilt the city, over which his descendants presided. Others affirm, and with greater probability, that the Phrygians and Lydians became possessed of the ruined territory, and imparted the name of Phrygia to Troas.

At the close of this article, we subjoin a general geographical statement, which may be useful in guiding the researches of the reader into the labyrinths of ancient history.

ASIA, in its northern and eastern parts, was very little the field of those transactions which most astonish and interest us in former times. To the north, are Asiatic Sarmatia and Asiatic Scythia, corresponding with Tartary. *Sarmatia* is situated between the rivers Tanais and the Volga. *Scythia* is divided into two parts: the one on this side, the other beyond mount Imaus. The easternmost parts are, *Serice*, Cathay, *Sinorum regio*, China, and *India*. The latter was divided into India on this side the Ganges, now the empire of the Great Mogul; and India on the other side of the Ganges.

THE GREATER ASIA commences at the Indus; of which the chief provinces are Oedrosia, Carmania, Arachosia, Drangiana, Bactriana, Sogdiana, Margiana, Hyrcania, Parthia, Media, Persia, Susiana, Assyria, Mesopotamia, and Babylonia.

ASIA BETWEEN PONTUS EUXINUS AND THE CASPIAN contains four provinces—Cohis, Iberia, Albania, and the Greater Armenia; and is separated from the Lesser, by the Euphrates; from Mesopotamia, by Mount Taurus; and from Assyria, by Mount Niphates.

ASIA MINOR comprises several divisions. 1. *Northward*, on the shore of Pontus Euxinus; *Pontus* under three names, having the cities of Trapezus and Themiscyra, on the river Thermodoon, the residence of the Amazons.—*Paphlagonia* and *Bithynia*, whose cities are Nicia, Prusa, Nicomedia, Chalcedon, and Heraclea.

2. *Westward*, by the shores of the *Ægean sea*: the

Lesser Myria, containing Cynicæ, Lampasæus, Parium, Abydos, Dardanium, Sigæum, Ilium or Troy, and the island of Tenedos. The rivers are the *Aræpe*, the Granicus, and the Simois. Mount Ida. This region is also called *Phrygia Minor*, comprising Troas.—The *Greater Myria*, containing Antandros, Tryjanopolis, Adramyttium, Pergama. *Lesbos* is an island opposite to Myria, having the cities Methymna and Mitylene. *Æolia*, having Elen, Cuma, and Phloceæ. *Ionis*, Smyrna, Clazomenæ, Teos, Lebedus, Colophon, Ephesus, Priene, Miletus. *Caria*, Ladiæa, Antiochia, Mlagnesid, Alahanda; the river *Mæander*. *Doris*, Halicarnassus, Cnidos. *Chios*, *Samos*, *Patmos*, *Cos*, are opposite; and more to the south, *Rhodes*.

3. *Southward* along the Mediterranean—*Lycia*, of which the cities are Telmessus and Patara; the chief river, *Xanthus*. Hence begins Mount Taurus. *Pamphylia*, having Perga, Aspendus, and Sida, as the principal cities. *Cilicia*, containing Selucia, Corycium, Tarsus on the river Cydnus. The island of Cyprus is opposite to Cilicia, whose chief cities are Salamis, Amathus, and Paphos.

4. *Along the banks of the Euphrates*—The *Lesser Armenia*, containing Comana, Arabyza, Melitene, and Satala; and the river *Meles*.

5. *Inland*:—*Cappadocia*, whose cities are Neocæsarea, Comana Pontica, Sebasta, Sebastopolis, Diocæsarea, Cæsarea or Mazaca, and Tyana. *Lycaonia* and *Isauria*, containing Iconium, Isauria.—*Pisidia*, having Selucia and Antiochia.—*Lycia*, whose cities are Thyatira, Sardis, and Philadelphia; the rivers Casystus and Hermus, which receives the Pactolus. Mount Sipylus and Tmolus. *Phrygia Major*, containing Synnada and Apamia.

SYRIA, now SYRIA or the EAST. This comprises the provinces of *Palestine*, containing the chief cities of Jerusalem, Samaria, and Cæsarea Palestina; and the river Jordan. The same name is also applied to *Canaan*, which includes the cities of Gaza, Ascalon, Azotus, Accaron, and Gath.

Phœnicia, having Ptolemais, Tyre, Sidon, and Berytus; and the mountains of Libanus and AntiLibanus. Syria, properly so called, or *Antiochena*, of which the cities are Antiochia, Apamia, Ladiæa, and Seleucia. *Comagena*, containing Samosata.

Cælogyria, whose cities are Zeugma, Thapsacus, Palmyra, and Damascus.

ARABIA PETRÆ. Its cities are Petra and Bostra. Mount Casius. DESERTA. FALIX.

HISTORY.

CHAPTER XI.

A SYNOPTIC VIEW OF THE JEWISH ECONOMY.

DISSERTATION I.

NATURE AND DESIGN OF THE JEWISH ECONOMY IN GENERAL.

History.
General observations.

THERE is no class of persons to whom the Jewish economy does not present something worthy of particular attention. In all respects it is unique and wonderful, furnishing ample materials of reflection, both for the devout and for the philosophic observer: exhibiting to the one the veiled magnificence of an ever-present Deity, and to the other a singular combination of the moral, social, and political elements of mankind. The arrangements of that economy, as a system of holy legislation, and its events, as a dispensation of omnipotent providence, impress upon it a character of novelty, of strangeness, and of singular importance. It supplies a chapter in the history of the world, which can never be read without a feeling, in which astonishment and admiration struggle for the pre-eminence; nor without suggesting motives, and principles, and considerations essentially beneficial in their tendency to every contemplative mind.

The volume which contains the circumstances of this extraordinary period, has impressed upon it an equal peculiarity and uniqueness. It is not a *fable*, "cunningly devised" for the purpose of entertaining the reader, by conducting him into a maze of mystery,—although the facts recorded are so curious and so interesting, as to possess all the seducement, without the fallacy of fiction:—it is not mere *history*, allied in quality and design to other records of time gone by, and framed to store the inquisitive mind with the transactions of dubious origin, or mixed character which have agitated the past population of this our globe,—although it has all the reality, and more than the common reality of such documents, but without the dross of error, the colourings of deceptive fancy, or the misrepresentations of prejudice:—it is, in truth, a *revelation*, comprising in that term not only what is real and what is historic, but what is divine: so that the pen of inspiration alone could have written what it contains, because, in its details and developments, the *searcher of hearts* is to be seen no less than the *recorder of facts*. It is not in man to ascertain the secret principles of conduct, to penetrate to the fountain of thought, and the spring of action, to lay open the bosom and to give permanency to the fleeting images of the inmost soul;—as well might he hope to arrest the shadows that fly across the plain in their course, or to detect the mysteries of the unattainable heights, or unsearchable depths of creation; but the

volume which exhibits and exposes, with infallible precision, all these secrets, approves itself as originating in a super-human source; and it is impossible to read its very earliest page, without finding oneself carried beyond the sphere of ordinary history, and common observation.

1. With regard to the general nature of that economy, the circumstances of which constitute the subject of the Pentateuchal history, we have to observe, in the first place, that nothing could be better calculated, or more evidently designed to establish the *doctrine of Providence*; and that nothing could be more important than, at an early period of the world, to impress *degenerate* and *wasteful* man with this sentiment.

In the life of Moses, we have already remarked that his conduct as a leader of the Israelites must be viewed not merely as singular, but as injudicious, nay, as absolutely wild and frantic upon any other supposition than that of his being guided by a divine impulse; and we may add, that the credibility of the common events of the Jewish history is essentially confirmed by those of a miraculous nature. Nothing surely can be more evident than the inadequacy of all human power to accomplish, independently of a divine interposition, the deliverance from Egypt, the establishment of the Jewish polity, and the settlement of that illustrious people in the land of Canaan. The want of military skill and military fame in their leader, the opposition of the government of Egypt to his projects, and the impediments which presented themselves at every step of his progress, justify the assumption that these events could not have resulted from unassisted human agency. If the narrative be considered in such a manner as to separate the leading facts not miraculous, which form the basis of the history, from the miraculous, the absurdity of supposing no providential interference becomes at once strikingly apparent. Otherwise, their existence in the wilderness during forty years cannot be accounted for upon any rational principles; nor can it be imagined by what means they could have been restrained from rebellion against the authority of their leader, and from taking the resolution of either returning to Egypt, or invading Canaan. Human passions were evidently held by the grasp of some mighty hand, and all their affairs guided irresistibly by an omnipotent arm.

Jewish Economy.

Doctrine of Providence established.

History.

Hence, therefore, we derive our first consideration with regard to the nature and design of the Jewish economy; as tending to establish upon a basis of incontestable facts the *doctrine of a providence*. This sentiment is indeed corroborated by every page of the sacred volume, which constitutes, as a whole, one grand argument in its favour. All the prophecies in connection with their corresponding events—all the miracles of the Mosiac economy, and afterwards of the Christian age—the well-attested histories of the visits of holy angels to this lower world—the remarkable incidents related in the lives of such men as Abraham, Joseph, David, Daniel, and others—the record of Divine interferences in the Israelitish affairs—the entire train of events which were preparatory to the coming of the Messiah, and linked together by a supernatural consanation, concur to establish this doctrine.

It has been sometimes pleaded as an objection, that this earth, with all its interests, however diversified and vast they may appear in our apprehensions, are too insignificant to attract the attention of the God of the universe. Such a notion would, in fact, restrict the Deity absolutely to himself, and consequently make him finite. For if he totally abandon this earth on account of its insignificance, a similar reason may be assigned for his abandoning other worlds of inferior or even of greater magnitude, till it would appear that every part of the universe in succession might be forsaken, and that God would exist as an independent, indeed, but a limited intelligence. Many of the heathen philosophers adopted this rash sentiment respecting the insignificance of the world, as a reason why it could not be regarded with any constant or minute concern by its original framer. But whatever the dictates of an imperfect philosophy, or whatever the doubts of uninstrusted reason, the conduct of God to ancient Israel furnishes to all generations an incontestable evidence of the reality of his superintendence of human affairs, and especially of the deep and superior interest he takes in whatever is connected with the concerns of the wise and virtuous, or tends even in the remotest degree to affect the welfare of his church.

Anti-Polytheistic principles.

2. A second great design of the Jewish economy was to establish *Anti-Polytheistic principles*, in opposition to those which were generally prevalent among the nations. The idea of God, as a Spiritual Intelligence, seems too simple and sublime for a creature fallen under the dominion of his senses, and whose grovelling perceptions have no aptitude for retaining that grand elementary doctrine. At a very early period, therefore, the strangest misconceptions had arisen respecting this being, and the primitive faith was perverted and degraded by a thousand mythological and idolatrous inventions. Dazzled with the brilliancy of the sun and the other luminaries of the firmament, men regarded them at first, perhaps, as the residences or representatives of the Divinity; but, certainly, afterwards, as themselves animated by distinct and independent spirits, and fit objects of religious adoration. Pillars and statues were erected to them, till these pillars and statues themselves became the objects of a senseless worship; and at length fire, air, light, and all the different elements of nature, were viewed with the same reverential regards. So degraded was man, that malignant principles, imaginary furies, and even venomous

Jewish Economy.

repiles and destructive animals, particularly in Egypt, were honoured, from a sense of fear; and superstition, idolatry, and sorcery, united, to bind in their rivets chains the intellects of mankind. These absurdities soon spread to the widest extent; so that previous to the mission of Moses they had infected every part of the world; and it is obvious, no ordinary means could have been efficacious in extirpating from the human breast the gross errors which it had so long and so deeply cherished. In addition to the prejudices of common minds, the system of paganism was defended by kings and legislators, who used it as an engine of government, to extend their influence and sustain their dignity. To the populace it was ever dear, on account of the unbridled licentiousness it sanctioned, and the gratification which its shows, festivals, temples, and services afforded to every vitiated passion. It was, in fact, a system which proved the fruitful source of every crime, domestic and public; and human happiness, no less than human reason, bled a victim on its altars.

To counteract, therefore, the prevalence of Polytheism, and to assert his own divine prerogatives, was worthy of the supreme legislator; who, in introducing a new and just principle of worship, and in adopting extraordinary measures to maintain it, consulted at once his own glory and the real interests of the human race. The great leading doctrine of the Jewish code, the primary and fundamental truth upon which the whole superstructure of the Mosiac economy was reared, may be found in the declaration "Hear, O Israel, the Lord our God is one Lord." (Deut. vi. 4.) In opposition, as we have once before observed (Life of Moses), to the Polytheistic inventions of surrounding nations, Moses at once asserted the worship of *one God*, as the *central truth*, in intimate association with which every other doctrine, every service, and every enactment, were arranged. This was the doctrine which he represented as "dropping like the rain, and distilling as the dew; as the small rain upon the tender herb, and as the showers upon the grass"—salutary and beneficial; the influence of which, wherever propagated, must diffuse a beauty over the face of degenerated human nature, and supersede the corrupt principles that have obtained so lamentable an ascendancy in the world. It was of incalculable importance that this truth should be deeply fixed in the wayward mind of Israel; for while they were so slow to learn, and so ready to forget it, the true religion, of which they were the depositories, could only be maintained by assigning it a just pre-eminence in their belief and practice. It is, and ever must be, as the sheet anchor; if we let it go, or break away from it, all is lost; an inevitable shipwreck of faith succeeds, and the mind of man is drifted into a vast and shoreless ocean of speculation, without a guiding star. Whatever system be adopted, it must be essentially wrong, without this principle, however plausible in appearance, or however supported by authority; and to this simple and elementary sentiment man must be conducted, in order that the book of his religious knowledge may be cleared from the innumerable errors that weakness and wickedness have inserted in it, and that the spring of action may be purified from the defilements of misconception, prejudice, and folly.

The character by which the Supreme Being is distin-

History.

guished from every other intelligence, is that of self-existence; and this is inculcated with the utmost solemnity upon Moses at his first interview with God, when he was appointed to his great work. "Thou shalt say unto the children of Israel, I am both sent me unto you." The superstitions which had arisen in that dark period from the invention of different names, was counteracted at once by this declaration, and the pre-eminence of the self-existent and immutable Jehovah, clearly established. And to accommodate more perfectly the instructions to be communicated to the people of Israel in religion, to their capacities and feelings, other epithets are added, "the Lord God of your fathers," "the God of Abraham, the God of Isaac, and the God of Jacob," which was to be the divine "memorial unto all generations." This intimation was calculated to exhibit the governor of the universe in the most attractive form, to fix upon their minds a most interesting impression of his paternal character, and of his deep and invariable interest in all their concerns, and to emancipate them from the slavish principles of an idolatrous worship, which had placed surrounding nations under the protection of tutelary divinities. It has been demonstrated by a series of acute reasoning, that the doctrine of self-existence lies at the basis of every other representation of the true God, and that it is the source whence may be deduced all the divine attributes.

Closely and essentially connected with this view of God, and therefore perpetually inculcated upon the Israelites by their great legislator, is the unity of God, to which we have before alluded. The atheistic has always been far less prevalent than the polytheistic notion; and the chief danger to which the chosen people were exposed, did not so much arise from the probability of their being induced to deny the existence of God, as from their associating in his worship other and inferior objects of adoration, who might be supposed to co-operate in the guidance of human affairs. The hazard was, and ever since has continued to be, not so much the subversion as the corruption of religion; and, therefore, to prevent the unallowable mixture of polytheism with the genuine faith, Moses continually repeats the doctrine of the divine unity, with all that solicitude which we may imagine to spring from the two-fold conviction of the importance of the sentiment, and the danger lest his people should be seduced into it by the force of idolatrous example, or their inveterate propensities to evil. It is, therefore, over and over again referred to in terms similar to the following: "Know therefore this day, and consider it in thine heart, that the Lord be God, in heaven above, and upon the earth beneath, there is none else;" and the most solemn interdictions are connected with these and other instructions of the same nature—"Thou shalt fear the Lord thy God, and serve him, and shalt swear by his name. Ye shall not go after other gods, of the gods of the people which are round about you; (for the Lord thy god is a jealous God among you) lest the anger of the Lord thy God be kindled against thee, and destroy thee from off the face of the earth." (Deut. vi.)

Real system
of morality
introduced.

3. The Jewish economy was the means of introducing a system of morality which, while it furnished a striking contrast to the irregularities of other nations, prepared the way for the more complete discovery of the extent of our obligations by the great teacher of the Christian dispensation. The ten commandments comprehend

Jewish
Economy.

an important summary of moral duty, such as no other system of legislation include, and such as was highly calculated, in proportion to its diffusion amongst mankind, to check the rapid progress of wickedness and purify the earth from its corruptions. The first table requires the worship of the one only living and true God as supreme over all the creation, and the source of every blessing, and interdicts every species of idolatrous adoration, as inconsistent with his unity and his perfections. It inculcates inward as well as outward worship, the regard of a sabbath, and the obligation of oaths. The second table specifies and enjoins our social duties, including the intercourse both of domestic and public life; our circumstances as men and as citizens.

It is to be observed, that mankind, even in the most enlightened nations, devoid of a revelation, have committed the grossest mistakes on the subject of moral obligation, and that especially at the period, and among the nations in question, they were sunk into the utmost state of degeneracy. It is scarcely possible to imagine a vice which even grave and repeatedly wise legislators have not sanctioned by their authority. Theft, rapine, adultery, and every species of impurity, even the most unnatural crimes have been allowed, as well as all the ferocious and revengeful passions of human nature; children were exposed by their parents, to perish, on account of some natural deformity or defect, whether of body or mind, and even human victims were often led to the accursed altar of their gods. The master sacrificed the slave, the conqueror the captive, the parent the child, and this under the sanction of law, and the prescription of philosophy "falsely so called." The propagation, therefore, of a code like that of the Decalogue amongst the Israelites, was of pre-eminent importance, to counteract their propensity to imitate the vicious conduct of others, and to comply with the suggestions of a perverted and debased reason; and particularly so when it is recollected that the Mosaic law, being probably the first ever given to any nation, must have been known in those countries whence the most ancient legislators and sages derived their systems. The effect consequently must have been considerable in regulating the opinions and practices of mankind.

The Decalogue was given to the people of Israel by the Supreme Being himself, in the most awful and impressive manner, and it enjoined those great principles which were at once simple in their enunciation, and comprehensive in their character, conducive alike to the glory of the legislator, and the felicity of the people whom they especially concerned. Upon the basis so broadly laid by this communication, the superstructure of all morality and religion was reared, and every injunction secures the highest interests of both. On the two commandments, love to God, and love to one's neighbour, depend all the law and the prophets; and every future enactment is in fact no other than an illustration and enforcement of one or other, or of both these great first principles of human conduct; for every one requires the separate or combined exercise of a warm devotion, and an expansive benevolence.

4. The system of Judaism was not confined in its effects to the single nation among whom it was originally propagated; but was intended, through their instrumentality, to enlighten the world. It furnished the clearest evidences of the existence and of the attributes

Design to
enlighten
the world.

History

of the true God, not only to those who were witnesses of the miraculous interposition of heaven, but to all the other nations by whom they were surrounded, and who nevertheless shared in the remarkable adventures, or heard of the singular exploits of the Israelish community; "amongst whom," as Dr. Graves well remarks, "were the Egyptians the wisest, the Canaanites the most warlike, and the Phœnicians the most commercial nations of remote antiquity; and afterwards, the four great empires of Assyria and Persia, Greece and Rome, which successively swayed the sceptre of the civilized world. So that whatever knowledge of true religion was preserved amongst mankind, was in all probability principally derived from this source, or at least was from thence materially extended and improved."

The Jewish legislator frequently appeals to the wonders wrought by omnipotence on behalf of his nation, and represents their evident superiority to every other people, not only on this account, but because they exclusively possessed the statutes and judgments of the Almighty. It is even distinctly declared in the law, as one express design of the proceedings in the Jewish economy, to promote the knowledge of the true God in other countries, and the motive by which infinite wisdom was influenced in its dispensations. Thus an appeal is made with regard to Pharaoh—"In very deed for this cause have I raised thee up to shew in thee my power, and that my name may be declared throughout all the earth;" and this declaration is equally applicable to the other extraordinary manifestations of Providence to Israel—all wear this inscription upon their fronts—all evince the same miraculous guidance—and all tended to impress the world with the same salutary surprise and fear. To this principle Moses refers in very striking terms in the following passage, in which he represents the prosperity which should reward the obedience of Israel, and the calamities which should attach inevitably to their rebellion, as attracting the attention of other people to the greatness of Jehovah. "The Lord shall establish thee an holy people unto himself, as he hath sworn unto thee, if thou shalt keep the commandments of the Lord thy God, and walk in his ways. And all the people of the earth shall see that thou art called by the name of the Lord; and they shall be afraid of thee. But it shall come to pass, if thou wilt not hearken unto the voice of the Lord thy God, to observe to do all his commandments and his statutes which I command thee this day, that all these curses shall come upon thee, and overtake thee." "So that the generation to come of your children, that shall rise up after you, and the stranger that shall come from a far land, shall say, when they see the plagues of that land, and the sickness which the Lord hath laid upon it; even all nations shall say, Wherefore hath the Lord done thus unto this land? what meaneth the heat of this great anger? Then men shall say, Because they have forsaken the covenant of the Lord God of their fathers, which he made with them when he brought them forth out of the land of Egypt."

These passages are, it must be admitted, remarkable, and prove (as well as others that might be adduced) the regard of the Supreme disposer of events, in the case of the ancient Israelites, to what "all the people of the earth" should "see," and to what "all the nations" should "say," that is, to the effect which his dispensations to the people of Israel should pro-

Jewish Economy.

duce upon other nations in their vicinity, or to whom the report of these proceedings should extend through a distant futurity; and accordingly the Mosiac Scriptures relate several instances of the impression which was actually made by the divine miracles. The Egyptian magicians acknowledged the finger of God. The servants of Pharaoh reconstrated with him upon his persistence and obduracy, notwithstanding the plagues which were brought upon the country; and, at a subsequent period, some of the Canaanish nations having heard of what the God of Israel had done, were terrified and confuted at the approach of the people to their borders. They particularly mention the signal miracle of guiding the Israelites through the Red sea, and the defeats of the Amorish monarchs; and long after the Philistines exclaim, "Woe unto us, who shall deliver us out of the hand of these mighty gods? These are the gods that smote the Egyptians with all the plagues in the wilderness." Afterwards, in the reign of Solomon, his fame "in all nations round about," which attracted princes and people from all quarters to hear his wisdom, and the manner in which he encouraged strangers to worship the true God, must have contributed powerfully to circulate his religion. This great purpose, however, was still more effected by the captivity, which occasioned their dispersion among the inhabitants of the most illustrious countries of the heathen, who were by this means excited to pay attention to the providence of God, and to the religion which he had established and supported by his power. Daniel and his associates were of eminent service in this point of view in Babylon, and the empire of Nebuchadnezzar and Darius; and so effectual was the impression on the mind of Cyrus, that he actively engaged in the restoration of the people of Israel to their land. Some of the most learned writers also have shown, that the principles of the true religion were diffused through the instrumentality of the patriarchal and Jewish revelations among the ancient Persians, who derived their knowledge originally from Abraham, which was rendered more complete and uncorrupt by the reformation of Zoroaster, who was acquainted with the Jewish Scriptures.

The plea that the Mosiac scheme could not have been divine because it did not universally enlighten and reform mankind, is utterly nugatory; for there is no reason to suppose it could have been so at that period of the world, or at any period which has yet occurred, by any methods of divine government consistent with the established course of nature and the moral agency of man. "So deeply," observes Dr. Graves (Lectures on the Pentateuch), "was mankind sunk in error and ignorance, in idolatry and all the vices connected with it, that any reformation of an entire nation, and much more of all nations, seems to have been totally impracticable. If the Egyptians and Canaanites could not be reformed by the wonders they beheld and the chastisements they suffered—if the Philistines, the Samaritans, and the Assyrians, so long witnesses of the divine providence over the Jews, continued still idolaters, it seems certain no nation could have been permanently and exclusively attached to the worship of Jehovah, except by placing it under a system of miraculous instruction and miraculous controul, nearly or exactly similar to that under which the chosen people were disciplined and restrained. Now that

History. many different nations should be thus miraculously disciplined and controlled, as far as we can judge, could not take place without *totally altering the entire scheme of God's moral government, and utterly subverting the established course of nature.* And so long as any nations continued unenlightened and unreformed, the objection that the divine dispensations were partial and confined, would still remain. Is it not then evident that such an objection rests on presumption, leads to absurdity, and would terminate in atheism?"

Jewish dispensation, preparatory and prefigurative. 5. The Jewish must be regarded as *preparatory and prefigurative of the Christian dispensation.* Without admitting this sentiment, it would be utterly impossible to account for many circumstances, or even to render intelligible the statements contained in some of the books of the New Testament. In particular, the Epistle to the Hebrews pre-supposes such an idea, and carries back the mind to it by plain and unequivocal representations of the fact. Abraham is said to have "rejoiced to behold the day of Christ;" and we find that, in the divine promises to that illustrious patriarch, such a blessing was included as should not only extend its benefits to his family and nation, but, as it is expressly said, to "all families of the earth." His faith is peculiarly celebrated in not having withheld his only son from the sacrifice, because he beheld in the figure the future Messiah, whose voluntary sacrifice and triumphant resurrection (of the latter of which the rescue of his son was an emblem) were predestined to secure the salvation of mankind. These sentiments were of course communicated to his family, and were well understood by the patriarch, whose bright expectations were sustained as they were embodied in the covenant which was so often renewed. The Jewish economy was, therefore, in reality, not exclusive and partial, since it anticipated and introduced another dispensation fraught with the welfare of the world. The purpose of providence to extend the effects of the Jewish dispensation to the very ends of the earth, and the remotest ages of time, is continually recognized in the Mosaic and prophetic writings. Jacob predicts it in the coming Shiloh; the inspired Psalmist records it in various prophetic intimations respecting the sufferings, the exaltation, and dominion of the Messiah; Isaiah proclaims it in the exultant tones of his heaven-strung lyre; and "all the prophets prophesied until John."

The Apostle of the Gentiles, in accordance with the Mosaic and prophetic writings on this subject, represents in a detailed and argumentative manner, in his Epistle to the Hebrews, that the Levitical constitution was introductory to the more spiritual scheme of the gospel, and expressly typical of it—"a shadow of good things to come," which constituted the substance. And not only so, but the law and the prophets did in fact accomplish the design here intimated, "their pre-exist-

ence being indispensably necessary to prepare for the reception of that gospel, and in a variety of ways illustrating its importance and facilitating its promulgation." Had no such religion or nation existed as the Jews, it seems evident that the whole world would have sunk into the grossest idolatry, and into an almost total ignorance of the first principles of religion; all expectations of a future retribution would have been incredible—the evidence from prophecy would not have existed, and every appeal to miracles must have been disregarded. If this state of debasement and degeneracy had taken place, it is inconceivable by what means mankind could at any time have been rescued from it without subverting the whole course of nature—no light could otherwise have penetrated this palpable darkness, and no religion could have been found in which to build the church of God. The Jewish economy directly prevented the occurrence of such a scene of moral anarchy, and such a debasement of the human character. It furnished an asylum for the truths of religion and the principles of morals, where they might take refuge from the mighty tide of corruption that deluged the other nations of the earth, and await a proper period for going forth with renovated strength and renewed and extended influence to bless mankind. Here all the radical principles of a pure divinity were preserved, and the contagion of vice was guarded against by a peculiar system of laws, and by manners grafted upon them; and moreover, as possessing a typical and prefigurative character, the contrite mind of the Jewish worshipper was perpetually directed to the Christian dispensation, and a bright impression of the reality and glory of this latter economy preserved in the memory and heart. The law convicted of sin, showed its nature, proved its demerit, impressed the necessity, and in its priests and ceremonies pointed to the reality of an atonement for it in the end of the world. Nor did the Jewish law only prepare for the introduction of the gospel by its types and prophecies, and also by preserving the principles of sound theology and pure morals, but by the strictness of its moral prohibitions and its denunciations of divine displeasure against transgression, it exposed the secret guilt of man, proving his depraved propensity and his utter dequency; and thus rendered unspcakably acceptable the publication of freedom and eternal life by the promised Messiah.

We refer the reader for a fuller exposition of the typical character of the Jewish dispensation to our former article *MOSAIC*, under the third division contained in his life, relating to the nature and character of his laws: also to *Outram de Sacrificiis*; *Faber's Hore Mosaicæ*; *Magee, on Atonement and Sacrifice*; and *Graves's Lectures on the four last Books of the Pentateuch*.

Jewish Economy.

DISSERTATION II.

MANNERS, CUSTOMS, AND OTHER PECULIARITIES OF THE ISRAELITES.

History. In the general term *Israelites*, we may be permitted with an allowable anachronism, to include the patriarchal families from the earliest periods of their history; since, like a river which has acquired a new name after flowing from a considerable distance to some remarkable spot, it is nevertheless essentially the same from its most insignificant source, through all its windings, and in every degree of its expansion to its issue in the ocean. It will not be expected, being obviously incompatible with our proportions, that all the peculiarities of the Israelites as a people, should here be minutely traced and specified: suffice it to detail those which are of the greatest importance, or which tend to exhibit their most distinguishing nationalities. With this view it may be convenient to classify them under certain general divisions, comprising their religion, their civil polity, their domestic circumstances, their distribution of time, and their ordinary pursuits.

Religion. 1. In considering the nature of the Jewish economy as a whole, the marked peculiarity of their religion has of course been especially noticed; but in order to have a more clear perception of that peculiarity, it seems requisite to enter into somewhat further detail, and to specify their more remarkable institutions. The principles of their religion have already been adverted to, and are in fact so completely interwoven with every topic of that great subject, which may either now, or will hereafter, come under discussion, that no formal enumeration seems to be demanded. They had but one divinely appointed place of public assembly, called the tabernacle, and afterwards the temple, in which all the solemnities of their worship were conducted, and on the one altar of which the appointed sacrifices were presented to the great Supreme. While this unity was symbolical of that of the object of their adorations, the magnificence with which it was adorned shadowed forth the glory of his perfections as the "king eternal, immortal, invisible."

The temple itself, with the sacrifices of different kinds which belonged to the Mosaic ritual, will presently come under review, remarking only here that the quality of the victims, and the manner of offering them, with all the circumstances of time and place, were prescribed by the law with an authority, and accuracy, and punctiliousness, that admitted not of the slightest deviation.

Fasts. Their three principal festivals were the passover, the pentecost, and the feast of tabernacles; the former was instituted to commemorate the signal deliverance of their nation from Egyptian bondage; the second to mark the promulgation of the law, which was at the expiration of fifty days, and the third to record, and to perpetuate a lively recollection of their settlement in the promised land, after the inconvenient method of living, and the toilsome marches and counter-marches, to which they had been so long addicted in the wilderness. To

each of these solemnities was assigned, apparently with reference to the creation of the world, the period of seven days. At these seasons, an immense concourse of people was usually assembled at Jerusalem, from every direction, all clad in the attire of holiday, animated by the pleasing recollections of their past history, which the very institutions themselves were calculated to revive, and exalted by the sight of friends and relatives convened for the similar purpose of indulging not only an allowed, but even a prescribed and commanded festivity. These were seasons of singular satisfaction, deeply remembered, often conversed over, greatly anticipated, and repeatedly celebrated in the writings of their inspired authors—seasons when the natural overflowings of earthly affection blended with the elevating delights of a heavenly devotion. The sabbath was also regarded as a holy feast, and the first day of every month, called the new moon, was likewise so considered.

The Israelites had their *fasts* as well as their festivals, **Fasts** and these were not only regular as to the time of their observance, but assumed a character of singular humiliation and mourning. The entire day was in these cases, spent in total abstinence, till the evening. The tenth day of the seventh month, or feast of atonement, was the only public fast-day appointed by the law; but others were afterwards introduced, as one in the fourth, another in the fifth, and a third in the tenth month. In addition to these, they observed fasts on occasions of a particular nature, or of great importance; such as seasons of national calamity or of great private misfortune, of which frequent mention is made in the compositions of David. Fasts were also sometimes connected with vows, and in their nature wholly voluntary. They were peculiarly strict and conscientious in all these circumstances, and never permitted themselves, under any pretence, or by any latitude of interpretation, to violate their sacred obligations; of which the whole volume of history does not contain a more striking illustration, than the often discussed tragic story of Jephthah's vow. The public fasts were, like the festivals, announced by the sound of trumpets, which procured a general assembly of the people in convenient places, where the old men usually delivered solemn addresses to the people. At these times they never married, and observed a peculiar continence.

Classes of religious persons among the Israelites. Several classes, or orders of religious persons among the Israelites, demand to be cursorily noticed. The most remarkable of these were the *prophets*, a highly gifted race of men, who addicted themselves to extreme simplicity of dress, and great austerity in their mode of living. They were ordinarily clothed in hair-cloth, or as it is called, sackcloth, a token of mourning, and adopted by them for the purpose of expressing, in a conspicuous sign, the sorrow of their minds for the transgressions of their countrymen. Thus Elijah is de-

Jewish Economy.

History.

scribed as "a man clothed in a hairy garment, and girt with a girdle of leather about his loins" (2 Kings i. 8); and John the Baptist is represented by the historian of the New Testament as having "his raiment of camel's hair, and a leathern girdle about his loins" (Mat. iii. 4). The prophets appear, in general, to have adhered to celibacy, as most compatible with their unsettled condition, and the spirit of self-mortification which, at least, adorned, if it were not absolutely required by their office; but instances are not wanting of marriage being practised among them. Their usual residence was upon a mountain, or in some secluded spot, although at times, and in some places, they associated together in considerable numbers, especially in seminaries called the schools of the prophets, where the junior members of this community received instructions preparatory to their more public engagements. They were great students of the divine word, and maintained a constant intercourse with heaven by prayer and meditation. The liberties they often practised in reproving the people, and even persons of the highest distinction, for their sins, and exhorting them to their duties, were not only justified by the high office they sustained, but regarded with much attention, and, therefore, received with good effects by those for whom they were peculiarly designed. The truth of their appeals, united with a characteristic unceremoniousness of manner, made the proudest and most dignified delinquents tremble, and feel "how awful goodness is."

Nazarites.

The *Nazarites* were persons who took a particular vow of abstinence, and the rule of the *Rechabites* was founded upon it; whose author, the son of Rechab, lived in the time of Elisha, and interdicted his children from the use of wine, and from securing to themselves temporal possessions. Hence they lived under tents, and imitated the pastoral life of the ancient patriarchal families. After the captivity, we have nothing of their history. "The term *Nazarite* signifies separated, and is commonly applied to persons who make a vow to live in a more holy manner than others, either during a certain specified number of years, or even after the pledge is given, without recantation or change. The *Nazarite* abstained from every kind of intoxicating liquor, 'from wine and strong drink,' from vinegar of wine, or vinegar of strong drink, and from grapes, whether moist or dried; he was to let his hair grow, and upon no pretext whatever to approach a dead body, though it were to render funeral honours to a father or mother. If, during the period of a vow, the *Nazarite* neglected any of these injunctions, the whole ceremony was to recommence. The least admissible time for this consecration was, according to some of the Jewish rabbis, thirty days; and the perpetual *Nazarite*, whose hair had been allowed to grow for many years, might cut it once. At the expiration of the appointed term, various sacrifices were to be offered, a particular enumeration of which is given in the sixth chapter of the book of Numbers. After this, the priest shaved the head of the *Nazarite*, at the door of the tabernacle, and burnt his hair on the fire of the altar. If the person died previous to the expiration of his vow, his son was required to fulfil the time, and offer the same sacrifices. Perpetual *Nazarites*, like Samson, were consecrated by their parents, but there is a peculiarity attaching to him above all others of whom we read, being devoted, even before his birth. Similar rites were observed among the

bethen, especially the Egyptians, the Greeks, and the Romans, the origin of which is unquestionably to be referred to the Jewish law."

Jewish Economy.

The *Levites* constituted another remarkable class of persons among the Israelites. They were the ministers of religion, and formed a particular order distinct from the other tribes. In addition to the privilege of birth, they were consecrated to their office by certain ceremonies, to which Moses alludes: "Take the *Levites* from among the children of Israel, and cleanse them. And thou shalt thou do unto them to cleanse them: Sprinkle water of purifying upon them, and let them shave all their flesh, and let them wash their clothes, and so make themselves clean. Then let them take a young bullock with his meat-offering, even fine flour mingled with oil, and another young bullock shalt thou take for a sin-offering. And thou shalt bring the *Levites* before the tabernacle of the congregation: and thou shalt gather the whole assembly of the children of Israel together: And thou shalt bring the *Levites* before the Lord: and the children of Israel shall put their hands upon the *Levites*: And Aaron shall offer the *Levites* before the Lord, for an offering of the children of Israel, that they may execute the service of the Lord. And the *Levites* shall lay their hands upon the heads of the bullocks: and thou shalt offer the one for a sin-offering, the other for a burnt-offering, unto the Lord, to make an atonement for the *Levites*. And thou shalt set the *Levites* before Aaron, and before his sons, and offer them for an offering unto the Lord: This shalt thou separate the *Levites* from among the children of Israel: and the *Levites* shall be mine."

David established a new order among the *Levites*, by which some were appointed to guard the gates, some to sing psalms, and others to guard the treasures; dividing them into different classes, amounting to about twenty-four, each serving a week. Each of the classes had a head, or superintendent, who regulated the services of the day. No *Levite* was permitted to exercise his functions, till after serving a kind of novitiate for five years; during which period he was instructed in the nature of those duties which he would hereafter be required to discharge. This probation was begun at about the age of twenty-five. At the age of fifty, they were dismissed from their office; but some of the Jewish writers intimate that this was only the case in the wilderness, during their laborious march; age furnishing no plea for dispensing with their engagements at a subsequent period. As the *Levites* had no assigned portion in the division of the land of promise, and only forty-eight cities for the support of their cattle, of which thirteen were shared with the priests, they had the benefit of tithes, which were paid out of the estates belonging to the tribes, and the tenths of that were given to the priests.

Each head or chief of the twenty-four classes into which the *priests* were arranged, acquired the title of the Prince of the *Priests*. Every week one class went up to Jerusalem to perform the priestly office, and on the sabbath day they all performed in rotation, till the whole had served: on the solemn festivals they were all convened. The prince of the class ordered the particular family to offer the sacrifices on the given day, and at the end of the week all united in sacrificing. The different offices to be performed by each family and its respective members, were determined by the lot.

History.

Certain defects excluded from the priesthood: of those of body, the Jews calculate fifty, common to men and animals, and ninety which are peculiar to the former. The person rejected was clothed in black, and sent without the courts of the priests: he who was chosen by the authorized examiners and judges, appeared in white, and assumed his station amongst the others of his order. Many that were but partially defective in body, resided in the temple, and were employed in preparing the wood for the fire of the altar. During the time of performing their offices, the priests were obliged to observe the strictest continence, and abstinence from wine; their only food then was the flesh of the sacrifices and the shew-bread. They stood barefoot, with their heads covered and feet washed, while engaged in their functions. Their general official duties were to maintain the fire upon the altar of burnt-offerings, to guard the sacred vessels, to offer sacrifices, to wash the victims, to sprinkle the blood or the water on the persons offering, on the victims, or the book of the law, to burn the incense, to trim the lamps, to supply or remove from the table the shew-bread. They only were to catch the blood of the victims, and sprinkle it upon the altar. The high priest was possessed of the exclusive privilege of entering the Holy of Holies, on the day of expiation once a year, when he only presented the sacrifice for himself and the people. This superior officer was consecrated to his work with peculiar ceremonies, precious oil being poured upon his forehead in the form of an X.

The sacerdotal habits are enumerated in the Mosaic writings, and consisted of the linen drawers, the linen robe, the girdle, and the tiara, or turban for the head, made of rolls of linen cloth. The high priest was decorated with a dress peculiar to himself, consisting first of the *me'il*, a long garment of a purple colour, which, according to Josephus, reached down to the feet, and not made of two distinct pieces, sewed together at the shoulders and sides, but woven throughout entire. On the border of this robe were seventy-two golden bells, and a similar number of pomegranates, under which was to be seen the tunic or *linen alb*, a part of the dress common to all the priests, worn in an open manner, having raised work and figures in it, very fine and twisted, and reaching to the ground. The high priest also wore an *ephod*, which was a waistcoat without sleeves. On each shoulder where this garment was fastened, was a precious stone, containing the names of the different Israelitish tribes engraven; on the right shoulder, were the names of the six eldest sons of Jacob, after whom they were called, and on the left the six younger. On his breast was a square piece of stuff termed the *breast-plate*, or in Hebrew *hoshen*. It was about half a cubit in dimensions, and was constantly worn in every solemn consultation with the Most High. On the breast-plate were twelve precious stones, graven also with the patriarchal names. It contained also the *urim* and *thummim*, about which we have very little information. The former word signifies lights, and the latter truth or perfection; and both are considered by the Jews as sacred signs by which the Deity revealed his will. They seem to have been something more than merely two words on the breast-plate, and are represented as beaming forth a miraculous splendour. The high priest was also invested with a *mitre*, a linen band, in length sixteen cubits, and

plaited on the head in several folds. Josephus says, "on the head he wears a cap, not pointed, nor extending over his whole head, but covering a little more than half of it;" so that between the mitre and the *holy crown* was a convenient place for the phylacteries. The holy crown was a plate of gold upon the forehead, on which was an inscription of two words: *Kodesh Laybharah*—"Holiness to the Lord." To preserve it in the proper position, it was tied with blue or purple lace or ribbon, drawn through two holes, one in each end, and fastened behind the head. Outram* remarks, that it was customary for the priests of other nations to wear crowns in the performance of their sacred functions, as we are informed by Pliny. "Anciently, indeed, no crown was given, except to some god; but never by one man to another in any games: and it is said that the first of all was Bacchus, who placed on his own head a crown of ivy. Crowns were afterwards assumed by priests, in honour of the gods; and very recently they have also been used in solemn games." To this add the following passage of Tertullian: "In the same manner, therefore, the purple robe and the ornament of gold worn round the neck were ensigns of dignity among the Egyptians and Babylonians. In a similar manner also splendid robes and golden crowns are worn by provincial priests, but not with the same condition." (De Idololat. c. 18.)

2. With regard to the *civil polity* of the Israelites, Civil polity, which naturally succeeds to the former considerations, it may be observed, that they were divided, as a nation, into twelve tribes, corresponding with the number of Jacob's sons. The tribe of Levi was regarded as consecrated to the service of the sanctuary, and as such, "holy unto the Lord." This of course invested them with prerogatives, and emblazoned them with a distinction which evidently separated them from the other tribes; but this was compensated by the two sons of Joseph, Ephraim and Manassah, being exalted into two tribes, and thus supplying the number. The following clear and concise statement, from Abbé Fleury, may not be unacceptable to the reader:

The tribe of *Reuben* had four families; the Hanochites, the Pallaites, the Hezronites, the Carmites.
The tribe of *Simeon* had five; the Nemuelites, the Jaminites, the Jachinites, the Zarhites, the Shaulites.
The tribe of *Gad* had seven; the Zophonites, the Hagcites, the Shamites, the Ozmites, the Erites, the Arodites, the Arelites.
The tribe of *Judah* had five; the Shelanites, the Pharzites, the Zarhites, the Hezronites, the Hamulites.
The tribe of *Issachar* had four; the Tolaites, the Punites, the Jathubites, the Shrimmonites.
The tribe of *Zebulun* had three; the Sardites, the Elonites, the Jahleelites.

The tribe of *Manassah* had eight; the Machirites, the Gilcadites, the Jezerites, the Helekites, the Arelites, the Shechemites, the Shemidites, the Hephreites.
The tribe of *Ephraim* had four; the Shualites, the Bachrites, the Tahantites, the Enantes.

The tribe of *Benjamin* had seven; the Belaites, the Ashbeelites, the Ahirmittes, the Shuphamites, the Huphamites, the Ardites, the Naamites.

The tribe of *Dan* had but one; the Shuhannites.

* De Sacrificiis Diss. l. cap. v.

Jewish Economy.

History. The tribe of *Asher* had five; the *Jimaites*, the *Jessutes*, the *Berites*, the *Heberites*, the *Malcolities*.

The tribe of *Naphtali* had four; the *Jahzeites*, the *Gnutes*, the *Jecerites*, the *Shellemites*.

In addition to those who were the proper descendants of *Abraham*, and who were naturally in most esteem among themselves on account of their genuine extraction and nationality, persons of other countries, upon their embracing the Jewish religion, were admitted into the community, and were denominated *proselytes*. They were of two kinds, *proselytes of the gate*, or *proselytes of habitation*, so distinguished as being allowed to live within their gates, and *proselytes of justice*. The former were not absolutely required to observe all the Mosaic institutions, only the sabbath, the precepts to abstain from blood, and from the worship of idols, and some others which had been enjoined upon *Noah*. These strangers, however, were neither circumcised nor baptised. The *proselytes of justice* were placed upon a different footing; they embraced the whole of the Mosaic law, and enjoyed the privileges and the rank of natural Jews. Circumcision was practised upon strangers of this class, which was regarded as the seal of the covenant into which they now entered with God, under the solemn engagement to observe all his institutions; and the blood which was shed upon the occasion received the epithet of the "blood of the covenant," the parties concerned being regarded as the "children of the covenant." They were also baptised in the presence of at least three Jews of sufficient notoriety, upon declaring the motives which induced them to embrace the Mosaic law, their resolution to live a holy life, and their disposition to receive all the instructions which were now willingly accorded. The presentation of sacrifice was a third ceremony it was deemed requisite to perform, at the period of this union with the Jewish community.

Government. The government of this singular people has been usually termed theocratic; a word employed to express its peculiarity, as under the immediate jurisdiction of the God of heaven, who chose to become both the supreme legislator and ruler of the Jewish church. From his sole authority their laws emanated, and the eminent men raised up amongst them, and placed from time to time at their head, were only the channels of communication for these regulations, framed in heaven, and enacted by an omnipotent wisdom. From their implicit obedience, always resulted the happiest consequences to themselves—security and peace, with all their concomitant blessings, while innumerable evils arose whenever they manifested a rebellious temper. In that, as well as in every subsequent age of the world, a connection, as inseparable as obvious, was formed by eternal providence, between duty and happiness, wickedness and misery. None of the tribes were invested with any prerogatives of superiority, and hence all great questions of policy were immediately referred to the decision of God himself, through an application made by some of their accredited agents, and principal leaders.

At length, however, they displeased the divine Majesty, by desiring to have a king, like the surrounding nations. In him was vested the power of life and death, without referring particular cases to the process of a slow and accurate investigation in judiciary courts. He was also empowered to levy tribute upon the peo-

VOL. IX.

ple. But though these prerogatives seemed to elevate kings to the dignity of absolute monarchs, they were nevertheless bound by the law, as well as private individuals, and could not introduce the slightest alteration. Their domestic living was plain and abstemious; but in public they often assumed considerable pomp and splendour. *Abdoun* had fifty men running before him as body guards. Some of their kings had accumulated immense riches, particularly *Solomon*, upon whose splendid condition the *Abbe Fleury* remarks—"By this prosperity of *Solomon* and his people, God gave two important lessons to mankind at the same time. First, he shows his faithfulness in accomplishing his promises, by giving the Israelites so plentifully of all the good things which he had promised their fathers in the possession of this land, that no one hereafter might doubt of his power to reward those that adhere to him, and keep his commandments. Men that applied themselves so entirely to earthly things, stood in need of such an earnest to make them believe they should hereafter enjoy an invisible happiness, and the recompense of another life. But besides, by granting the Israelites the possession of these earthly goods, and profusely bestowing upon them whatever might contribute to the happiness of this life, God has given all men an opportunity of seeing them in a true light, and conceiving higher hopes. For who under the sun can pretend to be happy if *Solomon* was not? Who can doubt that whatever happens in this world is vanity, after he has confessed it? Does not his example show as plainly that worldly goods are not only vain, but dangerous? Not only incapable of satisfying the heart of man, but likely to corrupt it! What reasons have we to flatter ourselves that we shall make a better use of them than a people so dear to God, and so well instructed in their duty? and who seem to have had a better right to this sort of happiness, since it was proposed to them as a reward. What presumption would it be to think ourselves more capable of resisting pleasures, than the wise *Solomon*?"

In common with all other nations, at the period in *Slaves*, question, the Israelites possessed the power of life and death over their slaves, which resulted partly from the right they acquired, or were supposed to acquire, over the lives of others by conquest, and the power which the victorious hero was believed to possess himself over the spared life of a subjugated foe, extended to his descendants born in a state of captivity. The great security against improper treatment, doubtless resulted from the value of the slave, whose death would be a loss to his owner of so much property: nor was this all, for the law inflicted a punishment upon the master who should kill, in chastising his servant.

It appears that parents had a right to sell their Domestic children, and they had ordinarily so much authority, influence, that after using every proper method of correction, they were, in case of failure, to represent the circumstance to the elders of the city, when the magistrate was empowered to order the rebel to be stoned to death. (*Dent. xii. 18—21.*) The apprehension of so melancholy an end to determined perverseness would naturally operate in a powerful manner upon the junior branches of families, and generally restrain their irregularities. Aged persons possessed a very considerable share of influence among the Israelites, as well as among the ancient nations in general: and it has been

Jewish Economy.

History. observed, that the best governed states have always been those where the old men were in authority, the young being both too impetuous and too inexperienced to rule proportionately well. The Scriptural history always makes very express mention of the *elders*, in relating public affairs and popular assemblies.

Administration of justice. The administration of justice was chiefly under the direction of two kinds of officers, which were established in every city by an express injunction to Moses. These were the *shopetim* or judges, and the *shoterim*, a term descriptive of inferior, and perhaps, of different orders of magistrates and officers, including sheriffs, sergeants, captains, heralds and others. To these, however, may be added, *zikonim*, senators or elders, and *rashim*, chiefs or captains, who are to be regarded as military officers. The council of seventy elders was established in the time of their great legislator, Moses, of which the high priest was president; and to this board were referred all those cases which appeared too difficult or important for absolute decision by the judges of the different cities. The judges kept their court in the gate of the city, through which the great bulk of the people, who were husbandmen, passed morning and evening, to and from their usual employments. Public affairs, therefore, were transacted at the gates from the earliest times, of which, during the patriarchal ages, the Scriptures furnish numerous examples. The towers of the gates contained spacious and handsome rooms; and although the business which was executed might not have been committed to writing, property would be made secure, and the knowledge of any general arrangement would be easily perpetuated by this publicity in the execution. The same judge presided over civil and ecclesiastical affairs, which, being alike under the supreme jurisdiction of the divine law, required no separate and independent tribunals; and hence public justice was administered by a comparatively few individuals.

War. War forms a very important article of the Jewish economy, so that every Israelite carried arms, and was trained to their use. At the age of twenty they were considered fit for service, and from that moment were regarded as soldiers, subject to a call upon every exigency. Swords, bows and arrows, javelins and spears, or half-pikes, were their weapons of warfare; and, as the history of the Gibonites shows, they were skilful also in the use of slings. Their defensive armour consisted of shields, bucklers, helmets, armour for the back and breast, and greaves to cover the legs. Sometimes machines were employed in cases of siege, to project great stones and arrows. Cavalry being of little avail in mountainous countries and sultry climates, they had at first only infantry, but the former were introduced in the times of the kings. They were, moreover, expressly interdicted the use of cavalry. They had numerous war-chariots, probably resembling those of the Greeks, and other notions of antiquity, simple in the construction, but capable of producing considerable havoc. Their army in the wilderness was immensely large, and very exactly registered. They always marched by sound of trumpet, and were quartered round the tabernacle of the covenant, which occupied a central position in the camp, in the same order; and their entire discipline and disposal has been asserted, and not without reason, to have furnished the Greeks and Romans with practical hints with regard

to military preparations. At all periods, a vast standing force was preserved. David had twelve bodies of 24,000 each, who served alternately every month; and though the dominion of Jehoshaphat were extremely circumscribed in comparison with those of David, he had 116,000 fighting men in his service, independently of those upon garrison duty.

3. The people of Israel may next be viewed in their domestic circumstances, from which the real character of life, a nation, no less than that of an individual, may often be most correctly deduced. Their marriages were always attended with great feasts and rejoicings, in which they arrayed themselves in their richest attire. The feast lasted seven days, with the festive accompaniments of singing and music. No religious ceremony appears to have been performed on the occasion, unless the simple prayers of the father and friends may be so denominated. They neither went to the temple, nor invited the priests, nor offered sacrifices: it was viewed altogether in the light of a civil contract.

The desire of children, which is so natural to the human breast, and which the corruption of society, superadded to the political difficulties of modern times, has partially extinguished, appears to have been a most ardent passion in the bosom of every Israelite. This feeling was kept in perpetual vigour by the authorized expectation of the promised Messiah, who was to be born among them; but at what precise period, was concealed amidst the clouds of prophesy. Hence they were excited to noble anticipation, by the very uncertainty of those circumstances of time, place, and family, which long shadowed the incontestable fact itself of his manifestation. The wish for children was not repressed among the Israelites by the prevalence of expensive habits and the consequent apprehension of being incapacitated to provide sufficient maintenance for a numerous offspring: quite the reverse; for their mode of life was extremely frugal, their clothing simple, and their habits such, that children, instead of proving an encumbrance, were directly beneficial, by being trained to assist them in their labours. Their only ambition was to bequeath their little inheritance entire to their children, and perhaps in a superior state of cultivation to its original condition; and as to their daughters, no one thought of seeking them for their wealth, but on account of the tribes and families with which they stood connected.

In this state of society, the married life was naturally looked upon as dishonoured by infertility, and many scriptural instances occur of pious women bemoaning it as a calamity. This sentiment is indeed evidently sanctioned by Scripture itself, in all those representations parents are spoken of with marked commendation, when surrounded with a numerous posterity, and which expressly states, that "children's children are the crown of old men." The law that a man should marry the widow of a deceased brother, when he died childless, was evidently founded on this sentiment, so consonant with the precept to "multiply and replenish the earth." It is further obvious, that *polygamy* originated from the same source; and though it was a violation of the first law of marriage, which united an individual man and woman together in that endearing bond, yet Providence tolerated the deviation, both on account of the thin state of the population, and the imperfect condition of society, upon a principle similar

Jewish Economy.

History. to that intimated by our Saviour, when he declares that Moses permitted divorce on account of the hardness of their hearts. (Mat. 19, viii.) It appears, likewise, from the inspired narrative, that they had concubines as well as wives, who were inferior to them chiefly in the circumstance of inheritance, in which the children of the legal marriage enjoyed the preference. These practices were evidently incongruous, and ill adapted to promote domestic comfort; in fact, the experience of past ages shows that they were attended with calamitous results, and must ever be regarded as a proof of weakness, if not of absolute criminality. Had the Creator at first perceived that a plurality of wives was most conducive to human felicity, he would unquestionably have bestowed more than one upon man in his paradisaical state; because his wisdom must have known what was really best; and the narrative evinces that his goodness adopted every possible measure for completing the happiness of him who was placed at the very summit of the inferior creation. It has been remarked that Lamech was the first polygamist on record, and from all that the Scripture says concerning him, there is much room to fear he was not a very good man.

Education. The subject of education stands in immediate connection with that of matrimony and of children; and among the Israelites it seems to have borne a resemblance to the discipline of the Egyptians and early Greeks. Corporal strength, being in great estimation among them as a nation of soldiers, their exercises were of a nature calculated to promote this object. They appear to have been trained to lifting weights and running races; hence they were able to convey intelligence of the issue of battles with the utmost speed. Of Asahel, the brother of Joab, it is said that he was as light of foot as a wild roe. The use of the bow, and other military exercises, entered of course into their educational system. With regard to the cultivation of the mind, it must be admitted they did not propose a very extensive range; for, adopting the prejudice that the study of the different languages was little meritorious, being equally in the power of slaves with those of the highest class in society, their attention was restricted chiefly to their own language, of which it may be said, that although it bears evident marks of grandeur and antiquity, it has little of the copiousness, and still less of the elegance of many other dialects. It is doubtful whether they were generally able to write, especially as learned men in Scripture are introduced under the name of scribes, as if the art of committing to writing were the profession of a separate class. With reading it was different, since they were laid under a religious obligation, each one to consult for himself the oracles of God—it was their employment on the sabbath or sacred day—and the remarkable contents of the inspired volume not only supplied ample materials, but suggested powerful motives to serious and frequent perusal. Here was contained all that the world furnished of authentic history; all that could particularly interest them in a national point of view, as being the record of those transactions in which their ancestors were busily engaged, and all that could authenticate their worship, and substantiate their illustrious descent.

From the riddles of Samson, and the avowed purpose

of the queen of Sheba's visit to king Solomon, we should be led to infer, that they were addicted to the use of unigmatical puzzles, which was the case also with the Greeks, and all the eastern nations. The book of Proverbs furnishes some curious specimens of this kind, and a few occur in that of Ecclesiastes. These naturally connected themselves with proverbs, fables, and allegories, which were commonly recited in verse, not only with the design of assisting the memory, but of promoting singing and musical entertainments. Several specimens of songs composed on the occasion of some memorable event are distributed through the historical book; as the song of Moses at the Red sea, the song of Deborah, the song of Hannah, and others. The Psalms is a collection of sacred hymns, fraught with devotion, as well as preceptive wisdom.

They had a variety of musical instruments, both wind and stringed, as trumpets, flutes, drums, and various others, the precise description of which it is now difficult to ascertain. The account, however, of Calmet, (Dict. Art. Music), is concise and interesting. He states, that of stringed instruments the *nab* (נב), the psaltery or psanneterion, (Dan. iii. 5) are names which appear to be significant of the same instrument, and have considerable resemblance to the harp, the ancient *eythara*, or the *hazur*, or ten stringed instrument: both were nearly of the figure Δ; but the *nab* or psaltery, was hollow toward the top, and played on toward the bottom; but the *eythara*, or ten stringed instrument, was played upon toward the top, and hollow below: both were touched either with the fingers or a small bow or fret. The *cinnor*, or ancient lyre, had either six or nine strings, which were strung from top to bottom, and sounded by means of a hollow case, over which they passed. They were played upon in a similar manner. The ancient *synophony* resembled the modern viol. The *rombuc* was, it is believed, similar to the psaltery. The *hugab*, or Hebrew organ, was composed of several pipes, of unequal length and perforation, which, like a flute, issued a sound when blown into successively. This is the ancient pipe of Pan. The drums were of different kinds, the term *toph*, from which is derived *tympannum*, applies to every description of drum or timbrel. The *salcelim*, cymbal or cysra, was an instrument of brass, of a clattering sound, in the form of a cap, or hat, and struck one against the other, while held one in each hand. By *gulgelm*, modern interpreters have understood the *astrum*, an instrument in frequent use among the Egyptians. It was nearly oval, and crossed by brass wires, which jingled upon being shaken, while their ends were secured from falling out of the frame, by their heads being larger than the orifice which contained the wires. The Hebrew text speaks of *shulshim*, which the seventy translate *cymbala*, but Jerom, *astrum*, an instrument, it should seem, of three sides, and it might be that ancient triangular instrument, which having several strings on either side, they were jingled together by a stick, and gave a sharp rattling sound. *Mezulthaim*, are also mentioned, translated likewise *cymbala*; but some render the term *finisimbula*, little bells. Zechariah alludes to the period when on the *mezulot* of the horses shall be written "Holiness to the Lord," which confirms this interpretation, since bells were anciently worn by the horses trained for war, for the purpose of accustoming them to noise. The bells fixed to

History. the bottom of the robe worn by the high priest, are denominated *phaumim*, by the seventy *Kacow, tintino-bu'lem*.

Dancing.

Dancing seems naturally enough connected with the subject of singing, and musical instruments; and we have evidence that this was practised among the Israelites. The term *achiluth*, which is found in the title of the fifth psalm, signifies dances or choirs of dancing women, and is derived from a root which means to dance. A remarkable instance of this nature, occurs at an early period of the Jewish history. When Pharaoh and his hosts were drowned in the Red sea, and the fugitive people of God obtained in consequence a complete deliverance from their enemies, Moses composed his celebrated song, recorded in the 15th chapter of the book of Exodus, and Miriam, his sister, appeared at the head of the women, to congratulate Israel upon this event, in responsive strains and dances, vying with the other sex in expressions of praise, and recognizing with equal joy, an interposing providence; she inspired the song, and led the dance. Moses exclaimed, "I will sing unto the Lord," and Miriam replied, with no tardy zeal, "Sing ye to the Lord, for he hath triumphed gloriously." At a subsequent period, David, when animated to an extraordinary act of piety, upon the ark of God being brought from the house of Obadedom into the city, disarrayed himself of his royal decorations, and substituting the lighter linen vestment of the priests, danced before the ark in holy ecstacy of spirit. The taunting language of Michael upon that occasion, which produced David's vindication of his conduct, as an act of humility and zeal, proves how little capable irreligious persons are of estimating those characteristic demonstrations of an ardent piety, for which eminent saints have been always distinguished.

Salutations.

The Israelites, in common with the eastern nations, observed many civilities in their intercourse with each other. The term *ford* was used whenever they wished to express a marked respect. It is recorded, particularly of Sarah, that she applied this epithet to her venerable husband. The bowing and the prostration of the body were also in use amongst them, often in Scripture termed worshipping. Kissing was an ordinary mode of salutation, and whenever they went into sacred places, they took off their shoes to express their reverential feelings. Sometimes the orientals kissed the beard of the person whom they intended to honour, and sometimes they kissed the ground.

Dress.

Their mode of dress cannot, perhaps, be accurately ascertained, but there is great probability in supposing it to resemble that of the Egyptians, which according to the ancient statues, comprised a tunic, made nearly in the form of a modern shirt, sometimes with long sleeves down to the wrist, and at other times with short sleeves reaching only to the elbow, or to the middle of the arm; occasionally there were no sleeves at all. The tunic, like the Roman stola, was girded round the waist, or under the breasts. A pallium was also worn, corring the shoulders and back, and corresponding in other respects with the Grecian chlamys.

In warm climates the inhabitants do not trouble themselves about any provision for the arms, legs, or feet, excepting that soles and sandals are furnished for the latter. Having discovered or determined what was most convenient, their fashions never changed, a circumstance which is characteristic of the oriental

nations even to the present day. The rich usually possessed a great accumulation of clothes, hence it was common to make presents from the wardrobe. Their stuffs were composed of wool. The *lyzuz*, which is often mentioned in Scripture, was a kind of silk of a golden yellow, formed out of the beard or tuft of the pinnæ longa, a large shell-fish of the muscule species, found on the coasts of the Mediterranean. The most esteemed stuffs were the white and the purple, red or violet: the former seem to have been most in use. Their clothes were ornamented with fringes or borders of purple or embroidery, and clasps of gold and precious stones. The Israelites were commanded (Numb. xv. 38.) to wear ribbons of blue on the borders of their garments, in order to maintain a perpetual and lively recollection of the law of God. The head was covered with a kind of turban, and they wore their own hair, which in the beard was allowed to grow to an extraordinary length. Their women made use of bracelets, necklaces, ear-rings, and other ornaments.

Cleanliness was in some degree essential to their circumstances, as well as a great refreshment. In walking they could not avoid gathering a considerable quantity of dust, wearing nothing but sandals, and hence it was requisite to wash frequently and abundantly. We read of this being practised continually on coming into a house, sitting down to meals, and going to bed. They also addicted themselves to anointing, which consisted either of simple oil, or such as had aromatic spices infused. They applied ointments chiefly to those parts of the body which were most exposed to the atmosphere, by which means they were considerably secured against its changes and inclemencies. The legal purifications eminently conducted to cleanliness.

The construction of their houses differed exceedingly from those of modern Europeans. They had no chimneys, and the windows consisted of lattice-work, or were closed with curtains. Stone was generally made use of in building, which was cut into very large pieces, and the beauty of the erection was considered to arise from the manner in which the stones were cut and joined, all being even and well dressed by the level and square. They employed fragrant woods, as cedar and cypress, to wainscot the inside of the finest buildings, and out of these they made the ceiling and the pillars. Josephus has given us an ample description of the architectural magnificence of Solomon, which it may be worth while to cite. "This house," says he, speaking of the king's palace, "was a large and curious building, and was supported by many pillars, which Solomon built to contain a multitude for hearing causes and taking cognizance of suits. It was sufficiently capacious to contain a great body of men, who would come together to have their causes determined. It was a hundred cubits long and fifty broad, and thirty high, supported by quadrangular pillars, which were all of cedar, but its roof was according to the Corinthian order, with folding doors, and their adjoining pillars of equal magnitude, each fluted with three cavities; which building was at once firm and very ornamental. There was also another house so ordered that its entire breadth was placed in the middle; it was quadrangular, and its breadth was thirty cubits, having a temple over against it, raised upon many pillars; in which temple there was a large

Jewish Economy.

History.

and very glorious room, wherein the king sat in judgment. To this was joined another house, that was built for his queen. There were other smaller edifices for diet, and for sleep, after public matters were over; and these were also floored with boards of cedar. Some of these Solomon built with stones of ten cubits, and wainscoted the walls with other stones that were sawed, and were of great value, such as are dug out of the earth for the ornaments of temples, and to make fine prospects in royal palaces, and which makes the mines whence they are dug famous. Now the contexture of the curious workmanship of these stones was in three rows, but the fourth row would make one admire its sculptures, whereby were represented trees and all sorts of plants, with the shades that arose from their branches and leaves that hung down from them. Those trees and plants covered the stone that was beneath them, and their leaves were wrought so prodigiously thin and subtle that you would think they were in motion; but the other part up to the roof was plastered over, and, as it were, embroidered with colours and pictures. He moreover built other edifices for pleasure; as also very long cloisters, and those situate in an agreeable place of the palace, and among them a most glorious dining-room for feasting and computations, and full of gold, and such other furniture as so fine a room ought to have for the convenience of the guests, and where all the vessels were made of gold. Now it is very hard to reckon up the magnitude and the variety of the royal apartments; how many rooms there were of the largest sort; how many of a bigger inferior to those; and how many that were subterraneous and invisible; the curiosity of those that enjoyed the fresh air; and the groves for the most delightful prospect, for the avoiding the heat, and covering of their bodies. And to say all in brief, Solomon made the whole building entirely of white stone, and cedar wood, and gold and silver. He also adorned the roof and walls with stones set in gold, and beautified them thereby in the same manner as he had beautified the temple of God with the like stones. He also made himself a throne of prodigious bigness, of ivory, constructed as a seat of justice, and having six steps to it; on every one of which stood, on each end of the step, two lions, two other lions standing above also; but at the sitting place of the throne hands came out and received the king; and when he sat backward, he rested on half a bullock that looked towards his back, but still all was fastened together with gold." (Book viii. ch. v.)

The most remarkable part in the construction of their houses was the *flat roofs*, which were conveniently adapted for a variety of purposes. Sometimes they afforded a cool as well as a secure place of lodging for the night; sometimes they were used for the purpose of concealment, as when the spies of Israel were hid by Rahab; sometimes they served the purpose of walking, as in the case of David when he saw Bathsheba from the roof of his palace. It seems, from the account of Elisha and the Shunammite, that separate buildings or little chambers were often attached to their houses; and this is indeed frequently the case in eastern countries. On some occasions they rise a story higher than the house itself; at other times they consist of one or two rooms and a terrace; others are built over the porch or gateway, and communicate by

means of a door into the gallery of the house, which the master of the family opens or shuts at his pleasure; besides another door, which opens from a private staircase immediately into the porch or street, without disturbing the family. In these backhouses strangers were usually entertained.

The simplicity of their furniture is also conspicuous. From the narrative above recited, for whatever accommodation was intended by the good Shunammite to be afforded by the prophet, he had only a bed, a table, a stool and a candlestick. The term rendered *stool* indeed signifies an honourable seat, &c.; sometimes applied to a throne. The candlestick also was unquestionably designed as a token of respect, and was probably of a large description, placed upon the ground, and capable of containing two or more lamps destined to burn during the whole night. Their beds were in reality couches, without curtains, excepting perhaps canopies. The wealthy had ivory bedsteads, which were decorated with rich stuffs, and sprinkled with odiferous waters. They were placed against the wall.

All the expressions which we find in Scripture in Diet reference to their eating and drinking, prove that their food was plain, and generally taken in moderate quantities. They used small rolls, which were not cut, but broken. Their provision consisted of bread and wine, wheat and barley, beans, lentiles, parched corn, raisins, dried figs, honey, butter, oil, sheep, oxen, and calves. They made great use of milk, and a variety of pastry. They abstained from several kinds of food on account of the interdictions of their law. They neither partook of blood nor fat, nor wine's flesh; and many animals were refused as unclean. Tertullian justly remarks (Adv. Marc. lib. ii. c. 18), "If the law takes away the use of some sorts of meat, and pronounces creatures unclean that were formerly held quite otherwise, let us consider that the design is to insure to temperance, and look upon it as a restraint laid upon gluttons, who hankered after the cucumbers and melons of Egypt, whilst they were eating the food of angels. Let us consider it too, as a remedy at the same time, against excess and impurity, the usual attendants of gluttony. It was partly, likewise, to extinguish the love of money, by taking away the pretence of its being necessary for providing sustenance. It was, finally, to enable men to sit with less inconvenience upon religious occasions, by using them to a moderate and plain diet."

Mourning was practiced by the Israelites upon a variety of occasions, not only of private affliction, but of public calamity; and the general indications of it were, tearing their clothes, which they did immediately upon receiving any distressing intelligence, beating their breasts, uncovering the head, and putting dust and ashes upon it, and shaving off the hair and beard. During the whole period of mourning, they were to desist from washing, or anointing themselves, or enjoying the refreshment of a change of clothes. Their faces were also covered, and their feet bared, and they frequently wrapped themselves up in a mantle. It was common also to sit upon the ground, and either maintain a profound silence, or utter some mournful ditty. With all these they connected fasting, either wholly, or with the exception of a little food of the plainest description, after sun-set. The usual period of observing these sever-

Jewish Economy.

History

ties, on account of a dead person, was seven days, but for eminent persons they were protracted for a month, as in the cases of Aaron and Moses. (Num. xx. 29. Deut. xxxiv. 8.) The mortifications to which the Israelites and the nations of antiquity in general addicted themselves in seasons of mourning, appear to have originated in natural passion, which, in such circumstances, avoids every thing like personal indulgence, and aims to honour the memory of an endeared object, or to express a sense of mental anguish amidst calamities of any description, by an extraordinary abstinence. And though, in some instances, we may censure an excess of feeling, or of outward grief, we cannot but venerate the principle which inspires it.

Funerals.

They were very solicitous about securing the rights of sepulture, and to rest with their fathers. Common people were buried; and persons of distinction embalmed, preparatory to their being placed in sepulchres: sometimes they burnt perfumes over the body of the deceased. The art of embalming was, probably, acquired in Egypt. The sepulchre was a kind of subterraneous chamber, or closet, sometimes so ingeniously contrived, that they had doors, which turned upon hinges, and a table to lay the body upon, cut out of the same stone. It is observed by Dr. Clarke, that the immediate receptacles for embalmed bodies, are relics held in veneration by the Jews, and are called *sarcophagi*, constituting integral parts of mountains, "which have been chiseled with a degree of labour not to be conceived from mere description. These are monuments on which a lapse of ages effects no change; they have defied, and will defy the attacks of time, and continue as perfect at this hour as they were in the first moment of their completion. Thus we are informed in sacred Scripture, according to the Septuagint version, that when Joseph died, 'they embalmed him, and he was put "ἐν τῷ Σαρφί" in Egypt; that is to say, in one of those immense *mono-lithal* receptacles, to which alone the ancients applied the name of Σαρφί; they were appropriated solely to the burial of men of principal rank; and their existence, after the expiration of three thousand years, is indisputably proved, by the appearance of one of them in the principal pyramid of Egypt."—Trav. part ii. vol. iv. p. 276, 277. 8vo.

Public and loud weeping seems to have prevailed at the interment, of which we have a striking specimen at the death of Abime, recorded in the 2d book of Samuel, and the 3d chapter. On that occasion, David "lift up his voice and wept," and "all the people wept." The king also stimulated his own and the public lamentation by a funeral address, adding to it a refusal to partake of food till after sun-set. There were hired women at such times, whose express business it was to utter dismal cries and lamentations in unison with flutes. In all these ceremonies the Greeks and other nations resembled the Israelites; of which, numerous specimens may be found in Homer.

Distribution of time.

4. The distribution of time, to which all nations have entitled it requisite to pay some attention, was, among the ancient Israelites, a matter of peculiar importance, since, without a degree of minute regularity on this point, their various religious observances must have been neglected.

Years.

Their years were each divided, with reference to the different periods of their commencement, into *civil* and *sacred*. The former began with the new moon following

the autumnal equinox, after completing the ingathering of the fruits. This is generally imagined to have been the time of the creation of the world, and the ancient commencement of the Jewish year, till the period of their emancipation from Egyptian bondage, which having been accomplished at the vernal equinox, appeared to them a proper reason for new dating their year, in commemoration of so wonderful a manifestation of Providence. This acquired the epithet of sacred or ecclesiastical, as this calculation regulated their fasts and festivals. Other affairs of a merely secular nature were still conducted upon the former arrangement. At first the year was not determined according to any astronomical rules and principles, but simply by the phases of the moon. Their months began as soon as she appeared, and they varied of course in their number of days. Their only certain rule was that the first month of each of their years consisted of thirty days; and their ordinary year consisted of twelve of these months. But since the aggregate of the lunar months falls short of the solar year by eleven days, each year commenced eleven days earlier, which, in thirty years, would lose an entire solar year by the regular retrocession of the time. To remedy this evil, they gave an additional month in the third year, called *Veadar*, or sometimes in the second, called *Adar*, making the whole thirteen months. The following is a view of the Jewish months, with their correspondences to our time.

Jewish Economy.

1. Nisan, corresponding with parts of March and April.	
2. Iyar, April and May.	
3. Sivan, May and June.	
4. Tamuz, June and July.	
5. Ab, July and August.	
6. Elul, August and September.	
7. Tisri, September and October.	
8. Marchesvan, October and November.	
9. Chisleu, November and December.	
10. Tebeth, December and January.	
11. Shebet, January and February.	
12. Adar, February and March.	

We subjoin a useful table of the *Jewish Calendar*, from Stackhouse's Preface to his History of the Bible.

The Jewish Calendar.

Months.	Days.
1. NISAN or ADAR.	I. New moon. Beginning of the sacred, or ecclesiastical year; a fast for the death of the children of Aaron, Lev. x. 1, 2.
	X. A fast for the death of Miriam, the sister of Moses, Numb. xx. 1.
	XIV. The Paschal lamb slain on the evening of this day.
	XV. The great and solemn feast of the passover.
	XVI. The oblation of the first fruits of the harvest.
	XXI. The conclusion of the passover, or end of unleavened bread.
	XXIV. A fast for the death of Joshua.
2. IYAR, or JIAR.	VII. The dedication of the temple, when the Asmoneans consecrated it again, after the persecutions of the Greeks.
	X. A fast for the death of the high priest Eli, and for the taking of the ark by the Philistines.

History.	Months.	Days.	Months.	Days.	Jewish Economy.
		XXIII. A feast for the taking of the city Gaza by Simon Maccabeus, 1 Mac. xiii. 43, 44.		XXIII. The rejoicing for the law; or, a feast instituted in memory of the law, which God gave them by the hand of Moses.	
		XXVIII. A fast for the death of the prophet Samuel, 1 Sam. xxi. 1.	8. MARCH- EVSAN.	VI. A fast upon the occasion of Nebuchadnezzar's putting out Zedekiah's eyes, after that he had slain his children in his sight, 2 Kings xxv. 7. Jer. li. 11.	
3. SIVAN.		VI. Pentecost, or the fiftieth day after the passover, called likewise the feast of weeks, because it happened seven weeks after the passover.		9. Cisleu.	
		XV. A fast for the victory of the Maccabees over the people of Bethsan, 1 Mac. v. 52.		VI. A fast in memory of the book of Jeremiah, torn and burnt by king Jehoiachin, Jer. xxxvi. 23.	
		XVII. A feast for the taking of Casarea, by the Asmoneans.		VII. A feast in memory of the death of Herod the Great, a bitter enemy to the sages.	
		XXVII. A fast in remembrance of Jeroboam's forbidding his subjects to carry their first fruits to Jerusalem, 1 Kings xii. 27.		XXI. The feast of Mount Gerizim, upon their obtaining leave of Alexander the Great to destroy the temple of Samaria, which was situate there.	
		XXX. A feast in memory of the solemn judgment given by Alexander the Great, in favour of the Jews, against the Ishmaelites and Egyptians.		XXV. The feast of dedication, viz. of the temple, profaned by the order of Antiochus Epiphanes, and repaired and purified by the care of Judas Maccabeus. This festival Christ honoured with his presence at Jerusalem. It is likewise called the feast of lights, because, during the time of its celebration, the people were used to illuminate their houses, by setting up candles at every one's door. Vid. 1 Mac. iv. 52. 2 Mac. ii. 16. John x. 22.	
4. TAMMUZ, OR THAMMUZ.		IX. A fast for the taking of Jerusalem on that day, but whether by Nebuchadnezzar, Antiochus, Epiphanes, or the Romans, it is not said.		X. A fast in memory of the siege of Jerusalem by Nebuchadnezzar, 2 Kings xxv. 1.	
		XVII. A fast in memory of the tables of the law that were broken by Moses, Exod. xxxii. 15.	10. TEBETH.	XXVIII. A feast for the exclusion of the Sadducees out of the Sanhedrim, where they had once all the power.	
5. AB.		IX. A fast in memory of God's declaring to Moses (as on this day) that none of the murmuring Israelites should enter into the land of Canaan, Numb. xiv. 29, 31.		IV. A fast in memory of the death of the elders who succeeded Joshua, Judg. ii. 10.	
		X. A fast, because, on this same day, the city and temple were taken and burnt, first by the Chaldeans, and afterwards by the Romans.	11. SHEBET.	XV. The beginning of the years of trees, when they were first allowed to eat the fruit thereof, after they were four years planted, Lev. xix. 23, &c.	
		XVIII. A fast, because that, in the time of Ahab, the evening-lump went out.		XXIII. A fast for the war of the ten tribes against that of Benjamin, for the outrage committed upon the body of the Levite's wife, Judg. xx.	
6. ELUL.		VII. A feast in memory of the dedication of the walls of Jerusalem by Nehemiah, Ezra vi. 16.		XXIX. A memorial of the death of Antiochus Epiphanes, a cruel enemy to the Jews, 1 Mac. vi.	
		XVII. A fast for the death of the spies, who brought an ill report of the land of promise, Numb. xiv. 36, 37.	12 ADAR.	VII. A fast in remembrance of the death of Moses, Deut. xxxiv. 5.	
7. TISRI.		I. The feast of trumpets, Lev. xxiii. 34. Numb. xxix. 1, 2.		XIII. Esther's fast; probably in memory of that which is mentioned in Esther iv. 16.	
		III. A fast for the death of Gedaliah, whereupon, the expulsion of the people and the utter destruction of the land ensued, Jer. xli. 2.		XV. A feast in memory of the death of Nicanor, a bitter enemy to the Jews, 2 Mac. xv. 30.	
		VII. A fast for the Israelites worshipping the golden calf, and the sentence which God pronounced against them in consequence of that crime, Exod. xxxii. 6, &c.		The feast of Purim or Lots; because when Haman proposed to destroy all the Jews that were in Persia,	
		X. The fast of expiation, as some think, in memory of man's fall and expulsion out of paradise, Lev. xxiii. 19.			
		XV. The feast of tabernacles, in memory of their dwelling in tents, in their passage through the wilderness, Lev. xxiii. 34.			

History.

Months.

Days.

according to the superstition of the country, he first drew lots, to know on what day of the year it would be best to put his design in execution; from whence the feast, in commemoration of their escape, took its name.

XXIII. The dedication of the temple of Zerubbabel, Ezra, vi. 16.

XXVIII. A fast in commemoration of the repeal of the decree, whereby the kings of Greece had forbidden the Jews to circumcise their children, to observe the Sabbath, and to reject foreign worship.

When the year consists of thirteen months, here is the place where the second month of Adar, or Veadar, by way of intercalation, comes in.

In addition to the common year, the Israelites had what they termed a *sabbatical year*, which was observed every seven years, during which they were not allowed to cultivate their land; and whatever was produced spontaneously during this period, was not considered as belonging to the proprietor of the soil, but the common inheritance of all. They observed also a year of jubilee at the expiration of seven sabbatical years, when there was a total suspension of agricultural pursuits; each took possession of his former inheritance, however it might have been alienated, and slaves gained their freedom.

Weeks.

The Hebrew week consisted of seven days, of which six were appropriated to secular employments, and the seventh, or sabbath, to religious services. The term *weeks of years* is occasionally used to denote seven years. Thus we find the expression, seven weeks of years, meaning forty-nine years, the interval between each jubilee year.

Days.

The Hebrews began their day at sun-set, and reckoned to the same time on the ensuing evening for its completion. They expressed the whole day by the phrase evening and morning, or the night and day: and their three original distinctions of the day were into morning, noon, and night, it not having yet been subdivided into twenty-four hours. Afterwards, the Jews and Romans divided the space between the rising and setting of the sun into four parts of three hours each. Their hours differed from ours in this particular, that ours are always equal, being the four and twentieth part of the day, but with them the hour was a twelfth part of the time which the sun continues above the horizon. This time being longer in summer than in winter, their summer hours were longer than their winter ones. The first hour began at sun-rise, noon was the sixth, and the twelfth ended at sun-set. The third hour divided the space between sun-rising and noon; the sixth divided that which was between noon and sun-set. They distinguished also between the two evenings: the first beginning at noon, and reaching to the setting of the sun; the second commencing at sun-set; and the space from noon to sun-set they called *Ben haarbeem* i. e. between the two evenings. The night was divided into four parts, called *watches*, each of which lasted three hours. The first began at sun-set, and was termed the *beginning of the watches or the evening*; the second portion of time was the *middle watch*, or *midnight*; the third is some-

times called the *cock-crowing*; and the fourth the *morning watch*.

5. The ordinary pursuits of the people of Israel claim some cursory notice. They may be said to have been chiefly agriculturists, an employment to which all the ages of antiquity seem to have been most addicted, and which, while it is the most natural, may also be regarded as the most healthful of all occupations. The primogenitor of the human race, even in a paradisaical state, was directed to cultivate the soil, for however the spontaneousness of its productions might have rendered his diligence unnecessary to its improvement, its advantage both in body and mind were undoubtedly promoted by this arrangement. The wealth of the patriarchs, which was sometimes by no means inconsiderable, consisted principally in cattle; and hence arose the solicitude they always displayed in their various migrations, to find wells, and cisterns of water. They appear to have been industrious, and as the natural concomitant, simple in their mode of living. Their goats, and sheep, and horned cattle, camels, and asses, shared their chief attention; and the produce of the field and of the flock supplied their table, without the refinements of a luxurious cookery. In the same manner the tribes, with little exception, were husbandmen and shepherds; and from these humble, though, in that age, by no means undignified employments, sprang their most distinguished men.

In the promised land, the Israelites possessed a soil adapted to their taste and simple habits. There were extensive plains suited to tillage and pasturage, and hills and mountains proper for the cultivation of the vine and of fruit trees. The climate also was congenial, the country being defended from the Arabian deserts by lofty mountains, and refreshed from the Mediterranean by acceptable breezes; and though the rain be seldom, it falls with a calculable regularity. The days in the mean time, during the intensity of summer, are abundant. The Israelites had large crops of wheat and barley, productive vineyards, and plenty of oil and honey.

This singular people seem to have had scarcely any notions of trade, manufactures, and commerce. Their own land was adequate to their maintenance, and the tribe of Zebulun only occupied sufficient of the sea coast to feel a temptation to traffic. In some of the arts, however, they appear to have been well skilled; as the melting of metals, cutting and engraving precious stones, casting of figures, joining, embroidery, and the making of tapestry. Bezalzel and Aholiab are particularly celebrated as the persons who were engaged in the construction of the tabernacle; but it must be admitted, that they seem to be solitary instances of proficiency at that time, and miraculously directed. None of the people were artificers by profession previous to the times of the kings, nor, in fact, would many of the trades have been of much service to them in their mode of living. David, however, left a great number of artificers in his kingdom, who were employed by Solomon; and after the division of the two kingdoms, there is evidence of their having been an ample supply of them. The inspired history speaks of "craftsmen and smiths" carried away from Jerusalem by Nebuchadnezzar (2 Kings, xxiv. 14, 16); and the prophet Isaiah (ch. ii. 3.) mentions "the cunning artificer."

16 logs made an bin, which answered our gallon.
6 hins made a bath, which was about six gallons; and 10 baths made an homer, which was sixty.

DISSERTATION III.

THE TABERNACLE IN THE WILDERNESS.

So far as we have hitherto been able to ascertain the state of mankind, it appears that every nation has recognized the existence of some overruling divinity, and adopted some form of worship: for in those very few instances which might be pleaded as exceptions to this statement, it may be fairly presumed, even though it could not be satisfactorily proved, that the opportunities of observation have in those cases been few—or the modes of imperfect worship sometimes adopted by newly-discovered regions, have been mistaken for the ordinary observations of civil life or parts of a domestic economy, through the existing ignorance of the language, manners, dispositions, and other peculiarities of uncivilized tribes. This universal tendency to religion may not only be regarded as resulting from its early establishment among the Israelites, but in the traditions of a great part of the globe may be distinctly traced the fragments of the Jewish economy in the mutilated forms of service, and the distorted features of truth. It must ever, therefore, be an interesting pursuit to ascertain the worship of that extraordinary people, who were under the peculiar superintendence of Providence during the first ages of their existence, and whose history is so intimately connected with the great moral revolutions of the world. We are thus naturally guided to a consideration of the TABER-

NACLE, which was erected among them in the wilderness.

The Hebrew term properly signifies a *tent*, corresponding with the Latin *tabernaculum*, and the Greek *σκήνη*, and was originally applied to the temporary habitations of the patriarchs. Philo calls it very appropriately *σκηνογραφον*, "a portable temple." The Israelites had two tabernacles, the one the tabernacle of the congregation, which was appropriated to secular uses, the other the tent, or tabernacle of testimony, called also the tabernacle of the Lord, which was devoted to religious purposes.

It was during the extraordinary intercourse with God, which was accorded to Moses in the mount, that that illustrious legislator received particular orders respecting the construction of the tabernacle, with its sacred vessels, to execute which, he desired the people to bring in their several offerings for materials, appointing two principal architects, Bezaleel and Aholiab, to complete the design. In six months from the commencement of the work, and on the first day of the first month, in the second year of the departure from Egypt, the erection was finished, and its whole interior miraculously occupied by a cloud of glory. When Moses, after some time, was able to enter within, he was divinely instructed on the subject of its future services, and afterwards solemnly consecrated Aaron and his family to the priestly office. At the expiration

History.

of eight days, Aaron presented his first burnt-sacrifice for himself and the people, on which occasion fire descended from heaven to token of acceptance, which was ever after, by an express appointment, to be preserved from extinction. Although, in the patriarchal ages, altars, mountains, and groves were used for worship, and even from the creation of the world, particular spots were appropriated to the engagements of piety, we have here a record of the first most remarkable building specially appointed by God himself for his own service, reared under his providential superintendence, and honoured with the glorious manifestations of his presence. And though it be true that a devout spirit will realize the whole universe as the great temple of the Almighty, and consecrate, by an appropriating faith, every spot and every object, every plain and every mountain, every grove and every copse, every stone and every star, in some sense, as the altar of sacrifice on which to present the animated offerings of gratitude, love, and praise; and though it be also true that the infinite God fills immensity with his presence, and eternity with his duration, and cannot be circumscribed within walls, or limited by place; it is, nevertheless, certain, that he has, for the wisest reasons, chosen to secure the honour due to his name amongst a race of beings, whose religion who too diffuse and undefined is apt to be dissipated, by commanding the erection of buildings in which appointed forms of worship should be observed; that by their fixing the attention which is so apt to wander, and forming the habits of piety, so apt to become irregular, his just pre-eminence may be established.

Construc-
tion.

The tabernacle consisted of an oblong square, thirty cubits in length, ten in breadth, and ten in height, having two general divisions, the holy place, and the sanctum sanctorum, or most holy, or holy of holies. The former was twenty cubits in length and ten in width, containing the table of shew-bread, the golden candlestick, and the golden altar of incense. The holy of holies, called also the sanctuary, was the same in length and breadth, namely, ten cubits, and was separated from the holy place by a veil or curtain of richly embroidered lino, suspended on four pillars of shittim wood, each overlaid with plates of gold, but having their bases of brass. This division contained the ark of the covenant. A veil of similar make, and supported in the same manner, served the purpose of a door, and separated it from the outward court. The tabernacle was enclosed on three sides, namely, the north, south, and west, by planks of shittim wood, covered with golden plates, with bases of brass, each two cubits in height, and a cubit and a half in breadth; in number forty-eight; but so far irregularly disposed, that twenty of them were on the north, twenty on the south, and only eight on the west side; all let into one another by two tenons above and two below, and the whole compacted by two bases or cross bars along the entire length, joined by mortises. Each had five golden rings, through which were passed poles covered with gold. The east side was open, concealed only by a rich curtain: this was considered the entrance. The roof was composed of a square frame of planks or boards, resting on their bases, overspread with different kinds of coverings. The first on the inside was of fine lino, embroidered in various colours of hyacinth,

purple, scarlet, and crimson: over this were coverings of goats' hair, neatly interwoven: the last consisted of sheep and badgers' skins, dyed of an azure blue or red, adapted to secure the whole from the inclemency of the seasons. These curtains were only on the sides and behind: there were none in front. The tabernacle had no window; the admission of the ordinary light being less adapted to grandeur and religious effect than artificial illumination.

Jewish
Economy.

An oblong court of a hundred eubits in length and fifty in breadth, surrounded the tabernacle. This enclosure was encompassed by pillars covered with silver plates, with capitals of silver and bases of brass; ten of them stood towards the west, six towards the east, twenty towards the north, and twenty towards the south, at a distance from each other of five eubits. These pillars were hung with curtains of twined lino thread, resembling net-work, which enclosed the tabernacle on all sides, with the exception of the entrance of the court, where a curtain still more splendid in its embroidery was disposed, twenty cubits wide, to correspond with the door-way, and sustained by four silver plated pillars, with capitals and bases of brass. It was in this court, and opposite the entrance, that the altar of burnt offerings was to be seen, five eubits long, five wide, and three high, placed on a base of stone work, and covered, within and without, with plates of brass. At the four corners were four projecting brass plated appendages, emphatically denominated the horns of the altar; from each of which a grate, made of brass, was suspended, fastened with four rings and four chains. On these the wood and the sacrifice were burnt, while a pan was placed below to receive the ashes. At a small distance was of by the priests for washing their feet when they were to offer sacrifice, or enter the tabernacle.

On the north side of the holy place was a table of shittim or cedar wood, overlaid with gold, two cubits in length, one in breadth, and one and a half in height. It was edged with a bordering of gold, and had a golden crown to the middle; at each end six leaves were piled up, called the shew bread, to represent the twelve tribes. This bread could be eaten by none but the priests, and was changed on every sabbath day. Opposite this table, to the south, stood the golden candlestick, having seven branches, beside the middle, equally distant, and each ornamented with six flowers in the form of lilies, with knobs to the same amount, resembling apples, and bowls like almond shells disposed alternately. Each branch had a golden lamp, which was regularly kindled at night, and extinguished in the morning. The altar of incense occupied the middle spot between the table and the candlestick. It was only two eubits high, and one in length, and one in breadth: over it was a crown of gold, and it was covered with the same precious metal. The incense presented each morning and evening here was of a particular composition; the officiating priest carrying a smoking censer full of fire, which he took from the altar of burnt offerings, and having placed it on this altar of incense, withdrew. Besides these there were several other brazen vessels, which need not be particularly enumerated.

The sanctum sanctorum, or most holy place, was highly

History.

distinguished for the ark, or the mercy-seat, which was a coffin, or chest, made of shittim wood, and overlaid with pure gold, both within and without. In length, it was two cubits and a half, a cubit and a half in breadth, and the same in height. The lid, which covered it, was entirely of pure gold. At the extremities were two cherubims, one at each end, composed of the same mass of pure gold with the lid itself. These were represented stretching their wings, and covering the mercy-seat on high, with their faces looking towards each other. They are often mentioned in Scripture, and innumerable disputes have arisen respecting them among the learned, which it will be foreign from our present purpose to detail, but we may state in brief, that whatever might have been their exact form and figure, which is rendered somewhat doubtful by the different statements of the historical and prophetic writers, they seem to have been emblematical of angels. The ark being a representation of the throne of God, the cherubim attended, like courtiers on their sovereign's person. Their faces being opposite each other, was illustrative of the general idea conveyed in Scripture of the celestial service, in which the blessed respond to each other in perpetual strains of melody and praise. Their outstretched wings evidently indicate the promptitude and activity of their movements as ministering spirits; and their eyes, fixed upon the ark, point out the reverential eagerness with which it is characteristic of them to investigate the mysteries of redemption. Maimonides ingeniously remarks, that God commanded Moses to make two cherubim for the purpose of inculcating into the minds of men, the doctrine of the existence of the angel; "If there had been," says he, "but one cherub placed upon the ark, the Israelites would have been tempted to conceive a great error: for they might have supposed that this was the image of God, who was to be worshipped under this particular form. They might also have imagined that there only existed one angel. But the command for the formation of two cherubim, coupled with the declaration 'The Lord our God is one Lord,' put the matter beyond all question. It proves there are angels, but only one God; and precludes the belief of their being Gods, since there is but one God who created the cherubim." The elegant Saurin has a beautiful passage with reference to the angels prying into the mysteries of our religion, and in allusion to this disposal of them on the ark, which we feel strongly tempted to introduce. "Les cherubins avoient leurs regards fixés sur l'arche. Cela marquoit l'admiration que les anges ont pour ces mystères dont l'arche étoit la figure. S. Pierre fait allusion à cette circonstance, lors qu'il dit dans le chap. i. de sa première Epître Catholique que les Anges se courbent pour regarder jusques aux fonds des Mystères de l'Évangile. C'est une belle idée de la religion Chrétienne. Les anges sont élevés au comble du bonheur et de la gloire. Ils contemplant Dieu face à face, et puisent ainsi la lumière et la vérité dans leur source. Ils voyent sa magnificence dans cette gloire éclatante qu'il fait briller à leurs yeux. Ils voyent sa bonté dans ces grâces dont il les comble. Ils voyent sa justice dans les supplices qu'il inflige aux anges rebelles. Ils voyent sa sagesse dans la conduite de cet univers. En un mot tout ce qui est capable de remplir l'esprit, et de satisfaire la cœur, est proposé à ces bienheureuses intelligences. Cependant au milieu de tant d'objets

Jewish Economy.

ravissans, au milieu de tant de félicité et de tant de gloire, les anges veulent être témoins de nos mystères. Ils trouvent Dieu plus grand sur la terre, dans ces exploits inouis qu'il fit pour notre salut, que dans la pompe céleste qui l'environne; et oubliant, pour ainsi dire, ce qui fait le bonheur de l'Eglise qui triomphe, ils viennent chercher parmi nous dans l'Eglise militante de quoi nourrir leur admiration"—i. e. "The cherubim had their eyes fixed upon the ark, which shows the admiration and reverence which the angels cherish for those mysteries typified by the ark. St. Peter alludes to this circumstance when he says, *which things the angels desire to look into*. This suggests a fine idea of the Christian religion. The angels are exalted to the summit of blessedness and glory, beholding God face to face, and for ever drawing supplies of light and truth from their divine fountain. They behold his magnificence in the glory that beams on their eyes. They see his goodness in the blessings which he communicates to them. They witness his justice in the punishment he inflicts upon the rebel angels. They contemplate his wisdom in the general superintendence of the universe. Every thing, in a word, capable of filling the mind, and of gratifying the heart, is presented to these happy spirits. But in the midst of these attractions, in the midst of all this felicity and glory, the angels desire to witness and to study the mysteries of our religion. They find that God is even greater on earth in those astonishing exploits which he performed for our salvation, than amidst the celestial pomp that encircles his heavenly throne; and forgetting, so to speak, the blessedness of the church triumphant, they come down into the church militant, to search among us for objects to engage their admiration." (Saurin Disc. Historiques 54.)

As to the contents of the ark, it has generally been supposed to have been appropriated to the law, or tables of the covenant, and St. Paul seems to imply it contained also the golden pot that had manna, and Aaron's rod that budded, (Heb. ix. 4.) Some, however, have interpreted the expression to signify near, not in, or within the ark. It has been said, that it is most probable, since Moses only mentions the volume of the law, that, in the times of Moses and of Solomon, this only was deposited in the ark, but that Aaron's rod and the golden pot of manna were afterwards introduced.* But in support of the interpretation of the Apostolic phraseology, as indicating only their being placed near the ark, it has been stated, 1. That the same word *Mizud* is used where it is said that the Philistines sent back the ark with an offering of jewels of gold, put in a coffer by the side of it, where it is certain the word must be understood of the outside, not of the inside. 2. The ark was not large enough to hold the volume of the whole law of Moses, with the other things placed in it. 3. The design of laying on the original volume of the law in the temple was, that it might be reserved as the authentic copy by which all others were to be corrected, and consequently it must be so placed that access might be had to it on all occasions requiring it, which could not have been done, if it had been put within the ark, and shut up there by the cover of the mercy-seat over it, which was not to be removed. 4. When Hilkiah, the high priest, in the time of

* Saurin Disc. 54.

History. Josiah, found the copy* of the law in the temple, nothing is said of the ark, nor is it there mentioned as taken from thence, but as found elsewhere in the temple.*

Speaking of the tabernacle in general, Calmet observes, "This tent was as it were, the dwelling of the God of Israel, who was considered as residing in the midst of the camp. Round about it were encamped the tribes, Judah, Zebulun, and Issachar to the east; Ephraim, Benjamin, and Manasseh to the west; Dan, Asher, and Naphtali to the north; Ruben, Simeon, and Gad to the south. The tribe of Levi being entirely employed in sacred service, were placed all round the tabernacle: Moses and Aaron were to the east; the family of Gershon, west; that of Merari, north; and that of Kohath, south."

It may be further remarked, that the heathen nations regarded their temples as the houses of their gods, taking the hint, no doubt, from the Jewish tabernacle. Hence *ædes deorum* is their most usual term for a temple, or place of religious solemnity. (Comp. Livii Hist. lib. 2. cap. 5. with many others.)

Whether the tabernacle was an imitation of Egyptian worship.

A question of considerable interest has been often agitated among theologians and critics; namely, whether the tabernacle, with its ark and other sacred vessels, were constructed in imitation of the Egyptian and other idolatrous worship; the affirmative of which is particularly, and with much zeal, maintained by Spencer,† who represents the Deity as condescending to imitate in some degree the system of worship paid to false gods, but with such alterations as tended to correct and purify the superstitions of his people, and thus to check at the proper point their lamentable propensity to idolatry. We shall abridge his arguments, and enunciate some reasons by which they may be confuted.

Spencer's arguments.

Spencer begins by alleging that it was a custom among the Egyptians, and other ancient nations, to convey the images of their gods in tents, or portable temples, either to do them honour or to secure their perpetual presence. This he demonstrates by the teraphim of Laban, the testimony of Apuleius, a passage from Virgil, and other citations; but especially the words of Amos (chap. v. 26, compared with Acts vii. 42, &c.) "Have ye offered unto me sacrifices and offerings in the wilderness forty years, O house of Israel? But ye have borne the tabernacle of your Moloch and Chiun, your images, the star of your god, which ye made to yourselves." Here he quotes a variety of opinions in illustration of the term tabernacle, as signifying a tent, or coffer, or receptacle of the god; and institutes critical examinations of the word Moloch, and the star of Remphan or Chiun, which was adored by the Israelites: a piece of idolatry borrowed from the Egyptians. Remphan he affirms to be the same with Saturn, adding, "that as the Israelites dwelt in the desert, driven out of Egypt, strangers and pilgrims divested of all things; free indeed, but preferring the bondage they had undergone to the kind of liberty they now enjoyed, they judged it for their interest to attach themselves in a more particular manner to the service of Saturn, the god of the poor, and of those wandering

people who had no settled habitation." In support of this idea of Saturn, he cites from Plautus (*In Pæulo*)—*Jewish Economy.*

Et hospitium tessera Saturni imago (hæc fere)
Inter nos: esto fides, &c.

And again,

Hospitium tessera mem cojus imago
Chiun (aut Saturnus) est.
Quæso induas, ut misericors me.

His comment is that Hanno (the person speaking here), carrying the image of Saturn, produced it as entitling to the rights of hospitality, because this god was considered as the protector of strangers.

All his proofs with regard to the tabernacle in general, Spencer applies to the ark in particular. With regard to its form, he affirms, that what are termed cists or coffers, were of great importance in the pagan religion, being used to preserve what were deemed the most sacred things belonging to their worship, and were carried in public processions by officers appointed to the service. With regard to its design, the resemblance to the pagan cists is obvious, as they were employed to impress the people with an idea of the mysteries contained in them. The very same term and titles are adopted in both cases, as ark of God, ark of the covenant, ark of the testimony; and that of Serapis was called "ark of the Lord." The materials too, both among the Israelites and the idolatrous nations, were costly and precious: hence Minutius Felix said, that the common people worshipped the images of the false gods, on account of the art with which they were made, and the splendour of the gold, silver, and ivory with which they were adorned. Spencer further intimates, that the differences observable between the Gentile and Israelitish arks establish the fact of the imitation; whereas the ark of the latter contained the most sacred symbols of religion, that of the former enclosed the most impure. The ark of Israel was to be carried by persons of the sacerdotal family only—the ark of the ancients was sometimes borne also by women;—the former was carried about with solemn ceremonies, those of the latter were childish and absurd—the former had cherubim, the latter no images but within—Israel had only one ark, the pagan nations had many. It is further alleged in support of the general argument, that the ark of Israel was conveyed by the command of David on a cart, and the pagan arks were carried about in a similar manner; and the Philistines, with the view of conciliating the favour of the God of Israel, placed the ark upon a *new cart*. The ark of Israel had a crown or golden border; which was precisely the case with the others. Euripides describes an ark crowned with flowers. Pliny asserts, that in ancient times none but the gods wore crowns. (lib. xvi. c. 40.) The same learned writer pursues a similar argument with reference to the *cherubim*, intimating that these hieroglyphics were in use previous to the Monastic period. Most of the statues or images of the Egyptians, he remarks, were of gold, in which they corresponded with the Israelitish cherubim; and the resemblance between the two people is discernible in several particulars—the turning of their eyes in worship to these images—consulting these statues, or in the case of the Israelites, the true God dwelling between the cherubim and the diversified figures of these hieroglyphics, and especially the forms of different ani-

* Pridmore's Connections, part I. b. 3.

† De Leg. Heb. Ritual. Diss. l. lib. 3.

History

male which they assumed. So extraordinary a representation as the cherubim, he thinks, would not have been introduced into worship but for the prevalence of some general custom. The same he considers as similar in meaning to apes, an ox or a cow; and the known attachment of the Israelites for the images of that animal, he believes to have arisen from what they saw in Egypt. This subject is further pursued with reference to the mysteries included in them, and sustains his argument by numerous citations from Philo, and Justin Martyr, and others. He then views the cherubim in relation to the temple, where they were afterwards placed, producing several ancient testimonies to show that the Sabæans were the first who devoted houses to the gods, from which he infers that the tabernacle and its ceremonies were derived from that people. In both the tabernacle and temple, an apartment accessible only to the high priest was constructed, which Lucian says was the practice of the pagans. Other points of resemblance here are noticed; and as the cherubim were deemed the place where the deity dwelt and the chariot on which he rode, the idolatrous nations of antiquity maintained the same notion, who believed they could by certain ceremonies bring down their deities into their statues and images. These, with some other considerations not necessary to be enumerated at present, constitute the substance of the celebrated work of Spencer, which suggests, it must be admitted, some difficulties, but capable of a tolerably easy solution.

Answers to
Spencer

It is worthy of observation, that in all the citations of our learned author, there is not a single writer of equal antiquity with Moses, who was surely the person best qualified to ascertain the origin of sacred edifices, religious rites and ceremonies, and modes of worship. But his history does not afford any circumstantial evidence by which to determine the origin of the Egyptian worship, and that of other ancient idolatrous nations; so that the assumption that the ceremonies observed among the Israelites were in imitation of those of other countries, is entirely gratuitous and unsupported. Among the idolatrous services, however, of which the Jewish legislator has furnished an incidental account, nothing is reported of a court, of a holy place, of a most holy place, or even of an ark, properly so called. It has been deemed highly questionable, whether Amos, in the passage quoted from that prophet, referred to the idolatry committed in the wilderness, or, as seems most likely, to that of his own times; for it is strange, if there did actually exist among the ancient Israelites tabernacles dedicated to Moloch, the sacred historian should never mention or refer to them, especially as he treated every instance of idolatry with the utmost rigour, and denounced it in the severest terms. The account of Egyptian idolatry, given by Spencer, differs, moreover, from that of several other authors of distinction, who affirm that the Egyptians offered nothing but simple herbs to their gods, and sacrificed no animals; and that they believed in the opposing doctrine of the transmigration of souls. Should it even be ad-

mitted, that among the almost incalculable variety of observances practised in different nations, some particular resemblances might be detected, this is far from proving them to have been direct and designed imitations. Let a person, as Saurin well states it, compare the manner in which God is worshipped at Ispahan and at Rome, and he will discover some similarity between them; but who will venture to maintain that Rome has mimicked Ispahan, or that Ispahan has mimicked Rome? Some three or four hundred years hence, a critic arguing like Spencer, and comparing these various modes of worship, would be quite as much justified in representing that the religion of the Roman Catholics is an imitation of that of the Persians, or that the religion of the Persians is an imitation of that of the Catholics. The moment you suppose a religion, you think of sacred places, of external ceremonies, of emblems, and of symbols. Such establishments owe their origin to the very nature of things, and not to the particular genius of the people. Spencer compares some things, which evidently have no resemblance, and which his zeal has unwittingly forced into the service of his argument; and a palpable sophism pervades all his dissertations, which is, that in order to show that a custom owes its origin to a particular nation, which is not doubted, he proves that this custom was received at a certain time by that nation, which may be true enough, but it avails nothing to his purpose. For instance, he cites numerous authorities to prove that the statues of the Egyptians were made in the shape of various animals, and resembled the cherubim of the ark, but he does not adduce a single instance or authority to demonstrate that the Egyptians were the first who made use of such images. Finally, and solemnly, it is most evident, notwithstanding the ingenious arguments, or rather sophistries of Spencer to evince the contrary, that the introduction of idolatrous rites into the worship of the true God, so far from tending to extirpate, would have been the most direct and most certain method of establishing and perpetuating idolatry. The transfer of Egyptian ceremonies of worship into the religion of the tabernacle, would have been the means of impressing the Israelites with a veneration for their worship. They would have seen a system of worship consecrated by revival or adoption; and though it might have been with something of a purer form, or with corrections and modifications, still sanctified in its great essentials and principles, by use, impressed by an all-commanding authority, attractive by its superior antiquity, and losing even the most objectionable cast of its features by familiarity. Nay, it must have degraded the whole of their religion as a mere imitation, grafted upon the inventions of other nations. The only idea, therefore, suited to the dignity of Jehovah is, what is manifest enough to the impartial observer, in every institution of the Mosaic economy, that the whole was a system, new—original—glorious (though in an inferior degree to that which was destined to supersede it)—and divine.

DISSERTATION IV.

THE TEMPLE OF SOLOMON, WITH A VIEW OF THE JEWISH WORSHIP.

History.

Although chronological order might seem to require the topographical and historical details of the next section to be introduced in this place, the natural connection between the tabernacle erected in the wilderness, and the temple by which it was succeeded, sufficiently justifies the arrangement we have adopted, especially as both the one and the other intimately and equally concern the great subject of religion.

Consecration of the temple.

We have already, in a former article,* alluded to some remarkable circumstances in the construction of the temple of Solomon; and to these we shall now add a somewhat more detailed delineation. The temple was built upon a ground plot of six hundred cubits square. It was inclosed within a wall of six cubits in height, and six in breadth, and contained several distinct buildings, surrounded with cloisters, and supported by pillars of marble. Here was the court of the Gentiles, of the width of fifty cubits, adorned in a similar manner, which was separated from the court of the Israelites by a wall of five hundred cubits square. The court was a hundred cubits, paved with variously-coloured marble. It had four gates, one at each quarter, to each of which was an ascent of seven steps. The separation of this court from the court of the priests, was accomplished by a wall of two hundred cubits square, the court of the priests being a hundred cubits, surrounded with cloisters, and apartments where they lived. This court had only three gates, each with eight steps: there was no gate to the west. All these courts were unenclosed at the top, but the cloisters afforded a sufficient shelter. Opposite to the gate of the priests' court, in the court of the Israelites, was placed a throne for the king, to furnish him with accommodation whenever he came to the temple. The court of the priests contained the altar of burnt-offerings, with ten brazen lavers and a sea of brass, supported by twelve oxen. On the west side of the altar of burnt-offerings was an ascent of twelve steps to the temple, properly so called, which was formed of the porch, the sanctuary, and the holy of holies. The porch was twelve cubits in length, and twenty in breadth, having at the entrance the two celebrated pillars, Jachan and Boaz. The width of the gate was fourteen feet. The sanctuary or nave was forty cubits in length, and twenty in breadth. In this part stood the altar of incense, and here was the table of shew bread. It had ten golden candlesticks. The holy of holies was a square of twenty cubits, having the ark of the covenant, in which were deposited the two tables of stone, graven with the ten commandments and with four cherubims. Josephus states, that about the temple and against the walls, thirty small houses or cells were constructed, which served the purpose of so many buttresses, as well as ornaments; for there were three stories of these cells, one above another,

the second being narrower than the first, and the third than the second, so that their roofs and balustrades, being within each other, made three different terraces, on which a person might walk round the temple. These little houses were ceiled, and their walls wainscoted with cedar, and embellished with carving and fretwork overlaid with gold. Laury[†] observes, that the temple itself, strictly so called, had two stories, the upper of which was raised quite above these little houses and their roofs; for their roofs reached no higher than the top of the first story. The second story, which had no building adjoining to its side, made a large room over the sanctuary and the holy of holies, of equal dimensions with them; and it is no improbable opinion, that this was the upper chamber in which the Holy Ghost was pleased to descend upon the apostles in a visible manner. This upper room was appropriated to the pious laity, as a place for them to come and pay their devotions; and therefore it seems very likely that the apostles were here, with other devout persons, while the temple was full of Jews of all nations, who were come to celebrate the feast of the Pentecost, and that the persons below, hearing the noise which was occasioned by the shaking of the place, ran up to see the cause of it, and, to their great surprise, found the apostles distinguished from the other Jews about them, both by "the cloven tongues which sat upon each of them," and by the several different languages which they spoke.

Jewish Economy.

The foundation of the temple was begun at the bottom of the mount, to render it more secure; so that the sides were three hundred and thirty-three cubits, or six hundred and eight feet, in height, before they were raised to the level of the temple; and this afforded a most magnificent prospect to the city. The stones of this foundation, says Josephus, were not only of the largest size, but hard and firm enough to endure all weathers, and he proof against the worm. Besides this, they were so morticed into one another, and so wedged into the rock, that the strength and curiosity of the basis was not less admirable than the intended superstructure, and the one was every way answerable to the other.

The sacred vessels of gold and silver were so numerous, that they brought back five thousand four hundred, even at their return from the captivity, which were deposited in treasuries. There were also "holy chambers" (Ezek. xlv. 19.) for the sacerdotal habits, and store-houses, in which the offerings for the support of the priests and Levites, widows and orphans, were preserved. Other places were appropriated to wine and oil for the libations, suit for the sacrifices, and materials for the shew bread. There were, besides, eating-rooms for the priests and guards of the

Sacred vessels.

* Hist. chap. 3. Jewish Monarchy.

† De Tabern. lib. l. c.

History. Levites, lodgings for the musicians, and other rooms for different purposes, especially a hall for the council of seventy elders.

Sacrifices. Sacrifices were enjoined upon every solemn festival, the principal of which may be briefly introduced. On the first day of the great festival of Passover was to be offered a burnt sacrifice of two young bullocks, one ram, and seven lambs of the first year, with some other offerings of an inferior description: on the second day, besides the usual sacrifices, a sheaf of the first fruit of that year's harvest; and previous to the offering of the first sheaf, no corn was to be eaten. The first and last days were observed as sabbaths, with the sole exception that victuals might be dressed on the first day. The sacrifices appointed at the opening of the feast of Pentecost were, two loaves of the first ripe wheat, seven lambs of the first year, one young bullock, two rams for a burnt-offering, and the usual meat and drink offerings; a kid for a sin-offering, and two lambs for a peace-offering. The sacrifices peculiar to the feast of Tabernacles were, on the first day, thirteen bullocks, two rams, and fourteen lambs of a year old, all without blemish, and offered in a burnt-offering, with the customary meat and drink offerings, formed of a certain quantity of flour mingled with oil and wine; a kid for a sin-offering, in the name of all Israel; and the usual morning and evening sacrifices. On the second day they offered twelve bullocks, two rams, and fourteen lambs, with flour and wine, and a kid, as before. The same offerings were continued on the five succeeding days, excepting that the number diminished by one bullock every day. On the last day, which was the most solemn, they only presented one bullock, one ram, and seven lambs, besides a goat for a sin-offering, and the usual and voluntary sacrifices. The first fruits of things of later growth were now brought, which were occasionally so plentiful, that it became necessary to extend the period of observing the feast to one more day. Particular sacrifices were also prescribed for other festivals, as the feast of the Trumpets and of the New Moon.

Besides the presentations just mentioned, were some others: as the daily sacrifice, when four lambs were offered, two in the morning, and two in the evening; all of the first year, and without blemish. Wine and flour mixed with oil, were also presented for a meat and a drink offering. This was termed a *continual sacrifice*, as nothing was allowed to interrupt its regularity. The *peace-offerings* were to be voluntary, there being no obligation but of a general nature. The victim was to be brought to the door of the tabernacle, when the votary laid his hands upon it, and killed it; the priest immediately taking some of the blood, and sprinkling it upon the altar and round about, poured the remainder upon the ground. The fat, the kidneys, and the ramp, if a sheep or lamb, were then burnt upon the altar; the breast and shoulders belonged to the priest, and the rest to the owner, who was allowed to dress and eat it. These offerings were either votal, supplicatory, or eucharistical. The *meat and drink offerings* accompanied the burnt-offerings of every festival, the daily and all sacrifices made with fire, and consisted of a certain proportion of wine, oil, and fine flour, to every beast that was sacrificed. The offerings for cleansing were on various accounts. The person who committed a trespass knowingly or ignorantly, was to bring his offering

to the door of the tabernacle. It was to be a bullock, or goat, for a priest; a goat, sheep, kid, or lamb, for a layman. Should it happen that the individual was too poor to afford either, he was permitted to bring a couple of pigeons, or turtle-doves, or a small quantity of flour. The person having then laid his hand upon the victim's head, confessing his sin, offered it up, and the priest taking up some of the blood with his fingers, and applying it to the horns of the altar of burnt-offerings, poured forth the remainder at the foot. Then he took the fat of the caul, kidneys, and ramp, and burnt it upon the altar, praying for the offerer, and pronouncing his forgiveness. The flesh of this victim belonged wholly to the priest. Another ceremony was added for legal impurities, such as touching anything unclean, &c. namely, the ashes of the red heifer, reserved for the purpose. The high priest was to be careful that it was without spot or blemish, and had never been yoked. It was carried out of the camp, and there killed, when he made a sevenfold aspersion of the blood with his fingers towards the sanctuary; it was then thrown into a large fire with its skin, entrails, and a bundle of cedar wood, hyssop, and scarlet, and burnt to ashes; which ashes being laid up for use, all the persons who assisted in the service, were unclean until the evening. A person who contracted such pollution as to make him unclean seven days, was to be sprinkled with water, into which some of these ashes had been thrown on the third and seventh day. If not sprinkled on the third day, he was not considered clean till the tenth. Besides these, were some other offerings for cleansing in particular cases, such as two pigeons to be presented by a woman after child-birth, or of flour and oil, if unable to bring a lamb; and two sparrows by the leper after his cure. In these cases, one of the birds was a substitute for a lamb, for a burnt-offering, and the other for a sin-offering; wherein the priest sprinkled the blood upon the person, or house, seven times. The offerings of the *first fruits*, were required not only of the nation at large, on the great festivals before mentioned, but of every individual who had fields, orchards, and vineyards. The time and quantity are not precisely stated. When the person, coming to offer, arrived at the court of the priests, the Levites sang the thirtieth psalm, when the votary confessed in these words, "I do this day make a public acknowledgement before the Lord your God, that I am entered into the good land, which he swore unto our fathers that he would give us." At the time the priest assisted him to take the basket from his shoulders, and he closed his confession, while it was yet suspended, in the words prescribed by Moses, "A Syrian ready to perish was my father, and he went down into Egypt, and sojourned there with a few," &c. The basket was then placed by the side of the altar, and he offered the burnt-offering and peace-offering; then proceeded to feast with his acquaintances on his share of the peace and meat offerings. The offerings of the *first-born*, related to the first-born of men, of cattle, and of the fruits of the earth. Of the former, they were redeemed at the age of thirty, for five shekels, when they were presented to the priest, and the mother offered the sacrifice of her purification. The first-born of clean animals could not be redeemed, but were brought to the tabernacle, or temple, and killed, the blood being poured forth at the foot of the altar, the fat burnt on it, and the flesh given to the priest. If it had any natural defect, it could not

Jewish
Economy.

History.

be sacrificed. If it were an unclean beast, it might be redeemed, or with five shekels, or its neck might be broken by the owner. With regard to vegetable products, the fruit of the new planted tree was not to be gathered during the first three years: on the fourth, its productions were the Lord's, and they belonged to the priests, from whom, however, the owner might redeem it at a proper price. Afterwards it was wholly for his own use. There were four species of *tythes*:—those belonging to the tribe of Levi, which all attached to that tribe might eat, men and women, clean and unclean;—the tenths of these *tythes*, assigned to the priests;—a second tenth, which a laymen was required to appropriate, or exchange it for an equivalent in money, with an addition of a fifth part above the value; which was to be brought to Jerusalem to make a feast with for his friends, and the priests, and Levites;—and a *tythe* to be reserved every year, and consumed in feasts at home, to which the Levites, the poor, the fatherless, the widows, and the strangers, were to be expressly invited.

Day of expiation.

There is one solemnity which has not yet been introduced to notice, but the mention of which we cannot with propriety omit—it is the *day of atonement or expiation*. It was a day of fasting, humiliation, and confession, and was instituted principally to expiate the sins of the nation for the preceding year. This solemnity commenced on the evening of the ninth day of the seventh month, and continued till the ensuing evening; an interval wherein the people of Israel scrupulously, and under pain of excommunication, abstained from every description both of labour and of pleasure, and held a solemn convocation to offer a peculiar sacrifice by fire for their transgressions. On this day only throughout the year, the high priest entered into the holy of holies; for which service he prepared himself by various previous abstinences, and wore a particular kind of dress. As soon as he entered, it was his business to present a young bullock for a sin-offering, and a ram for a burnt-offering, on his own account and for his whole family, confessing their and his own sins.

Jewish Economy.

He then received from the heads of the assembly two kids for a sin-offering, and a ram for a burnt-offering, for the whole congregation. Two goats being placed before the tabernacle, the high priest cast lots to determine which should be sacrificed and which dismissed; and to the latter the term of *scape-goat* was applied. Taking his censer in one hand, and a quantity of fine incense in the other, to fill the place with the smoke so as to conceal the mercy-seat, he proceeded into the holy of holies; and having placed the censer on the altar, he withdrew and dipped his finger in the blood of the bullock which had been offered; and sprinkled it towards the mercy-seat seven times eastward. He then killed the goat for a sin-offering on account of the people, and sprinkled the mercy-seat with its blood; by which aspersions the tabernacle was purified from all the stain incurred by standing amongst a guilty people. The goat which had escaped was now brought to the high priest, when, laying his hands upon its head, he confessed both his own sins and those of the people, and immediately afterwards delivered up the *scape-goat* to a person appointed to take it and set it adrift in a desert place. These ceremonies being completed, the high priest thoroughly washed himself, and having put on the ephod, mitre, breast-plate, and the other priestly garments, offered a burnt-offering of a ram for himself, and another for the people. The assistants, together with the man who had carried away the *scape-goat*, were deemed unclean till they had bathed and washed themselves. On this same day, the high priest gave the solemn blessing prescribed by Moses, and pronounced the mysterious name of Jehovah. When he withdrew from the most holy place he walked backwards, keeping his face towards the mercy-seat, and bending towards the earth. All the rest of the day was occupied in prayers and self-denying services. The conclusion of the public solemnity was announced by sound of trumpet, when the people dressed themselves in clean or white linen and sat down to meat.

DISSERTATION V.

GEOGRAPHICAL AND TOPOGRAPHICAL ACCOUNT OF CANAAN, WITH A VIEW OF ITS EARLY POSSESSORS.

Various names.

Circumstances have contributed to affix a great variety of names to the country in which the Israelites settled. Its most ancient, and, perhaps, even still, its most frequent appellation, is that of *Canaan*, derived from the grandson of Noah, of that name, whose posterity were its inhabitants. *Palestine* is another title derived from the Philistines, when the Greeks and Romans called *Palestines*, who occupied that part of the land which bordered on the sea coasts. From the tribe of Judah, which was the most important of the twelve, who continued after the dispersion, and dwelt in the richest quarter, it obtained the epithet *Judæa*, after the period of the return from the Babylonish captivity. It has also been termed the *land of Israel*, obviously from that people having subdued it, and the *land of promise*, with reference to the remarkable pro-

mise of God to Abraham, which assigned this territory as in fee-simple, to the descendants of that illustrious patriarch. It has derived the most honourable appellation of the *Holy land*, from its having become, by the instituted worship of God, his peculiar dwelling; and from its having been subsequently distinguished by the residence, actions, miracles, sufferings, and final personal triumphs of the "holy child Jesus." Profane historians have blended it with the countries of Syria, Coelosyria, Phœnicia, and other contiguous places, as forming in their estimation an insignificant portion of them, and as it has been supposed, out of intentional contempt; but this, if it be indeed the fact, only evinces how ridiculous are the judgments, and how perverse the sentiments of mankind with regard to what is truly great and supremely honourable. The

History. mighty scenes which have been transacted within the limits of this country, are such as could derive no additional glory from any circumstances of an exterior nature, and would render even a barren wilderness, or a solitary rock of more real consideration than the most extensive region upon the page of history.

Boundaries. The northern boundary of this celebrated country was formed by the mountains of Antilibanus, or the province of Phœnicia; on the south was Idumæa, having on the line of separation also a ridge of mountains; on the east, the lake Asphaltites, the river Jordan, the sea of Tiberias, and the Samochonite lake; on the west, the Mediterranean sea. The extent has been variously computed, and if we reckon the utmost, it must appear comparatively small, when we recollect the descriptions we have of its population and natural opulence. These, however, are partly attributable to the care with which it was cultivated, and partly to the extraordinary blessing of Heaven upon its soil. It extends in length about two hundred miles, and from ten or fifteen, to eighty in breadth, the latter dimensions being at about the middle. Profane writers corroborate the Mosaic account of its fertility. Heecæus, an author of the time of Ptolemy I. mentions it as an excellent and fruitful province, well peopled. Pliny celebrates the course of the river Jordan, the palm trees, and other productions.* Some ancient writers, however, as Strabo, for instance, and some modern travellers, have expressed an opposite opinion, and even poured contempt upon this land as full of barren mountains and woods; but if this testimony may be considered as enhancing the almost miracle of its natural capacities to sustain a large population, it does not contradict the fact of its extraordinary fertility in particular places; and even some of the writers themselves, especially Jerome, while he descants upon its rocky character in general, and upon the frequency of the drought that prevails there, remarks also upon its productiveness. The Jewish legislator gives a detailed account of its fruits, and its oil, wine, and other produce; it is said to have exceeded all other countries. So rich was the soil, that it required no manure to force, or to sustain its vigour. The corn was both excellent in quality, and abundant in quantity. The plain of Jericho was remarkable for its palm trees, and for the balsam shrub held in so much repute among the Greeks and Romans, and several other nations. The grapes were large, and of a delicious flavour; and citrons, oranges, apples, and other trees were numerous. Honey was very plentiful. Trees of a large growth were numerous in all parts, as the cedar and the cypress, and fertile pasture-grounds overspread the plains and the banks of the Jordan. Great quantities of fish were found in the rivers and lakes.

Mountains. This country has been long eminent for several of its mountains, among which we may particularly specify the Libanus, or the Libanus and Antilibanus, situated on the northern side. The Libanus or Lebanon consists, in fact, of four ridges of mountains, rising one above another, of which the first and third are the most inhabitable and fertile; the last is exclusively cold, and covered with almost eternal snow. Libanus and Antilibanus are, in fact, two ridges; the former

name is applied to the western, the latter to the eastern. The mountains of Gilead and of the Moabites, Hermon and Arnon, are next in importance. Hermon is covered on its summit with a crown of snow: it was once celebrated for a temple much resorted to by the sons of superstition in ancient times; and Jerome reports that its snow was conveyed to Tyre and Sidon to be used in cooling liquors. Mount Tabor is possessed of singular beauty, and overspread with a perpetual verdure, rising in a conical form upon the northern side of the district of Ecdraclon, in the midst of an extensive plain, and in solitary grandeur. Josephus states its height to be thirty stadia or furlongs, having a plain of twenty-six stadia at the summit enclosed within a wall; but this elevation is disputed by modern travellers. Polybius mentions a city once built upon it; but it is rendered most famous by the circumstance of our Saviour's transfiguration, which has drawn multitudes of pilgrims to it in all ages. Its summit affords a splendid prospect of several celebrated hills and of the sea of Tiberias. Mount Carmel is situated on the coast, and extends eastward to the plain of Jezreel, and to Cæsarea on the south. A city has likewise been built upon it. The name it has obtained seems derived from its fertility, the word in Hebrew signifying the *vine of God*, and is generally used in Scripture to denote any very fruitful spot. As the residence of the prophet Elijah, who is believed to have dwelt in one of its caves, it has acquired celebrity among Jews and Christians. The narratives of the evangelical history have conferred a distinguished fame upon some other of the Judean mountains. Olivet, or the Mount of Olives, is situated within about a mile of Jerusalem, and is a ridge with three summits extending from north to south: from the central summit our Saviour ascended. The one towards the north is the most lofty, and is usually called the mount of Galilee; the other towards the south of the middle ridge is called the mount of Corruption or Offence, a name derived from Solomon having erected temples upon it to the Ammonitish and Moabitish gods, out of complaisance to his strange wives, and which the people justly regarded as a defilement. Mount Calvary or Golgotha, stood anciently within the walls of the metropolis, and was appropriated as the spot for the execution of criminals. Mount Moriah, on which the temple was built, stood in a south-eastern direction from Calvary, and is thought to have been the place where Abraham went to sacrifice Isaac, his beloved son. Mount Gibon was west of the city, and nearer Calvary. In this place Solomon was anointed king by the prophet Nathan and the high priest Zadock. Besides these were Ebal, Gerizzim, Sion, the mountains of the Desert in the south, the mountains of Ephraim and of the Philistines in the west, and the central cluster spoken of in Scripture as the mountains of Judæa.

The principal river of the Holy land is the *Jordan*, *River, &c.* the rest being scarcely worthy of such a term. The source of this river is to be found in the lake of Phiala, and it divides Judæa; its course is chiefly southward by west. After proceeding a few miles it runs through the Samochonite lake, then enters on the north side of the sea of Tiberias, and issues again near the city on the south side, and at length falls into the lake Asphaltites. It is deep, its waters turbid, and its general course is rapid. Formerly, it was said to be subject to

* Herod. ap. Joseph. cont. app. p. 1049. Pliny lib. 5. cap. 15, 15. Compare also Tacit. Hist. lib. 15, cap. 6. VOL. XX.

History. overflows about the time of the early harvest, or soon after Easter, owing probably to the rains and the melting of the snows; but the moderns affirm that this appearance has ceased. The plains on each side are in some places exceedingly beautiful; but from the sea of Tiberias, as far as the lake Asphaltites, or Dead sea, it is dry and barren, the heat being often intense. The other rivers or brooks are principally the Jarmuch, in the country of the Gergesenes, rising from the mountains of Gilead; Kinnoson, near Danasus, called also Abana; Pharpar, which flows from Mount Hermon; Kishon, which was in the tribes of Issachar and Zebulun; Arnon, originating in the mountains of Arnon, and running into the Dead sea; and Jabok, which falls into the Jordan. The deserts or wildernesses, seas, lakes, wells, and other geographical peculiarities alluded to in Scripture, and mentioned by modern travellers, we need not here specify, as the article CANAAN, in the Miscellaneous Division, will supply more detailed information.

Political changes.

At the period when the Israelites took possession of the land of Canaan, it was inhabited by several powerful nations, as the Amorites, the Perizzites, the Canaanites, the Hittites, the Hivites, the Jebusites, and the Girgashites. After the conquest it was divided by Joshua into twelve parts, corresponding with the twelve tribes of Israel, whose respective portions were determined by lot, with the exception of the tribe of Levi, which had no inheritance in the soil. The most remarkable change occurred, when the ten tribes were driven out and carried into captivity by the Assyrians. The Cushim came to possess their country, lived chiefly in the tribe of Ephraim and the half tribe of Manasseh. Judah continued in captivity seventy years; and the Greeks subsequently, of whom some were kings of Syria, reunited most of the country possessed by Israel to their crown, the tribe of Judah alone remaining after this dispersion.

To return to the Canaanitish nations. We propose furnishing the reader, under this division, with a very concise account of these and other tribes, who have been rendered conspicuous through some connection more remote or immediate with the Israelites, and the most important facts respecting whom we may here properly enough throw into the general stream of history.

§ 1. The Canaanites.

Origin.

The eleven sons of Canaan, the son of Ham, originated and impressed their names upon several nations or tribes, which, however obscure their history, have acquired a certain degree of importance from the circumstance before-mentioned of their coming in contact with the Israelites. These were the Hittites, the Jebusites, the Amarrites, the Girgashites, the Hivites, the Sidonians, the Arkites, the Sinites, the Arvadites, the Zemarites, and the Hamathites, of whom the five first inhabited the land of Canaan, which contained also the Perizzites, and what are properly termed the Canaanites. The many kings enumerated in the conquests of Joshua, belonged, doubtless, to one or other of these seven nations, besides, probably, others not particularly specified in that catalogue; all of whom are to be regarded not in the modern sense as comprehending the sovereignty of a large kingdom or empire, but rather of a city, town, or at most a petty district.

Within the territory of the seven nations, may, without hesitation, be assigned the residence of those whose names are recorded in the Abrahamic covenant, namely the Kenites, the Kenizzites, the Kadmmonites, the Hittites, the Perizzites, the Rephaimites, the Amorites, the Canaanites, the Girgashites, and the Jebusites.

Our information respecting the seven Canaanitish nations is extremely limited, amounting to little more than a knowledge of their origin.

The HITTITES were the descendants of Heth. (Ptolemy, lib. v. c. 16, 17. Joseph. Antiq. lib. xiv. c. 2.)

The JEBUSITES were so called from Jebus, the son of Canaan. They were of a warlike cast, and dwelt in Jerusalem and its vicinity till the time of David.

The AMORITES derived their name from Amorrhous, the fourth son of Canaan, and first peopled the mountains to the west of the Dead sea. They had, besides, establishments on the east of the same sea, between the brooks Jabbok and Arnon, from which fertile region they expelled the Ammonites and Moabites. During the sovereignty of Sihon and Og, Moses dispossessed them. The term *Amorite* is frequently used in the sacred writings; as synonymous with Canaanite. They were of a gigantic stature; and their territory was ultimately apportioned, in part (on this side Jordan) to the tribes of Judah, and in part (beyond Jordan) to the tribes of Reuben and Gad.

The GIRGASHITES, or GERGESITES, resided beyond the sea of Tiberias. The traces only of their name are discoverable in the town or city of Gergesa.

The HIVITES were descended from Hethum, a son of Canaan, and dwelt "from Hecurim unto Gaza," (Deut. ii. 23,) and were dispossessed by the Caphterim or Philistines. They also occupied Shechem, Gibeon, and other places. It is supposed by Bochart that Cadmus, who took a Phœnician colony into Greece, was a Hivite. The metamorphosis of the companions of Cadmus into serpents is founded on the meaning of the term *Hivite*, which, in the Phœnician language, signifies *serpent*.

The SIDONIANS, the inhabitants of Sidon, derived their name from Siden, the eldest son of Canaan, who founded their city. It is a place much celebrated for its trade and navigation. They worshipped Baal and Ashtaré.

Of the ARKITES we, in fact, know nothing worth recording. The same may be said of the ARVADITES.

The SINITES, so called from the eighth son of Canaan, resided near Arce, in Mount Libanus. Strabo refers to the fortress of Sinai. By Sinaiti the Arabic means the inhabitants of Tripolis, in Phœnicia.

The ZEMARITES descended from the tenth son of Canaan, who are believed to have inhabited Smyrna, a city of Phœnicia. The two Chaldee paraphrasers and Jerome say, they dwelt at Enches, in Syria.

The HAMATHITES originated in Hamath, a son of Canaan, and, according to Calmet, dwelt in the city of that name, on the river Orontes, in Syria. Josephus and others suppose Hamath to be the same with Epiphania.

The KENITES resided west of the Dead sea, and extended some distance into Arabia Petrea. In the time of Saul they were biroded with the Amalekites.

The KENIZZITES are supposed to have dwelt in the mountains south of Judæa.

The KADMOMITES lived beyond Jordan, east of

Isaiah Economy.

History. Phœnicia, about Mount Libanus. The Kadmonites were Iivites.

The PERIZITES, or PHERESY, were the ancient inhabitants of Palestine, blended with the Canaanites; but had no fixed habitation, as their name, significant of wandering or dispersion, imports. Some of them inhabited each side of Jordan, in the mountains and the plains. Solomon subdued the remains of the Canaanites and Perizites which the Israelites had not exterminated, and made them tributary.

The REPHAIMITES are believed to have descended from Rephah or Rapha. They are celebrated as giants. They are mentioned in the time of Abraham, as beyond Jordan, at Asheroth Karnaim. In Joshua's time some of their descendants were in the land of Canaan; and we afterwards hear of them at Gath, in the age of David. The valley of Rephaim, or Ginnai, is often mentioned in Scripture. In Greek it is called the valley of the Titans. It was near Jerusalem.

Government. All public business amongst these nations was transacted in popular assemblies, the kings universally consulting their people upon every important occasion. Of this we have several specimens in sacred history, which will be easily recollected. What were the particular laws of each petty district or sovereignty, cannot now be ascertained; but the kings, or rather chiefs, seem generally to have been independent of each other, unless at any time brought into a partial subjection by conquest or treaty.

Occupations and customs. The Canaanites residing on the sea-coast, to whom, as well as to the whole country, the terms Phœnicians and Phœnicia have been applied, were merchants; while those who inhabited the interior devoted themselves more exclusively to agricultural employments, the tillage of the land, and the rearing of cattle. They were, however, all united in the common cause when required to engage in military operations, and showed considerable skill in the use of arms, and of warlike chariots. They seem to have paid particular attention to the defence and fortification of their towns; a care naturally resulting from their liability to internal dissensions and external attacks.

Religion. During the early period of their political existence, and till the days of Abraham, they appear to have retained the true religion, of which we have a remarkable specimen in the brief account which the sacred historian furnishes of Melchisedek. That ruler, uniting, as was common in the patriarchal times, the princely and sacerdotal offices in his own person, is distinctly represented as "the priest of the most high God," which proves incontrovertibly the prevalence of the religion of Israel to some considerable extent among families, and perhaps tribes, now buried from view amidst the obscurities of history. It is pleasing to catch, even though it be only a momentary glimpse of such families or individuals who give birth to the interesting reflection, that as

Full many a gem of purest ray serene
The dark unfathomed caves of ocean bear,
Full many a flower is born to blush unseen,
And wastes its sweetness in the deep silent—

so, truth has in every age of the world found an asylum from the general pursuit of persecution in many a human being unknown to fame or to history, and shed a cheering illumination in many a dark and unexplored recess of the wilderness. After the period in question,

these nations degenerated, till they eventually incurred the displeasure of God to such a degree, as to induce the adoption of measures for their expulsion, and the transference of their country to the more favoured nation of Israel. The narrative of Moses alludes to their altars, images, and groves, the public tokens of their idolatry, which he commanded to be overthrown with a holy violence, while the people themselves were to be smitten, lest their superstition and crime should spread a pestilential influence around. They even sacrificed the fruit of their body to Moloch; and in their ordinary conduct rioted in all the excesses of uncleanness. Corrupt in doctrine, they were equally debased in character, and in abandoning the true religion, they parted with the sheet-anchor of their happiness and their safety, and became exposed to the dreadful storm of Almighty displeasure.

It has been before stated, that the Phœnicians were Canaanites by descent,* and we now add, that these people divided from each other in consequence of their multiplication at an early period; a part moved northward, and another part southward into Egypt, where, after creating a separate kingdom under Mizraim, they were torn to pieces, and finally dispersed by internal commotions.

History. The first principal event in the history of the Canaanites, seems to be the incursion of Chedorlaomer, king of Elam, into the vale of Siddim, who compelled them to pay tribute for twelve years; after which they revolted and became involved in another war, when Chedorlaomer again triumphed, and despoiled the country. In this conflict Lot was taken prisoner, and afterwards rescued by Abraham, as stated in the book of Genesis. After the period of the former transactions, Abraham was received among them with great courtesy, but a famine prevailing, he was compelled to retire into Egypt. He was, however, soon afterwards enabled to return, and found the Perizite in the land; the whole of which was now made over by a divine grant to the patriarch.

Prosperity, which has in all ages been the ruin of such myriads, spread, in a few years, its corrupting influence over the vale of Siddim, and by an extraordinary visitation of providence, its four cities, of which Sodom was the principal, were overturned, and the fire-smitten region converted into the lake Asphaltites, or Dead sea. Zoar, or the city of Bela, alone escaped. Excepting the treaty of Abraham with the Hittites, for a burial place, recorded in the 23d chapter of Genesis, nothing material occurred till the reign of Hamor, in Shechem, which was at the distance of a hundred and twenty-eight years. Having sold a plot of ground to Jacob, that prince's son availed himself of the intercourse that had been established, to cultivate an acquaintance with his daughter, Dinah, and to ruin her. Negotiations having been subsequently entered into, through the intervention of Hamor, with a view to the young transgressors being married together, Jacob adopted the singular stratagem of inducing the king, his son, and all the citizens to be circumcised, with the hope of obtaining intermarriages; the danger of which led the patriarch to attack them when suffering from the operation, who cut them off to a man.

The future circumstances of their history may be

* Hist. chap. 6.

History.

rapidly told. Upon the approach of Moses to the promised land, the Canaanites being joined by the Amalekites, attacked and repulsed the Israelites, who attempted to enter their land contrary to a divine injunction. About the same time, Sihon, king of the Amorites, invaded Moab and Ammon, and dispossessed them of their settlements on the other side Jordan, and the Dead sea. When Moses had a second time attained the south-eastern borders of Canaan, he was again attacked by Arad, who took many prisoners, but was at length utterly subdued. Sihon having rejected the application of Moses for a free passage, and even marched against him, was also wholly overthrown. Og, king of Bashan, the giant ruler of a large and wealthy district, upon endeavouring to stop Moses, lost his kingdom, which was transferred to Israel. Upon the entrance into the long promised land, the lives of Joshua and the Judges comprise the chief events of this period. Those who were vanquished and dispersed by Joshua, are supposed to have travelled towards Africa; and in their way are thought to have seized upon Lower Egypt, where they founded a monarchy of some continuance, but were at last driven into Africa. The history of the Canaanites is overspread with obscurity, from the time of the ruin of Jabin by Deborah and Barak; but it seems that they long continued in possession of certain portions of the country; for the Jebusites opposed David when he went to occupy the city of Jerusalem, which he assaulted and carried by storm. They were also attacked from other quarters, especially by the forces of Egypt, till in the reign of Solomon they were reduced to a state of absolute slavery. The Canaanites, properly so called, and comprised in the general name Phœnicians, continued to flourish on the sea coast, and acquired by their commerce and their ingenuity eminence among the nations.

§ II. The Moabites.

Origin.

Moab, the son of Lot, by an incestuous connection with his eldest daughter, was the father of the Moabites, who possessed a small tract of country called after them Moabitis, or the land of Moab, a part of Cælo-Syria, or as some assert, of Arabia. This people practised circumcision, and were under a monarchical government. Their chief occupation seems to have been the cultivating and grazing of the land. The Israelites were forbidden to seek their goods, and to intermarry with them to the tenth generation, although a friendship seems to have subsisted between the two nations.

Religion.

The Moabites were idolaters, as appears from the express testimony of Scripture, at least, after the time of Moses; previously they possessed the true religion, but corruptions gradually stole in, till they gained the entire ascendancy. They had two principal idols, Chemosh and Baal, or Baal-Peor, respecting which there exists a degree of uncertainty, some authors believing these to be only different names of the same god; but the contrary is the most probable. Peor was the name of a mountain, where the altars and groves of Baal were situated: the latter term signifies *lord*, and was the name of the sun. Vossius supposes Baal-Peor to have been the same with Bacchus, which seems countenanced by the fact of their worship being attended with obscene rites.

Jewish Economy.

Temples were erected to their idols in the cities, but they also sacrificed oxen and rams, and even human victims, in the open air, and on certain mountains appropriated to the performance of their religious ceremonies.

Enmity.

The Emims, a gigantic race, are considered as the original inhabitants of this territory, and were probably of the same origin with the Anakims and Rephaim, the descendants of Ham. At what precise period the Moabites disinherited these people, cannot be ascertained, but they became an easy prey after the incursions of Chedorlaomer. All their possessions, however, to the north of the River Arnon, were taken from them so early as the days of Moses, by Sihon, who totally vanquished the predecessor of Balak. This last prince was their ruler at the time when the Israelites encamped in their borders; and the Moabish king, whose jealousy and apprehensions were excited, instead of attempting, by conciliatory measures, to gain their friendship, or at least to secure their neutrality, endeavoured in the surest method he could imagine, to effect their destruction. The artifice he employed was indeed worthy of the baseness of his design, and bespoke the meanness of his character. He had recourse to the arts of necromancy and divination, offering Balaam, the most noted enchanter of the time, "the rewards of divination and the wages of unrighteousness;" and beseeching him to use his utmost art against the objects of his jealousy and aversion. "Come," said he, "I pray thee, curse me this people, for they are too mighty for me: peradventure I shall prevail, that we may smite them, and that I may drive them out of the land; for I wot, that be whom thou blessest, is blessed, and be whom thou cursest, is cursed."

It may serve to elucidate this request, to remark, that magic and divination were very extensively professed, and very generally credited in the remotest antiquity. Persons pretending to these occult sciences, were deemed capable of both inflicting and curing diseases, and of performing wonderful miracles by means of the subservient demons, with whom they were believed to have formed an association. It was supposed that they could produce earthquakes, destroy armies, and controul human destiny; in short, there is no excess of extravagance into which the superstition of mankind has not run, with regard to their mysterious agency; and in ancient times princes were accustomed to retain magicians about their persons, and generally to avail themselves of their incantations. The following is a form of curse which has been transmitted to us by Macrobius, and was made use of by the priest destined to the service, standing at the head of the army, and in the immediate presence of the principal officers. "Almighty father of gods and men, or if thou wouldst rather be addressed by the name of Jupiter, or if any other appellation be grateful to thine ear, pour out I conjure you upon this army the spirit of terror and dismay; deprive of the sight of their eyes all those who shall level their blows at us, our legions, or troops; spread darkness over our enemies, over their cities, over their fields, over their armies. Look upon them as a thing accursed; bring them under the hardest conditions that ever an enemy was constrained to undergo; as for me, to destruction I hereby devote them; my curse I pour upon them; and take this prince, these captains, this people to be witnesses of it."

History.

To a service of this kind, the confederated princes, Moab and Midian, invited Balaam, anxious to extirpate a powerful nation, brought into their vicinity, instead of being contented to strengthen their own defences against any violence or encroachment. The wizard received the messengers with the utmost courtesy, and after providing for them every accommodation, proposes to devote the night to mysterious consultation with the deity. A message from God, however, through some voice or vision, anticipated his inquiries by others respecting the deputation now lodged in his house, and by an interdiction against his purpose, on the most peremptory terms. Anxious to secure his wages, and, probably, to stimulate the applicants to more splendid offers, he makes a partial report, implying simply his disinclination to go. Upon this, a second embassy is dispatched, calculated to gratify his vanity by its splendour and his avarice by its unlimited offers. For a moment he refuses, and we cherish the hope that superior principles have gained the ascendancy; but, behold, while his words are specious, his actions are contradictory, for he tampers with temptation by receiving them into his house again, and giving them hopes of his obtaining a reversal of the decree. Balaam is now permitted to go—permitted in wrath; but in the folly and the wickedness of his spirit, he rises early to proceed on his journey, but is arrested in his course by a miraculous interference. The dumb ass speaks, and the mighty angel of a merciful, though insulted Providence, appears before him. With a heart, however, devoted to covetousness and vanity, he ventures, even after all, to proceed, and to use the emphatic language applied to Ephraim, he is “let alone.” But no sooner does the base enchanter sit down amongst his princely employers, than he confounds their expectations by an extorted declaration, that “he had no power at all to say anything.” After the festivity of the day, and the retirement of the night, Balaam is conducted to the high places of Baal, that he might see the utmost parts of the people, where aiding the superstition of the Moabish prince, instead of correcting it, he directs seven altars to be erected, and upon each a bullock and a ram to be sacrificed; thus endeavouring to sanction cursing and cruelty by the awful forms of religion. He directs Balak to stand by the sacrifice while he retires to a “high place” to watch for preternatural signs. It was here that “God met him,” and sent him back downcast, mortified, silent, crest-fallen, restless—to pronounce what he dared not refuse to do—a blessing instead of a curse. His enchantments were ineffectual—his artifices vain—his divination overturned—his ambition and avarice for ever blasted, and the eager and expectant monarch, with emotions more easily imagined than described, hears from his reluctant lips, “How shall I defy whom the Lord hath not defied? for from the tops of the rocks I see him, and from the tops of the hills I behold him; so the people shall dwell alone, and shall not be reckoned among the nations. Who can count the dust of Jacob, and the number of the fourth part of Israel?”

Balak, disappointed and mortified to the last degree, desires Balaam to proceed to another station, where the sacrifices are offered with the hope of changing the blessing into a curse. The impious wizard retires as before, but every foolish and wicked anticipation is in a

moment extinguished. “Rise up and hear, hearken unto me, &c.” Numb. xxiii. 18—24.

Jewish Economy.

We have entered at some length into this remarkable story, as not only forming the most striking incident in the history of Moab, but as being one of the most singular and instructing occurrences in the annals of the world.

The Moabites were the instruments of the second oppression of the Israelites, after their settlement in the promised land; for on the decease of Othniel, the chosen people having relapsed into idolatry, Eglon was raised up to inflict the proper punishment upon their apostasy. In conjunction with the Ammonites and Amalekites, he invaded Israel, and reduced it to subjection for eighteen years; from which they were only released by his assassination and the subsequent discomfiture of the Moabites by Ehud. At a later period, Saul carried on successful war against them, and afterwards David, being incited by a confederacy they had formed against him, defeated them in battle, put two-thirds of them to the sword, and reduced the rest to a tributary dependence and vassalage. They now became subject to Solomon and Rehoboam, till the revolt of the ten tribes, when they were tributaries to the Israelitish sovereigns, with inferior kings or chiefs of their own. Various petty wars were undertaken by them against the people whom they most disliked, and who had fastened the yoke upon their neck; and at certain periods they seem to have succeeded to a considerable extent, especially during the declension of the kingdom of Israel. The prophets mention several cities of the tribes of Reuben and Gad as in their possession, or the Ammonites their probable confederates. After the memorable overthrow of the army of Sennacherib, the Moabites frequently revolted, and were as frequently reduced, till they were finally subdued by Nebuchadnezzar, and ultimately merged in the greater empires.

§ III. The Ammonites.

The incestuous connection of Lot with his younger daughter originated the Ammonites, as a similar intercourse with the eldest had produced the Moabites. Ammonitis (for such was the name they impressed upon the district which they inhabited) was situated on the northern side of the land of Moab, and taken possession of by them, after expelling a gigantic race, called Zamzummim, who were the aboriginal inhabitants. Their government was kingly, and their occupations agricultural. They likewise practised circumscription. The conduct which Israel was required to observe with regard to them, resembled that which was commanded towards the Moabites. In both instances their prosperity was not to be molested, but they were not to be admitted into the congregation to the tenth generation.

Like the other surrounding nations, they were idolaters, and their chief gods were Chemosh, and Moloch who has passed under so many names. The Ammonites, it has been supposed, were worshippers of the sun.

We have just binned at their expulsion of the giants who first possessed the country which they peopled, and whose subjugation was doubtless facilitated by the conquests of Chedorlaomer. The date of these transactions is now lost in irremediable uncertainty; not so

Religion.

History.

History.

their overthrow in the days of Moses. Sihon, king of the Amorites, dispossessed and drove them to the more mountainous parts. They are known to have united with Eglou, and shared his successful achievements against the Israelites. About one hundred and fifty years afterwards they contended with the same people single handed, with the view of recovering, by a sudden incursion, their ancient territory, and succeeded so as to keep the people in subjection eighteen years. Three of the tribes, Judah, Benjamin, and Ephraim, were now sorely pressed by the victorious enemy. They applied to God, and, assembling at Mizpeh, sent an expostulatory message. The Moabitish king, however, persisted, after a second communication, in claiming the territory from which his countrymen had been driven, forgetting, as, too often conquerors do, their own original mode of obtaining an *untilled* possession. Conflict ensued, and the Ammonites lost twenty cities and their claim beyond the Jordan.

Another war was excited, and upon the same principles, in the days of Saul; at first with such success on the part of Nabash, king of Moab, that he besieged the city of Jabbeth and spread universal consternation on every side. The terror of the inhabitants only exasperated his cruelty, and he proposed, as the term of his desistance, that every individual should lose his right eye, and thus carry a stigma to his grave. They requested seven days to seek for a deliverer, which was granted, with the satisfaction on the part of the destroyer, of a conscious or fancied security. At the expiration of this short interval Saul attacked the camp, and not only overthrew, but literally slaughtered the enemy, and terminated the war. Hanun, the successor of Nabash, having foolishly and ungenerously provoked David (who had sent to condole with him for the loss of his father, and congratulate him on his accession to the throne), by treating his ambassadors as spies, shaving half their beards, and cutting away part of their dress, so as to disfigure and expose them, gave occasion to a war which, in its disastrous progress and calamitous end, brought entire ruin upon his kingdom. Hanun was slain, in the assault upon his capital, which being taken, the inhabitants were treated with marked severity, being led out to a kind of execution, horrible to name: they were harrowed, sawn asunder, hacked in pieces with axes, and passed through the brick-kilns. Other cities in his dominions which continued to resist, received a similar treatment.

Nothing further is heard of this people till the reign of Jehoshaphat, king of Judah, against whom they united with the Moabites and the inhabitants of Mount Seir. They afterwards became tributary to Uzziah, king of Judah, by right of conquest. In the next reign they rebelled, but were overthrown and compelled by Jotham to pay a large contribution.

Baalis was the last king of Ammon, who maintained a good understanding with Zedekiah, king of Jerusalem; but when destruction came upon him and his city, the Ammonites were so forward in their exultations as to incur a prophetic denunciation. Baalis, however, received the fugitive Jews into his protection, and sent one of them, named Ishmael, to go and slay Gedaliah, the Babylonian governor over the remnant of the Jews. This order he executed; but Baalis was soon attacked by the Babylonian general, who ravaged

the country, and carried him and his people into captivity. They are afterward mentioned as uniting with others to molest those who rebuilt the temple.

Living quietly under the great monarchies, they at length became important, and fought with Judas Maccabeus, but were repeatedly worsted, and fell a prey to the Jews. They are, however, afterwards mentioned in the second century of the Christian era, but at last are lost amongst the Arabians.

Jewish Economy.

§ IV. *The Midianites.*

The name of this people is derived from the fourth son of Abraham by Keturah, who was called Midian, and was sent, like his brethren, into the east, to be removed from Isaac. The Midianites were a numerous race of shepherds and merchants, and of roving habits. They are represented as very much addicted to splendour of dress, and they clothed their camels with gold chains or collars round the neck. From the extensive traffic which they carried on, and from what is reported of their acquaintance with letters, they are supposed to have had a competent knowledge of the arts of writing and arithmetic, and the sciences of geography, geometry, and astronomy.

Whatever might have been the original purity of Religion, their faith, such of them as lay contiguous to the Moabites evidently adopted their idolatrous creed and practices. They seem even to have surpassed that abominable people in their attempts to corrupt the Israelites during the period of the encampment in the plains of Moab: "And the Lord spake unto Moses, saying, vex the Midianites and smite them: for they vex you with their wives, wherewith they have beguiled you in the matter of Peor, and in the matter of Cozbi, the daughter of a prince of Midian, their sister, which was slain the day of the plague for Peor's sake." (Numb. xxv. 16—18.) Long after this northern district of Media, however, became sunk into the grossest depravity, the southern parts retained, excepting in the single article of circumcision, the true religion, of which we have a specimen in Jethro, who is styled the priest of Midian. Their government was monarchical.

The principal facts of their history are the following:—History. ing: The Midianites were in the earliest times blended with the Ishmaelites, and long afterwards with their posterity; and they were also amalgamated in so considerable a degree with the Moabites, that the Jewish legislator and historian almost viewed them as one. They were both united by the ties of consanguinity and the feeling of hatred to Israel. The Midianites were smitten in the Moabitish plains, in a conflict with Hadad the Horite. Mention is made of them as among the merchants who bargained for Joseph and took him away into Egypt. We have just alluded to Jethro, the Kenite, who dwelt among them in the south as their priest, and to whom Moses became allied by marrying Zipporah, his daughter, who also resided in his family till the period of his being miraculously called to be the deliverer of Israel. After the splendid successes of Moses in rousing the chosen people of God from the Egyptian bondage, Jethro went with his family to meet him in the wilderness, and was induced to join the party of his son-in-law and adopt his faith. He also very much contributed by his wise advice to facilitate the administration of Moses in civil concerns.

History.

The descendants of Jethro are introduced in the Scripture narrative at a subsequent period, as uniting, under the name of Kenites, with the children of Judah in their march from Jericho into the wilderness of Judah (Judg. i. 16.); and upon the capture of Hebron, they were rewarded with a considerable possession. Heber, who killed Sisera, and thus put the finishing hand to the victory of Deborah and Barak, belonged to this family, in consideration of which they were separated by Saul from the Amalekites, whom he was commanded utterly to extirpate. At length they were carried into captivity, with the ten tribes of Israel, by the Assyrians.

It has been stated that the Midianites residing among the Moabites, or close upon their borders, inherited their spirit, and joined Balak in the consultation of Balaam. Their conduct brought an attack upon them from a detachment of Israelitish troops, amounting to 12,000, and their defeat was signalized by the destruction of their cities and fortifications, the dispersion of their cattle, the captivity of their women, and the removal of their riches in gold, silver, iron, and other metals, which fell to the conquering foe. This, however, was only a branch of the nation; and a century and a-half afterwards we find them re-appearing with two kings, Zebah and Zalmunna, at their head, and warring against Israel in conjunction with the Amalekites and Arabians. Their success was great, and they hesitated not to profit by it to devastate the country during seven successive years (about a.c. 1245), and drive the Israelites into the mountains. In this critical emergency Gideon was raised up, and gave the final blow to their power, and slew the two hostile chiefs with his own hand. Notwithstanding this apparent annihilation of them a second time, they are spoken of at a distant period as industrious and opulent; but in the first century of the Christian era, they became entirely blotted with the Arabians.

§ V. The Edomites.

Origin.

The story of the twin brothers, Esau and Jacob, the sons of the patriarch Isaac, by Rebekah, is sufficiently familiar to every reader of the inspired records, and having been adverted to in a preceding part of our History, need not be repeated in this place. Esau was the father of the Edomites. After several vicissitudes and removals, at the age of a hundred and twenty years, he settled in the country of Seir, married, and adopted suitable measures for the permanent and peaceful residence of his posterity. The original inhabitants were the Horites, who were under the government of certain chieftains, known by the appellation of dukes, to whom the sovereignty descended by hereditary succession. The government of the Edomites was at first of a similar nature, but afterwards became monarchical. There is some evidence of their having acquired an early proficiency in astronomy and other sciences, as well as arts. They appear at first to have been a warlike people, and addicted to commerce; but their subsequent degeneracy may justify the representation of Josephus, who describes them as a race of robbers and incendiaries. Little, however, can be learned respecting them with any certainty. In point of religion they soon became idolaters, although the knowledge of the true God descended in the family, in consequence of its connection with Isaac. Circumcision, the distinguishing criterion of an Is-

Govern-
ment.Attain-
ments and
habits.

Religion.

raelite, was discontinued at no distant period from their origin; but they were eventually incorporated with the Jews by Hyrcanus, and of course re-adopted their religion.

Jewish
Economy.

History.

Esau, the progenitor of the people in question, is said to have settled under one of the Horite kings, and assumed no higher distinction than the ordinary one of patriarch of his own family. But as a change occurred in the Horite form of government, by its being divided into petty districts and sovereignties, or dukedoms, it seems most probable, without being absolutely certain, that the numbers and opulence of the descendants of Esau, enabling them to acquire a predominant influence, and, perhaps, inducing them to foment the divisions which took place, they rose into a more extended power, and became lords of one part of the country, which, henceforward, took their name. In process of time, the seven dukes who retained possession of the land of Seir, seem to have lost their dominion, by the superior power of the Edomites, who also expelled the Amalekites and became sole rulers. When the Israelites went into the wilderness, there were eleven dukes of Edom, who united under one king, for the purpose of more effectually defending themselves against the attacks to which they erroneously believed themselves exposed from Moses, who had, however, received an interdiction on this head from God himself. The king of Edom so far yielded to the suggestions of fear and jealousy, that when the Israelitish leader sent messengers to him to request a passage through his country, although he pleaded that they were brethren, and adverted to the marvellous guidance under which they were, as a nation, placed, yet positively refused the application, and warned them, in case of making the attempt, of the decisive hostility they were to expect. But although he marched his troops and assumed an attitude of defiance, he at length so far regarded their solicitations, or his own doubts, as to furnish them with what supplies his country afforded, upon payment being made.

The Edomites are henceforth buried in the obscurities of history, till the time of David, excepting that we have evidence of their extending their dominions and engaging considerably in mercantile transactions. After his victorious progress against the Syrians, Moabites, and Ammonites, David advanced against Idumea: eighteen thousand of them were destroyed in the valley of Salt, and the rest were either compelled to retire into distant countries, or to submit to the yoke of subjection. Many fled to the Philistines, whose strength they materially assisted. Hadad, their young king, was courteously received by Pharaoh, who gave him the queen's sister in marriage; but a state of dependence did not accord with his lofty spirit, and he plotted for an opportunity to recover his lost inheritance. Having, after some difficulty, persuaded the king of Egypt, he was allowed to return to Idumea, and made several vain efforts to regain his dominions; but as the royal family of Syria afterwards bore his name, it is thought that he established himself in that country. The kingdom of Edom continued, till the reign of Jehoshaphat, to be governed by the viceroys of the kings of Judah. They united with the Moabites and Ammonites in an attempt to surprise that monarch, but suffered immensely from the confusion which arose, when the two chief parties in this conspiracy fell upon

History. each other. In the reign of Jehoram, however, the Edomites assassinated the Jewish viceroy, and placed a ruler of their own choice in his situation. Jehoram marched against them, and was surrounded; but they were ultimately defeated, with great slaughter, and forced back into their entrenchments. Still they succeeded in their main purpose, and shook off the galling yoke of servitude; but we have no information either of their leader on this occasion, or of his successors. They suffered a disastrous defeat afterwards from Amaziah, the king of Judah, who slew ten thousand in the valley of Salt, and took an equal number of prisoners, and threw them down the precipices in the vicinity of Srah, their capital, which he carried by storm. The Edomites also engaged in an unsuccessful war with the Moabites, and became subject to the king of Babylon. At the period when the Jews were carried captive into that country, the malignant detestation of the Edomites was evinced in destroying such of them as attempted to escape, and in burning the remains of the temple. They would, had they been able, have levelled the entire city with the ground; and they slaughtered all the Israelites who unfortunately fell into their hands, uttering the most violent blasphemy against the God of Israel. The prophets were commissioned to retaliate upon this impiety, by predicting the desolation of their land, and the returning prosperity of that of their enemies. Soon afterwards they accordingly became dispersed, in consequence of the prevalence of intestine commotions; a considerable part of them settling in Judaea, while the remainder were amalgamated with the Nabatians. The name of Idumea was henceforth applied only to that part of the land which the refugees occupied, the lot of Simeon and Judah, the ancient kingdom now losing its distinctive appellation. After the time of Alexander they were under the dominion of the Seleucids, when their ancient and deep-rooted antipathy inducing them to war against the Jews, under the conduct of Gorgias, their city was at length taken and sacked by Judas Maccabeus, who also reduced their strong holds, cut off 20,000 in various assaults, and penned up a residue of 9,000 in two strong towers. From hence many escaped, by means of bribery; but this was at length detected by the general, and the castles forced. Their subsequent history is not very distinctly traceable. Their discontent and restlessness engaged them in numerous broils, till they were vanquished by Hyrcanus, who required them either to quit the country altogether, or embrace the Jewish religion. They chose the latter alternative, and submitted to circumcision.

§ VI. The Amalekites.

Origin, &c. The name of this people, as is obvious, is derived from Amalek, who was the son of Eliphaz, son of Isaac, by Timna, his concubine. The Arabians, however, deduce his genealogy much higher, and affirm, that in ancient times, the Amalekites possessed the country round Mecca, from which they were expelled by the Jorhamite king. Amalek was reckoned among the Edomite dukes, and succeeded Gatsam. Of their early separation from the family of Edom, we had no account; of their form of government all we can gather is, that they were under kings; and of their religion, we are guided, chiefly by probable conjecture, in assigning

to them the same idolatries which the Edomites practised, and an entire departure from the religion of their remote patriarchal ancestor.

Jewish Economy. The Amalekites, after being expelled by the Edomites, seized upon the country, which, after them, was called Amalekites, and seem to have made a remarkably rapid progress to the heights of power and splendour. They are well-known in the Sacred History, as the early and malignant enemies of the children of Israel, in the wilderness. They attacked the rear of the Israelitish army in its march from Rephidim to Mount Horeb, but though they had some temporary success, were ultimately defeated with great loss. They were afterwards engaged conjointly with the Canaanites in the attack upon Israel, which was a providential punishment for the disobedience of the chosen nation, in attempting to penetrate into the promised land, in violation of an express injunction from Heaven. They united against the Israelites with Eglon, the king of Moab, and the Ammonites, and afterwards with the Midianites, and in fact used their utmost efforts to exterminate that people, against whom they cherished such an inveterate and unconquerable hostility, but who were destined to so wonderful a triumph and establishment.

History now passes over in silence the story of their proceedings, till the age of Saul, who, contrary to the divine command, spared their comely, though tyrannic monarch, in a general massacre of his subjects. Samuel, however, bewed Agag, the name of this king, in pieces before the Lord. The feeble remains of the Amalekite army returning to their country, lived in peace till David obtained Ziklag for a refuge from his persecuting sovereign, and slaughtered them once more. Exasperated against their victorious neighbour, and foe, they made a descent upon Ziklag, and consumed it, carrying off the women, and the inhabitants. David, upon his return, hastened after them, and overtaking them in an hour of festivity, while celebrating their recent success, cut them off; four hundred only escaping upon the swift-footed dromedary. The finishing blow was given them in the days of Hezekiah, by the Simeonites, who took possession of their country.

§ VII. The Philistines.

The origin of this extraordinary people is to be traced to Mizraim, the son of Ham, the son of Noah, in the two branches of the Cushim and the Caphtorim. In the book of Deuteronomy they are mentioned by Moses as having expelled the Avites, even to Azzah or Gaza, where they settled.

Their most ancient form of government was monarchical, their kings being distinguished by the common appellation of Abimelech; but so early as the time of Moses, the government became aristocratic under five lords, who, though acting in concert, appear to have been in a degree independent of each other. They were afterwards again under the dominion of kings, but in what manner this second change was accomplished, cannot now be ascertained. These kings received the common appellation of Achish, as well as Abimelech, residing at first at Gath, afterwards at Ascalon, and finally at Gaza. This nation differed from the Israelites in regard to circumcision, and hence often incurred from them contemptuous epithets. Like the other nations, they gradually relapsed into gross

History. idolatry, and corruption of morals. Although they occupied a considerable inheritance in the promised land, they were never expelled, because they were not natives, but Egyptians, and to the former class only did the denunciations of expulsion refer. They were a warlike and an ambitious people, and so inveterately attached to their idolatrous worship, and so hostile to the Israelites, that the successes of their enemies did not dishearten or convert them. In consequence of the accession they received from the influx of the Edomites fugitives in the time of David, before mentioned, they rose to great distinction, and acquired a high repute as merchants. They are said also to have been an ingenious people, and to them is ascribed the invention of the bow and arrow.

Religion. That they were uncircumcised has been just stated; but during the period of their first kings, they practised the Jewish rites: afterwards their idolatries were numerous. Each of their five cities is represented as having an idol of its own. At Gaza, Marna or Marnas was worshipped, which is said to have become afterward the Cretan Jupiter. Dagon was adored at Asdod, and he was their principle and most honoured divinity; to him was ascribed the invention of agriculture. Baalzebub was the god of Ekron. Derceton is believed, upon the authority of profane history, to have been the goddess of Ascalon; and, perhaps, Ashtaroth, or Astarte, of Gath. Their temples were large and spacious, and their religious services attended with great pomp. It was common to carry their gods about with them to the wars in which they were engaged, and to present them with the principal part of the spoils.

History. The Philistines came originally from Egypt, but at what period is not certain; and having dispossessed the Avites, or Avims, occupied a fertile and pleasant district. Their king, Abimelech, in the time of Abraham, had some transactions with that patriarch, particularly with reference to Sarah, which are related in the Scripture book of Genesis. The son of Abimelech, who retained his father's name, dwelt also at Gerar, and like his father, was an excellent and conscientious prince. He had also transactions with Isaac, with reference to his wife Rebekah, of a nature very similar to those of his paternal predecessor with Abraham, and which tend to show the high honour, hospitality, and ebullency that prevailed among that people. Isaac afterwards having been exposed to some vexatious contentions and removals, was visited by Abimelech, in company with Abuzzath, and Phicol, the captain of his host, with a view of entering into a covenant of friendship, which was accordingly ratified, upon the simple condition of Isaac and his posterity using the Philistines and their posterity, in the same manner as Abimelech and his people had used the patriarch and his family.

Little or nothing is now heard during a long succession of years; but the form of the Philistine government seems to have undergone a change, and they cherished a decided and extreme aversion against the Israelites. After the death of Joshua, the tribes of Simeon and Judah captured the three principal places of Gaza, Ascalon, and Ekron, but they were soon repossessed of them, whether by treaty or seizure is unknown. Three hundred and twenty years after this period, we find the Israelites were in subjection to the Philistines, till they were released by the heroism of Shamgar. In the time of Jephthah, they again op-

Jewish Economy. pressed Israel, in conjunction with the Ammonites. A similar superiority was obtained during forty years, when Samson arose, and broke, by repeated victories, the yoke of servitude; when, at length, he pulled down the pillars of the house in which the Philistine lords were assembled, involving at one blow himself and them in destruction. The Israelites availed themselves of the consternation which was necessarily produced in the country, and marched immediately to Ebenezer, while the Philistines prepared for the anticipated conflict, by encamping at Aphek. On this occasion the Israelites were worsted, and 4,000 slain. The ark of God was conveyed to the Israelitish camp, which occasioned the chosen people great joy; but, in a second encounter, 30,000 Israelites were slain, the ark taken, and the two priests, Hophni and Phineas, the sons of Eli, slain. Carrying the ark in triumph to Ashdod, they placed it in the temple of Dagon, their chief idol; but Dagon fell before it, and after being replaced, fell again, with his head, hands, and feet broken off. As these happened to lie upon the threshold, their priests avoided ever afterwards treading on the threshold. The country of the Philistines was now smitten with a terrible plague, and they resolved to detain the ark no longer, justly attributing this calamity to its continuance among them. They resolved, therefore, on its removal to Gath, where similar visitations of Providence afflicted the people; upon which it was sent to Ekron, whose inhabitants exclaimed that it was sent to destroy them. They accordingly consulted the lords of the Philistines with regard to the proper measures to be adopted for restoring the ark to its place. The ark was then sent into the country, where the fields were, in consequence, overrun with mice; and thus finding, that wherever it abode the country was visited with instant calamity, they followed the advice of their priests and divines, and dismissed it to the original possessors.

Some years afterwards, when the Israelites assembled at Mizpeh, suspecting that the intention was to free themselves from bondage, the Philistines marched towards them, and the terrified Israelites applied to Samuel to intercede with heaven on their behalf. A storm of thunder and lightning dispersed the Philistine army at the moment of their intended attack upon their enemies, of which Israel taking advantage, overthrew and pursued them with tremendous slaughter, and for a time broke the detested yoke of subjection. The Philistines, however, soon recovered themselves, and even attained to a greater power than before: they assembled a large force to fight with Jonathan, the son of Saul, who had surprised Gaba, one of their fortresses, and ravaged the country from Michmash; but Jonathan, accompanied only with his armour-bearer, slew a number at their out-post, and Saul, availing himself of the confusion, discomfited and pursued them even to Ajalon. In a few years they renewed the conflict, by pitching their hostile tents on a mountain opposite to one where the Israelites were encamped. It was on this occasion the memorable encounter took place between David and the gigantic Goliath, at whose fall the Philistines fled in consternation, and were pursued with great slaughter to the gates of Gath and Ekron. They were afterwards again vanquished by David, when a considerable change was made in their government, the rule of the lords being

History merged into the more extended authority of a king. When David fled from Saul he was brought before this sovereign, whose name was Achish, but who dismissed him as insane; and afterwards the Philistines prevented Saul from seizing his persecuted subject, in the wilderness of Maon, but they again retreated before Saul. At length they received David and his family into protection, assigning him a residence at Ziklag, and the Philistines deemed it better to suspend their resentments than hazard his return. But when Achish took him in his train against Saul, and promised him distinction in his service, the Philistine lords were offended, and insisted upon his dismissal. David accordingly returned to Ziklag, while Achish advanced against Saul with his Philistine army. A battle was fought in Mount Gilboa, in which Israel was completely defeated, and Saul and Jonathan slain, the former by his own weapon. The triumphant foe cut off Saul's head on the following day, and stripped him of his armour, which they dedicated in the temple of Ashtaroth. David was now crowned king in Hebron; but though the Philistines remained quiet during his contest with Ishboeth, a son of Saul, they renewed their hostilities when they found that all Israel and Judah yielded to his sceptre. They were, however, most completely defeated, with the loss of their baggage and gods. To redeem the latter they again marched to battle, but were again defeated, and pursued with great slaughter to Gaza. Soon after this they were invaded by David, who captured Metheg-Annah. To a considerable period of quiet at length

succeeded another war with Israel, and in four different conflicts their gigantic leaders were slain, their strength exhausted, their spirits broken, and they now became tributaries to David. The Jewish Economy.

Several years after these transactions (n. c. 953), the Philistines were besieged in Gibeon by Nadab, the Israelitish king, and the same city was again invested afterwards by Elah, king of Israel, to whom it was considered as belonging, though the Philistines seized and kept it notwithstanding repeated efforts to regain possession. Though the Philistines courted the favour of Jehoshaphat, by paying him a voluntary tribute, they raised the standard of revolt against Jehoram, his son, rified his palace, nearly annihilated his family, and secured a multitude of captives. They were at length, however, invaded by Uziah, king of Judah, who dismantled some of their chief cities, and huilt others in their subjugated territory to overawe them. But in the reign of Ahaz they resumed their arms, and obtained a signal success, reducing a number of cities, and adding a considerable part of Judah to their territory. Soon afterwards Hezekiah abundantly retaliated, and overran all their country. They were also attacked by the Assyrians, Ashdod their chief city taken, and the country converted into the seat of war between the Egyptians and Assyrians. Henceforward they became tributaries to the superior powers. The Egyptians seized Gaza and a large portion of their territory, and in the end they were, according to prophetic intimations, utterly annihilated.

DISSERTATION VI.

THE JEWISH SYNAGOGUES.

It is the opinion of Spencer, Vitrina, Reland, and of the learned in general, that the institution of synagogues for worship originated in the reading of the law publicly after the collection of its volumes by Ezra, and that consequently there were no such places of solemn assembly previous to the Babylonish captivity. Some of the Jews themselves have expressed a conviction that this is the fact, and the Scriptures give no intimation of their existence antecedent to that time. Aware at length of the great importance of such a measure, and perceiving that many of their calamities arose from the transgressions of the people, which often resulted from their ignorance of the sacred code, it was adopted as a rule that a synagogue should be erected in every place where ten persons of sufficient age and leisure could be found to attend. This was the number which they deemed requisite to constitute a congregation, and to no fewer was the law to be publicly read. These synagogues were eventually multiplied to a great extent, so that one or more was to be found in every town of Judea.

It has been justly observed, that there was this remarkable difference between the tabernacle or temple, and the synagogues which were erected in succeeding times: in the latter God was merely worshipped; in

the temple he was not only worshipped, but resided in an extraordinary manner.

The services of the synagogue were orderly and impressive. Of these the prayers formed an essential part; and these are prescribed in their liturgies. Originally they were few in number, but devotion perhaps at first, and superstition afterwards, contributed to increase them, till at length formality and tediousness were the principal concomitants of their worship. The Shemoneh Eshreh, or eighteen prayers, said to have been introduced by Ezra and the great synagogue, are considered as the most solemn part of their devotional service. To these a nineteenth was added in a latter age, with a particular view to Christians whom it is intended to designate and denounce. Prideaux has given a translation of these prayers, which we shall insert as an interesting piece of antiquity.

"1. Blessed be thou O Lord our God, the God of our fathers, the God of Abraham, the God of Isaac, the God of Jacob, the Great God, powerful and tremendous, the High God, bountifully dispensing benefits, the Creator and Possessor of the Universe, who rememberest the good deeds of our fathers, and in thy

* Outram de Sacrificiis, cap. lii.

History. Iove sendest a Redeemer to those, who are descended from them, for thy name sake, O King, our Helper, our Saviour, and our Shield. Blessed art thou O Lord who art the Shield of Abraham.

" 2. Thou O Lord art powerful for ever. Thou raisest the dead to life, and art mighty to save, thou sendest down the dew, stillest the winds, and makest the rain to come down upon the earth, and sustainest with thy beneficence all that live therein; and of thy abundant mercy makest the dead again to live. Thou lookest up those that fall; thou curest the sick; thou lookest them that are bound, and makest good thy word of truth to those that sleep in the dust. Who is to be compared to thee O thou Lord of might? and who is like unto thee O our King, who killest and makest alive; and makest salvation to spring up as the herb out of the field; Thou art faithful to make the dead to rise again to life. Blessed art thou O Lord, who raisest the dead again to life.

" 3. Thou art holy, and thy name is holy, and thy saints do praise thee every day, Selah. For a great King and an Holy art thou O God. Blessed art thou O Lord God most Holy.

" 4. Thou of thy mercy givest knowledge unto men, and teachest them understanding; give graciously unto us knowledge, wisdom, and understanding. Blessed art thou O Lord, who graciously givest knowledge unto men.

" 5. Bring us back O our Father to the observance of thy law, and make us to adhere to thy precepts; and do thou O our King draw us near to thy worship, and convert us unto thee by perfect repentance in thy presence. Blessed art thou O Lord, who vouchsafest to receive us by repentance.

" 6. Be thou merciful unto us, O our Father, for we have sinned; pardon us O our King, for we have transgressed against thee. For thou art a God, good and ready to pardon. Blessed art thou O Lord most gracious, who multiplieth thy mercies in the forgiveness of sins.

" 7. Look we beseech thee upon our afflictions. Be thou on our side in all our contentions, and plead thou our cause in all our litigations; and make haste to redeem us with a perfect redemption for thy name's sake. For thou art our God, our King, and a strong Redeemer. Blessed art thou O Lord the Redeemer of Israel.

" 8. Heal us O Lord our God, and we shall be healed. Save us, and we shall be saved. For thou art our praise. Bring unto us sound health, and a perfect remedy for all our infirmities, and for all our griefs, and for all our wounds. For thou art a God who healest and art merciful. Blessed art thou O Lord our God, who curest the diseases of thy people Israel.

" 9. Bless us O Lord our God in every work of our hands, and bless unto us the seasons of the year, and give us the dew and the rain to be a blessing unto us upon the face of all our land, and satiate the world with thy blessings, and send down moisture upon every part of the earth that is habitable. Blessed art thou O Lord, who givest thy blessing to the years.

" 10. Convoke us together by the sound of the great trumpet, to the enjoyment of our liberty, and lift up thy ensign to call together all of the captivity, from the four quarters of the earth into our own land.

Blessed art thou O Lord, who gatherest together the exiles of the people of Israel.

" 11. Restore unto us our Judges as at the first, and our counsellors as at the beginning, and remove far from us affliction and trouble, and do thou only reign over us in benignity, and in mercy, and in righteousness, and in justice. Blessed art thou O Lord our King, who lovest righteousness and justice.

" 12. Let there be no hope to them who apostatize from the true religion; and let heretics, how many soever they be, all perish as in a moment. And let the kingdom of pride be speedily rooted out, and broken in our days. Blessed art thou O Lord our God, who destroyest the wicked, and bringest down the proud.

" 13. Upon the pious and the just, and upon the proselytes of justice, and upon the remnant of thy people of the house of Israel, let thy mercies be moved O Lord our God, and give a good reward unto all, who faithfully put their trust in thy name, and grant us our portion with them, and for ever let us not be ashamed. For we put our trust in thee. Blessed art thou O Lord, who art the support and confidence of the just.

" 14. Dwell thou in the midst of Jerusalem thy city, as thou hast promised, build it with a building to last for ever, and do this speedily even in our days. Blessed art thou O Lord, who buildest Jerusalem.

" 15. Make the offspring of David thy servant speedily to grow up, and flourish, and let our horn be exalted in thy salvation. For we hope for thy salvation every day. Blessed art thou O Lord, who makest the horn of our salvation to flourish.

" 16. Hear our voice, O Lord our God, most merciful Father, pardon and have mercy upon us, and accept of our prayers, with mercy and favour, and send us not away empty from thy presence O our King. For thou hearest with mercy the prayer of thy people Israel. Blessed art thou O Lord, who hearest prayer.

" 17. Be thou well pleased O Lord our God with thy people Israel, and have regard unto their prayers: restore thy worship to the inner part of thy house, and make haste with favour and love to accept of the burnt sacrifices of Israel, and their prayers; and let the worship of Israel thy people be continually well pleasing unto thee. Blessed art thou O Lord, who restorest thy divine presence to Zion.

" 18. We will give thanks unto thee with praise. For thou art the Lord our God, the God of our fathers for ever and ever. Thou art our Rock, and the Rock of our life, the shield of our salvation. To all generations will we give thanks unto thee, and declare thy praise, because of our life, which is always in thy hands, and because of our souls, which are ever depending upon thee, and because of thy signs, which are every day with us, and because of thy wonders, and marvellous loving-kindnesses, which are morning and evening and night continually before us. Thou art good, for thy mercies are not consumed; thou art merciful, for thy loving-kindnesses fail not. For ever we hope in thee. And for all these mercies be thy name, O King, blessed and exalted and lifted up on high for ever and ever; and let all that live give thanks unto thee. Selah. And let them in truth and sincerity praise thy name O God of our salvation, and our help.

History.

Selah. Blessed art thou O Lord, whose name is good, and whom it is fitting always to give thanks unto.

"19. Give peace, beneficence, and benediction, grace, benignity, and mercy unto us, and to Israel thy people. Bless us O our father, even all of us together as one man, with the light of thy countenance. For in the light of thy countenance hast thou given unto us, O Lord our God, the law of life, and love, and benignity, and righteousness, and blessing, and mercy, and life, and peace. And let it seem good in thine eyes to bless thy people Israel with thy peace at all times, and in every moment. Blessed art thou O Lord, who blestest thy people Israel with peace. Amen."

The preceding petitions were directed to be offered by every person of age, of either sex, and of every condition in life, in the morning, afternoon, and evening of every day, either in public or private. They were, and still are, indeed, considered only as the basis of prayer in general; not intended to supersede, but rather to regulate the drift of other petitions which the worshipper might think proper to superadd, and which occasioned, in process of time, so great an accumulation as to render the synagogue services wearisome in the extreme. Long and formal prayers can never atone for the absence of a genuine ardent feeling.

Reading the Scriptures.

Another important part of the worship consisted in the solemn reading of the Scriptures. Portions of the law and the prophets were regularly selected for this purpose, and publicly pronounced for the instruction of the people. What is called the Kiriath Shema formed also a part of the public reading; that is to say, three portions of Scripture were selected. The first from the commencement of the fourth verse of the sixth chapter of Deuteronomy, to the conclusion of the ninth verse; the second from the beginning of the thirteenth verse of the eleventh chapter of Deuteronomy, to the close of the twenty-first verse; and the third from the beginning of the thirty-seventh verse of the fifteenth chapter of Numbers to the end of the chapter. This reading is accompanied with prayers and benedictions, and is regarded as next in importance and solemnity to the nineteen prayers already cited. It is to be practised twice every day, or morning and evening, by the males of free condition; women and servants being exempted from all obligation to this duty.

Exposition.

In addition to the exercises of devotion, the word of God was publicly expounded in the synagogues, and the people addressed them in set and serious discourses. Exposition was particularly attended to at the time when the Scriptures were read; and preaching, after the reading of the law and the prophets was concluded. The posture assumed during the reading of the Scriptures was that of standing, it being deemed most reverential: in discoursing from the suggestions of their own minds they sat.

Time of service.

The synagogues were regularly opened for public service three days in a week, besides on the fasts and festivals, and three times on the appointed days, that is, morning, noon, and night. Monday, Thursday, and Saturday were the days in question; the last of which was the Sabbath. They affirm the following reason for this appropriation of time: that as the Israelites were in great distress on travelling three days in the wilderness without a supply of water, they ought not to remain during three successive days without the hear-

ing of the law, which they consider to be prefigured by water. The manner of attending to this part of the service is thus described by Frédeux:

Jewish Economy.

"The whole law, or five books of Moses, being divided into as many sections or lessons as there are weeks in their year (as hath been before shown), on Monday they began with that which was proper for that week, and read it half way through, and on Thursday proceeded to read the remainder; and on Saturday, which was their solemn Sabbath, they did read all over again, from the beginning to the end of the said lesson or section; and this both morning and evening. On the week days they did read it only in the morning, but on the Sabbath they did read it in the evening as well as in the morning, for the sake of labourers and artificers, who could not leave their work to attend the synagogues on the week days, that so all might hear twice every week the whole section or lesson of that week read unto them. And when the reading of the Prophets was added to that of the law, they observed the same order in it. As the synagogue service was to be on three days every week for the sake of their hearing the law; so it was to be thrice on those days for the sake of their prayers. For it was a constant rule among them, that all were to pray unto God three times every day, that is, in the morning at the time of the morning sacrifice, and in the evening at the time of the evening sacrifice, and at the beginning of the night, because till then the evening sacrifice was still left burning upon the altar. It is certain that it was anciently among God's people the steady practice of good and religious persons to offer up their prayers to God thrice every day. This we find David, and this we find Daniel did. For the former says (Psalm, liv. 17) 'Evening, morning, and at noon will I pray.' And the latter tells us, that notwithstanding the king's decree to the contrary, 'he kneeled upon his knees three times a day, and prayed, and gave thanks unto his God, as he did aforetime.' By which it is plainly implied, that he did not only at that time thus pray, but that it was always his constant custom so to do. They having had no synagogues till after the Babylonish captivity, till then they had not any set forms of their prayers, neither had they any solemn assemblies for their praying to God at all, except at the temple only. That was always the house of prayer, so Jewish, and so from him our Saviour calls it, and to this use Solomon consecrated it, and there the times of prayer were fixed to the times of the morning and evening sacrifice, and the ordinary time of the former was at nine in the morning, and of the latter at three in the afternoon; but on extraordinary days, as Sabbaths, festivals, and fasts, there being additional sacrifices, additions were also made to the times of offering them, and both the morning and the evening service did then begin sooner than on other days. As soon as they did begin, the stationary men were present in the court of Israel, to offer up their prayers for the whole congregation of Israel, and other devout persons, who voluntarily attended, were without in the court, called the court of the women, praying for themselves. But neither of these had any public forms to pray by, nor any public ministers to officiate to them herein, but all prayed in private by themselves, and all according to their own private conceptions."

History.
Mode of
worship.

There was a considerable diversity between the mode of conducting the worship of the tabernacle and the temple, and that of the synagogue. The ministration was not, as in the former cases, limited to one particular order or tribe, but every one was admitted to the performance of this duty, who qualified himself by learning its requirements. There were, however, persons appointed to minister in every separate synagogue, who were solemnly designated to their office by the imposition of hands. These were elders or rulers of the synagogue (*Archidiaconos*), one of these was the minister of the synagogue, whose office it was to present public prayers for the whole congregation; who, as the representative and messenger of the rest, was denominated *Sheliach Zibbor*, or angel of the church. This distinguished individual did not always officiate personally; others of sufficient age and gravity were sometimes allowed to occupy his place, and for the time acquired his appellation. The deacons possessed the next rank to the *Sheliach Zibbor*. Their name in Hebrew (*Chazanim*) signifies *occurents*. They were also ministers, and besides had the charge of sacred books of the Scriptures, and of the public liturgies, and of all the vessels belonging to the service of the synagogue, under the general superintendence of the chief ministers. They also overlooked the rulers of the synagogue when they read the book of the law and the prophets, correcting them if they committed any mistakes, and receiving the book from their hands when the reading was concluded. As there was no fixed minister anciently, the rulers of the synagogue, when the time for public reading arrived, called out to some one to officiate; a priest first, and then a Levite, if such were present, and then any other Israelite, till the number seven was completed. Hence every section of the law was divided into seven parts, each reader having his assigned proportion. The interpreter held the next official rank to the chazanim. His duty consisted in interpreting the lessons into Chaldee, as they were read to the congregation in Hebrew. The benedictions were pronounced by priests, or if none were

present in the congregation, the *Sheliach Zibbor* took that office.

With regard to the general arrangements in the synagogues, there was a pulpit or desk in the middle, whence the book of the law was solemnly read, and where the preacher stood to address the multitude. At the most elevated part, towards the east and opposite the door, was the chest or press containing the book of the law, carefully preserved in fine embroidered cloth. The women sat alone, in a gallery which was enclosed with lattices, whence they could see and join the worship without themselves being at all exposed to view.

The synagogues were commonly erected within the walls of the cities. As the Jews imbibed an opinion that it was dishonourable to God to have his house inferior, or even only equal to that of any private individual, they were usually more lofty in their construction than any ordinary building. In distinction from the proscenium or places of prayer, they were roofed in and covered, thus resembling those places of solemn religious assembly which have since obtained among all civilized nations.

It is notorious that the Jews, subsequently to the Babylonish captivity, were to a remarkable degree hostile to every species of idolatry, although previous to that event they were extremely addicted to it. If the general opinion be correct, that the public reading of the law was regularly observed after that captivity and not before, this circumstance is sufficiently explained; since nothing can have so great a tendency to enlighten the mind and preserve it from the corrupting influence of error as familiarity with the word of God; and this by improving the faith will gradually ameliorate the moral condition of a people. When the temple of Jerusalem, or the cities of the Levites alone were the appointed places of public worship, religion was either wholly neglected, or negligently performed; but when synagogues became dispersed in every corner of the land, they were the means of diffusing truth, and exciting a proper feeling, stimulating to holy service and leaving into a pious mass, the community of Israel.

Jewish
Economy.

DISSERTATION VII.

CONSIDERATIONS ON THE PROBABLE INTENTIONS OF PROVIDENCE WITH REGARD TO THE LIMITED SCALE OF THE JEWISH ECONOMY.

It is impossible to advance in our inquiries far beyond the simple detail of facts, without being involved in an inextricable labyrinth of doubt and perplexity. Reason is only a feeble taper, and sheds but an uncertain and twinkling light upon those regions which lie beyond the precincts of ascertained science or immediate revelation; and consequently we must rest satisfied in the present inferior condition of our being, either with a total ignorance, or, at best, with a hypothetical and speculative knowledge, graduated into varying degrees of probability, of many most interesting subjects of investigation. Nor ought we so much to murmur at this constitution of our nature as to cherish a grateful feeling towards the author of our existence, for the importance of the knowledge he has

communicated, and the superiority of those faculties with which he has endowed us, and by which we are enabled perpetually to advance in wisdom, and to anticipate the brighter discoveries of another world, for which we shall undoubtedly be capacitated. The barriers are, indeed, now impassable; but religion certainly assures us that the day will come when they shall be thrown down, and the human mind placed in those circumstances of unfettered freedom which will present no obstacles to its best speculations and eternal improvement.

In contemplating the Jewish economy as a whole, we have been led to the preceding observation, by finding that a difficulty almost instantly occurs, which perhaps is not very soon to be satisfactorily explained and

History. fully obviated. At the same time it would be unwise and unphilosophical, in the highest degree, to indulge a feeling of despondency. It would, moreover, be unchristian; because, although it may not have pleased Almighty wisdom to obviate by anticipation every probable subject of perplexity that might occupy the human mind, by a direct and formal statement, moral speculations are not interdicted where they may be unsuccessful, and may, and certainly do, often tend to cast an incidental light upon what is frequently in itself dark and mysterious. If we cannot fully explain parts of the economy of Providence, and if no reasons have been assigned for many of its operations, we are more than justified in seeking to ascertain them, if for no other purpose than to gain some satisfaction in our own minds with regard to these proceedings. The difficulty just adverted to in reference to the Jewish economy, is that of the *very limited scale of its operations*, which were restricted to one particular nation, and that, in comparison with others, an insignificant one. So far from aiming at universality, many of the laws of heaven were clearly of an opposite tendency, and, in fact, it is most evident, as we have repeatedly had occasion to remark, that great pains were taken to separate the people of Israel from the rest of the world, and to preserve their rites and observances within their own boundaries; for some such reasons perhaps as the following:

Inconveniences avoided.

1. In order to avoid those extreme inconveniences which must necessarily have resulted from a different arrangement; and which, indeed, would have rendered such an establishment of religion altogether impossible, had it aimed at universality. It was essential to this system, and especially for the purpose of producing those impressions for which it was intended, that the people whom it embraced should assemble in a central and authorized place of worship, having all the remarkable circumstances attaching to it which are recorded of the Israelitish tabernacle. There the prescribed orders of priests were to officiate, and the ceremonies of divine service to be regularly performed, the smallest deviation from which was severely punished. The perpetual and punctilious exactitude of religion thus exhibited daily, and in detail, before the people, was highly calculated to produce the feelings of reverence and obedience, which were further enforced on the one hand by all the solemn sanctions of law, and on the other by all the glory of a personal manifestation of deity. The Jewish economy, in its early stages, moreover, required precisely such a character as Moses, whose personal qualities should ensure the affection of the people, whose birth should legitimate his influence, and whose sanctity and express appointment to the work he had to accomplish should give him an access to the Supreme God, equally sublime in its nature and beneficial in its tendencies upon himself and the Israelitish nation.

Let us then suppose, that instead of limiting the economy to the particular people in question, it had spread its plan over the surface of the globe, and advanced its claim to an universal observance. What must have been the result? Plainly this—that whoever would render acceptable worship to the Supreme God, must have repaired to the tabernacle in the wilderness, travelling all the lengths of the most distant regions to bring their offerings to his altar, and procure all the

public and private acts of religion. The consequence must evidently have been to subvert the entire order of society, and, in fact, to render impossible of performance what was solemnly required. The true character of the Jewish nation would have at once ceased, as well as the offices of Moses, the priests, and principal leaders. They would have been no longer a people gradually conducting through a scene of extraordinary vicissitude, and by a miraculous guidance, from the state of Egyptian bondage to the land promised to their illustrious ancestors, and reassured to them; since, had the same economy been authoritatively imposed upon every kingdom and nation, the peculiarities of their case must have been merged in the equally extraordinary circumstances of the entire population of the earth.

Jewish Economy.

If it be alleged that Providence might have multiplied its tabernacles, its altars, and services, and priests, and legislators, and manifestations of every kind, proportionally to the extent of the plan upon which it designed to operate—that a place of central worship might have been erected in every district—that a cloud of glory might have descended in every region—and a Moses and an Aaron raised up in every land;—this is true, considered as a question of *possibility*; but what would have been the effect? No other surely than the establishment of a totally different system, and, in some respects, upon very different principles to that of the Mosaic dispensation; for that dispensation accommodated itself to the Jew, as a Jew, having special regard to the circumstances and character of individuals so descended; and it was founded upon promises and predictions which primarily concerned the people of Israel, and presupposing a different state of society from their own in surrounding nations. Providence, therefore, could have manifested itself in a miraculous manner to every nation, and established “ordinances of worship” for “all things are possible with God;” but this is to say, that the world might have been differently circumstanced, or differently governed—a question which, to add nothing further, has no claim upon our present consideration. Taking the fact as it is recorded, we are simply to ascertain the reason, and, therefore, repeat the statement which the preceding observations tend to confirm and illustrate, that by limiting the scale of the Jewish economy, inconveniences were avoided which, under other circumstances, would in reality have had the effect of nullifying altogether the chosen system and arrangement. Its difficulties must have multiplied, till the plan had ceased to exist.

2. The limitation of the actual sphere of the Jewish economy to the particular people of Israel, afforded an opportunity for a full exhibition, and for a consequent and complete disavowal of the claims of false gods. Had Providence at once interposed to crush their worship and annihilate their images all over the earth, and upon the ruins of every form of superstition and idolatry, established a more perfect system of faith, no doubt their claims would have ceased, and their falseness have been proved by their debasement. But in addition to the fact that God never acts with even an apparent precipitancy in carrying into execution any of his measures, but in the general administration of human affairs sees fit to mature his purposes in a manner equally gradual and effectual—unfolding, as it were, the bud of his designs, sometimes in the lapse only of months

Opportunity for the disavowal of false gods.

History. and years, and sometimes not till after the slow revolution of centuries—he it recollected that the best method of exhibiting to the world the folly, feebleness, and impidity of idolatry, was to allow it to exert all the influence of which it was capable for a time, to erect its temples, and to multiply its worshippers. Idolatry was allowed a certain theatre, and indeed a very extensive one, for its operations—it was permitted to acquire a very considerable ascendancy over the human mind in general—to obtain a decided footing on every land—and this by limiting the sphere of the Jewish economy—by confining its wonderful communications and its influence to a few people. The whole world was for a period “let alone,” there being no direct interference with their prejudices or their practices—they were suffered to “go after” the idols to which they had “joined themselves,” and without any providential disturbances to continue in the condition in which they delighted, that of “lying in wickedness.” God had not, nor has he in any age so abandoned the world as to leave it wholly destitute of celestial illumination—of a pure and acceptable form of worship;—the light has never been extinct—the temple of the Lord has never been raised to the foundations—although there have been seasons of lamentable defection from the truth, and even of still more lamentable corruption—but at the time in question mankind were in a state of great darkness, and, with the single exception of the people of Israel, proceeded to the most deplorable lengths of idolatrous impity. Man was sunk under the dominion of his senses, and God, as by an almost universal consent, expelled from his own world. Idolatry had, therefore, ample space and equal opportunity to display its real character, which could not have been the case, had the divinely authorized system of religion given to the Jews been at once universally established.

And let us inquire what was the actual result of this reign of the so called divinities? Was this dominion favourable to the happiness of mankind? Did it contribute to the dignity of human nature, or to the real exaltation of a creature who had departed from God? It is needless to particularize what every page of profane history exhibits, and what we have often, and must again frequently notice. It is needless, as disgusting, to dwell upon the horrid scenes that were in every age transacted among the heathen, in the groves and temples of their idols; and but for the truth of history, and the purpose of illustration, we should willingly blint from our page, and obliterate from our memory, all traces of those follies and crimes, those impurities and bestialities, which have so degraded the very name of man.

“When men were exalted into gods,” says Dr. Greaves (Lect. on the Pentateuch), every, the basest passion and the foulest vice found an example in justify, and a patron to protect it. Gods, whose characters and actions had been impure, revengeful, and cruel, were honoured by adopting as parts of their worship, impurity, cruelty, and bloodshed. Demons who were worshipped not from love but fear, not because beneficent but malignant, it was naturally supposed could be appeased or conciliated only by the suppliant inflicting sufferings and death, even on the object whom he held most dear. Hence every abomination of the Lord which he hated, did the heathens do unto their gods, so that even their sons and their daughters did they burn in

the fire to their gods.’ (Deut. xii. 31.) In truth we know, from other sources than the Scripture, that theft, bloodshed, and cruelty; that incest, adultery, and unnatural crimes were sanctioned by the example of the heathen gods, and even consecrated as parts of their worship; we know that every species of wickedness was practiced in the temples of some, and that human sacrifices blud upon the altars of others, and this in the most polished and celebrated nations of antiquity; amongst the Egyptians and Assyrians, the Chaldeans and Phoenicians, and from them were these abominations transferred to Greece, and Carthage, and Rome.” And the words of Cicero (De nat. Deorum) are remarkable: “Exposui pene non philosophorum iudicio s-d delirantium somnia, nec enim multa absurdiora sunt que postarum vocibus fass, ipsa suavitae noverunt; qui et ira inflammatos et libidine furentes induxerunt deos; feceruntque ut eorum bella, pugnas, prelia, vulnera, videremus; odii proterea, dissidia, discordias, artus, interitus, querellas, lamentationes, effusas in omni intemperantia libidines, adulteria, vincula, cum humano genere concubitus, mortalesque ex immortalis procreatos, cum postarum autem errore conjungere licet portenta magorum, Egyptiorumque in eodem genere demantiam, tum etiam vulgi opinionones que in maxima inconstantia, veritatis ignorantia versantur.”

How different, and how superior, was the Mosaic economy! Imperfect as it was in comparison with the nobler dispensation it prefigured, it was nevertheless “glorious.” No human sacrifices blud upon Jewish altars—no Bacchanalian revelries polluted their religious solemnities—no vices were consecrated as objects of adoration by their ritual no ridiculous or obscene images occupied the niches of their house of worship, nor obtruded into their public walks or private dwellings; but “holiness to the Lord” was the characteristic of their economy. Places and persons were consecrated to his service—legislation and religion went hand in hand; and vice either dared not to intrude, or if she did, her hated form was recognized at once by the faithful delineations of prophets, and seized and sacrificed by the strong arm of legislation. That the actual state of the Jewish nation was less exalted in piety and virtue than under all the circumstances we might be induced to anticipate, is to be attributed to the propensity to imitate the idolatries of the heathen which they so long and so unobscuringly retained; but so far as they did conform to the divine law, they acquired a superiority of character to other nations; and the tendency of all its observances, was not like those of the Gentile nations, to lower them in the scale of dignity and worth, but to enhance their happiness, by enhancing their real excellence—to make them respectable, wise, and good, by leading them to respect themselves and to reverence and serve the true God. While, therefore, the true religion and every form of false worship were suffered to exist contemporaneously, by the former being confined to one small people, the contrast is the more striking—the darkness and the light more distinctly traceable—and the effect upon the reflecting mind consequently the more powerful.

3. It is probable, that a further reason might have influenced the conduct of providence, in confining the Mosaic economy, and all its extraordinary appointments and communications, to the single people of the Jews, arising out of the predestined superiority of the Christian dispensation. To the latter was assigned the

Jewish Economy.

The glory of universality reserved for the gospel.

History

honour and distinction of being an universal religion, superseding alike the prefigurative ceremonies of the former period, and the first established faith, and the idolatries of the Gentile world. It was befitting the character of the son of God, that his religion should surpass in the extent of its influence, as it did in the sublimity of its principles, every other; and that its high claims should be recognized, and its dignity consulted, by allowing it the unrivalled distinction of universality.

So deeply rooted were the prejudices of the first converts to Christianity, and even of its apostles themselves, that they were both slow and reluctant to admit the benevolence of its plan, and the comprehensive liberality of its author. Nor ought it, perhaps, to be much wondered at, that a certain narrowness of view and feeling should have been superinduced by the extraordinary history of their nation, and the early prepossessions in which they were educated in favour of their own country, which had been so privileged and patronized by Heaven. Whatever of true religion existed, was found among themselves; and of its truth they had the most incontestible evidence in the authenticated revelations of their eminent men, and the accomplished predictions of their prophets. There is something peculiarly forcible in the words of God to Abraham, to which frequent references are subsequently made by Moses:—"A father of many nations have I made thee. And I will make thee exceeding fruitful, and I will make nations of thee, and kings shall come out of thee. And I will establish my covenant between thee and me, and thy seed after thee in their generations, for an everlasting covenant, to be a God unto thee and to thy seed after thee. And I will give unto thee and thy seed after thee the land wherein thou art a stranger, all the land of Canaan, for an everlasting possession; and I will be their God (Gen. xvii. 8-18). Their great legislator and historian impresses upon them, by a solemn appeal, considerations of their grandeur and distinction as a people, which he is solicitous they should never forget; but, on the contrary, cherish the sentiment as a motive to obedience, and a reason for preserving a total and marked separation from all other nations. "For," says he, "what nation is there so great, who hath God so nigh unto them as the Lord our God is, in all things that we call upon him for? And what nation is there so great, that hath statutes and judgments so righteous as all this law which I set before you this day?"—"For ask now of the days that are past, which were before thee, since the day that God created man upon the earth, and ask from the one side of heaven unto the other, whether there hath been any such thing as this great thing is, or hath been heard like it? Did ever people hear the voice of God speaking out of the midst of the fire, as thou hast heard, and live? Or hath God assayed to go and take him a nation from the midst of another nation, by temptations, by signs, and by wonders, and by war, and by a mighty hand, and by a stretched out arm, and by great terrors, according to all that the Lord your God did for you in Egypt before your eyes? Unto thee it was shewed, that thou mightest know that the Lord he is God; there is none else beside him. Out of heaven he made thee to hear his voice, that he might instruct thee; and upon earth he shewed thee his great fire; and thou heardest his words out of the midst of the fire. And

because he loved thy fathers, therefore he chose their seed after them, and brought thee out in his sight with his mighty power out of Egypt."

Such, then, being the representations of the most eminent individual of their country, who wrote, too, under the express influence of inspiration, and such the statement, of which the annals of their history furnished no less than a miraculous attestation—can it be surprising that, even at the commencement of the Christian age, and among the first propagators of the religion of Jesus, the limited views of providence should still be believed to be a principle of the divine administration, and a strong reluctance should be felt against including the hitherto rejected Gentiles in the privileges of the new-born dispensation? Jesus had even commissioned them to "go and teach all nations," and, during the course of his personal ministry, had given several intimations of his purpose to diffuse his gospel, with all its concomitant blessings, to an illimitable extent; and yet we find that so distinguished an apostle as Peter started at a vision which directed him to visit a Gentile worshipper, and was with difficulty persuaded to renounce his Jewish prejudices. In obedience, however, in an unequivocal communication of the plans of Providence, he at length accompanied the messengers of Cornelius to Cæsarea, where he thus avowed himself to the people assembled together: "Ye know how that it is an unlawful thing for a man that is a Jew to keep company or to come unto one of another nation; but God hath shewed me that I should not call any man common or unclean." (Acts x.) These principles were soon afterwards more fully understood, when Paul became "a burning and a shining light," in conveying the tidings of salvation; without any limitation or restriction. It is, therefore, the peculiar glory of the Christian religion, and appears such especially as viewed in contrast with the Jewish, to overstep the geographical boundaries of the ancient faith, and to scatter the freely imparted blessings of the gospel with an unsparring liberality. The honour of this comprehensive character was reserved to the course of providence for this religion, the last and the best; and in contemplation of this triumph of Christianity, no less than because of the peculiarities of the preceding dispensation, the first, and during a long period, all the communications of heaven were carefully limited to the Israelitish community. To participate the privileges of religion, it was requisite to prove their birth, or to seek naturalization; whereas, since the introduction of the new and nobler economy, "it is come to pass, that whosoever calls upon the name of the Lord shall be saved." The highest authority pronounces that "the hour cometh when ye shall neither, in this mountain, nor yet at Jerusalem, worship the father"—that the hour "now is, when the true worshippers shall worship the father in spirit and in truth; for the father seeketh such to worship him." (John iv. 21, 23.) The religion of Jesus is moreover adapted to the influence it is destined to acquire; meeting the exigencies of man; obviating the disadvantages of his moral condition; providing for his most pressing necessities; and dissipating his worst apprehensions: in a word, it is not the religion of the *Jew*; it is the religion of *MAN*—holding in one hand the cup of consolation, to soothe his sorrows; and in the other the sceptre of dominion, to sway his destinies.

Dr. Pri-
doux.

On the threshold of this inquiry, we cannot forbear to notice the almost singular conjecture of a learned prelate of France, that Moses was Zoroaster; or that a fictitious personage, under that name, was invented by the Persian magi to give a sanction to the theological system which they had borrowed from the religion of Moses. We refer to M. Huet, in his "Demonstratio Evangelica" (Prop. iv. c. 5). On this conjecture, a learned countryman of the prelate, M. de Pastoret, in his "Zoroastre Confucius et Mahomet Comparé" (Ed. ii. p. 3), has thus anticipated all which we could say on this subject. "Entraîné par un esprit systématique, ce savant prélat ne veut voir que Moïse dans Zoroastre. Cette prétention, contraire à la croyance de tous les peuples et de tous les siècles, ne mérite pas même qu'on lui fasse l'honneur de la combattre." (That learned prelate, led astray by an attachment to system, could see only Moses in Zoroaster. Such a notion opposed to the belief of all people, and all times, scarcely deserves the honour of being combatted.)

It is then to be regarded, as generally agreed, that an extraordinary person, who after the Greeks is called Zoroaster, and whom the Persians have named Zerdusht, or Zaratush, flourished in the reign of Darius Hystaspes. That he introduced various important changes in the religious rites, institutions, and manners of the Persians, is also fully admitted. There are, however, previous inquiries of some importance, on which there has been no small disagreement among the learned, respecting the origin of the name Zoroaster, and the number of persons, some in very remote antiquity, to whom it has been applied.

Dr. Thomas Hyde, the Laudian Professor of Arabic, at Oxford, who died in 1702, had published in 1700 a very learned work, entitled, "Veterum Persarum et Parthorum et Medorum Religio Historia." In this work (to the Oxford edition of which, in 1760, we shall have occasion frequently to refer), Dr. Hyde maintains that the theological legislator of the Persians, who will occupy our principal attention in this article, was the only Zoroaster, however various authors may have professed to find the name, and thus to multiply the individual in very different periods of history. He thus expresses his confidence on the subject (p. 312): "Auctores avidè ascripserunt Zoroastri nomen: de ceteris tamen seculis et patribus errando, usum, eundemque hominem in plures multiplicando. At quisquid dixerint, ille fuit tantum unus, isque tempore Darii Hystaspis, nec quis nominis plures unquam existit." (Authors have seized with avidity the name of Zoroaster; and, by mistaking his age and country, have multiplied one man into several men. But whatever they may affirm, there was only one, and he appeared in the reign of Darius Hystaspes: nor was there really any other of his name.)

Dr. Hyde has been followed by Dean Prideaux, in

VOL. IX.

his Connection (p. i. b. iv. an. 486), where he concludes, on the unanimous agreement of all "the oriental writers, that there was but one Zerdusht, or Zoroastres;" that this was "the famous prophet of the Magians, and that the time in which he flourished was while Darius Hystaspes was king of Persia." Sir Isaac Newton also, in his Short Chronicle, appears to acknowledge no Zoroaster, except the one whom he describes as flourishing An. 512 a. c., and in concert with Hystaspes, the father of Darius, effecting a great reformation in the worship of the Persians. He also, in his Chapter of the Empire of the Persians (Chron. p. 348), conjectured respecting Zoroaster, that "from his conversing in several places he is reckoned a Chaldean, an Assyrian, a Mede, a Persian, a Bactrian." A modern writer, whom we have already quoted, M. de Pastoret (Zoroast. p. 7), coincides in opinion that there was but one Zoroaster. This he determines on the unanimity of the oriental historians. "Tous le placent dans le même temps et sous l'empire du même roi." (All place him in the same time, and under the reign of the same king.)

It is urged on the other side, that the Greek and Latin writers describe several Zoroasters; of whom Mr. Stanley, in his Chaldaic Philosophy, enumerates no less than six. Some of those authors have, indeed, indulged to great extravagancies in determining when the Zoroaster flourished of whom they write. Pliny (l. xxx. c. 1) having quoted Eudoxus, who placed the time of Zoroaster "sex milibus annorum ante Platonis mortem" (six thousand years before the death of Plato), goes on to describe Moses, as having appeared "multis milibus annis post Zoroastrem" (many thousand years after Zoroaster). Plutarch, in his Isis and Osiris, speaks of "Zoroastres the Magian, reported to have lived five thousand years before the Trojan times." Diogenes Laertius, in his Proemium, says, that "from the magi, of whom the chief was Zoroastres," whom he calls the Persian, "to the taking and destruction of Troy, were five thousand years, by the computation of Hermodorus the Platonic; though Xanthus the Lydian reckons from Zoroastres to the descent of Xerxes not above six hundred years." Justin places Zoroaster eight hundred and fifty years before the Trojan war.

"Of Zoroaster," says Sir Walter Raleigh (World, h. i. c. xi. a. 1), "there is much dispute; and no less jangling about the word and art of magic. Arnobius remembereth four to whom the name of Zoroaster or Zoroastres was given; which, by Hermodorus and Dinon, seemeth but a cognomen, or name of art, and was as much as to say *astronomer cultor*. The first, Arnobius calleth the Bactrian, which may be the same that Nicurus overthrew; the second, a Chaldean, and the astronomer of Ninus; the third was Zoroaster Pamphilius, who lived in the time of Cyrus, and his familiar; the fourth, Zoroaster Arameus, the nephew

Biography. of Hostians, which followed Xerxes into Greece.

Suidas remembereth a fifth, called Persomedus Sapiens; and Plato speaketh of Zoroaster, the son of Ormazdes.

"Some eastern writers," says Mr. Richardson (Dissert. p. 231), "place Zerdusht thirteen hundred years after the flood. Some make him the disciple of Elijah, or Elisha; others of Ozair, Ezra, or Esdras. Some consider him as Abraham; others as the usurper Zohak; and some, according to D'Hérbelot (from the name Mikhgush, which occurs in the Turkish Montekheh), have conceived him to have been Smerdis Magus. But the greater number make him contemporary with Kishtak, king of Persia, and consequently suppose him to have lived near five hundred years before the Christian era."

Mr. Bryant, in his Analysis of Ancient Mythology (Ed. iii. pp. 388, 389), says of Zoroaster—"The ancients who treated of him have described him in the same foreign light as they have represented Perseus, Dionaeus, and Osiris. They have formed a character, which by length of time has been separated and estranged from the person to whom it originally belonged. And as among the ancients there was not a proper uniformity observed in the appropriation of terms, we shall find more persons than one spoken of under the character of Zoroaster; though there was one principal, to whom it more truly related. It will be found that not only the persons originally recorded and revered, but others, by whom the rites were instituted and propagated, and by whom they were in after times renewed, have been mentioned under this title: priests being often denominated from the deity whom they served."

"Of men styled Zoroaster, the first was a deified personage, revered by some of his posterity, whose worship was styled magia, and the professors of it magi. His history is therefore to be looked for among the accounts transmitted by the ancient Babylonians and Chaldeans. They were the first people styled magi; and the institutions of those rites which related to Zoroaster. From them this worship was imparted to the Persians, who also had their magi. And when the Babylonians sunk into a more complicated idolatry, the Persians, who succeeded to the sovereignty of Asia, renewed under their princes, and particularly under Darius, the son of Hytaspes, those rites, which had been in a great degree effaced and forgotten."

Mr. Bryant conjectures that "the Persians were originally named Persians, from the deity Perez, or Parez, the Sun; whom they also worshipped under the title of Zor-Aster." Hence (p. 890) he disputes the conclusions of Hyde and other learned men, "that the two names" Zerdusht and Zoroaster were "the same." He, on the contrary, supposes that "one of the magi, named Zerdusht, who is supposed to have first formed a code of institutes for the Persians, was one of those magi, or priests," who, "in different parts of the world, were denominated from the rites of Zoroaster, which they followed."

Those, however, who have attended to this subject, most commonly acquiesce in the opinion that there were certainly two persons at least of the name of Zoroaster, who appeared in very distant ages, and that the Zerdusht of the Persians rather revived the religious rites taught by the Chaldean Zoroaster than became the inventor of a new religion. Dr. Thomas Barne, in his *Archæologie Philosophique* (1692, p. 26)

says, "Magorum princeps et coryphæus erat Zoroaster; at multi testantur auctores; sed in hujus Zoroastri vel Zoroastorum historiâ parum conveniunt. Alii unum, alii duos, alii multos constituent. Constat videtur primò, duos fuisse, minimùm, Zoroastros, utroque sapientiæ nomine et doctrine magicæ, celebres; alterum Chaldeum, aut Bactrianum, cujus plures auctores meminerunt; alterum Persam, vel Medo-Persam, de quo non dubitatur. Secundò, constare mihi videtur, horum duorum res, etates, dogmata, patrias scriptas, alia, sæpe confundi et permisceri, tam ab antiquis, quàm à recentioribus." (Zoroaster was the prince and chief of the magi, as many authors testify, but they differ much in the history of this Zoroaster, or of the Zoroasters. Some reckon one, some two, and others several. It seems to be certain, first, that there were, at least, two Zoroasters, both eminent for wisdom and magic; one a Chaldean, or Bactrian, mentioned by many authors. The other a Persian, or Medo-Persian, concerning whom there is no doubt. Secondly, I clearly perceive that the affairs, ages, opinions, countries, writings, and other circumstances of these two, are often confounded and blended together, both by the ancients and moderns.)

Of the same opinion respecting two Zoroasters, was Moyle and that acute investigator of ancient history, Mr. Walter Moyle. In an unresolvable controversy with his uncle, Dean Prideaux, he quotes, among other authorities, a passage from Nicolaus Damascenus, which "has escaped all the modern critics." Damascenus says "that the Persians, when they were burning Cronus (see our page 271), be thought themselves of the oracles of Zoroaster, which forbade such a profanation of fire;" and adds, that "it was an ancient prohibition." Mr. Moyle seems to have rejected the notion of a Chaldean Zoroaster, yet "supposed two Zoroasters: the first, the founder of the Persian sect; and the second," so far as the authority of the eastern historians may be received, "the reviver, or reformer of the same sect." The result of this discussion was the candid admission by the learned dean, "that there were two Zoroasters, the elder of which was the founder of the magian sect, and the other the reformer; and that this was the Zerdusht of the Persians," an admission which ought to have been noticed by those who published the law editions of the Connection. See *Moyle's Works*, 1726, pp. 1-76; or *Life of Prideaux*, 1748, pp. 123-137.

Thus we have arrived at the same conclusion with the late Dr. Enfield, in his valuable *History of Philosophy* (i. 32), that "if in the midst of so much uncertainty any thing can be advanced with the appearance of probability, it seems to be this: that there was a Zoroaster, a Perso-Median, who flourished about the time of Darius Hytaspes, and that besides him there was another Zoroaster, who lived in a much more remote period, among the Babylonians, and taught them astronomy." Dr. Enfield adds, that "he was the father of the Chaldean astrology and magic."

Three centuries ago an expectation was excited among the learned, of some curious information respecting the religious and philosophical system of the Chaldean Zoroaster. Raleigh, who wrote his history about 1611, mentions in the section we have already quoted, "those books of one Zoroaster, found by Picus Mirandula, written in the Chaldean tongue, and

First Zoroaster.

Misreading of Zoroaster.

Two Zoroasters.

Raleigh on Mirandula.

Biography. the comment in the same language." John Picus, prince of Mirandula, a prodigy of learning, died at Florence, in 1494, at the early age of 32. Dr. Thomas Burnet (Arch. p. 23) quotes from the works of Mirandula, printed in 1601, the following account of these supposed Chaldean MSS. which he had communicated to his friend Marcellus Ficinus, a protégé of the illustrious family of Medici. "Chaldaici hi libri sunt, si libri sunt et non Thesauri. Audi inscriptiones, Patris Ezer, Zoroastri, et Melchiar, Magorum oracula, in quibus et illa quoque quam apud Græcos mendosa et nulla circumferuntur leguntur integra et absoluta. Tum est in illis Chaldæorum sapientium brevis quidem et salebrosa, sed plena mysteriis interpretatio. Est itidem et libellus de dogmatibus Chaldaicæ Theologiæ. Tum Persarum, Græcorum et Chaldæorum in illam divinam et locupletissimam enarratio. Vide, Marcell, quæ inasperata mihi bona irreperunt in sinu. Cur non ego et cornu copiam jam mihi nactus videar?" (These are Chaldean books, if we may not rather call them treasures. The titles are, the Oracles of Father Ezer, Zoroaster, and Melchiar, the magi; wherein are also to be found, whole and complete, those things which are handed about among the Greeks, faulty and imperfect. There is likewise in them an interpretation of the Chaldean wisdom, short indeed and crumbed, but full of mysteries. As also a small treatise concerning the dogmas of the Chaldean theology: with a divine and very copious exposition thereon, of the Persians, Grecians, and Chaldeans. Behold, Marcellus, what unexpected riches have fallen into my hands; may I not reckon myself possessed of the horn of plenty.)

Dr. Burnet, writing two centuries after the death of Mirandula, adds "Magna he sunt, sed hi thesauri Chaldaici nontum comparuerunt." (These are great words, but the Chaldean treasures have not yet appeared). Mr. Stanley, as quoted (Bib. Univ. vii. and v), says, that these MSS. were found in Mirandula's study, after his death, but so injured and unintelligible that they could not be deciphered. To supply the loss, he has given extracts, in his History of Philosophy, of those pieces, entitled, "Oracles of the Magi" who succeeded Zoroaster, on which several of the learned were employed, as commentators, during the sixteenth and following century.

Dr. Enfield, however, justly concludes, that "all the writings which have been ascribed to the Chaldean Zoroaster are unquestionably spurious;" and as to the magic which he invented, that it "was probably nothing more than the performance of certain religious ceremonies, by means of which, good demons were supposed to be premittit upon to communicate supernatural properties and powers, to herbs, stones, and other natural bodies, or to afford assistance in other miraculous ways to those who invoked them. In war, it was supposed that, by the help of magic, the forces of an enemy might be routed, or an army struck with a general panic, as is said to have happened to Ninus, in his war with the Bactrians. In this art, the kings of Chaldeæ and Persia were instructed, as one of the most useful instruments of government, among a people whose ignorance and credulity rendered them proper subjects of imposture." Thus "the Chaldean magic was a very different thing from a knowledge of the real properties of bodies; and though some acquaintances with the notions of the heavenly bodies was necessary for astrolo-

gical calculations, it cannot be inferred, either from their magical or astrological arts, that the Chaldeans were eminent masters in any branch of natural science." (Hist. of Phil. i. 34). Yet some rare genius would now and then improve his knowledge to rule over the ignorant, as the enlightened Baptist Porta understood, more than three centuries ago. In his *Magia Naturalis*, published about 1596, he says of magic (l. i. c. 1), "Doctæ rerum admiuicula, et earum mutua ac opportuna applicatione, opera efficiere, quæ vulgus putat miracula, omnem admirationem, humanumque captum excedit. Ideo maxime in India et Ethiopia vigeat, ubi animantium, herbarum, lapidum ceterorumque ad id spectantium multa suppetebat facultas." (It teaches the nature and suitable conjunction of substances by which effects are produced, which the vulgar deem miraculous, and wonderfully exceeding all human capacity. Hence it abundantly prevailed in India and Ethiopia, where it was greatly assisted by the extraordinary qualities of animals, plants, stones, and other substances).

On returning to the Persian Zoroaster, whose history will occupy the remainder of this article, we find great uncertainty and disagreement as to his birth-place or parentage, though it seems generally admitted that he flourished in the sixth century before the Christian era. Some of the orientals with whom the late M. Anquetil appears to coincide, have described Féridoun, an illustrious prince of Persia, celebrated for legislative wisdom, as the ancestor of Zoroaster. Dr. Hyde had before noticed that opinion, which he rejected, though he concluded that he was a Persian, whose parents were in humble life. On the testimony of Abulpheda, he describes Urm, or Urmia, a town amidst the Gordian mountains, as the birth-place of Zoroaster. Pridcaux, who generally follows Hyde, here differs from him, and inclines to the opinion that Zoroaster was born in Palestine, of Jewish parents.

According to the tradition preserved among Zoroaster's followers, his birth was preceded by wonderful presages, announcing the celebrity to which the future child should attain, and immediately followed by amazing prodigies. The magi, it is said, fearing that this infant would prove a severe reformer, cast him into a fire, from which he escaped without injury. He was then thrown among ferocious wild beasts, who gazed upon him with harmless reverence. His constitution also resisted an attempt to poison him. Indeed, says M. de Pastoret (Zoroast. p. 6), "Il est peu de miracles dont ses disciples n'aient conté son enfance, ou son berceau" (there are scarcely any wonders ever pretended with which the votaries of Zoroaster have not adorned his birth or his infancy). But it is of more importance to inquire how Zoroaster acquired that knowledge, address, and influence, which enabled him to surmount the disadvantages of an obscure condition, and to become the religious legislator of Persia.

If Zoroaster were not born in Palestine, he appears to have passed his early youth there, and is said to have procured his subsistence by becoming the servant of a Jewish prophet. To this connection, Dr. Hyde (p. 316) attributes the first formation of Zoroaster's design to assume the character of a divine legislator, and his opportunities of preparation for such an attempt. "A talis Prophetæ miraculis fuerit stimulatus ad simulâ patrândum, et provida multas astutias studuerit, prompto ingenio, et forti imaginatione et naturali au-

dacit et confidentia adjutus; nam si non fuisset suda et intrepidus, totius nationis religionem, suo modo reformare non tentasset." (By beholding the miracles of a prophet he would be stimulated to an imitation of them. Hence he would employ himself in arduous contrivances, aided by a ready invention, a powerful imagination, and a natural boldness, and confidence. For had he not been bold and intrepid, he had never made the attempt of moulding to his purpose, the religion of a whole nation.)

Who was the prophet to whom Zoroaster was a servant has been much disputed. He was Elijah, according to Abulpharagius, who relates a story of leprosy inflicted on Zoroaster by his master, and thus seems to confound him with Gehazi. This representation is quite inconsistent with the supposed time of Zoroaster. Others have described his master as one of the disciples of Jeremiah, while others again conjecture that he was Oseer, or Eodras. To the latter opinion Hyde (p. 318) seems to incline; while Prideaux considers the time of Zoroaster as best agreeing with that of a disciple of Jeremiah, whom he conjectures to have been Ezekiel, or Daniel; the last he thinks most probable. The learned historian adds, somewhat coarsely, "no doubt his seeing that great good, and wise man arrive at such an height and dignity in the empire, by being a true prophet of God, was that which did set this crafty wretch upon the design of being a false one, hoping that by acting this part well, he might obtain the same advancement, and by pretending to that which the otherwally was, arrive to the like honour and greatness."

Leaving Palestine, Zoroaster came, according to Bundhî, a Mohammedan author, quoted by Hyde, into the country of Adorbovargian, which has been also generally considered as his birth-place. There, at first, he secluded himself from society, and improved his solitude, by maturing the knowledge he had acquired, and preparing for the bold and hazardous attempt to alter the religious rites and institutions of his country. This retirement was called, by the disciples of Zoroaster, his journey to the throne of Ormuzd.

Quitting his solitude, in the thirty-first year of Darius, whom the Persians call Gushtâsp, which was in the year 490 before the Christian era, he is supposed to have been first introduced to the king at Persepolis. His access to the court was, no doubt, facilitated by the patronage which Hytaspes, the father of Darius, had afforded him. Dr. Hyde, in his twenty-fourth chapter, has minutely described, from various oriental writers, the surprise of the king when he first heard of Zoroaster's pretensions to a divine commission, the opposition of the priests, and the trials to which the pretended prophet was now subjected, as to his power of performing marvellous works. According to one writer, he had so far availed himself of his acquaintance with the Jewish Scriptures, as to assume the character of the prophet like unto Moses. Dr. Hyde thus introduces the quotation from this Mohammedan biographer of Gushtâsp (p. 321). "Cum autem astutus ex lege Moysi, ei sat bene notâ, didicerat Deum promissis Israelitis quod eis suscitaturus esset virum ad instar Moysi, cui auscultaturi essent, ille nimis arrogantia et vanitate inflatus, se illum virum esse opinatus est, idque alius insinuaré voluit, quasi ex stellis hoc didicisset." (Understanding from the law of Moses, with which he was very conversant, that God had pro-

phesied to the Israelites that he would raise up to them a prophet like unto Moses, to whom they should hearken; and being puffed up by excessive vanity and arrogance, he professed to be that prophet, and wished to have it understood that the stars had so instructed him.)

By whatever means Zoroaster acquired this confidence of the king, and surmounted the opposition of the priests, his projects appear to have rapidly succeeded. If, indeed, as Dr. Hyde conjectures, he died before Darius, he had employed only four or five years in establishing his religious system. According to one account, he lost his life in a battle which he had urged Darius to wage against a king of Touran, who had refused to embrace the new system of faith and worship. Yet the author of the Alexandrian Chronicle, as quoted by Dr. Hyde (p. 330), gives a very different account of the death of Zoroaster. He says, "Quod Zoroaster precatus est, ut moriturus fulmine itens interiret: et Persis denuntiavit, ubi ignis celestis consumperit, ossium meorum crematorium cineres servare; et quando hoc facitis, regnum a vobis non auferetur: quod fecerunt. Ille autem, invocato Orione a celesti flamma depastus interit." (Zoroaster prayed that he might die by a stroke of lightning; and said to the Persians, when the celestial fire shall consume me, preserve the ashes of my burnt bones; and while you remember this, the kingdom shall not be taken from you. This command they observed. As for Zoroaster, inroking Orion, he was consumed by a celestial flame.)

The years of Zoroaster's life have been equally disputed with the circumstances of his death. Dr. Hyde says (p. 330), "Shahristani dicit cum anno ætatis xxx. in missione a Deo (ut prætendebatur) adiuvare Gushtâspem. Sed deinde paucis annis occisus fuit. Si hoc verum sit, obit juvenis. At ex sequentibus verbis in libro Zendavesta, colligo eum ad senilem ætatem vixisse: nam in nuptiarum officio inter plurimas alias benedictiones, quas sacerdos nuptiis præcatur, legitur. Sicut Zaratushra longevi ætate." (Shahristani says, that he was in the thirtieth year of his age when he presented himself before Gushtâsp on his pretended divine mission; and a few years after he was slain. Were this true, he must have died young. But from the following words in the book Zendavesta, I find that he lived to old age; for in the office of marriage, among several other benedictions which the priest bestows on the newly married, there is the following: Be ye long-lived like Zaratushra.)

We should now proceed to inquire into the alterations which Zoroaster produced in the opinions, rites, and customs of the Persians. But there is a previous inquiry, which disputes among the learned in modern times have rendered necessary respecting the authenticity of writings, still existing in the east, and attributed to Zoroaster. These writings compose the Zendavesta: a copy of which the late M. Anquetil brought into Europe in 1771, and published in a French translation. The Sadder, a Latin translation, of which Dr. Hyde has annexed to his Historia, is, according to his preface, a collection of rules and precepts drawn from the Zendavesta, about the year 1500, for the use of the magi, by a deâstr, or priest, eminently versed in the Persian language.

Dr. Hyde was certainly no common authority on Hyde, any question connected with oriental literature. Yet

we cannot read without surprise, some of the opinions of this Christian writer, respecting the purity and perfection of the ancient religion of Persia, the authenticity of the writings attributed to Zoroaster, and the honour scarcely to be distinguished from a divine mission, which he assigns to him, though a false prophet (quævis pseudo propheta). These sentiments appear in his preface, but are more fully expressed in the dedication to Lord Somers. The passage is so extraordinary, and the work now become so scarce, that we cannot forbear to quote the learned writer's own words, where he describes the purpose which he expected to effect, by the publication of his history of the religion of the ancient Persians.

"Cum talis historia lace donaretur publicæ, dicta gens à Græcorum et Muhammedanorum officiis ac calumniis liberata et vindicata esset; cùmque semper ab ipso diluvio veri Dei cultum tenuisse et firmè ab illis temporibus (quod à pacis speratum aut creditum), rectè constitutum Ecclesiam cum bonè regulatâ hierarchiâ habuisse comparet. Ad hæc aut, quævis primitivam suam puriorum religionem interpolando, multas, processu temporis, admiscuerint superstitiones, hæc tamen ratione refutatur vulgatus ille error virorum doctorum superioris sæculi, istum populum fuisse merè idololatricum, quæque linguam et litteras prorsus exolevisse et scripta monumenta intercidisse ac perisse, et de his omnibus, quasi de rebus internuntiis, conclusum fuisse credendum. Cum è contra, dicta eorum ecclesia (ex quo humanum genus à Noacho reparatum) Deicola semper existerit; et præsertim in Medicis moarchio initio maxime florens, triplici sacerdotum et presulum atque archipresulum ordine, ab illis temporibus usque ad Yesdegherd altimum (circa millesimum abhinc annum), tanquam sol in sua abside, fulserit, sanæ religionis authenticos libros, at vivas et perennantes tabulas, summâ curâ conservans. Et quæ sanè hæc tunc quæ hæc noscimus; cum suorum rituum tenacissima, et ad hoc usque diem vigilantissima in custodia sui prophete codicum, in quibus (præter alia curiosa) latere creduntur de Messia prophetum plures quàm quas hæc noscimus; cum vetus Testamentum non fuerit ei ignotum, et is (quævis pseudo propheta) peculiaribus quibusdam revelationibus adjunctus videatur. Et hinc factum est, ut post Christum hæretici hoc sobolescent, prætulerint se habuisse Zoroastri revelationes de Christo; genuinum codicum loco, exhibendo notios et spurios, ex suo cerebro confictos, quos, sub ejus nomine, ignaro populo talium avido obtrudebant. (The publication of this history may serve to disabuse and vindicate, from the falsehoods and calumnies of Greeks and Muhammedans, that nation which has always from the time of the deluge itself, maintained the worship of the true God, and from nearly the same period (what few expected or believed possible), appears to have possessed a rightly constituted church, with a well regulated hierarchy. However their pure religion may have been, in the lapse of time, corrupted by the addition of many superstitions, yet the common error of learned men in the last age may be satisfactorily refuted, those who believed that people to have been wholly idolatrous; that their language and literature had become obsolete, that their written monuments had utterly perished, and that all which respected them must be reckoned among the things lost and forgotten. Yet, on the contrary, their church

(from the time when Noah became the restorer of the human race) has always retained the worship of God. It greatly flourished in the beginning of the Median monarchy, shining like the sun in his bow, with its triple order of priests and prelates, and also arch-prelates, from those times even to the last Yesdegherd (about a thousand years ago); preserving with the greatest care, the authentic books of their religion as living and permanent records. And thus truly to our time (though in a less flourishing condition), this church is most tenacious of its rites, and even to this day most vigilant in preserving its prophet's writings, in which (besides other things very curious) there are thought to be contained many prophecies of the Messiah hitherto unknown; since he was well acquainted with the old Testament, and (though a false prophet) seems to have been favoured with some peculiar revelations. Hence the fact that heretics, after the time of Christ, being aware of this, pretended to be in possession of Zoroaster's revelations concerning Christ, but producing instead of the genuine writings, those which were counterfeited and spurious, which they readily imposed on an ignorant and credulous age. It appears, from the British Biography (vol. p. 82), that Dr. Hyde, Dr. Hyde's at the time of his death, was projecting, among other profoundly learned works, the publication of "the theological mathematical, medical, and physical works of Zoroaster, or Zerdasht, in Persian and Latin." What these works were, or on what evidence the learned professor was convinced of their authenticity, cannot now be known, as Dr. Hyde's valuable manuscripts were suffered to be dispersed; and were probably destroyed.

During half a century from the appearance of Dr. Bassege, Hyde's history, the question respecting Zoroaster seems generally to have been left exactly where the researches and arguments of that learned writer had placed it; except that James Bassege, in "L'Histoire des Juifs," 1716 (b. iv. ch. xii. a. 13), had considered his Arabian and Persian authors as too modern to discover to us the religion of the ancient Persians. It was not till 1765 that there arose in a neighbouring kingdom a desire to investigate at their source the literary and theological antiquities of Persia. The late M. Anquetil du Perrou, oriental interpreter to the king of France, and member of the Academy of Inscriptions, undertook a voyage into the east for this express purpose. He occupied eighteen years in this pursuit, and at length brought before the public the result of his labours, in three large quarto volumes, containing, with a life of Zoroaster and his own remarks, a French translation of the manuscripts he had procured, and which he had deposited in the royal library at Paris. Referring to this publication, Sir John Shore (Lord Teignmouth) says of Sir W. Jones, in the *Discours* prefixed aouth to the first volume of his works, "The vanity and puerility of Anquetil du Perrou, with his illiberal reflections on some of the learned members of the university of Oxford, extorted from him a letter, in the French language, which has been admired for accurate criticism, just satire, and elegant composition." This juvenile production of the accomplished writer, which first appeared in 1771, and which we had occasion to quote (p. 343), has never been translated. It forms the concluding article of his works (vol. iv), and we now refer to it and to his Dissertation written in 1789, to ascertain

Sir W.
Jones.

the judgment of one so competent to give an opinion respecting the authenticity and value of the writings thus attributed to Zoroaster.

In his *Lettre* (p. 585), the writer speaks to the following purport. The curiosity of the public, and of the learned, respecting Zoroaster, had ceased, on seeing some fragments of his supposed writings, in the *Sadder* and other books, written in Persian by the magi. There were also already many treatises attributed to Zoroaster, or Zaratust, translated into modern Persian: these contained that legislator's supposed conferences with Ormuzd, prayers, dogmas, and sacred laws. Some learned men, who had read those translations, maintained that the originals were of the highest antiquity, because they contained many dull passages, mistakes, and contradictions; but we conclude, for the very same reasons, that they are quite modern, or, at least, that they are not the productions of a man of genius, and a philosopher, such as Zoroaster is described by historians. At p. 596, speaking of the late Arabic Professor, Dr. Hunt, and his supposed acquaintance with the ancient languages of Persia, he says, he is persuaded, as well as we are, that no one does, or ever will know them, at least, that all those histories, poems, and religious writings are irretrievably lost which the Caliph Omar and his generals so furiously destroyed. At p. 605, the letter writer quotes a specimen of the first supposed work of Zoroaster, from the French publication, describing it as a tedious liturgy, connected with absurd ceremonies, the undoubted rhapsody of some modern Guebre. At p. 607, &c. are extracts from the *Pazend*, on the qualities of the dog, described as an absurd rhapsody unworthy of a philosophic legislator. Upon the whole, the letter writer concludes (p. 609) that Zoroaster would have been destitute of common understanding, had he really written what M. Anquetil has ascribed to him.

Sir W.
Jones's Dis-
sertation.

From Sir W. Jones's Dissertation, written in 1789, it does not appear that he had materially altered his opinion as to the supposed writings of Zoroaster, translated by M. Anquetil. Of the translator, however, he speaks (p. 190) as of one "who had the merit of undertaking a voyage to India, in his earliest youth, with no other view than to recover the writings of Zaratust, and who would have acquired a brilliant reputation in France, if he had not sullied it by his immoderate vanity and virulence of temper, which alienated the good-will even of his own countrymen."

Mr. Rich-
ardson.

Mr. Richardson, who also criticised these supposed writings of Zoroaster, says in the Dissertation already quoted (p. 343), speaking of Zoroaster (p. 12), as represented by Hyde, "those fragments of his supposed works which the learned Doctor has given us, under the title of the *Sadder*, are the wretched rhymes of a modern *parsi destour* (priest), who lived about three centuries ago: from that work we cannot then have any thing authentic of the genius of the lawgiver; whilst the publications of M. Anquetil du Perron carry palpable marks of the total or partial fabrication of modern times, and give great weight to the opinion of Sir John Chardin: that the old dialect of Persia (excepting what remains in the present language) is lost; and that apparently no books now exist in it."

Mr. Richardson proceeds to sustain his opinion, by remarks on the language of M. Anquetil's *Zendavesta*,

and then offers, as a last reason, the "uncommon stupidity of the work itself." He adds, "the Zaratust of Persia, or the Zoroaster of the Greeks, was highly celebrated by the most discerning people of ancient times; and his tenets, we are told, were most eagerly embraced by the highest in rank, and the wisest men of the Persian empire. But could his success have possibly been so remarkable, had his religion breathed only the most jejune puerilities; without one ray of genius to rescue it from contempt, without a sentiment that could elevate the soul, or give one dignified idea of Omnipotence." He gives, as an instance, a passage in the *Vendidad Sade*, where "Ormuzd (Omnipotence) and Zoroaster are introduced in dialogue. The lawgiver wishes to know how a man should get rid of a demon called Daroudj Neosoch, supposing him, in the shape of a fly, to have taken possession of the crown of his head. Ormuzd directs him to wash the part, which would drive the fiend between the eye-brows; from thence he is to be forced, by another solution, to the back of the head; from that to the ear, then to the nose, the mouth, the chin; till at length we find him stationed on the left foot." Mr. Richardson gives the sequel of this dialogue, which is in the same strain, quoting the French of M. Anquetil (vol. i. pt. ii. p. 341) with his own English translation, and justly concludes, "can human credulity suppose this to be the composition of Zoroaster, or of any man who had pretensions to common sense?"

Mr. Richardson further says (p. 25), on considering the effects of the Mahometan conquest, by the victory of Kaddesia, in 636, "that the original works of the Persian lawgiver have long ago fallen a sacrifice to the ravages of time, and of conquest; that the publications of M. Anquetil have no pretensions to authenticity; and that nothing now remains, bearing the names of those celebrated books, but the absurd ceremonials of the modern Guebres." He adds, that "the Persia of Guzerat even acknowledge, that so far from now professing the ancient books of Zoroaster, they have not so much as one single copy saved by their ancestors from the general wreck in the seventh century."

To these objections of oriental scholars, so conver-
sant with these subjects, we are not aware that there has been any reply. M. De Pastoret, a member of the same academy with M. Anquetil du Perron, in the work which we have more than once quoted, and which was crowned by the Academy of Belles Lettres, in 1786, has entirely declined, or, perhaps, would not venture, to notice the objections raised against the work of his associate. He continually quotes M. Anquetil du Perron's *Zendavesta*, and even (p. 91) relates the rhapsody of the dog, as if no doubts had ever been entertained respecting these supposed writings of Zoroaster.

It is still more surprising that Sir John Malcolm, in his late splendid and interesting "History of Persia," should have been equally silent on this subject. In his seventh chapter "On the religion, &c. of the inhabitants of Persia, before the Mohammedan conquest" (p. 181), he pays a deserved respect to the opinions of Sir W. Jones, on the authenticity of the *Dabistan*, yet (p. 193) he quotes the *Zendavesta*, which "Anquetil du Perron has translated," as "certainly the most authentic source from which we can

Plutarch.

derive information upon the religion of Zoroaster," as if it had never been described as a modern compilation.

Having now mentioned, as the subject required, the critical doubts which may be fairly indulged as to those writings which learned moderns have attributed to Zoroaster, we proceed to state what has been related by the ancients respecting the works of the Persian prophet; or rather to gather up the very few fragments of early opinions on this subject which have escaped the ravages of time. Piny, whom we have before quoted, says that Zoroaster composed two millions of verses, which were explained by Hermippus. According to the Arabian writers, Zoroaster delivered a book to the magi, consisting of twelve volumes, each of which consisted of the entire hide of a bull; these immense rolls have been attributed to the large size of the Persian characters. According to Suidas, there were books by Zoroaster upon Gemes, on Astronomical Predictions, and four books concerning Nature.

Among the small remains now found in the writings of the Greeks, respecting the works and opinions of Zoroaster, the largest is a passage by Plutarch, to which we have already referred for his extravagant computation of the time of Zoroaster. In his life of Numa, he has named with that king the lawgivers Minos, Zoroaster, and Lycurgus; but in his and Osnis, he professes to describe the leading doctrines of Zoroaster the magus, though he certainly lived long enough after the time of Zoroaster to misunderstand his system. He says, however, that of his two principles, that magus, called Oromazes the good one, God, and Arimanus the evil one, Demon, the first resembling light, and the other, darkness; and that Mithras, or the Sun, was placed between them. He adds, that Zoroaster first taught men to make vows, and offer thanks to the one, and avert, by sacrifice, the displeasure of the other.

Plutarch next attributes to Zoroaster the origin of the following strange ceremony. They beat a certain plant called homoni in a mortar, and call up Pluto and the Dark; and then mix it with the blood of a sacrificed wolf, and convey it to a place where the sun never shines, and there cast it away. He then describes, as the opinions of Zoroaster's disciples, which they had learned from their master, that of plants, some opportunist to the good God, and others to the evil Demon; and also of animals: dogs and fowls belonging to the good, and water animals to the bad; for which reason they esteem him happy who destroys them. That Oromazes springing from pure light, and Arimanus from thick darkness, they are at perpetual war. That Oromazes made six gods the authors of benevolence, truth, justice, wisdom, wealth, and the conscious pleasure of doing good; and that Arimanus made the same number, with contrary qualities, to oppose them. That, after this, Oromazes, having first trebled his own magnitude, mounted up as far above the sun, as the sun is above the earth, and so bespangled the heavens with stars; but one star, called Sirius, he set as a sentinel before all the rest. That, after he had made twenty-four gods more, he placed them all in an egg-shell; but those which were made by Arimanus, being of the same number, breaking a hole in the egg-shell, bad things were blended with good. But the time is approaching, when Arimanus, who by means of these evil gods, brings upon the earth

plagues and famines, must be himself utterly destroyed; when the earth, become a plain, there will be one life, and one happy society of mankind, of a common speech.

This narration is neither very intelligible nor interesting; but it may serve to show how the opinions of Zoroaster were described in the first century of the Christian era. The account is closed by Plutarch, with a reference to the authority of Theopompus, a disciple of Socrates, who flourished five hundred years earlier than himself. Theopompus affirms that, according to the magi, each of these gods subdues, and is subdued by turns, for three thousand years; and that for three thousand years more, they fight to destroy each other's works, but that at length Pluto shall be subdued, and mankind shall be happy, and neither need food, nor yield a shadow. And that the god who projects these things, doth for some time take his repose; but yet this time is not much to him, although it seems so to man, whose sleep is but short. Such, concludes Plutarch, is the mythology of the magi.

The following fragment has been translated from Eusebius. Eusebius, who professes to find it in a collection of physics attributed to Zoroaster, probably the four books concerning Nature, before mentioned on the authority of Suidas. "God is the first, incorruptible, eternal, unbegotten, indivisible, most like himself, the charioteer of every good, one that cannot be bribed, the best of things good, the wisest of things wise. He is, moreover, the father of equity and justice, self-taught, self-existent, infinitely perfect, omniscient, and the sole ruler of nature." Besides these fragments, one from Eubulus, quoted by Porphyry, and some scattered passages in Platonic authors, there appear to be no remains of Zoroaster, except in the writings of the East, and the institutions which have in some degree continued to our times. To these subjects we must now confine our attention.

Sir W. Jones says, that Zoroaster "reformed the old religion by the addition of genii, or angels, presiding over months and days; of new ceremonies, in the veneration shown to fire, of a new work, which he pretended to have received from heaven; and above all, by establishing the actual adoration of one Supreme Being." He had in his service, "as a Persian reader, a learned follower of Zerdasht, who died at Calcutta, and is described (Diss. i. p. 201) as "a pure theist," who "strongly disclaimed any adoration of the fire or other elements: he denied that the doctrine of two coeval principles, supremely good, and supremely bad, formed any part of his faith."

Yet, if the writings ascribed by the modern Persians to Zoroaster do justice to his opinions, he considered the events of the world as produced by the jarring influence of opposite principles, each with the power of creation. But that the Source of good alone, the great Ormuzd, was eternal, and must, at last, prevail, after a war of twelve thousand years. Light was the type of the good, darkness of the evil spirit. "Hence," says Sir John Malcolm (i. p. 194), "the disciple of that prophet, when he performs his devotions in a temple, turns towards the sacred fire that burns upon its altar; and when in the open air, towards the sun, as the noblest of all lights, and that by which God sheds his divine influence over the whole earth, and perpetuates the works of his creation." Zoroaster is,

Theopompus.

Biography. said to have described the Deity by a term which signifies boundless time; and to have represented him as first creating water, light, and fire; and then from fire and water combined the god, or principal Ormazd. How Arimanius was created, does not appear.

According to Zoroaster, says Beausobre (*Hist. des Manich.*, p. 164), God who is self-existent, before all ages, formed the world, of pure and happy spirits, the same as the monks of the Manichæes, the intelligences of Plato, and the angels of the Jews and Christians. Three thousand years after that first work, God sent his will, under the form of a glorious light, and which appeared in the figure of a man, accompanied by seventy of the most honourable of the angels; then were formed the sun, the moon, the stars, and men.

Beausobre.

Three thousand years after, evil appeared, when God formed this lower world, bounded by the vortex of the moon, where the empire of evil and matter ceased. The magi thought matter animated, and having the power of producing from itself an infinity of beings, partaking of the imperfections of the cause which produced them. This matter lay in the lowest region.

Original bull.

From several of the books attributed to Zoroaster, M. De Pastoret describes (p. 23) his notion of an original bull (un premier taureau), from which animals, vegetables, and the human race have sprung; the latter from his legs (de sa jambe). The description of the resurrection, ascribed to him (p. 26) from the Béhémédesch, we cannot venture to translate. It is indigently minute. One opinion, however, is, that it will occupy fifty-seven years, during which all the dead shall be raised; their souls first, and afterwards their bodies, in the same manner as they were first united.

Resurrection.

When this account closes with the solemn declaration that "chacun verra le bien ou le mal qu'il aura fait" (every one shall behold the good or evil he has done), we cannot help suspecting that the works attributed to Zoroaster have been interpolated from the Christian scriptures. For the veneration paid to fire, and the other elements—the character and influence of the magi—the peculiarities of the religious and civil institutions ascribed to Zoroaster—the encouragements of marriage—the system of morals, and the penal sanctions, for these we must refer especially to the Zoroaster of M. de Pastoret, which probably contains the fullest information on this curious subject, to be found within a moderate compass, in any modern language. We remark further, that this learned academician in his comparisons, gives Zoroaster the superiority over Confucius and Mahomet as a legislator; but makes him yield to Confucius as a moralist, and to Mahomet as the founder of a religion.

Pastoret's comparisons.

Those who estimate highly the merit of Zoroaster, under the latter description, have supposed that the system he established was presently corrupted, and that it is ill represented by the present Guebres. Herbelot, as quoted by Lardner (*Works*, iii. p. 421), relates, after the "eastern authors," that Mani, who is said to have lived in the third century, "having gained some esteem, began to gather together a number of disciples, who opposed the worship and ceremonies of the religion of Zoroaster, which the Persians professed at that time." How that religion was professed in Persia, in the century preceding the Mahomedan conquest, and with what singular customs it was connected, we learn from the *Bibliotheca Literaria* (No. ix. p. 22), published

in 1724, by Mr. Wasse, where is "an Historical Account of some part of the Emperor Justinian's Life, abridged from the Greek," by the learned editor himself. Speaking of Mermerces, a Persian general, who, A. D. 552, carried on the war of Chosroes against Justinian, the historian (p. 40), thus writes:

"He died at Mechiasta, a city of Iberia, where his body was entombed in wild beasts and fowls of the air, according to the custom of Persia. And it was an honour that they waited for his death, for in lesser men that labour under any distemper in the army, supposed to be incurable, the way is to expose the patient in the open fields, a prey to ravens and vultures; only they set bread and water by him, and leave a staff in his hand, that he may defend himself; but the sooner he is devoured, the greater opinion do they conceive of his virtue. If he happen to recover, then he is abhorred of all; and his own relations will not suffer him to come near them, till the magi, by some particular ceremonies, expiate the sin of recovery, atone for his return to life, and restore him to this world."

"This practice," adds the historian, "is the more remarkable, because all the adjacent countries use either urn-burial, or deposit the body entire in tombs and coffins as we do; but the Persians have laid aside their ancient usages, and embraced those of Zoroaster, or as they call him, Zarades, the son of Oromasda, who lived in the time of Hystaspes; but which of that name and family is now unknown. At present, they are generally Manichæes, and worship two independent principles, the first of which, Hormisdates, is, according to their notions, author of all good, as the second is of evil; him they style Arimanius. The greatest festival they celebrate is called, in honour of the former, *Avân-pour Kaûr*, the destruction of evil; in this they kill a great number of serpents and wild beasts, and bring them to the magi, as a token of their piety."

About a century after the date of this description, many of those who professed to maintain the religion of Zoroaster quitted Persia, on the Mahomedan conquest, and settled about Surat, in the East Indies; there, Sir Thomas Herbert, in 1632, found their descendants. He has described their opinions and customs (Harris, i. p. 414), and evidently considered them as worshippers of fire, in the pyres, or fire-temples, which had escaped the rage of persecution. Thus, Tavernier also, who travelled in 1673, esteemed the Gurs, or Guebres, whom he found in the province of Kerman, though, according to Hyde (p. 111), they resented the imputation. He adds, a conversation which a friend, by his desire, had held with their priests. He asked whether, in their worship, they addressed their prayers directly to the fire. He answered never, but always to Almighty God. But, as Mr. Farmer remarks (*Worship of Hum. Spir.*, p. 57), "the remains of the ancient Persians, in different parts of the east, are under peculiar temptations to represent their worship as consistent with the divine unity, because the Mahomedans, though indulgent to all other religions, detest, and persecute idolaters, and the worshippers of fire." For this opinion, he quotes Sir W. Jones, who adds, "Si quelques familles de ces malheureux trouvoient le moyen de se retirer dans L'Inde, ils ne pourroient conserver que quelques traditions imparfaites au sujet de leurs anciennes loix."

CONFUCIUS.

—
FLOURISHED ABOUT A. M. 3454. A. C. 550.

Biography.

A. M.
3454.
—
A. C.
550.

CONFUCIUS is the name by which the great Chinese philosopher *Confu-tsi* has been so long known in European literature, that it might savour of affectation were we not to employ it in relating what is known of the life and doctrines of this celebrated man. It appears that he was born at *Chen-Ping*, about the year A. C. 550. To those who have credulously believed in the extreme antiquity of the Chinese empire, and in the great progress which its inhabitants had made in art, science, and literature, above two thousand years earlier, it cannot but appear remarkable that no monuments remain of any extraordinarily eminent person before the time of *Confucius*; and this surprise must be greatly augmented, when we come to consider the very meagre productions extant as the foundations of his celebrity. A little reflection on the probable state of China at the period when *Confucius* lived, will, however, serve to remove any surprise that may be entertained on either of these accounts. It has been shown in our *Introductory Chapter on History*, that the Chinese originally consisted of wandering tribes, which, having been induced to settle on the fertile banks of some great river, probably the *Huang-Ho*, had there become agricultural, and consequently populous, had grown formidable by union, gradually enlarged their dominion, acquired the rudiments of letters and arts sufficient to reduce their savage neighbours to their power, and at length, about six or eight hundred years before the Christian era, had become united under a regular government, with laws similar, perhaps, in rudeness and brevity, to the fragments which have come down to us of the laws of *Numa Pompilius* and of the twelve tables. Even these circumstances are sufficiently curious, if they took place, as there is great reason to believe they did, without the intervention of foreign conquerors, or of a class of priests or philosophers from foreign countries. In those parts of the world where civilization has been undoubtedly of the longest continuance, we find traces of continual intercourse between the different races and nations. War and commerce have been the handmaids of philosophy and religion.

No traces of
intercourse
with other
nations.

*Græcia capta feram victorem cepit, et artes
Involuit agresti Latine—*

and in more modern times, a connection originally begun with the coasts of Africa, for the abominable purpose of trafficking in the persons of the natives, has ended in the establishment of a society for the express purpose of liberating their bodies from oppression, and their minds from ignorance and heathenism. But hitherto the progress of the Chinese has been wholly their own. They have received nothing from their neighbours but a superstition which they despise, and confine to the lowest classes of their people; and though, at various periods, since the beginning of the fifteenth century, some of their emperors and great men have shown a

VOL. IX.

disposition to listen to the truths of Christianity, they have generally fallen back to the narrow and exclusive policy of discouraging all foreign intercourse, a policy which, as it originated in an unfounded self-conceit, so it must perpetuate error, and lead to ultimate degradation.

In the time of *Confucius*, this policy either did not exist, or, if it existed, was not, in appearance, very blamable; for the Chinese could have no knowledge of any other nations, who were not far from their interiors in all kinds of useful information. Of the great empires which then existed in the more western parts of the world, they were totally ignorant; they could not even imagine that such regions existed; for they knew not the form of the earth, and had not the means of exploring the paths of the ocean. They seemed to themselves to live in the centre of light and intellect, surrounded on all sides by mere barbarians and savages, to whom they might communicate instruction, but could learn nothing from them; and whom they had no occasion to fear, but might, at their leisure, subdue and render tributary.

We are not, however, to suppose that their superiority over their neighbours in all the arts of peace and war, was so great as the expressions of even their best writers, when rendered into the European languages would give us room to believe; and the reason for this is well explained by *M. De Guignes*. "One of the causes," says he, "which have led the Chinese into great errors with regard to the ancient state of their country, is the having given to their ancient characters the acceptance which they did not acquire till later times. The characters which are now translated by the words *emperor, province, city, and palace*, meant no more in former times than *chief of a tribe, district, camp, and house*; but these simple meanings flattered the vanity of the Chinese very little, and they therefore preferred employing terms which might represent their ancestors as rich, powerful, and instructed in the arts; and their empire as vast and flourishing in the very first moments of its foundation. It is necessary, therefore, to distrust all these new denominations, and never to pronounce on their accuracy without having first carefully consulted the original text."

It is to be observed, that the earliest books now extant in China, are themselves of very doubtful antiquity, and that the earliest date which can be assigned to any of them, is not prior to the year A. C. 250. Those which pretend to an earlier composition, and particularly the works attributed to *Confucius* himself, have undoubtedly undergone great interpolation. Nevertheless, these are the works on which we are expected to rely for the early history of China, for at least two thousand seven hundred years before they were written! The most reasonable exposition of the Chinese chronicles, fixes the reign of *Fo-Hi*, two thousand nine hundred

and fifty-three years before Christ; but almost every incident which is recorded between that time and the age of Confucius, proves the absolute state of barbarism from which the Chinese had but just emerged at the latter period. *Fe-Hi*, it is said, taught the arts of hunting and fishing: in other words, the time in which this imaginary person lived, was when the Chinese, or the most civilized of their tribes lived in the hunter state, as the North American Indians do now. *Shang-Nong*, one hundred and twenty years afterwards, established fairs and markets; thus we pass rapidly over the shepherd state, and come down to that of agriculture and commerce. *Wang-Ti*, two hundred years later, invented bells, boats, chariots, gowns, and caps: that is to say, men lived in towns, and adopted the customs common in that stage of society. That even this progress is too rapid, is manifest, because we find the Chinese historians describing the state of the country under Yao, three hundred and forty years subsequently, in the following terms: "The country presented only a desert, and the men were half savages. The empire was not yet formed; the lowlands were covered with stagnant water, the remains of inundation; those parts which were not still submerged, were covered with trees and bushes, and had become the haunt of innumerable wild beasts. Yao set fire to the forests, in order to clean the ground and to dislodge the fierce animals: he dug canals to drain off the water into the rivers, and so convey it to the sea. Chinn was at this period only a residence for serpents and dragons; the men who inhabited it had no fixed dwelling-places, but were compelled to shelter themselves on trees when in the low country, and in caves when they were among the mountains." Such are the terms in which *Meng-tse*, a Chinese philosopher, describes the state of his country, at a period many centuries subsequent to the time, when, according to some authors, it was a flourishing, populous, and refined empire!

There is so total a confusion in the dates of the early Chinese history, that some writers have supposed *Fe-Hi* to be identical with *Noah*, while others have imagined Yao to be that patriarch. There was a deluge in the time of Noah, and there was an inundation in the time of Yao; and the terms which have been used by some of the Chinese historians, as descriptive of the latter event, have been either so much exaggerated originally, or so much misunderstood by subsequent expositors, as to be supposed applicable to a general submersion of the surface of the whole earth beneath the waters. De Guignes, however, has completely demonstrated the absurdity of this application, and has shown that the original terms convey no other idea than that of the overflowing of some great river, occasioned by the fall of a rock, which blocked up its course, or by some convulsion which turned the stream from its usual channel.

In order to produce an impression that the empire of China was of vast extent in the time of Yao, it is stated that he divided it into nine *cheu*. "Every one of these *cheu*," says De Halde, "consisted of ten *shu*, every *shu* of ten *tu*, every *tu* contained ten towns, every town five streets, every street three *ho-ki*, every *ho-ki* three *ling*, every *ling* nine *king*, every *king* a hundred *mu*, and every *mu* contained 240 paces in length, and one in breadth." This continual subdivision of land, as it is a thing utterly impracticable in point of fact, so

the assertion of its existence only proves the account to be wholly imaginary. The word *cheu* is explained somewhat differently, in a Chinese dictionary named *Tching-te-tong*, according to which, it signifies 500 houses or families, so that the great empire of Yao would be reduced to 4,500 families; and as it is admitted that families in China do not average more than four souls each, the population of this mighty empire would be reduced to 18,000 persons! Dr. GUIGUES, however, has explained the matter satisfactorily. The word *cheu*, according to him, signifies an island, or tract of habitable land, surrounded by water; and it so happened, that in the territory governed by Yao, there were nine of these districts, which that monarch drained, or protected by dikes against future inundation. Father Ko, the missionary, contends that these works of the emperor, or chieftain Yao, were very limited in extent, and that he ruled over a very narrow territory. Above eight hundred years after their erection, according to the Chinese annals (viz. a. c. 1401), we read of an emperor proposing to his subjects to abandon their dwellings and remove to another situation, "according to the custom of their ancestors." This fact could only have happened in a state of society when men had, within living memory, quitted the hunter or shepherd state, and betaken themselves to agriculture. If in their new employment they happened to meet with some great inconveniences, arising either from the fault of the seasons or of their own ignorance, they might in a moment of vexation propose to recur to their old wandering way of life; but to suppose that a great emperor, residing in a magnificent palace, and ruling over a number of large cities, should gravely recommend to his subjects such a step, is to suppose that his imperial majesty had already taken leave of his senses. Sixty-nine years after this curious proposal, however, we find another emperor actually abandoning his palace to go and live at the foot of a wild mountain. Again, two hundred and twenty-four years later, we find *Tchou-Kong*, the brother of the emperor *Fou-Fong*, going to fix upon the site of a new town, which is built in five days! Nothing can more manifestly prove that the towns of China in those days were like those of our British ancestors in the time of Julius Caesar, or like those of the Hottentots in the present day, surrounded, perhaps, by a ditch or some rude kind of defence against savage beasts, or men no less savage.

If we look at the more minute pictures which the historians give of the modes of living in these early ages, we shall find them all pointing to the same result. The Emperor Yao is described as inhabiting a mere cabin, the roof of which was covered with thick mud and earth; and the rain made the grass grow upon it. The only entrance was by a door fronting the south, and admitting visitors into a large walled court, which served as a hall of audience, and also as a sort of market-place. At the opposite end stood a sort of shed, where the weights and measures for the market were kept; beyond this there was another open court and last of all, the humble dwelling of the emperor raised a little above the level of the ground: the steps leading to it were simply made of turf, and bordered with a row of trees to shelter his imperial majesty and his courtiers from the heat of the noon-day sun, whilst they discussed and settled the great affairs of state.

The Shu-
King.

The emperor's subjects lived still more simply than their sovereign. Some of them dwelt on the tops of the mountains, and others lived in caves. The habits of life of their great men, as described in the *Shu-king*, reputed a work of almost sacred antiquity, are at least as rustic as those which we find in the *Odyssey*. *Heou-tai*, who is regarded as the founder of the *Tcheou* dynasty, appears to have been employed, like another Cincinnatus, at the plough, and in all the most fatiguing exercises of husbandry. For his services as director of agriculture to the Emperor *Yao* (which services, as they are described, were pretty much the same as those of a modern farm-buff), he was rewarded with permission to occupy the district of *Pia*, a tract of land in the province of *Sara-si*, about seven leagues square, possessed by some tartars, who lived by feeding hogs on the mountains. It is hardly possible to read the account given of *Heou-tai*, and not to call to mind *Eumæus*, the faithful feeder of hogs to King Ulysses, whom Homer calls *ἄρκαρ' ἄρκαρ' ἄρκαρ'*, "the noble swineherd," and *ἄρκαρ' ἄρκαρ'*, "a prince of men," and whose great merit consisted in having built, by his own labour, a spacious sty, in which he kept six hundred sows. It appears, too, that in the time of our Saxon ancestors, the king's *stye-ward* was a very important personage, whose office being afterwards pronounced *steward*, gave name to the royal family of *Stewart* which so long possessed the Scottish and English thrones. A similar circumstance occurred in China; for the descendants of the *stye-ward*, *Heou-tai* continuing in possession of their little territory of *Pia*, and possibly adding to it some adjoining lands, were, at length, powerful enough to wage war against the emperors of the *Chang* dynasty, to overcome them, and found a dynasty of their own, named *Tcheou*, or *Chou*, which is said to have lasted for eight hundred and seventy-six years; viz. from the year b. c. 1122 to the year a. c. 246.

General
consistency
of the
Chinese
chronology.

In referring to these dates, we would not have it understood that we think them at all to be relied on, and still less those of an earlier period. The writers who proceed on the idle assumption of a Chinese empire, founded immediately after the confusion of languages, suppose *Fo-Hi* to be Noah, and leave his pretended successors, *Shang-Nong* and *W'ang-Ti*, to be accounted for as may be thought most agreeable. This brings them down to the Emperors *Yao* and *Shun*, whom they chuse to pitch upon as leaders of the wondrous colonies which marched direct from the plains of Senaar to the banks of the Yellow river, and there found themselves at once sovereigns of a mighty empire. From the time of Shun, the empire, say they, ceased to be elective, and then began the hereditary dynasties, of which the first was that of the *Hia*, which began either in the year a. c. 2207, or 2198, or 2025; for a century or two is of no great moment in such matters; it, however lasted till the year a. c. 1767, when it was succeeded by that of the *Chang*, which reigned six hundred and forty-four years uninterruptedly, and then gave way to the dynasty of *Chou*, which continued eight hundred and seventy-six years, and under which Confucius was born. It is not very probable, that the first one thousand nine hundred and sixty-one years of this hereditary monarchy should have produced only three dynasties, and the next two thousand and sixty-four to the present time, no less than nineteen; and if this account has not probability to recommend it, has cer-

tainly very little else. It is said to be established by the Chinese annals confirmed by astronomical observation. Let us inquire into these facts. First, what are the Chinese annals? Certain books printed on paper, of no very durable substance. It is not pretended that any of the books actually existing are of very great age, probably not more than two or three centuries at the very utmost. It is suggested, however, that they have been copied from more ancient editions on silk; but none of these silk books exist, or are positively known to have ever existed. Again, it is said that prior to the reign of *Yen-Ti*, who died in the year a. c. 157, the Chinese wrote with pointed iron styles, on the leaves and bark of trees. Whether they did so in the time of *Yen-Ti*, we have no very satisfactory means of knowing, but that they did, before the invention of paper, is very probable; for some of the oriental nations do to this day, and manuscripts of this kind are to be found in the Bodleian and other public libraries in Europe. We are not, indeed, aware that any Chinese books so written are extant; but we may reasonably conclude, that they were the originals from which the most ancient of the present histories were with more or less fidelity copied. At what period either paper or printing was first introduced into China, it would be utterly in vain to inquire. Respectable writers have supposed that both these events occurred before the Christian era: we confess that we should place them nearly a thousand years later; but the whole subject is very much in the dark, and it is not on such data as these, that the authenticity or correctness of the Chinese annals can be at all ascertained. Father Trigault, one of the first Christian missionaries to China, and who wrote A. D. 1615, affirms that the Chinese cannot produce proof of any edition having existed before A. D. 1100. Some of the Chinese historians admit that printing was not practised till the reign of *Ming-Tsang*, about A. D. 926. The art, as still practised in that country, is very far inferior to the ingenious invention of Fust and Scheffer, to which we owe the present productions of our press. It is a mere stamp, such as was used by the Romans to mark their wine casks, and for many similar purposes, and was probably adopted by the Chinese from the Indian mode of stamping cottons. If neither the paper nor the printing will help to ascertain the antiquity of any given work, will the form of the characters, or the dialect in which it is written? As to the form of the characters, all that can be said is, that some are certainly more ancient than others. There are at present thirty-two different hands or types in which literary works are written or printed in China; and some of these are so much more rude and simple than the others, and approach so nearly toward picture writing, that we cannot well be mistaken in attributing to them considerable antiquity; but their exact age, it must be very difficult to determine, since there are no ancient inscriptions on brass or marble, no coins or medals, no writing, in short, of undoubted antiquity, with which they may be compared. The spoken language, it is well known, has no connection of sound with the written language; and besides, the spoken dialects of the different provinces vary extremely, nor can any one, except the court dialect, be understood all over the kingdom, and that only by the literary class. The whole proof of the age of these annals, therefore, must arise from the style of their composition, or the subjects of which they treat. As to

style. Mr. Marshman, the latest and one of the best critics in Chinese literature, states, that on comparing a collection of the discourses attributed to Confucius, with two commentaries on them, the one published fifteen hundred years after the supposed date of his death, and the other much later, the only difference he could discover between them and the original, consisted in the former being rather less concise. Now this may have happened, from the language having been written and spoken for more than two thousand years without undergoing any material change; but it is certainly much more likely to have happened, either from successive corruptions of the original text of the books attributed to Confucius, or from absolute fabrication of works in his name. It only remains, then, to determine the age of these writings, by the subjects of which they treat.

Of these, the most important for ascertaining the real dates of events, are undoubtedly the astronomical phenomena which happen to be recorded, and particularly the eclipses. It was for some time contended, that the Chinese had observed an eclipse in the reign of *Chang-Heng*, a. c. 2169; but this has been for some time given up; for it appears, that the supposed record mentions neither the year nor the month of the event; nor is it very clear whether the word which is rendered an eclipse, has any such meaning. The *Chou-tseu*, an historical work, attributed to Confucius, does, indeed, mark the eclipses with some degree of regularity; but that work only begins in the year a. c. 722, prior to which time the author himself confesses that there is no certainty in the Chinese history; and, moreover, on examining the work carefully, it appears, that three eclipses are mentioned which never occurred at all, and two, which though they really took place, could not be seen in China. The natural inferences to be drawn from this fact are the same as before, viz. that the text has been either interpolated, or forged. This work, however, bears the venerable name of *Confucius*, and the next great historian to him is *Se-ma-tseu*, to whom we may judge what credit is due, when we find him attributing to the empire of *Huang-Ti* (a. c. 2637), on extent and a splendour almost beyond conception, and certainly beyond what it at any time, ancient or modern, ever attained. And how should *Se-ma-tseu* have known the fact, if it had been true? Confucius, in the sixth century before Christ, could not go back more than two centuries before his own time with any confidence; three centuries after Confucius, all the books, or, to speak more properly, all the bundles of inscribed wood which served for books, are said to have been burnt by a certain wicked emperor, named *Shi-Huang-Ti*, and two centuries later *Se-ma-tseu* collected their ashes, out of which history, like another phoenix, arose in new brilliancy and beauty!

It is not to be denied that the Chinese are an ancient people; but the proofs are not to be found in their miserable annals; the best proofs are the *ignorance* and *corruption* which they exhibited five centuries and a half ago, when they were first visited by Europeans, and which they retain to this day with little variation.

In pursuing the history of such a people, we fall unavoidably into anachronism at every step. We trace their fables backward into perfect night; and even from the time of their most celebrated sage, by whose name we have designated this article, the path is by no means clear; his name seems the only land-mark in

the early records of this empire upon whose existence and general pretensions all historians are agreed, and it is a name which occupies a vast moral space in its history; but in estimating his merits as a moralist and philosopher, we must apologize once for all to the reader, not only for occasionally travelling to remoter ages to illustrate the existing situation of his country at the period of his birth, but for many allusions to the effect and extent of his influence upon the minds of this singular people to the present day. There is no other method of doing justice to our subject.

Every thing leads us to believe that the first Chinese came from the heights of Tartary, and established themselves in the modern province of Szechuan, on the banks of the different streams which fall into the *Huang-Ho*, or Yellow River, where a rich alluvial soil tempted them to abandon the pastoral for the agricultural state. In this manner, various tribes seem to have formed different kingdoms, which gradually coalesced into larger empires; but *Kathai* and *Manj*, that is, northern and southern China were not united till the time of *Kohai Kise* (a. n. 1279). The traces of the Tartarian origin of the Chinese are very discernible. The most remarkable is the imperial symbol, a dragon. Of the notion of this fabulous animal, it would, perhaps, be difficult to discover the origin. Perhaps it originated in the crocodile, which is found in some of the Chinese rivers, as well as in those of India. When Indian superstition peopled the sky with monsters, the great dragon of the waters, perhaps, received his wings, as fit appendages for an inhabitant of those airy regions. Be this as it may, the dragon was certainly a Scythian, that is, Tartarian symbol in the earliest ages. It became the standard of the ancient Persians, and probably from them, by various descents, gave the name to our present *dragons*. The Scythians had a superstitious veneration for the number *nine*; so have the Chinese. The reason of this seems to be, that their notions of number are derived from a very barbarous age in which men counted by *threes*. On examining the numerals of different savage nations, it seems that some count only by threes, others by fives, and the most ingenious by tens. The Chinese architecture, such as it is, is manifestly taken from the erection of tents; and the opening of all the great palaces is to the south, as was the custom of the Tartars with their tents. It seems probable, however, that the Chinese separated from the Tartarian stock before the latter had received the division of time into weeks, which division, among the idolatrous nations, was uniformly combined with the worship of the planets, or their presiding divinities. The Chinese, it appears, never worshipped the separate planets, nor ever used the hebdomadal division of time.

If any government was ever founded on parental authority, it must have been the Chinese, for the emperor seems to unite in his person the respect due to a father and to a sovereign. It is not possible to say how far this principle may have gone in early times; but it is more probable that the king or emperor was originally a sort of elective magistrate, to whom was confided the chief direction, not only of the military and civil, but also of the religious affairs. Possibly the customs of different tribes in China were originally different in this respect. It is said that there are some traces in the early Chinese history of a high priest

called *Tai-Chi-tsing*, and also of an established priest-hood. It is indeed difficult to conceive a nation emerging from barbarism without such a body, and therefore we may believe them to have existed in China, and to have lost their power, which left to the civil magistrates the exclusive direction of religious affairs, or rather of religious ceremonies. If any such conclusion took place, all memory of it is lost in the night of time. It would seem that in the time of Confucius, who certainly flourished under the *Chou* dynasty, the government had long been an hereditary monarchy, and that the literary class to which he belonged, had been placed under legal regulation and entrusted with the chief civil offices in the state; both which circumstances imply a considerable progress in civilization, when compared with what we have already observed of the previous state of manners. The arts, however, were still in their infancy, which the remarks of De Guignes on the written language of the Chinese sufficiently prove. In this language a certain character stands for a particular object or conception of the mind, another character for another, and the union of the two for a third. It must certainly have happened, that when any two characters were first united, the new character formed by their union expressed an object or notion common to both; and it can only have been by subsequent and gradual changes of meaning, that it came to signify something extremely different. Some of these compounds still retain an obvious allusion to their primitives; thus the characters *field* and *man* mean a *field-man*, *countryman*, a *farmer*; the characters *not* and *straight* mean *crooked*, *pervious*, &c. In others the allusion is less obvious; and therefore we must presume that they refer to particular circumstances in the ancient state of the people, which have now ceased to exist. Thus, when we find that the characters *dog* and *covering* united signify a *family*, we cannot but conclude, that when this character was first introduced, Chinese families in general lived, as our Irish peasantry now do, in the same apartment with their pigs. The written language of the Chinese not being alphabetical, but verbal, must necessarily have undergone changes exactly similar to those which our spoken language has suffered. Thus, an English writer, meaning to express this same notion, *family*, will beg to be remembered to his friend's *fire-side*, because, in our mode of domestic life, the family is most frequently collected by the *side* of the *fire*. If we used the verbal writing of the Chinese, the combined characters of *side* and *fire* would signify a *family*, and would come to be so employed, even in our settlements within the tropics.

Nor is it only in compound words, that the written language of the Chinese is liable to changes which very much pervert the historical conceptions of an inexperienced reader. The same circumstance necessarily arises from the gradual transitions of meaning, through which simple terms often proceed. It is thus that the English word *knave*, from meaning simply "a boy," has come to signify "a fraudulent person;" so the Latin *castrum*, a camp, pronounced by our Anglo-Saxon ancestors, *caester*, has come to signify the city of *Caeter*. So in Chinese, the character signifying *writing*, has come to mean painting, drawing, and embroidery; and hence we are told, that these three latter arts flourished in the earliest epochs of the

Chinese monarchy. The character rendered *palace*, means "a house of two stories;" that expounded *collage*, a "sheepfold." We are told, that the emperor *Hwang-Ti* coined money; and that his empress, a very ingenious lady, discovered the arts of rearing silk-worms, spinning their webs into thread, manufacturing that thread into stuff, and of the stuff making handsome silken robes and garments of all sorts; but it unfortunately happens, that the character signifying *money* nowhere occurs in history before the time of the *Chang* dynasty, and that all the words into which the character of *silken* enters, are subsequent to the commencement of the succeeding dynasty of *Chow*. In like manner, though this same *Hwang-Ti* (who at the most moderate calculation, lived about three hundred years before the deluge), found out, among his various discoveries, the art of *dying*; yet there was no character to express the colours used in dying until some 15 or 1600 years afterward. He moreover was a great astronomer, and caused to be made a *celestial sphere*. But the word which is rendered "sphere", might more properly be rendered "the cover of a pot"; and the utmost that we can reasonably infer from it is, that some ancient chieftain of one of the tribes, which afterwards coalesced into the Chinese monarchy, possessed a rude chart of the appearance of the visible heavens, serving to indicate the relative situation of the most distinguishable of the fixed stars. This is the more probable, inasmuch as the same prince is said to have instituted sacrifices to the Lord of heaven, or God of the firmament, a personification evidently resembling the *Idra* of Hindoo mythology. It is now pretty well known, that all the pretended astronomical observations of the Chinese, in early ages, were absolute forgeries; that on the arrival of the Jesuits in that country, they found no person there capable of calculating an eclipse; and that though they met with some astronomical instruments at Nankin, these must necessarily have been brought thither from a distant country, as they were only adapted to the latitude of 36° N.; whereas, Nankin is in 32°. M. de Guignes remarks, that astronomy could not have made much progress among a people who considered arithmetic as a sort of magic; for the character which expresses *numbers*, is composed of the figure which represents "a demon", redoubled. It is thus, that our rude ancestors spoke of "grammartye", and "ars metrique", (grammar and arithmetic), as synonymous with necromancy, and other imaginary supernatural arts. *Hwang-Ti*, we are assured by some writers, had so high a respect for the science of astronomy, that he established not merely astronomical professorships in his universities, but seats in his cabinet for certain great ministers of state, whose sole business it was "to observe the motions of the celestial bodies." It is a lamentable degradation of this magnificent narrative, to find that the character which is explained "observing the stars", really means no more than "examining the lots"; and that the whole business which these worthy gentlemen had to perform, was to see whether the stars were lucky or unlucky. To this hour, indeed, the Chinese are merely *astrologers*, and not astronomers. They consult the stars for their guidance in all affairs, public and private. They have a code of laws very sagaciously drawn up by the wise emperor *Kong-ki*, to which both the stars and the star-gazers must necessarily conform; and they have

Biography. a body of official soothsayers, for the good of the state, who are bound to predict right, under pain of the bastinado. Luckily, the persons who enjoy these honourable posts, keep up a good understanding with the Mandarins, whose business it is to compare the predictions with the events, and consequently the balance of debtor and creditor, between fortune and the fortune-tellers, is always struck in favour of the latter. This gross and senseless superstition has prevailed in China at all times, and with all classes of people. The great emperor *Kien-Lang*, the first man of science in his dominions, would not step out of doors on the 4th of February, 1795, under the persuasion that the eclipse, which had just happened, presaged some great misfortune to him, in case he quitted his palace!

General state of knowledge before Confucius' time. It has been supposed that the Chinese, before the time of Confucius, understood the use of *burning glasses*; because the character *kouên* or *kunn* is explained "to light any thing at the fire of the sun;" but this compound character does not contain the simple character signifying "the sun;" and the better commentators expound it "to light a fire for the regulation of time," a custom which seems consistent with the habits of a rude and uncalculated age, and resembling what we are told of King Alfred, who measured the time of his studies by the burning of a watch-candle.

The few particulars which we have here noticed, may serve to afford a general notion of the state of knowledge in China, when Confucius first appeared. A full and accurate delineation of the country, its manners, customs, and institutions, cannot now be obtained: few documents exist to furnish out such a detail; and of those few, the greater part consist of obvious exaggeration and falsehood.

Birth-place of philosopher. The birth-place of Confucius was at *Shan Ping*, in the kingdom of *Lu*, the present *Shan-Tung*; and, from different circumstances, it is probable that this kingdom was in a great measure independent of the neighbouring kingdoms of *Tai*, and of *Siu*. It is asserted, that Confucius was of a family descended from *Ti-Ye*, the twenty-seventh emperor of the second race; but as we have no great faith in the Chinese genealogies of that period, we shall place this circumstance among the fictions of his followers in later times, to do honour to the memory of their master. He was undoubtedly of the literary class from which the mandarins are chosen; and it is said, that from his infancy he distinguished himself by his remarkable progress in philosophy.

Class. Certain it is, that he made those advances in rank and dignity, which in China could not be made without much study, and an acquaintance with the works of his predecessors in different branches of learning. He became, say his biographers, one of the first mandarins in the kingdom of *Lu*. It is difficult to ascertain whether the distinction of orders was so minute and exact in the time of Confucius as it has since become. The Chinese authors, indeed, attribute this distinction to *Yao*; but his history is altogether fabulous. That monarch appears in their oldest histories to have been clothed with a simple garment of linen in summer, and of lamb-skin in winter. This fact is convincingly proved by the form of the characters employed to express his dress; since they are only compounded of the more simple characters signifying *flax*, and *wool*. It is not easy to believe that such a sovereign could have been

able to institute nine orders of literary, and six orders of military mandarins, and to distinguish not only each order, but the separate classes of each order, by the quality of their dress, the symbolical figures embroidered on it, and the jewels by which it is ornamented. Such, however, is the modern custom, as described by D'HARLELOT in the article *Six*, the Arabic name for this country. The mandarins of the literary class are distinguished by the figure of a bird, as the swan, eagle, peacock, &c.; those of the military class by a beast, as the lion, tiger, leopard, &c. These figures, embroidered in silk and gold, are worn on days of ceremony by the officers of the different ranks, on two square tablets, one on the back the other on the breast; besides which, each has in his cap a distinctive jewel according to his dignity; but the most honourable figure is the dragon, this being, as we have already mentioned, the imperial symbol. It is embroidered on the robes of the emperor, and of the mandarins belonging to the three highest literary and four highest military orders, with this essential distinction, however, that the feet of the emperor's dragon have five claws, and those of the mandarins only three! The *holies* too, who are not less tenacious of rank than their husbands, wear on their dresses (says this author) the same symbols of their respective dignities. As the emperor's dress forms an essential part of this system, and as the whole seems to be connected with the arts of embroidery and the manufactures of silk, it is tolerably certain that the system could not have existed before the time of the *Caru* dynasty, when the character expressing *silk* first came into use.

It is not very improbable, that about this period, China was somewhat similarly situated with Greece; and that each consisted of several independent states; and that the philosophers, or literary class, were in each a distinguished body of men: among whom Pythagoras, in Greece, and Confucius in China, were the most eminent. The religious system to which Confucius adhered, was either that which the government of his day supported, or that which eventually became predominant. We shall have occasion to speak more particularly of it hereafter; but at present, we only notice it as one of the circumstances which tended to bring him into general notice, and to give his opinions that weight and influence with his contemporaries, which insured their subsequent celebrity.

Early part of his life. The early part of his life, as recorded by his followers, is probably little better than a mere romance. However, it may be proper to notice its prominent traits. He was but three years old, says the tale, when he lost his father, *Chou-Leang-Ho*, who had enjoyed the highest office in the kingdom of Long, but who died in a state of honourable poverty, leaving young Confucius to the care of his wife *Ching*, and his father *Coom-Tse*. The young philosopher, we are told, took no delight in playing like other boys, a very bad symptom, as we should have apprehended, of the vigour of his intellectual faculties; but which is, of course, recorded to his honour. He was remarkably grave and serious in his deportment, and endeavoured, say his biographers, to imitate in all things his grandfather! For this old gentleman he entertained an extraordinary degree of veneration; but nevertheless, he one day ventured to reprove him with much philosophic dignity. The occasion was as follows. *Coom-Tse* was

Incredible
anecdotes
of him.

sitting absorbed in a melancholy reverie, in the course of which he fetched several deep sighs. The child observing him, after some time approached him, and with many bows and formal reverences spoke thus: "If I may presume, without violating the respect which I owe you Sir, to inquire into the cause of your grief, I would gladly do so. Perhaps you fear that I, who am descended from you, may reflect discredit on your memory by failing to imitate your virtues." His grandfather astonished, asked him from whence he had learned to speak in such a manner. "From yourself, sir," replied the boy. "I listen attentively to your words: and I often hear you say, that a son who does not imitate the virtues of his ancestors, deserves not to bear their name." The result of this sage discourse is not mentioned; but it is manifestly a story fabricated to hold him up to admiration among a people whose single virtue appears to be that of filial affection for their parents. Another story is told to exemplify his veneration for the ancients. After the death of *Coen-Tse*, which happened when Confucius was a mere child, the latter pursued his studies under one *Tseu-Sze*, a learned doctor, by whose instruction he was soon enabled to read and comprehend many ancient works, long since lost. This progress he had made at the age of sixteen, when he fell into company with a person of high rank, and more than twice as old as himself. The great man who did not entertain so high a respect as Confucius for the works in question, declared that they were obscure and not worth the trouble of studying. Whereupon our young student sharply reproved him, saying, "the books which you despise are full of profound knowledge, and their obscurity is a recommendation to them. In consequence of this, they can only be understood by the wise and learned. If they were plain and intelligible to the people in general, the people would despise them. It is very necessary to the subordination and tranquillity of society, that there should be degrees of knowledge which render the ignorant dependant on the wise. As society could not exist with equality of power, so it could as little exist with equality of knowledge; for every one would wish to govern, and no one would be willing to obey. I have heard from a low ignorant person the same observation which you now make, and it did not surprise me from him, but I am astonished to hear it from a person of your rank and dignity, who ought to be so much better informed." The story goes on to say that the mandarin, incensed at the rebuke, and unable to reply to it by reasoning, would have fallen upon the young logician and given him a sound beating, if he had not been prevented by those who stood by.

His marriage.

Early marriages are common in China, and Confucius, who seems to have had a peculiar aptitude for conforming to established customs, took to himself a wife at the age of nineteen. By her he had one son, named *Pe-Yu*, who died before his father, at the age of fifty; but left a son named *Tseu-Tse*, who grew up in the path pointed out to him by his grandfather, became very learned, and attained to the highest honours of the state. Confucius, who seems to have entertained no great regard for the fair sex, soon divorced his wife, for no other reason than that he might attend the better to his books, and put in practice the grand scheme which he had conceived for the reformation of philosophy. All these events are stated to have occurred

before this extraordinary personage attained the age of twenty-three; and the biographers do not seem at all aware of the inconsistency of the tale. According to them, this is not an instance of a very young man having attained extraordinary powers of intellect by the native force of genius alone, which, however improbable, is still within the bounds of possibility; but it is of one who had acquired a profound knowledge of law, antiquities, and philosophy, from the writings particularly of the Emperors *Yao* and *Shun*, who lived one thousand seven hundred years before his time. The very materials on which these works are supposed to have been written, and still more the verbal characters in which, if they ever existed, they must necessarily have been composed, render it physically impossible that any person should, from such sources, acquire at so early an age that degree of information which could only justify him in attempting to frame a general system of knowledge. Human strength would sink before the mere labour of decyphering so many thousand characters, of which the generality, it is admitted, had become obscure even to the learned of that day; and with the infinite advantage of alphabetic characters, and the facility of consulting the great diversity of printed books in all languages to be found in our modern libraries, a young man of twenty-three, who should set himself to project a scheme for a general reformation, would only exhibit an instance of consummate conceit and self-conceit.

Discarding these idle fables, we may reasonably believe, that Confucius, from his youth upwards, displayed great talent and indefatigable perseverance in studying the obscure records of his own and the neighbouring states, and the enigmatical sayings of the old sages who preceded him. The distinctive feature of his mind, however, seems to have been a turn for reflection and self-examination, which, when pursued with sincerity, must necessarily lead a man to discover the superior importance of the moral part of his nature. Such was the path which Socrates followed in Greece; and Confucius has been, perhaps not undeservedly, styled the Socrates of China. The Grecian sage examining the trifling disputes, the sophisms, and the logomachies of those who in his day called themselves sages, or sages, soon discovered, that the greater part of their pretended knowledge, was but a splendid ignorance, that looking only on the forms and external surface of things, they never penetrated to the contemplation of true and substantial existence; that they had become more cunning, but not more wise,—more ostentatious in their professions, but not better in their conduct. Socrates, therefore, laboured incessantly by discourse with his numerous disciples, to teach them the essential importance of cultivating self-knowledge, and at the same time the great difficulty of attaining to any thing deserving the name of absolute wisdom. Hence he called himself, not *sage*, but *philosopher*; not a sage, but a friend of knowledge; and the system, of which he became so distinguished a teacher, was in consequence denominated *philosophy*. Confucius, in like manner, appears, from all the concurring accounts of his life, to have been followed by a great number of disciples, on whose minds the simplicity of his precepts and the purity of his conduct made a deep impression. Like Pythagoras, he made frequent and long journeys, for the purpose of acquiring and com-

communicating knowledge. Like Plato, he mixed with the world, and gave counsel to princes; and his behaviour corresponded with his doctrines. It is recorded of him, that having attained an eminent post in the kingdom of Lu, and finding that the morals of that court were corrupted by debauchery, in consequence of a number of concubines having been sent as a present from the king of Tsi to the king of Lu, he resigned his office, and, retiring to the kingdom of Ssu, devoted himself wholly to teaching. In this undertaking, says his biographers, he was so successful, that in a short space of time his disciples amounted to three thousand in number; of whom five hundred were mandarins holding the highest offices in that and the neighbouring kingdoms. Some extravagant fictions have been related of the school of Confucius. It has been said that all his followers formed a society, among whom a community of goods was established, and that, in order to detach their minds from the affairs of the world, they appointed one of their number to purchase their food and clothing, and to manage their funds for the good of the whole association. Nothing of this has any foundation. Confucius, like Socrates, seems to have wished to fit men for conducting themselves honourably and usefully in those stations which the public good required that they should fill. His disciples were, for the most part, men of full age, who lived in their own families, and followed their separate pursuits, resorting to him to propose their doubts, or to collect his opinions and instruction, and sometimes accompanying him in the different journeys and voyages which he thought fit to undertake. He divided his scholars into four classes: to the first he taught morals, to the second rhetoric, to the third politics, and to the fourth, the perfection of their style in written compositions. The first was the necessary introduction to the others. Confucius was well aware, that without a distinct perception of moral excellence, there was no such thing as good taste in eloquence, or in writing; nor any practical skill to be attained in the direction of political affairs. He therefore directed his first care to the formation of the mind for the attainment of this perception: and in order to do so, he taught that it was necessary to clear the intellect from those mists and obscurities which prevent its distinguishing truth from falsehood. These, he said, arise from vices early sown or springing up in the heart, which it must therefore be our primary care to eradicate; as the good husbandman begins by rooting out weeds and noxious plants, before he commits to the earth the hopes of a future harvest.

Confucius considered the absolute submission of the mind to the supreme will, as the indispensable means of eradicating evil passions, and, like Socrates, he demanded, as a proof of obedience to the divine law, a similar obedience to the law of the state. To this feature of his doctrine, it is more than probable he owes his extraordinary celebrity. Amid the thick darkness which hangs over the early history of China, we seem to perceive traces of a rude superstition which prevailed before the planets had been observed to differ from the other stars. Hence, neither these celestial orbs, nor any supposed deities presiding over them, were considered as objects of religious veneration; but to the unknown Ruler of the sky, and to the equally unknown Director of the earthly elements, worship,

and perhaps barbarous sacrifices, were offered up. Such seems to have been the state of religion among the tribes who first settled on the banks of those great rivers which flow from the Tartarian heights into the Chinese sea. Whether the rites of this worship were performed by any other person than the chief of the tribe, may perhaps be doubted.

Some writers contend that the Chinese had formerly a priesthood, and a high priest called *Tai-Che-Ling*; but it seems generally admitted that the Emperor always presided at the religious ceremonies, and therefore the others were probably no more than his assistants, casually appointed, and not necessarily officiating as part either of an hereditary or collegiate body; in short, it is likely that there was no separate order of priests; but that their place was supplied, in private affairs, by the head of each family, and in public affairs, by the head and parent of the state, the chief, or emperor, with the help of those who were his usual advisers and assistants in other matters. Hence, probably, arose the great veneration for their deceased parents, which has in all ages formed so marked a feature of the Chinese manners, and which constitutes a principal branch of their idolatry. MARCO POLO found this custom existing even among the inhabitants of *Karadanda* (a part of the modern *I-sa-nan*), whom he represents as among the most uncivilized of the countries dependant on the Chinese empire, the inhabitants having no knowledge of any kind of writing. "In this district," says he, "they have neither temples nor idols, but pay their worship to the elder or ancestor of the family, from whom they say, as they derive their existence, so to him they are indebted for all that they possess." The different copies of the Italian work use the expressions "*il pia vecchio di casa*" and "*la maggior di casa*"; whence it seems somewhat doubtful whether the object of adoration was the living or the deceased ancestor, or both; but as this practice existed in the most barbarous parts of the empire, it was probably among its most ancient customs. That the early worship was attended with very barbarous sacrifices, is probable from a variety of circumstances. At the present day, the Chinese at funerals burn the pictures of men, horses, garments, &c. in the firm persuasion that this ceremony will supply the deceased, in another world, with the objects represented. "It is difficult," says Dr GUILLOT, "to determine whether the ancient Chinese contented themselves with burning garments and homes of paper, or whether that custom be not rather the representation of an ancient barbarous usage which existed among many nations of antiquity, and which was practised not so very distant epoch by the *Manchou Tartars*, the present masters of China." The custom referred to existed also among the Moguls. MARCO POLO, speaking of the death of Mongu Khan (A. D. 1256), says, "It is the custom during the progress of removing the bodies of these princes, for those who form the escort to sacrifice such persons as they chance to meet on the road; saying to them, *depart for the next world, and there attend upon your deceased master*; being impressed with a belief, that all whom they thus slay do actually become his servants in the next life. They do the same also with respect to horses, killing the best of the stud, in order that he may have the use of them. When the corpse of *Mongu* was transported to the mountain of Altai, the horses

men, who accompanied it, having this blind and horrible persuasion, slew upwards of *ten thousand* persons, who fell in their way!" This custom prevailed to a very late period: the Emperor *Chou-chy*, whose reign ended in 1661, ordered thirty persons to be sacrificed to the manes of one of his wives; and at the death of the Emperor *Kang-hi's* mother in 1718, four young girls wished to have immolated themselves on the tomb of their deceased mistress, but the emperor would not permit it, and issued an ordinance, forbidding throughout his dominions the burning of valuable stuffs, articles of furniture, or *slaves*, at funerals, which seems to show that down to that time the horrible sacrifice of human life on such occasions existed, at least in some parts of the empire.

Connection
of the
Chinese
with the
disciples of
Buddha.

It is probable, that the disciples of Buddha spread themselves from India to China at an earlier period than the sixth century before Christ; and as the chief characteristic of their doctrines was a resolute hostility to all bloody sacrifices, they must from the first have been opposed to the barbarous ceremonies of the old Chinese religion. They had two other peculiarities, one was the celibacy and monastic life of their teachers, priests, or holy men; the other, that these latter pretended to be in possession of the secret of attaining immortality. This sect of pretended immortals appears, from Herodotus and Plato, to have spread very widely, being to be found in the time of those authors so far to the westward as the modern Wallachia, Moldavia, and the north of Greece. In China they obtained the name of the *Tao-Tse*; and they have maintained themselves as a sect, in that country, from the period before-mentioned to the present day.

Sect of the
Tao-Tse.

The followers of the two doctrines thus existing in the different petty states into which China was then divided, were naturally opposed to each other; and as the sect of the *Tao-Tse* held up their leader *Lao-Kien* as a personage of extraordinary sanctity, so the followers of the old Tartarian rites and ceremonies naturally proclaimed the superior talents and virtues of their teachers, among whom, the most eminent was Confucius. The doctrines of the latter do not seem to have been uniformly successful in his own life-time. We cannot help suspecting that his abandonment of the high post which he occupied in the kingdom of *Lu*, his retreat into that of *Sin*, and his complaints of the wickedness prevailing at the court of *Tsi*, really prove no more than the prevalence of the *Tao-Tse* in the first and last of those petty states, whilst in the second, the good old customs of worshipping the sky and the earth, and sacrificing men and horses at funerals, were retained in all their purity. If the kings of *Tsi* had eventually triumphed over their neighbours, and founded the empire of *Katai*, which afterwards, by the conquest of *Manji*, formed that of China, we should probably have found that *Lao Kien* would have been the great Chinese philosopher in the opinion of the modern mandarins, and that *Confucius* would have been little known or regarded.

Chinese.

Beneficial
influence of
his writings.

It is not to be denied, that the superstitions of the Chinese became less barbarous, as their empire grew larger, and their habits more sedentary; and if the writings of Confucius have been preserved in anything like their genuine state (which, however, is much to be doubted), he certainly contributed very much to the

improvement of his countrymen, and almost deserves even the extravagant honours which they yet pay to his name. However, his influence appears to have been exclusively confined to the higher ranks of society; the lower being almost wholly devoted to the gross idolatry of the *Bonze*. These latter seem also to be *Buddhists*, but to have come from India some ages after the death of Buddha, who, from a mere man, had by that time been converted into a deity, in the opinions of his ignorant followers, and is represented by the great idol *Fo*, who has precedence over all the others in the Chinese temples. According to some accounts, *Foism* was introduced into China (a. c. 65); and according to others, not till the fourth century of the Christian era; but whenever it happened, it soon spread among the vulgar, for whose religious opinions the lettered followers of Confucius did not at all care, provided that they produced neither riots nor seditions in the state. The same line of conduct was afterwards followed with regard to the Nestorian Christians, the Jews, the Mohammedans, and the Roman Catholic missionaries; and if the latter, together with their converts, were at one time favoured, and at another time persecuted, it was in neither instance with any reference to their religious opinions, but solely to their conduct as peaceable citizens, or persons likely to produce disturbances in the empire.

Particularly
famous for
his
maxims.

The accounts which have reached us of the progress made by Confucius in his great scheme of universal reformation, are as vague and inconsistent as any other part of his history. We find him travelling and teaching, not only in the kingdoms of *Lu* and *Sin*, but also in those of *Tsi*, *Guci*, and *Tson*, for a period of fifty years, namely, from the age of twenty-three, to that of seventy-three, when he died. Sometimes, however, he is represented as an object of universal respect, and even adoration, at other times of persecution, contempt, and neglect. He had not been three months in office in the kingdom of *Lu*, say the historians, when the court and provinces were entirely altered; he contrived in that short space of time (and in only the twenty-third year of his age), not only to render fidelity and candour fashionable among the courtiers, and chastity and simplicity of manners among the ladies, but also to persuade hucksters and green-grocers not to use short weights and measures, a custom, it seems, of great antiquity among that class of people in the time of our philosopher, and to which, notwithstanding his precepts, aided by a very liberal application of the bamboo, they have, in modern days, unfortunately returned. Having in so very short a space of time wrought this surprising change in the morals of *Lu*, it was naturally to be expected that the fame of the young reformer would spread on all sides, as, in fact, it is said to have done; but the effect of his reputation was a very extraordinary one. It made the neighbouring princes jealous, who easily perceived that the possession of such a prodigy must render the cabinet of *Lu* extremely formidable; that a sovereign, assisted by such counsels, must naturally attain an irresistible degree of power, and that the only way of preventing his aiming at universal dominion, was to annihilate the influence of the virtuous young minister. Such, according to the tale, was the motive which induced his majesty of *Tsi* (so doubt at the suggestion of some exceedingly crafty and immoral old lord of his privy council), to send to

the reformed court of Lu, the young ladies of whom we before made mention, and who were not only able to resist the powerful impression of the Confucian precepts, and the general example of the whole kingdom, but actually to dislodge the philosopher from his strong hold, to overturn the edifice of morality which he had constructed in the preceding three months, and to drive him in utter despair from the scene of his first and most splendid triumph. The most beautiful and accomplished of these lovely Cyprians fastened on the king; the others, in the regular gradation of their charms, attached themselves to the grandees in proportion to their rank. It is not said that the queen and the chaste ladies of the court, offered any remonstrance against the seduction of their consorts; and, therefore, we are left to infer that they themselves had given way to a similar temptation. The result, however, was such as we believe never happened in any other country, from a sudden importation of ladies of pleasure; namely, that from an extraordinary austerity of morals, the whole nation was at once dissolved in luxury and pleasure; the business of the state stood still; the courtiers occupied themselves only in feasting, dancing, shows, and dissipation; and the shopkeepers consoled themselves for the wickedness of their superiors, by cutting off part of their reformed measures, filling down their weights, and making one scale an ounce heavier than the other.

Poor Confucius, who had first protested against admitting into the kingdom ladies of such equivocal character, with eyes and feet so small, voices so melodious, and gestures so expressive, employed his youthful eloquence for some time after their arrival, in persuading the old grandees to have nothing to do with these lovely foreigners; but his harangues, which a few weeks before had been omnipotent against the charms of the women of Lu, were wholly ineffectual against those of the Tsun ladies. Vexed, therefore (as a philosopher naturally must be at such a discovery), he soon resigned in disgust, and went abroad in search of disciples less vacillating than his countrymen of Lu.

It might naturally have been expected, that some one of the many princes who had dreaded the effect of his counsels in raising Lu to a predominating eminence, would have gladly seized the opportunity of engaging in his service a statesman of so much eminence; but we do not read that any such offer was made to him. He had the misfortune to live in times when men were ambitious, avaricious, and voluptuous; when rebellions, wars, and tumults every where prevailed; and though he was fortunate enough to make a vast number of proselytes among the most eminent persons wherever he went, yet he fell into extreme poverty, was greatly oppressed and persecuted, conspiracies were even formed against his life, and at the age of seventy he was forced to retire altogether to a place of concealment, where he gave himself up to misery and regret. A few days before his last illness, he told his disciples who were about him, that he was overcome with grief at the sight of the prevailing disorders of the times. "The mountain," said he, "is fallen: the lofty edifice thrown down; and its inhabitants have all disappeared;" meaning, as his commentators expound the passage, "the system which I had founded, and raised to such a height of perfection, is destroyed; and the sages whom I had instructed, have abandoned my precepts." Notwithstanding this general demoralization

of his contemporaries, we are, however, told, that he was no sooner dead than they began to venerate his memory. Upon hearing of the event, *Ngai-Cong*, the king of Lu, burst into tears, exclaiming, "Tien (the god of the sky) is displeased with me; since he has taken from me Confucius." The same sentiments prevailed through all the surrounding countries, which from that very moment (say the historians) began to honour him as a saint. It is scarcely necessary to dwell on the absurdity of all the parts of this tale. Certain it is, that in the present day, the veneration shown to Confucius, is little, if at all short of idolatry; and the same was practised when the first Roman Catholic missionaries visited China. In the time of Maaco Polo, however, the case was certainly different. That very exact and faithful roler of what he saw, during a residence of eighteen years in China, from A. D. 1272 to 1290 (during which he visited most parts of the empire, had the best means of information, and was himself, for three years, the governor of a considerable district), never mentions the name of Confucius, and only once alludes slightly to his followers by the terms of "persons distinguished as professors of learning, or, as we should term them, philosophers;" nor could this happen from inattention; for he is very minute and particular in his account of the Nestorian Christians, the Mohammedans, the Jews, and above all, of the idolaters of China. But the case is widely different, as respects Confucius, when we come to peruse the accounts of the missionaries who began to visit China about the middle of the sixteenth century. D'AVITY, who in his work called *La Monney*, published in 1636, presents a good compendium of the statements of Mendoza, Trigault, and the other missionaries, thus speaks: "The particular temple of the literary class, is that which is built in each city near the place of study, to Confucius, the prince of Chinese philosophers. In the most honourable place of this temple is seen his statue, or at least his name, in letters a cubit long. By his side are seen the statues of some of his disciples, whom the Chinese esteem as saints or divinities of a low rank. All the magistrates of the cities assemble, together with those who are proclaimed bachelors, at each full and new moon in the temple, and offer a kind of adoration to their master, with inclinations of the head, and bendings of the knee, and even with burning of incense and torches. They also present to him food on his birth day, and at some other periods, thanking him for his doctrines; but neither making a prayer to him, nor asking any thing from him." This and other ceremonies observed by the emperor and literary class, soon produced a violent dispute among the missionaries. One GASPAR DE LA CROIX, a Dominican, in 1544, was the first who preached Christianity in China; but very little was done by him or any other, until Father Ricci, a Jesuit, in 1580, arrived in China. This reverend person was of opinion that these ceremonies might be tolerated, "because, in their first institution, and in the opinion of the most enlightened among the Chinese, they were purely civil." The Dominicans, on the contrary, maintained that all these ceremonies were really idolatrous, and could not be associated with the profession of Christianity. Father LEOGASANI, who, in 1610, succeeded Ricci, inclined to the opinion of the Dominicans; and the contest growing warm, both

Papal bull.

parties appealed to the judgment of the pope. The Dominican agent arriving first at Rome, obtained a decree from Innocent X, in 1645, against the concessions of the Jesuits; but on a subsequent application by the agent of the latter, ALEXANDER VII. in 1656, issued a bull in their favour. The Dominicans continuing to remonstrate, obtained some favour at Rome; but their antagonists secured a powerful party in China, and the emperor Cong-Hi, in 1708, ordered all missionaries who opposed the Chinese ceremonies to leave the country, and threw the legate, De Tournon, into prison, where he died. In 1720 the pope sent a new legate, named MERRASSA, with a list of permissions to be granted to the Chinese Christians, among which was the following: "It shall be permitted to render to Confucius a veneration purely civil, and to the tablet inscribed with his name, but without any other character or superstitious inscription, there shall be annexed a proper explanation, which precautions being observed, it shall be allowable to light candles, to burn incense, and to offer viands, before the tablet." These concessions, however, were not thought sufficient, and the Christians were finally expelled from China, for treating the ceremonies of the empire with disrespect. From these facts it would appear, that in the interval between the time of Marco Polo and of Ricci, a considerable change had taken place in respect to the estimation of Confucius among the Chinese; nor is it very difficult to suggest the reason of this circumstance. Polo was in China, under the great Kublai Khan, the Mogul chief, who conquered first Katesi, or Northern China, and then Manji, who now forms the southern part of the empire. Kublai, although from policy he adopted the customs of former emperors in sacrificing to the god of the sky and the god of the earth, was very much of a free-thinker, and troubled himself but little about the religious opinions of his subjects. His prime minister for many years, was a Mohammedan; and he employed the members of the Polo family, who were Christians, in many important offices. In his time the military council, which at present ranks only as fourth of the six high courts, was superior to all the others; and the literary class was proportionably treated with disregard. When the Mogul conquerors were expelled by Hong-Fou (A. D. 1369), the men of letters regained their ascendancy; and from that period, it may be presumed, the extravagant eulogies on Confucius are to be dated. To this epoch, too, it is not improbable, are to be referred most of the falsifications of his genuine text; and when we consider that the missionaries and others who have favoured as with translations of his works into the European languages, have for the most part given us nothing but paraphrase and amplification, we may easily conceive that great deductions are to be made from the favourable opinion of his philosophy which so long prevailed in Europe.

Concessions with regard to the veneration of Confucius.

Changes of the public conduct respecting him.

parties appealed to the judgment of the pope. The Dominican agent arriving first at Rome, obtained a decree from Innocent X, in 1645, against the concessions of the Jesuits; but on a subsequent application by the agent of the latter, ALEXANDER VII. in 1656, issued a bull in their favour. The Dominicans continuing to remonstrate, obtained some favour at Rome; but their antagonists secured a powerful party in China, and the emperor Cong-Hi, in 1708, ordered all missionaries who opposed the Chinese ceremonies to leave the country, and threw the legate, De Tournon, into prison, where he died. These concessions, however, were not thought sufficient, and the Christians were finally expelled from China, for treating the ceremonies of the empire with disrespect. From these facts it would appear, that in the interval between the time of Marco Polo and of Ricci, a considerable change had taken place in respect to the estimation of Confucius among the Chinese; nor is it very difficult to suggest the reason of this circumstance. Polo was in China, under the great Kublai Khan, the Mogul chief, who conquered first Katesi, or Northern China, and then Manji, who now forms the southern part of the empire. Kublai, although from policy he adopted the customs of former emperors in sacrificing to the god of the sky and the god of the earth, was very much of a free-thinker, and troubled himself but little about the religious opinions of his subjects. His prime minister for many years, was a Mohammedan; and he employed the members of the Polo family, who were Christians, in many important offices. In his time the military council, which at present ranks only as fourth of the six high courts, was superior to all the others; and the literary class was proportionably treated with disregard. When the Mogul conquerors were expelled by Hong-Fou (A. D. 1369), the men of letters regained their ascendancy; and from that period, it may be presumed, the extravagant eulogies on Confucius are to be dated. To this epoch, too, it is not improbable, are to be referred most of the falsifications of his genuine text; and when we consider that the missionaries and others who have favoured as with translations of his works into the European languages, have for the most part given us nothing but paraphrase and amplification, we may easily conceive that great deductions are to be made from the favourable opinion of his philosophy which so long prevailed in Europe.

Stories of his pretensions to preternatural intercourse, &c.

If we could credit the stories which are related of Confucius, they would prove him to be either a gross impostor, or a man of very weak intellect indeed. His disciples attest, that he asserted himself to be every night visited by the ghost of one Cheou-Kong, who had been dead above six hundred years. They say, too, that being one day told that some hunters had killed a very uncommon animal, somewhat resembling a lamb, Confucius burst into tears, and declared that

this omen portended the downfall of his philosophy. These same disciples mention, as marks of profound wisdom, the discourses which he held on the fall of stars, the rolling down of mountains, the song of the matchless bird, the apparition of the unicorn, and many other topics, only fit to match with those of Owen Glendower, as ridiculed by Hotspur:

He angers me
With telling of the maddening and the not,
Of dreamer Merlin and his prophecies,
And of a dragon and a fiery tub,
A clipa wing'd Griffin and a moaning raven,
A coaching lion and a ramping cat,
And such a deal of skilful shamble stuff
As puts me from my faith.

It is to be feared that the good missionaries, in their zeal to do honour to Confucius, sometimes added fresh absurdities to those of his Chinese disciples. Thus Father MARTINI, says that this celebrated philosopher, incessantly repeated "that a saint would appear in the west," meaning to intimate that he was divinely inspired to predict the appearance of the Messiah. Upon this story is built another, doubtless equally fabulous, that the Emperor Ming-Ti, who reigned A. D. 65, having dreamt that he saw the holy person spoken of by Confucius coming from the west, fitted out a fleet, with orders to sail till they found him. The navigators, it is said, unfortunately brought back the statue of Buddha, or Fo, and thus the sage anticipations of Confucius were rendered useless. This tale bears so strongly the appearance of an invention of the missionaries, that it would hardly be reasonable to attribute it to any other source.

The most candid mode of considering the character of Confucius, will be by a reference to the works which are attributed to him. After what we have already said, it is scarcely necessary to add that a great part of these works must be regarded as the fabrication of after ages; but still enough remains to prove that the Chinese philosopher, though very far indeed below the rank assigned to him by many European writers, contributed not a little to the improvement of his ignorant countrymen. The books regarded by the Chinese as most sacred or canonical are the Five King, or Doctrines. It is said by some writers, that Confucius corrected four of these, and added a fifth. Other works attributed to him are the *Ts-Hio*, or "Grand Science;" the *Chong-Yong*, or "Unchanging Medium;" the *Yen Lu*, or "Book of Maxims;" the *Hiao King*, or "Filial Reverence;" and the *Sia-Hio*, or "School of Children." These, it will be seen from their titles, are almost wholly moral works; but perhaps the most authentic of all the productions attributed to him is an historical work, called the *Chun-Tsien*, or "Spring and Autumn." One of the most convincing proofs that this history is not entirely a modern composition, is, that it does not ascend quite two centuries higher than the era in which Confucius himself is believed to have flourished. It begins with the year A. C. 722, and the author ingeniously confesses, that prior to that time no satisfactory materials for Chinese history are to be found. The style and manner of this history too, are in favour of its antiquity. It is an extremely dry and meagre record of events, answering very much to the description which Cicero gives of the early Roman chronicles, and, indeed, like the first attempts at history in all countries. The circumstances before ad-

verted to, relative to the ancient mode of writing and the construction of books, throw considerable doubt on the authenticity of the *Chou-Tsun*. Some of the Chinese literati reckon it as the fifth of the canonical books, but others represent it to be merely a collection of fragments of a more ancient work called the *Yu-King*. BAYEN, who has given a translation of it in the Proceedings of the Petersburg Society, very justly puts it upon a level with the rude memoirs of the better sort of farmers and citizens, which contain nothing more than a plain and simple account of the most obvious and common events; and if the great reformer of learning, and prodigy of wisdom, in the sixth century before Christ, could write no better than this, what must we think of the historians, his predecessors? We have before noticed the incorrect statements of eclipses in this work: some of those eclipses were probably observed in the northern parts of India, and Confucius or his commentators, who knew no better, must have copied them from the accounts of the foreigners who visited China.

No traces
of a know-
ledge of the
fine arts in
ancient
China.

If Confucius did little to improve his countrymen in a knowledge of history, it does not appear that he did much more to refine their taste for the productions of the imagination. The fine arts have a certain degree of dependence; and though in uncultivated nations, poetry usually precedes painting, music, architecture, and statuary, yet, if it had been true that the Chinese empire had existed in splendour so many ages before Confucius, we should, probably, have seen in his works some traces of its progress in all these arts: and if, on the other hand, they had been unaccountably neglected, a great genius would have seen the importance of cultivating them, and would have pointed out, at least, some of their leading principles. But when first China became known to the Europeans, it had nothing to boast in any of these arts which would now be tolerated by the lowest of our artificers. In painting, they knew neither perspective, nor light and shade, but designed and coloured exactly as we see on their porcelain-ware. Marco Polo, indeed, speaks in favourable terms of the paintings which decorated the imperial palaces of *Cambalu* and *Kin-tai*; but Marco knew still less of painting than the missionaries of the sixteenth century, one of whom (though certainly nothing like what we should call a painter in Europe) was appointed to decorate the palace at Pekin; and his performances were with reason considered as prodigies, when compared with those of the Chinese artists. Ghirardini, an Italian painter, who went to China in 1698 to paint the cupola of a church for the missionaries, says expressly "that the Chinese have not the smallest idea of the fine arts;" and what is still more remarkable among the many millions of persons in that country, who for the last two hundred years have had opportunities of seeing European works of art, not one individual has given himself the trouble of studying their principles. As to engraving, it is pretended by Confucius, that *Ching-Tong*, n. c. 1766, caused certain characters to be engraved on a brazen vessel; but even if this be true, the art, like every other, remained stationary; for when the Jesuits drew the plans of the battles gained A. D. 1754 and 1757, no person in all China was capable of engraving them. NIEVHOFF positively asserts that the Chinese have no ancient statues: great numbers of idols, indeed, are

found of all sizes, colossal and diminutive; but they are, of course, subsequent to the introduction of the Indian superstitions; and as to the statues and pictures of Confucius, they are purely imaginary. What a contrast to Greece, where the wonderful sculptures of Phidias were produced within half a century after the period at which Confucius is supposed to have existed! In architecture, the Chinese may be said to have succeeded better than in any other of the fine arts; because they had built spacious palaces and other buildings before the thirteenth century, but still there was a total want of taste, and none but the rudest ideas of proportion to be found in these buildings: they had no tapering columns, no pedestal or cornice, and, instead of a capital, their awkward pillars were surmounted by no better ornament than a sprawling dragon! Their musical talents are much the same; Father TRIGAUT says, that they have no notion of singing in harmony; and DU HALDE admits, that what is called *Chinese music* does not merit that name in any sense whatsoever. In poetry, it is true, they take more delight. The most ancient records that remain of China are poetical. The very symbol by which compositions of this kind are designated, points out their early origin—*shee*, a character compounded of a *word* and a *hall*, or *temple*, a place from which the magistrates anciently delivered instruction to the people (as if we were to say *temple-words*, and as we do say *church-music*), the words of the temple being short measured sentences, composed generally of four characters. The *She-king*, or book of odes, one of the four most the *Shin* ancient classics, is chiefly composed of this kind of *king* verse. This, however, as their own writers seem to admit, is very rude. One of them thus compares the progress of poetry to the growth of a tree. "The ancient *She-king* may be likened to the roots; when *Soo-too* flourished, the buds appeared. In the time of *Kee-Ngan* there was abundance of leaves; but during the *Tang* dynasty many reposed under the shade of the tree, and it yielded rich supplies of flowers and fruit." The late Emperor *Kien-Lung* was a great manufacturer of verses; and most of the learned men, it is said, are fond (as literary men without much poetical talent in other countries sometimes are) of sending little complimentary productions of this sort to each other. Their intrinsic merit it would be somewhat difficult for an European to estimate; for according to the account given of them, their merit is supposed by the Chinese to depend very much on the choice of the characters in which they are written. Indeed it has been justly observed, that the greater part of their written language is, in this sense, poetical; since the characters present to the eye, and through that to the mind, pictures of the conceptions, which they are meant to represent. No account has reached Europe of any very striking monument of poetical genius among the Chinese (although such may possibly exist); but their best works seem to be a kind of moral ode, of which some are attributed to Confucius. One of these latter was translated by the late Sir WILLIAM JONES; but, unfortunately, there are reasons for believing that Sir William knew but little of the language from which he made this translation; and at all events, he was not enough of a critic in it, to determine the age and authenticity of the composition. In speaking of poetry, it is impossible not to notice that great branch of it,

The drama.

the drama; more especially as the Chinese are so passionately fond of dramatic exhibitions, that no entertainment is ever given without a company of comedians to amuse the guests; and such was the custom at the court of *Kublai-Khan*, as described by Marco Polo, in the thirteenth century. The laws direct that plays should represent "the characters of just and upright men, chaste wives, pious and obedient children, and such others as may tend to dispose the minds of the spectators to the practice of virtue;" and some compositions intended to have that effect certainly exist; such as the *Loon Seng-Urh*, or "an Heir in his old age," recently translated by Mr. Davis; but it is universally admitted by all travellers, that by far the greater part of these entertainments are a compound of the most puerile absurdities, with the grossest indecency: inasmuch, says Mr. Bazuow, that "the European gentlemen at Canton are often so disgusted with the filthy and obscene exhibitions, as to leave the theatre;" whilst, on the other hand, these very scenes are stated generally to throw the entire part of the audience into raptures. To whom the Chinese are indebted for the origin of dramatic representations it would be idle to dispute, since attempts at such kind of amusement are among the very first efforts of the imagination, even among children and savages; so that man, among the many definitions that have been given of him, may justly be called a *dramatic animal*.

Confucius as a philosopher.

From considering Confucius as an historian and a poet, we come to the more important part of his character, that which he has obtained as a philosopher; and as he undertook a general reformation of philosophy, it will be proper to see how far he either comprehended the circle of arts and sciences himself, or assisted his countrymen to do so, by pointing out the great paths of future discovery.

Progress of the civil arts in China.

The fine arts have been already discussed: we come next to the useful arts: and in these it must be owned that the Chinese, sixteen centuries after Confucius, were nearly as far advanced as they appear to be now; but we cannot discover that on this account they owe any obligation to Confucius. It has been said that his followers honour the mechanical arts; but in what that honour consists it would be hard to say, unless it be in depriving the real inventors of the reputation justly belonging to them, to bestow it on sovereigns who were either barbarians or had no existence at all; as if we were to say that Hengist and Horsa brought with them from Saxony, WATT's improvements on the steam-engine, or DAVY's invention of the safety-lamp. There is no public institution in China in which lectures are read on the mechanical arts, or models of machinery preserved; and a petty mandarin who prides himself on the length of his nails, would not only form a wretched experimentalist, but would consider himself degraded by troubling himself any otherwise about the employment of shipkeepers and artisans, than to order them to be bastinadoed for fraud or rioting. We do not bear of any large manufactories in China, except it be for the service of the emperor; but we find that the streets are crowded with wandering artisans, who go about asking for employ like our tinkers, and, like them, are little better than vagabonds. We were formerly told that the three great inventions—printing, gunpowder, and the compass, came from China. If so, the Chinese have most grossly misused their talents;

for their literature is wretched, their military exploits disgraceful, and their navigation a nullity. Of all these discoveries, however, which have produced such mighty changes in the western world, Confucius was either wholly ignorant, or, what is worse, he knew them but could not judge of their importance. It is most probable, that Confucius merits neither praise nor dispraise in this respect; since there is no ground whatever to suppose that any one of those arts is of Chinese origin. The case is perhaps different with the manufactures of silk, tea, and porcelain, in which they have had the merit of working up the raw materials with which nature supplied them. In regard to the manufacture of silk, they have certainly exhibited much industry, and something approaching to ingenuity, for many centuries past; but whether they were the first people that cultivated this species of industry may be doubted. The infusion of astringent leaves was rendered necessary in some parts of China, by the badness of the water; and the tea plant being an indigenous shrub, there was little difficulty in applying it to that purpose. The invention of porcelain is no more than what we meet with in the first stages of civilization all over the world: only the Chinese empire happens to produce a clay which is peculiarly suitable to the formation of vessels. The three articles which we have last mentioned, have become at different periods the object of a commerce sufficiently lucrative to the Chinese; but this was wholly without their exertion, or that of their statesmen and philosophers. Porcelain is so called by the Europeans from its similarity to the larger species of the *cypræa*, particularly the *cypræa tigris*, which, from its similarity in shape to a hog (*porco*), the Portuguese called *porcelano*. Both the shell and the Chinese ware have a brilliant polish, which, in the latter, is produced by the vitrification of the materials in the process of baking; but though the Chinese had been probably for many centuries in the habit of seeing this process going on, it never taught them the art of making glass, which they first learned about the beginning of the last century from the missionaries. It does appear that the great use of ovens, which was rendered necessary for the manufacture of the porcelain, led them to the invention of the *perpetual bellows*; but of its philosophical principles they are utterly ignorant; and the same may be said of the *ventilating-pipes*, which MARDOZA describes, as employed for giving air to their houses, in a mode superior to any yet brought into general use in Europe. The physical circumstances of the country led them also to the adoption of a judicious system of irrigation, System of and to the formation of those numerous canals, in the irrigation. use of which, for purposes of commerce, they afforded an useful example to the nations of Europe. To the conqueror, *Kublai-Khan*, they are indebted for many of these works; but certainly not for all. He, in the year 1280, began to make the *Great Canal*, and also numerous cross canals and trenches for watering the fields. It is manifest, however, from Marco Polo's description of *Kiu-sai*, and from many other parts of his works, that the Chinese had long before applied themselves to such works, which, indeed, must always be among the earliest efforts to render habitable a country which is subject to periodical inundations. Hence, Hercules slaying the hydra, is no more than the strength of man, cutting off the thousand branches of

Natural advantages of the country.

a mighty stream, and confining its dragon-like windings within the bounds of an artificial channel. It is to be observed, that China has great natural advantages, not only in its numerous rivers, but in its mineral-coal, of which the following account, given by Marco Polo, in the thirteenth century, when its properties were little if at all known in Europe, is alone a sufficient proof of that author's plain and circumstantial accuracy: "Throughout *Katzi* there is found a sort of black stone, which they dig out of the mountains, where it runs in veins. When lighted, it burns like charcoal, and retains the fire much better than wood, inasmuch that it may be preserved during the night, and in the morning may be still found burning. These stones do not flame, except a little when first lighted; but during their ignition they give out a considerable heat." Dr HALDER adds, that there is no country in the world where pit coal is so abundant. When we consider what vast advantages England has drawn within the last century from her coal mines, we cannot but view this circumstance as another striking proof of the defective state of knowledge in China. On none of these topics does Confucius say a word; but it is said, that he exhorts the people to pursue agriculture, and that having in pursuance of his precepts become a very agricultural nation, they have thus produced the large population which their country is said to possess. If mere exhortations to improve would make men good farmers, all nations would long since have attained the summit of perfection in agriculture; but it is necessary to teach them the mode of improving, and this will in vain be sought in the works of Confucius, or perhaps of any of his followers. The maxims which are understood to have been laid down for the guidance of rural economy among the Chinese, are, to say the best of them, exceedingly questionable. One of these is to use human labour in preference to the power of machinery, or the strength of beasts; and the other is to rear poultry and small animals rather than large cattle; accordingly, their cultivation is effected almost wholly by the spade and the hoe, and we are not surprised to learn from Mr. BARNOW, an author of great acuteness, and an eye witness, that "they have no knowledge of the modes of improvement practised in the various breeds of cattle, no instruments for breaking up and preparing waste lands, no system for draining and reclaiming swamps and morasses, though that part of the country over which the grand communication is effected between the two extremities of the empire, abounds with lands of this nature." The last observation at once exposes the futility of the early accounts, that the Chinese "left not a corner of land any where uncultivated;" but indeed the same authors, who first gave us this assurance (such as HERRERA, D'AVITY, &c.), in a few pages afterwards sufficiently refuted it, by telling of the "great numbers of tigers, bears, and wolves," to be found in these very cultivated regions. Even Dr HALDER admits, that "in most of the principal governments there are whole tracts of more than sixty miles in length, thinly peopled, little cultivated, and very often so savage as to be wholly uninhabited." Nobody pretends that any such class as that of wealthy farmers is to be found in China, nor if there were, would they enjoy the least distinction, honour, or influence, but would be liable to be bastinadoed almost at the caprice of any petty mandarin; so that the praises which Confucius may have

Confucius encouraged them to agriculture.

Agricultural maxims of the Chinese.

bestowed on agriculture, have proved as barren of any real benefit to his country, as can well be imagined. Of their navigation it would be idle to talk. Lord ANSON said, that an English sixty-gun ship could destroy a whole fleet of their miserable junks.

In the physical sciences, Confucius was probably as ignorant as he was in the arts. Of *geography*, he could surely know nothing; for long after his time the Chinese believed the earth to be a square, in the centre of which the "celestial empire" of China was placed. In 1717, the emperor *Cang-Hi* commissioned the Jesuits to make a general survey of the country, before which time little or nothing was known with accuracy of its relative positions. It is no wonder that the Chinese were poor geographers, when their ignorance of *astronomy* was

Astronomy.

such as we have already mentioned. MARCO POLO speaks of the instrument used to measure time in China, by the Italian name of *horologio*, but does not particularly describe it. D'AVITY, however, from the accounts of the missionaries, speaks as follows:

Ils manquent presque d'instrumens pour mesurer les heures; et ceux qu'ils ont le mesurent par le moyen de l'eau, ou du feu—ils en font encor un petit nombre qui ont des roues que le sable fait tourner, ainsi que l'eau; mais ils ne sont que l'ombre de nos nôtres; et manquent en la vraie mesure du temps. Quant aux horloges solaires ils n'avoient connoissance que de l'équinoctial; mais ils ne sauroient pas leur donner sa pente à son assiette selon les lieux.

After this, it is somewhat ridiculous to hear Father MARTINI talking of a tower built near three thousand years ago, in the *Teng-Tong-Kien*, where the astronomer *Cheou-Kong* observed the movements of the heavenly bodies. We have observed that the Chinese astronomers are nothing but *astrologers*, and such they were in the time of Marco Polo, who says that in the imperial city of *Cambala* there were no fewer than 5,000 of them, some being idolaters, some Mohammedans, and some Nestorian Christians. They attended the emperor when he went to war; they accompanied him on his hunting expeditions; they formed part of the pageantry of his court on all great festivals, and gave their advice on questions of all kinds. This did not happen from any peculiar turn for superstition, on the part of *Kublai-Khan*, who, on the contrary, was more enlightened than most of his subjects; but it was the universal custom of the country to be guided in all affairs, public and private, by these impostors. "When any person," says Polo, "forms the design of executing some great work, of performing a distant journey in the way of trade, or of commencing any other undertaking, he has recourse to one of these astrologers, and informing him that he is about to proceed upon such an expedition, inquires in what disposition the heavens appear to be at the time. The other tells him, that before he can answer, it is necessary he should be informed of the year, the month, and the hour in which he was born; and that having learned these particulars, he will then proceed to ascertain in what respects the constellation that was in the ascendant of his nativity corresponds with the aspect of the celestial bodies at the time of making the inquiry. Upon this comparison, he grounds his prediction of the favourable or unfavourable termination of the adventure." It may be supposed that the philosophers, and particularly the great Confucius, either openly ridiculed or secretly lamented this superstitious credulity. Far from it. One of the prin-

Influence of the astrology in general.

Biography.

principal works of Confucius is a commentary of the *Y-King*; and the only difference between the *Y-King* and the rules of the astrologers is, that the former is the elder and more barbarous superstition of the two.

Divination
by the *kwa*.

All savage nations, and indeed all credulous men, have a strong desire to pry into futurity. The Chinese, before they had made any observations of the heavenly bodies, or knew that there was any difference between a planet and a fixed star, were in the habit of examining certain figures called *kwa*, as our ignorant nursery-maids tell fortunes on the cards, or inspect the grounds of a coffee cup. The Chinese say that the emperor *Fo-Hi* had no father, and in his lower extremities resembled a dragon. To this illustrious personage, who is supposed at the latest to have reigned a. c. 2953, they attribute the first invention of the *kwa*, which consist of eight horizontal strokes, and, according to their different arrangements, are conceived to signify certain words. It has been suggested, that these *kwa* were a sort of intermediate step between the use of knotted cords, as in Peru, and of picture writing, as in Mexico; but it is much more probable, that they were never used for any other purpose than that of rhabdomancy, for which they are still employed. In the pagodas of China are usually kept a number of small sticks, which persons who come to know their fortunes cast at random on the ground, and their fortuitous disposition, compared with the figures of the *kwa*, is supposed to indicate good or bad auguries. The *Y-King* is literally nothing more nor less than a fortune-telling book, explanatory of the meaning of the *kwa*; and on this book, which is one of the *Five Doctrines*, the great Confucius has written a grave commentary! Every barbarous nation on the face of the earth has had its *kwa*, and some have had their *Y-King*; but Confucius is the only commentator on such absurdities who to this day bears the name of a philosopher! In China, as elsewhere, successive practitioners of rhabdomancy have had different schemes of their art. Each race of emperors, from *Fo-Hi* to the *Chow* dynasty inclusive, had their own peculiar *Y-King*. It consequently follows, that even if the *kwa* had ever related to any reasonable subject of thought, Confucius would have undertaken a blind and useless task in attempting their explanation. The wretched folly of this canonical book and its commentaries will, however, be best judged of by an example: let us, therefore, take the first of these characters, viz. that which is expressed by the word *kien*.

The *Y-King*, on which Confucius wrote a commentary.

Specimen of
its contents.

"The word *kien*, according to the Emperor *Fen-Fang*, signifies great, penetrating, suitable, solid."
"According to *Chew-Kong*, the son of the former sovereign, it signifies something totally different."
1. "A dragon is hidden, do not make use of it!"
2. "When you see a dragon in the fields, you will meet a great man."
3. "The wise man watches over himself all day; but be fears at night; and yet he is not in fault."
4. "He raises himself aloft; he is in the abyss; and yet he is not in fault."
5. "When a dragon flies in the air, you will see a great man."
6. "When the dragon has withdrawn, there is repentance: when you see a dragon without a head, it is a good sign."—(*Y-King*, vol. I. p. I, &c.)

The same kind of absurdities occur in the *Shu-King*,

another canonical book, of which also a single extract will suffice:

"If the grandees, the ministers, and the people speak in one manner, and you think otherwise, but conformably to the signs of the tortoise and the *chi*, your advice will succeed."

"If the grandees and the ministers are united in sentiment with the tortoise and the *chi*, although you and the people differ from them, every thing will succeed equally."

"If the people, the tortoise, and the *chi* are unanimous, when you, the grandees, and the ministers have another opinion, you may be sure to succeed interiorly, and to fail outwardly."

"If the tortoise and the *chi* oppose the counsels of men, it is wise to undertake nothing, for evil alone must be the consequence."—(*Sau-King*, part 4. c. iv.)

The *chi*, here mentioned, is a certain plant, which another mode of divination is practised. The fibres of the leaf are drawn out and thrown at random, as the sticks are in the former case; and the forms which these fibres take are compared, as before, with those of the *kwa*, and then explained by the *Y-King*.

Such are the works, which to this day are considered as the foundations of Chinese philosophy, the groundwork of a system which these ignorant beings imagine raises them above all comparison with the other nations of the earth! The commentary of Confucius on the *Y-King* would certainly reflect the greatest disgrace on his memory, if we did not consider that he lived in all the darkness of a barbarous age, which it may be very excusable in him to have participated, but which leaves him very low indeed in the scale of intellect, compared with any men who have had the least claim in ancient or modern times to the title of philosophers.

From natural philosophy we pass to metaphysics: and here we find Confucius apparently labouring to discover something like principles by which the nature of existence in general might be explained. These principles, however, are completely wrapped up in mystery, and lead to no intelligible conclusion. Father Couplet says, that Confucius being asked to explain his sentiment on the divinity, excused himself at the time; but after much reflection, wrote as follows:—

"The Great Height engendered two qualities, the perfect and the imperfect: these two qualities engendered four images: and these four images produced the eight figures of *Fo-Hi*, that is to say, all things."

He is also said to have taught very ridiculous doctrines about the power of numbers, considering the odd numbers as perfect, and the even as imperfect, and combining both with the power of chance, and the revolution of the elements, which he sagaciously makes to be five, wood being included as one; to all which folly his disciples have added greater absurdities of their own. They pretend that each of the five elements alternately produces a new dynasty on the throne of the "celestial empire;" that according to the predominant element of the dynasty, must be the number of emperors that it produces; and that all these things are to be calculated by the admirable rules of the *Y-King*, as commented upon by the great Confucius.

Passing over numberless puerilities of this kind, we come at length to view Confucius in his fairest and best light, as a moral philosopher. It must be observed,

that the splendid character originally given of him by the missionaries in this point of view, was dictated, in no small degree, by motives of policy. They found that no reception would be given to themselves or their doctrines, if they spoke disrespectfully of the great object of veneration throughout China. They had even found it necessary to wink at some honours closely bordering on idolatry, that were paid to his memory; and the only way that they could reconcile this to their own consciences, was by receiving, as genuine, the most refined sentiments attributed to him by his followers; constructing all doubtful passages in the better sense; and helping out the expressions of the Chinese by a paraphrastic translation, which brought them to a very near resemblance with the Christian doctrines. However laudable all this may have been, as a mode of conciliating the affections of the Chinese to Christianity, it has probably tended to give Europeans a notion of the moral system of Confucius much more favourable than it really deserves. However, it cannot be doubted but that the great moral teacher of so many millions of men, for so many ages together must have made some powerful appeals to some of the best principles of human nature, or he could neither have acquired nor retained so strong a hold on their affection and admiration.

Mistake
respecting
his purity.

The great mistake of most Europeans who have written on the morality of Confucius, has originated in their investing it with an imaginary purity, manifestly borrowed from Christianity itself. "Hardly anything can be added," says one, "to the purity of his morality. He seems rather to speak like a doctor of the revealed law, than a man who had no light but what the law of nature afforded him"—and after enumerating, with much exaggeration, his personal virtues, the same writer adds, "all these would almost tempt one to believe, that he was not a mere philosopher, formed by reason only, but a man inspired by God for the reformation of the world, and to check that torrent of idolatry and superstition which was about to check that particular part of it." Such wild inferences are naturally to be expected from such unsound premises. The Confucius here spoken of, is altogether an imaginary being, and can have no relation to the author of the *Chun-tseu*, or to the commentator on the *I-King*.

The historical
facts.

Let us look to historical events: let us consider the circumstances in which Confucius must have been placed, and try his doctrines by the effects which they appear to have produced. He was probably an eminent person in the little independent state of Lu, where, as in the neighbouring countries, the followers of Lao-Kien had made considerable progress, being recommended to the admiration of all ranks, by the opinion that they possessed the drink of immortality, by which they could at pleasure prolong human life to any extent. One of their leading tenets was to recommend seclusion from active life, and a devotion to habits of idle and unprofitable contemplation. The men of the world, those who were engaged in the business of government and understood best the actual constitution of society, were naturally averse to the prevalence of doctrines which threatened to break up all civil relations, and reduce men again to a state of barbarism. Confucius appears to have been most earnest in resisting these anti-social doctrines and practices, "I am a man," said he, "and cannot exclude myself from the society

of men, to consort with beasts." He therefore set himself most strenuously to defend society, as it was then constituted; his works ought therefore be tried by the principles of that constitution, and not by other principles, which he had never witnessed in practice, and could not conceive in imagination. Of these principles we shall consider: first, those which are political, and secondly, those which are more purely ethical. The former occupy far the greater space in the works of Confucius, who is indeed chiefly to be regarded as a political moralist. The political system which he and his followers support, appears to be founded on some specious maxims; as

1st, That the sovereign should be considered as the father of his people.

2dly, That all offices should be given to merit alone.

3dly, That the military power should be entirely subject to the civil.—And,

4thly, That the state should not interfere with the religious opinions of the individual.

The application of these principles to practice, might have produced an admirable system of civil polity in the hands of a man of deep knowledge and practical experience.

Qui mores hominum antiquorum vidit et scripsit.

But this could not reasonably be expected from the native of a little barbarous state on the banks of the Yellow river, who, if he travelled, could only travel from one tribe to another, all possessing nearly the same degree of civilization, and actuated by nearly the same views of policy. The result was, that the two first of the principles above stated resolved themselves into pure despotism, the third into absolute cowardice and the last into total irreligion.

Confucius, in the *Ta Hiao*, or, at least, the paraphrastic translator of that work, says, "the whole science of princes consists in cultivating and perfecting the reasonable nature they have received from *Heaven*.—When a man has thus renewed himself, there will be less difficulty in renewing others, and by this means concord and union reign in families, kingdoms are governed according to the laws, and the whole empire enjoys peace and tranquillity." This is, to be sure, a very pleasing picture of two or three hundred millions of human beings, guided by one profoundly wise sovereign; but this picture is purely imaginary, and it contrasts singularly with the account given by Marco Polo of the manner in which the last emperor of Manji or Southern China, passed his time. This sovereign retained in his service a thousand young females, and his great amusement was to see them bathe, in a state of nudity, in one of his parks, every male person except himself being carefully excluded from these parties.

"Thus," says Polo, "was his time consumed amidst the encraving charms of his women, and in profound ignorance of whatever related to martial concerns; the consequence of which was, that his depraved habits and his pusillanimity enabled the grand khan to deprive him of his splendid possessions and, to expel him with ignominy from his throne." It will be said, this was because he neglected the precepts of Confucius. No, it was because the precepts of Confucius were vague and unmeaning, and went to confirm, instead of correcting, the erroneous principles of government which prevailed among his countrymen.

Distribu-
tion of
orders in
China.

In order to judge properly of the despotism of China, we must consider the distribution of orders in the state, the distribution of political powers, and the particular measures which, it appears, have been adopted in that country.

The distribution of orders is very marked in China, and they may be reduced to four, viz. the royal family, the officers of government, the common people, and the slaves; and this distribution is derived from the rude notion of family government which prevailed among the first settlers of China, in which the father of the family was regarded as a sort of deity, who had absolute power over all his household, delegating a portion of his authority occasionally to such of his children as he thought fit, and leaving the most servile occupations to those who were strangers to the family, but reduced to the unhappy necessity of serving it. The fundamental error consisted in an ignorance of the true principle of paternal power, that principle which, within due limits, is essential to the very existence of society. As the parent was venerated when living with a supererogation approaching to idolatry, and actually idolized when dead, and as it would have been thought impious to restrain his power of correcting disobedient children or slaves, so the emperor, considered as the father of the people, was treated with a degree of submissive veneration unequalled in the history of mankind; inasmuch, that to this day, wherever he travels, all persons are forced, under pain of death, to remain within doors; and if any one should by chance meet his train approaching on the road, he must prostrate himself with his face to the ground, lest he should incur the guilt of looking on so exalted a personage. This explains why the Chinese government so rigorously exacts from foreign ambassadors the observance of ceremonies which we call servile; for as the celebrated Dr. Busby thought that he should never be able to govern his school if the boys did not consider him as the greatest man in the kingdom, so the constitutional veneration of the emperor's sacred person would be irremediably shaken, and the government itself would be in danger, if a foreign ambassador were to be presented at the court of Peking without having made, in one form or another, the nine indispensable prostrations. Despotism, however, cannot be carried on without officers, civil and military; and the certain mode of prevailing on such officers to treat the sovereign with unlimited submission, is to give them the power of exacting a submission proportionably unlimited from the inferior orders of the people, among whom in China are reckoned all traders, all artificers, all labourers, as well as the vagabonds, robbers, and even savages, that are to be found in this so well regulated empire. The gradations between the orders grow weaker in a descending ratio. The emperor is inconceivably higher than the highest mandarin. The lowest mandarin thinks himself much superior to the wealthiest trader; but between the slave and the lowest labourer the distinction is scarcely perceivable, and in many respects is in favour of the slave.

The em-
peror sits
head of the
executive
judiciary.
The legal
code.

Political power is no otherwise distributed than in its administration. The emperor is the sole legislator, and absolute head of the executive and judiciary. The constitutions of the empire resolve themselves into the single rule of hereditary succession in the imperial dynasty. There is, indeed, a code of civil laws derived

from ancient sources; but that code is newly-formed at the accession of each new dynasty, and takes its name as the *Ta-Tsing-Hoei-Tien* and the *Ta-Tsing-Lee-Lee*, the one being the code of general institutes, and the other the code of penal laws, promulgated by authority of the *Tsing* dynasty; as we lately saw in France the *Code Napoleon*, during the short prevalence of the Napoleon dynasty. This code, however, is subject to continual modification by imperial decrees, which are generally discussed, beforehand, by one or more of the courts, or sections into which the council of state is divided, and which, after revision by the *colius* who form his imperial majesty's cabinet, are submitted to his sanction, and when promulgated by him become as binding as if they had formed part of that venerable record which Fo-Hi transcribed from the inscriptions on the back of his dragon-horse. All other power, as we have said, is administrative, and its administration depends on two principles, centralization and gradual subordination. In every province there is a regular hierarchy of offices, civil and military, all of whom we call by the general name of *mandarin*, or commander, from the Portuguese verb *mandar* to command, which is well enough chosen, since each in regular subordination is commanded by his superior, until we come to the emperor, who is under no command but that of his own "great thoughts" and wisdom, which his officers are always ready to pronounce sublime, until by some unexpected convulsion his dynasty is hurled from the throne; and then they abuse him, as the Chinese, under the *Ming* dynasty, did that extraordinary warrior *Kablai* the Great, who so much enlarged the bounds of their empire, improved their military system, made the great canal, and was, in his time, the most powerful sovereign on the face of the earth. The frauds and oppressions of the mandarins go on increasing in the ratio of their power, and yet great pains are taken by the council of state to inform themselves of what passes in the remotest corners of the empire. Each province has its prefect, or governor, who is changed triennially; and besides, the emperor sometimes sends special commissioners into certain districts to make their reports to the several sections of the council at Peking. But the radical error remains: a system of mere centralization is necessarily a system of universal corruption, and in spite of the grave exhortations of Confucius, the mandarins of all classes exercise their functions without the least regard to honour or conscience. This is the more universal, because there is nothing hereditary, nothing professional, nothing commercial, nothing popular, to serve as a check, or corrective, to the absolute power of the emperor. If there was ever an hereditary nobility in China (as some have supposed), it does not appear even in the time of Confucius, to have existed, with any powers or privileges which might have enabled it to resist the oppressions of the emperor, or even of the lowest mandarin. If there was ever a priesthood, endowed with lands or revenues, it has long since ceased, and given place to the miserable bonzes who work on the superstitious feelings of the common people, by pretences to sorcery and magic. As to the profession of the law, which so often in Europe has defended the genuine interests of freedom, no trace appears in China of its ever having existed. Indeed, as a separate profession, it is always one of compa-

Biography, ratively late growth in the progress of civilization. Laws come first. They are administered for a while by kings in person, then by generals, or bishops; after these come judges, as a separate order of men, and lastly, advocates and solicitors; when, and not before, the law becomes a learned profession, and performs a great and essential part in protecting the rights of civilized man. The place of such a profession is not supplied by a code, and least of all, by a code framed like that of China, which aims at directing the minutest concerns of civil life, and at graduating its penalties so nicely to the offence, that it totally overlooks the character and situation of the offender. Hence arises that indiscriminate frequency of corporal punishments in China which has taken away from the Chinese all feeling of personal disgrace, and consequently has eradicated from their minds every sentiment of honour. If neither nobility, clergy, nor lawyers exist to check, and thereby to temper the exercise of despotism in China, still less can it be modified by any popular rights. There is nothing, and never has been in that country, like our commercial corporations, nothing like our representative system in any of its branches; nothing like our trial by Jury. The liberty of the press, it is said, exists; and a proof of its existence is, that in the year 1779, a doctor of physic published a book, in which he predicted the death of the reigning emperor *Kia-Lung* (then pretty much advanced in life), and spoke with some disrespect of *Kang-Hi*, who had been dead about sixty years. He was at perfect liberty to publish this work, but after it was published he was brought to trial, and sentenced to be cut into ten thousand pieces. The emperor, however, of his great clemency, pardoned every thing but the disrespectful mention of *Kang-Hi*, for which the poor author was only beheaded: If it should be argued that the system of examination, by which alone the mandarins can be admitted to office, at least in the lower ranks, is a preservative against absolute despotism, inasmuch as they must all have read the moral precepts of Confucius; we shall only answer by appealing to the uniform testimony of all Europeans who have ever visited China, to prove that their studies produce very little effect on their conduct; and that such a thing as a bold and patriotic mandarin, who from public spirit would resist any tyrannical conduct on the part of the emperor, is a prodigy no less unfrequent in China, than the appearance of the miraculous bird *Fou-Hoon*.

Not commercial companies.

Liberty of the press.

Population of China.

In examining the political system of the Chinese by its particular effects, we are doubtless first struck with the great population attributed to that empire. The government seems to have been always very anxious to ascertain the number of its subjects, partly for purposes of military conscription, and partly for reasons of finance and police. *Marco Polo* informs us that in the great city of *Kia-soi*, the capital of southern China, every housekeeper was obliged to suspend at his door, a list of all the inmates of his family; and that from these lists it was ascertained that the number of families was 1,000,000, or, according to the Basle edition, only 600,000, which latter at four and a half persons to each family would give a population of 2,700,000 souls. There can be no doubt that the empire, taken together, is to be reckoned among the most populous in the world, in proportion to its size. The numbers, however, are

very unequally distributed over the surface of the territory. Whilst the cities are crowded to excess, and millions of individuals live upon the rivers in boats, large tracts of fifty or sixty leagues in length are totally uncultivated. The soil remains unproductive in the distant provinces, while the towns and cities labour with a redundant population, evidenced in the extreme misery of the very lowest classes, in the number of vagabonds and thieves, in the customs of infanticide, and child-selling, and in the frequency of pestilences and famines. The sexual union too, is so far from being well regulated in China, that we find every possible corruption of it practised; some with little shame or secrecy, and others with the protection or encouragement of the laws. Polygamy, and incapacity for marriage, prostitution, and professed celibacy, sexualities, natural and unnatural, are all almost equally common, and cannot but have a powerful effect in deranging the natural and desirable progress of the population. Of these evils, Confucius was not philosopher enough to discern the effects in the causes; at least he did not point out their proper correctives. He did not lay the foundations of a state in the relations of a family: he did not show how an agricultural as well as a trading population might be encouraged and improved; he did not teach the admirable science of furnishing the industrious of all classes with the means of earning an independent and comfortable subsistence. To multiply crime and misery under the notion of augmenting the population, is to become a curse instead of a blessing to the human race; but the most wretched of the Chinese are incited by the precepts of Confucius to an early marriage, that they may not want a child to perform sacrifice at their tombs; and what is very remarkable, we find in China, as in England, a provision by law for the support of the destitute poor. The Chinese government, like all other despotisms, has shown great rapacity in its financial system. It has established a monopoly of salt, a capitation tax, personal services from landholders, and duties, internal and external, on tea, cattle, and all sorts of merchandise; and it is very remarkable that *Kia-soi-Kiao*, some centuries before paper-money was known in Europe, availed himself of that mode of recruiting his treasury, as is fully explained by *Marco Polo*. In respect to police, too, the Chinese government has adopted many useful regulations, though principally with no view to public accommodation, but merely to its own convenience. Large garrisons, originally stationed in cities to keep down seditions, have dwindled to a mere patrol for protection against fire and robbers. A post conveyance has been established, but only for government dispatches; inns have been erected, but only for travellers going to or from the court; roads have been made principally for the convenience of the government and its couriers; and it is deserving remark, that the great *Kublai* bordered his roads with trees, because his astrologers told him that a person who planted trees would be sure to attain long life. As to education, it would seem, from the nature of the case, that it would be pretty much confined to the mandarins. *D'Arville*, indeed, says, that there is no person in China, however poor, who cannot read and write. It is said, that the emperor *Ta-Eang*, the founder of the *Ming* dynasty, built schools throughout the country; but that they have since been suffered to fall into ruins.

Tolerance.

As to Confucius (according to the stories related of him), he was, even in his youth, averse to the education of the lower orders: "the people," said he, "would think cheaply of the ancient books, if they could comprehend them. A subordination of minds, by which the ignorant are dependent on the knowing, is very useful, and even necessary in society:—if mankind were all equally knowing, all would be for governing, and no one would obey." It must be owned that this sounds rather more like the doctrine of the Jesuits, who relate the anecdote, than of a young barbarian of the kingdom of Lu, some centuries before printing is pretended to have been known there, and who is described as not more than sixteen years old at the time of making the remark.

Celest arms togæ has been considered as a wise maxim in many states; but the Chinese have carried it to an absurd extreme. It was not so in the time of the Mogul conquerors: Kublai, himself a soldier, gave precedence to the military. He had his *conscription* and his *imperial guard*. By means of the former he raised men in *Katai* to keep down the people of *Manji*, and in *Manji* to keep down those of *Katai*. "It is his practice," says Polo, "to make an annual selection amongst all his subjects, of such as are best qualified to bear arms, and these he enrolls to serve in his numerous garrisons, which may be considered as so many armies." A little further this author adds: "When it happens that a city is in a state of rebellion (and it is not an uncommon occurrence for these people, actuated by some sudden exasperation, to murder their governors), a part of the garrison of a neighbouring city is immediately dispatched with orders to destroy the place where such guilty excesses have been committed." The imperial guard of Kublai consisted of 12,000 men, called *kassan*, or "soldiers devoted to their master." After the expulsion of the Moguls, the old Chinese customs were revived, according to which the literary class again took the lead: and a general is now subject to be publicly flogged by order of a superior civil mandarin, without losing either his rank or his command. The consequence is manifest: the Chinese armies have no feeling of military honour, and are skilled in no military arts; and though they are numerous beyond all conception, yet it is probable that a single English brigade would easily overrun the whole country. Thus a branch of the Mogul Tartars conquered first *Kutai*, and afterwards *Manji*, in which latter country a single city contained a population more than ten times as numerous as all the Tartar armies. And again, in 1618, when the Tartars broke through the great wall, and defeated a Chinese army of three hundred thousand men, the emperor sent to Macao to engage one hundred Portuguese musketeers, by whose aid he hoped to do what he could not accomplish by means of his immense native forces.

The principle of toleration is doubtless, in itself, as amiable as it is wise and just; but, unfortunately, Confucius, in this instance, as in most others, has omitted to point out the evil with which it may possibly be connected, namely, a total indifference to all religious principles. In China, travellers have been much puzzled to know what was the religion of the state, or of any man of tolerable education in the whole country; and, in fact, these latter seem to concern themselves very little on this most important of all subjects. All

that they deem necessary is, that the emperor, attended by his principal officers, should perform certain insignificant ceremonies at stated periods to the deity of the sky and to the deity of the earth; but who these deities are, whether they are the same or different, whether mortal or immortal, spiritual or bodily, good or bad, nobody either knows or cares. If we could trust to the translations of the missionaries, we should regard some passages in the works of Confucius as breathing a spirit of the purest and most refined religion; but when we look to his Commentary on the *Y-King*, we see him asserting *Chance* into the supreme deity and governor of human affairs. Hence, among his followers, some appear to be pure theists, some worshippers of the visible sky, some general sceptics, and some positive atheists: and the only point in which they agree is, in deeming China the "great nation," and themselves the most enlightened of the Chinese. They consider that persons who have not had the good luck to be taught to read ten or twenty thousand of their awkward characters must needs be extremely ignorant; and that for such people the doctrines and ceremonies of the *Bonzes*, of the *Tao-tes*, or of the *Christian missionaries*, are equally suitable: and it is only when these latter venture to speak publicly in derogation of the established customs of China, or to do any act tending to disturb that tranquillity of the empire, which Confucius so strongly inculcates, that they are restrained by law. Several imperial decrees have been issued at different times on these grounds, and one by the present Emperor *Kia King* in 1805, which is principally remarkable for the very vague and confused manner in which it speaks of the Christian doctrines. As to the gross idolatry of the *Bonzes*, which all the mandarins regard with the utmost contempt, it has been for ages protected by the government, and is the religion of nineteen-twentieths of the population.

Confucius has succeeded as little in reforming the moral character as the political institutions of his countrymen. Some authors, and even some Englishmen, have had the inconceivable folly to argue as if they thought that the morals of a people would be improved, if their governors had no religion at all; and in support of this monstrous proposition, Mr. Gossow, the translator of *Tacitus*, gravely produces the instance of China. "Here," says he, "the mandarins, who are the nobles, wise men, and governors of the country, are, properly speaking, of no religion; but zealous for the public good, they make the welfare of the state their principal care, and distinguish themselves by their politeness and virtue." "The empire of China is the most populous and flourishing on the face of the earth, although the individuals who govern it have no other rule of conduct than the light of pure reason and natural morality." Let us see how this picture is substantiated, in the lower, the middle, and even in the higher ranks of society. It does indeed appear, that one virtue, certainly of no mean weight in the scale of morals, prevails from the emperor to the peasant, namely, *filial piety*; but, as we have seen, even this is converted, by the ancient laws and customs of the empire, into the vice of actual idolatry, which, there is strong reason to believe, was accompanied, ill about a century ago, with human sacrifices. This virtue, too, is far from producing its natural result—*parental*

in China.

Biography. *affection.* The father may, and often does, punish his children with a severity which, in its consequences, may prove fatal: and whatever the penal code says of the practice of *infanticide*, we know it prevails to a very great extent. Parents, too, have the horrid custom of inflicting sexual mutilation on their male children; sometimes that they may stand a better chance of promotion in the offices of the state, and sometimes that they may sell them as slaves. In a popular tale, called "The Three Dedicated Rooms," recently translated from the Chinese, by Mr. Davis, we find a woman offering to sell herself and all her children, as slaves; and this is mentioned casually, as a mere common incident. In fact, the sale of children by their parents seems, in China, to be the great source from which slavery is supplied. Many parents, too, literally sell their daughters to prostitution; and the number of prostitutes, from this and other causes, in the Chinese cities, is, and for many centuries past has been, immense, as we may see from Marco Polo's account of Kiu-Sai, where, he says, the prostitutes were in such numbers, as he dares not to report, although he had before mentioned, that in another city there were no less than five and twenty thousand. The lower Chinese have even been accused of being cannibals; and it is certain that in the extremity of famine, which not unfrequently occurs among them, they have eaten dead bodies: but this is not extraordinary, under such circumstances, in man whose poverty constantly induces them to devour vermin, and the most disgusting food. From such people generous feelings of humanity cannot be expected, and they accordingly see their associates drowning or perishing from fatigue, without an effort for their relief. Kept as these wretched people are, through life, under the perpetual terror and frequent infliction of corporal punishment, they cannot be otherwise than servile and cowardly, in the highest degree; but these very vices only render them more insolent to foreigners, whom they think they may safely treat with contempt; and more disorderly, when, by the accidental weakness of the police, they are emboldened to break out into sedition.

Prostitution. If we ascend to the artisans and traders, who are removed above want, and sometimes possess considerable property, though without any thing like rank or estimation in society, we shall find the character of fraud very generally attached to them by travellers. Ghutony, sensuality, and the indulgence of unnatural propensities, are common to the wealthier individuals of this class, with the superior mandarins; and on the other hand, it would seem that they ape the latter in that sort of politeness which consists in a multitude of fatiguing and ostentatious ceremonies. It will perhaps be thought a remarkable circumstance, that among the Chinese ceremonies, the missionaries of the sixteenth century have minutely described a custom similar to the modern European use of *visiting-cards*; but instead of a mere card, the Chinese visitor leaves a little book of about twelve pages, in which nothing is written but his name, with various epithets of sub-

missiveness and reverence, toward the person at whose house it is left.

It is among the higher literati, the great officers, civil and military, who must all have profoundly studied the works of Confucius, that the happiest effect of his philosophy is, if anywhere, to be found. Mr. Gordon, we have seen, asserts that they distinguish themselves alike by their politeness and their virtue. That their politeness gives place entirely to selfishness and insolence, is abundantly proved by their conduct to the ambassadors who, in late times, have been dispatched to the court of Peking; nor is this any novelty. When the Emperor Sheng-Tse, in 1721, put an end to the disputes between the Jesuits and the Dominicans by banishing them both, the following was the treatment experienced by the pope's legate, Monsignore MEZZABARBA: "The *Ta-Gin*, or great mandarin Lee-Ping-Shang, entering the apartment like a madman, and seizing the legate by the collar, cried out before the whole company, that he was a perfidious wretch and a traitor, on whose account he, the mandarin, was likely to lose his own head; but that he would be revenged beforehand by murdering the legate. During this disgraceful scene, the domestics of the *Ta-Gin* improved upon the violence of their master by boxing the ears of the legate's principal attendant, pulling him by the beard, and treating him with a hundred other indignities. Monsignore MEZZABARBA, overcome with fear and terror, was in a state of agitation which would have excited the pity of any body but a Chinese; but this only served to excite the mockery of a mandarin, who jeeringly told him that he looked as if he were transported with rage, and that he was quite pale with anger against his imperial majesty: nor had the legate any other mode of repelling this inhuman reproach, than by descending to the most humble protestations and the most humiliating excuses." Such is their politeness! As to virtue, public or private, we look in vain among the accounts of all our travellers for any proof of it in a mandarin. Greater meanness, corruption, or injustice, cannot well be imagined to exist in any class of men, than these vaunted sages exhibit in their uniform conduct. Nor will this be thought surprising, when we learn that the highest dignities of the empire are often conferred on persons who have undergone the barbarous mutilation before mentioned. It is true that the Mandchew Tartars, who founded the present dynasty, effected some reform in this respect: they reduced the number of these unhappy persons in the palace from twelve thousand to about six thousand; and removed them in general from the chief posts in each department of public business; but it is much to be feared, that the growing habits of sensuality and corruption at the imperial court have since brought back things very nearly to their former situation. Such monstrous deviations from the wise laws by which the great author of nature has willed that mankind should be governed, can never take place without drawing after them consequences equally fatal to the happiness of men, and to the true greatness of nations.

LEONIDAS.

FLOURISHED ABOUT A. M. 3524, B. C. 480.

Biography.

A. M.
3524.
A. C.
480.

most distinguished for indefatigable courage and exalted patriotism, Leonidas must ever hold a pre-eminent rank. His extraordinary self-sacrifice, with that of his faithful little band of warriors at the pass of Thermopylae, has not only rendered the place itself illustrious, but gives additional brightness and glory to the name of Greek, and to the age of splendid achievement. The service rendered to his country was no less remarkable than the crisis which seemed to demand it, and the honourable failure and consequent destruction of all who were engaged in the enterprise, merits a greater commendation, and has acquired, in fact, a more lasting celebrity than many of the most splendid successes.

Answers of
Lennidas.

The ancestors of Leonidas were, according to the testimony of Herodotus, Anaxandrides, Leon, Eurycratides, Anaxander, Eurycrates, Polydorus, Alcibiades, Teleduc, Archelaus, Agaeusilaus, Doryssa, Leocleas, Echestratus, Agis, Eurysthenes, Aristodemus, Cleodemus, Hyllus, and Heracles: and, although eminent names may be recognized in this enumeration, the single deed which gave him at once a matchless fame and a gloomy sepulchre, invests him with a better distinction than the most renowned ancestry. The same historian relates that his elevation to the throne of Sparta was accidental; for as he had two brothers, both of superior age to himself, Cleomenes and Doriucus, he had no expectation of possessing the government. The former, however, died without leaving any male issue, and the latter also ending his days in Sicily, the crown devolved on Leonidas, who was older than Cleombrotus, the youngest son of Anaxandrides, who had married the daughter of Cleomenes.

March of
Xerxes.

At the period when Xerxes was marching against Greece with his countless myriads, which it seemed almost impossible to oppose by any effectual resistance, a fit opportunity presented itself for the display of that heroic patriotism which inflamed the bosom of Leonidas. The Persian king having halted at Thermopylæ for the purposes of obtaining all possible previous information, procuring guides, and refreshing his troops, the resolution was taken to proceed by Upper Macedonia into Thessaly, the fleet remaining in the adjoining bay eleven days subsequently to the re-commencement of the march. No sooner had intelligence of the Persian movements reached the assembly at Corinth, than the Spartan leader Leonidas proceeded to take their station at Thermopylæ, and the fleet was collected in the road of Artemisium, on the coast of Eubœa, where the galleys being dispatched to watch the enemy. At this momentous crisis, the Delphian oracle being consulted, directed them to pray to the winds, which might prove powerful confederates of the Greeks: an admonition which the confederates received with great thankfulness.

ness and ready obedience. Another response ordered the Atheians to pray to their son in law; which referred to an invocation of the north wind, because Boreas (probably a chief of that name in Thracia) had married a daughter of Erechtheus, king of Attica.

In the meantime, Xerxes pressed on through Macedonia to Perthambra, and across Thessaly to the neighbourhood of Thermopylæ. This spot furnished many facilities for a vigorous defence. The ridge of *Eta*, which forms the southern boundary of Thessaly, extends across the country from sea to sea, and is almost every part of it unsuited for an army. It is pervaded at nearly right angles by another ridge of similar description, rising immediately from the Corinthian isthmus, and passing along under the different names of Helicon, Parnassus, and Pindus, through the middle of Greece. On the western side, consequently, Pindus, *Eta*, and Parnassus, present three formidable obstacles to the approach into Attica and Peloponnesus. *Eta* is the only difficulty on the eastern side; and here only a single pass was known, termed *the gate*, situated at the point where the eastern extremity of the ridge meets the sea. The Phocians had formerly erected a fortress, and stationed a garrison there, and had placed a wall across, where was a width of fifty, or nearly fifty feet. On the Thessalian side they had also contrived to pour an inundation from some hot springs in the vicinity of the mountain. From this circumstance, the name of Thermopylæ, which signifies hot-springs, was derived. To the northward of this pass the mountain closed, so as scarcely to admit a single carriage, and to the southward they ran into the sea. Hence, it is evident, that precisely at this spot a very small force might contend with successful resistance against a very large one, and that the project of stopping the progress, if not turning back the legions of Xerxes, though sufficiently hazardous, was not an entirely hopeless or desperate undertaking. This situation possessed also the further advantage of a ready communication with the fleet, which rode in a secure haven.

On the north of Thermopylae is a plain, of some part wide, and in another very narrow, enclosed by impassable mountains, called the Trachiae rocks, and bordering on the Malian bay. The king had fixed his head quarters at the town of Trachis, to the southward of which the river Asopus enters a cleft of the mountain, and forms the only road; a little southward, the small stream called Phoenix meets the Asopus, where a single carriage-way rendered this part passable. The Asopus discharges itself into the Malian bay, after entering a valley in which stood the town of Anthela, with the temple of Ceres, the temple of Amphipyton, and the place of meeting of the Amphictyonic assembly. Thermopylae was a little beyond, at about the distance of two English miles from the junction of the

Biography.

Asopus and the Phœnix. To the north of the mountains, Xerxes commanded the country, while the Greeks held the pass.

Leonidas took with him a body of 300 chosen men, who were all heads of families, with the view, no doubt, of rendering their state the greater, and inspiring them to deeds of nobler heroism—thus judiciously combining the domestic with the patriotic feelings.

Preparations for the conflict.

To these were added Theban troops to the amount of 400, under the command of Leontides, son of Eurymachus; but they were united in the enterprise rather from motives of policy than feelings of confidence, since they were strongly suspected of cherishing secret sentiments of hostility against the common cause, being attached to the Medes. The march of this body was hastened by the Spartans, in order that their example might stimulate their allies to action, and prevent any pretence from delay for going over to the Medes. In addition to these, the troops of the confederate cities, with those of the Thespians, and the others already enumerated, amounted to only 8,000, or, at most, to about 11,000 men; of which, 4,000 only were employed at Thermopylæ against the Persian host; but these, as one of their historians observes, were all resolved, to a man, to conquer or die. It appears that the Carnian festival, which was celebrated for seven days at Sparta, in honour of Apollo, protracted the advance of the main body, though they intended to follow with the utmost expedition. The Olympic games had a similar effect in detaining others of the allies who were not anticipating any immediate engagement at Thermopylæ.

Exposés of Xerxes.

The Persian monarch had made an erroneous calculation of the effect of his preparations, and the hitherto irresistible progress of his army. He vainly imagined that the Greeks would flee at the first news of his approach, without even an attempt at self-defence; but what was his astonishment when he found the passes guarded to stop his intrusion, and defy his power. He had indeed been forewarned of the probability of such a measure, but he despised the thought as ridiculously romantic, believing firmly in his own invincibility. The Greeks were indeed at first seized with terror, and not only consulted about a retreat, but would most likely have accomplished it, but for the skill of their general. The Peloponnesians were anxious to return and guard the isthmus, which was, however, resolutely opposed by the Phocians and Locrians, whom Leonidas prevailed upon to continue at the post of honour and of danger; at the same time, adopting the very proper precaution of dispatching messengers to the different states to procure necessary supplies.

At this juncture, the Persian king sent a horseman to ascertain the numbers of the enemy, and to give advice of their movements. Those who were stationed within the intrenchments he was unable to discover, but he brought a report of those who were on the outside. These were the Laocœdemonians, some of whom were performing gymnastic exercises, while others were engaged in combing their hair, which was explained to him by Demaratus as their ordinary practice, previous to their undertaking any dangerous enterprise. Plutarch mentions it as a saying of Lycurgus, that long hair added grace to handsome men, and made those who were ugly more terrible. This is well alluded to in the poem of Leonides by Glover.

By chance

The Spartans then composed an external guard; They in a martial exercise employed; Heed not the monarch and his gaudy train, But judge the spear protested as in fight; Or let their adverse shields in single strife, Or, trooping forward, rush, retreat, and wheel in ranks unbroken, and with equal feet: While others calm beneath their polish'd helmets Draw down their hair, whose length of subtle curls O'erspread their necks with terror.

Xerxes is said to have waited four days, after having thus reconnoitred the position of the Greeks, in the confident expectation of their availing themselves of this opportunity to make good their retreat. He could not entertain a moment's doubt, but that his tremendous armament would induce them to disperse at once, and leave him an undisputed entrance. In this interval, he adopted every expedient to gain over Leonidas (Plut. in Lacon. Apoph.), giving him the most magnificent promises, especially urging his desertion by assurances that he should obtain the sovereignty of all Greece. It is easy to imagine with what scorn and abhorrence such proposals would be received by the unsullied patriotism and devoted zeal of such a person as Leonidas. He was afterwards commanded by a herald in the name of Xerxes, to come and deliver up his arms, to which the Iæonic general replied, *Ἀρτίστρατα, πολὺν ἄδελφ',* "Come and take them," which left no hope to the invader from the arts of negotiation. Herodotus says, that on the fifth day of the Persian's merciful inactivity, observing that the Greeks continued on their post, merely, as he imagined, from imprudent rashness, he became much exasperated, and ordered a detachment of Medes and Cissians to go and bring them all alive into his presence. This command, however, was more easily given than executed. The attack was made, but to the disgrace of the assailants, who lost a considerable number of men. A reinforcement was sent, but without producing the effect; and it became evident, observes the historian, *ὅτι πολλοὶ μὲν ἀσπαστοὶ ἦσαν, ὀλίγοι δὲ ἄνδρες,* that "Xerxes had indeed many men, but few soldiers." The Persian troops, which had obtained the distinctive appellation of the "immortal band," under the command of Hydarnes, were next ordered to the assault, and a certain and easy victory was confidently expected; but their success was no better than that of their predecessors; their superior numbers, as the Greek historian candidly admits, being of little or no advantage, on account of the confined extent of the field of action, and the shortness of their spears, in comparison with those of their enemies. Their conduct was highly spirited, though their efforts were unsuccessful; for, after making every kind of attack they could devise, they were compelled, at length, however reluctantly, to relinquish the attempt. A few only of the Spartans fell, while the loss of the Persians was prodigious. The conflict was renewed the next day, with fresh troops on the part of the invading enemy, who indulged the hope that weariness and wounds would have disabled the defenders of Thermopylæ from any vigorous resistance, but the disappointed tyrant and his minions were obliged again to withdraw from the terrible conflict with the patriotic Spartans and their immortal leader.

Amidst the perplexities that now encompassed the Persian monarch—thus checked, and some of his cho-

Treachery
of Ephialtes.

sen troops disgraced by the moral force of an insignificant few,—treachery came to his relief in the person of Ephialtes, the son of Eurydemus, a Melian, who was influenced by the hope of a great recompense, to point out a path over the mountain leading directly to Thermopylæ. It was a circuitous and difficult route, but had been used by the Thessalians on some occasions when they invaded Phocia for plunder; and though afterwards neglected, was well known by the Phocians, whom Leonidas had appointed to defend it. It commenced at the cleft in the rock where the river Asopus entered; whence it was found winding up the hill called Anopetia, and proceeding along the ridge between Æta, on one side the Trachinian rock; on the other, it descended to Alpeni, the first town of Lœria. By adopting this course, the Persians were likely to obtain an access to the opposing and hitherto resistless force, which they might with probability calculate upon as insuring the victory to their innumerable hosts. These were most welcome tidings, and were no sooner heard than acted upon by the generals of Xerxes. The enterprise being committed to Hydarnes, he marched, under the cover of evening, with a strong detachment, and by day-break attained nearly to the summit of the mountain Anopetia, where the Phocian guard was placed, to the amount of 1,000 men, but from whom the Persian troops were screened by the oaks which everywhere covered it. The modern warrior will with justice accuse them of the want of necessary vigilance, in the employment of sentries and scouts, on so important an occasion, when they had volunteered their services to guard this pass, which was the only practicable method of taking them by surprise; they can never be extricated from the charge of a folly amounting to madness. So it was, however, that they received the first intimation of the approach of their enemies by the sound of their feet on the fallen leaves; the air, fortunately, being at the time extremely tranquil. Instantly the Phocians flew to arms, which at first checked the eager haste of the Persians, who had not expected that any measures had been taken to defend this narrow passage; but finding from the treacherous Ephialtes, that they were not Lacedæmonians, Hydarnes soon recovered his panic, and drew up his troops in order of battle. The Phocians retreated up the mountain to a more elevated spot, thinking, by this means, to gain an advantage over their assailants; but availing himself of this indiscreet movement, dictated also, probably, by sudden fear, Hydarnes marched onwards, and descended the opposite side of the mountain without opposition.

It seems that information had been already communicated to the Grecian camp at the straits, of the detachment which had been sent from the Persian commander to traverse the mountains. Diodorus Siculus mentions one Tyrastides, of Cyrene, a man of honour and probity, who went by night, and forewarned Leonidas of the treachery which had been practised: and early in the morning the scouts conveyed the unwelcome news that the enemy had passed the Phocian guard, and were descending towards the plain. A council of the Grecian generals was immediately summoned, who were greatly divided in opinion: some urging resistance, others retreat. Their conduct was as divided as their councils; and in this moment of extreme exigency, Leonidas saw himself abandoned by great multitudes,

who hastened to their respective homes. Herodotus states, indeed, that it was reported that those who withdrew, did so not from their sense of danger, or from any unpatriotic motives, but at the express desire of Leonidas himself, who wished to save their lives. Conceiving himself and his Spartan troops, that he could not retreat with honour, whatever might be the event, he resolved to remain. The historian, however, expresses what is indeed a very probable opinion, that Leonidas was not so much prompted to give the permission to retire from his own conviction, as from observing the dispositions of the soldiers, who were averse to the terrible encounter that awaited them. He is said also to have been influenced by an oracular decision which was fresh in his memory, by which the Spartans were informed at the commencement of this war, when they made an application, as usual, to their divinity, that either their King must die, or Sparta be vanquished by the barbarians. The hexameter verses, containing the response, have been thus rendered:

To you who dwell in Sparta's ample walls,
Be bold, a dire alternative befalls;
Your glorious city must in ruins lie,
Or, slain by Persian arms, a king must die;
A king descended from Hercules' blood;
For, lo! he comes, and cannot be withheld;
Nor bulls, nor lions, can dispute the field,
Till Jove's own force, and this or that must yield.

Glover has accordingly put into the mouth of the hero the following exclamation, on hearing that the enemy had succeeded in his purpose, through the treachery of his professed adherents:

I now behold the oracle fulfilled—
Then art thou near, thou glorious sacred hear,
Which shall my country's liberty secure?
Thrice hail, thou solemn period! then the tongues
Of virtue, fame, and freedom shall proclaim,
Shall celebrate in ages yet unborn.

The Thespians were the only body of the Grecian confederates that willingly remained with Leonidas and his Spartans in this extremity: the Thebans, indeed, were with him, but Herodotus affirms, though Plutarch is indignant at his representation, that they were detained very reluctantly, and as hostages. The Thespians, under Demophilus, emulated the zeal of their brethren in the cause, exhibited an equal courage, and perished in the same glorious conflict. The little band of heroes was soon inevitably summoned, and prepared, with undaunted fortitude, to choose the spot on which their lives should be offered up by the Persian sword, on the altar of patriotism. This being arranged, the tragedy began.

At sun-rise, according to the Persian habit, Xerxes offered up a solemn libation, and then dismissed the troops to await orders. About the middle of the forenoon, he set forth from his camp, and calculating that Hydarnes, with his detachment, might now probably have arrived in the rear of the Greeks, he commanded an attack to be made in front. Anxious to do all the execution upon their enemies possible, and prompted by desperation, Leonidas advanced much further from the intrenchments than he had done in any preceding contest, judging that in a wider space he should have a superior opportunity of avenging the enemy. Multitudes fell as they were whipped on to the encounter, by officers stationed for the purpose in their rear, many perished in the sea, and many others were trod-

Attack of
Xerxes.

den under foot by their own troops. Aware that destruction was at hand, from those who had made the circuit of the mountains, but were not at first arrived, the Greeks exerted themselves to the utmost, and performed prodigies of valour; and when their spears were broken, they had instant recourse to their swords. The Lacedæmonian soldiers wore a red uniform, which Suidas says, was adopted that the blood of the wounded might be the less conspicuous.

But what could mortal prowess accomplish against the numberless foe? Leonidas himself fell early in the engagement, but not before he had had the opportunity of signaling himself by extraordinary efforts; and with him many Spartans of distinction met their fate. The battle, nevertheless, continued, and with equal zeal on the part of the defendants, till Hydarnes presented himself in the rear with his detachment, when they retreated to the wall. At this juncture, Herodotus says, that the Thebans solicited mercy of their conquerors; but many were killed in the very act of surrendering, while the remainder were made prisoners. The surviving Lacedæmonians and Thebians gained a rising ground, which afforded them the means of some further temporary resistance, till they were slain to a man. Herodotus states, that such of them as had no swords left, exerted themselves with their hands and their teeth; upon which Longinus exclaims, "What are we to think of this hyperbole? What probability is there that men should defend themselves with their hands and teeth against armed troops? This, nevertheless, is not incredible, for the thing does not appear to be sought out for an hyperbole, but the hyperbole seems to arise from the subject." This mode of fighting, however, remarks Mr. Beloe, was common amongst the Lacedæmonians. When they had no arms they availed themselves of their nails and teeth: Cicero had been a witness of this, *vid. Tusc. Quest. l. v. c. 27*. There is another instance of a similar kind in the Numidian soldier, at the battle of Cannæ, who was found in the field expiring under the dead body of a Roman, whose head he was tearing with his teeth, being unable to make use of his hands, *Livy xxvii. 51*.

The account which Plutarch has given may be considered as fictitious, and resulting solely from the natural propensity which most men feel to embellish with extraordinary circumstances the names of illustrious individuals, especially in critical conjunctures. It is this—that Leonidas, after receiving a multitude of wounds, got up to Xerxes himself, and snatched the crown from his head. He lost his life in the attempt; and Xerxes, causing his body to be opened, found his heart hairy. Such, he adds, is the account of Aristides, in the first book of his Persian history. The other part of his statement savours less of exaggeration, and is sufficiently characteristic to be admitted as at least not improbable. The barbarians fell upon them whilst they were at dinner; upon which Leonidas desired them to eat heartily, for they were to sup with Pluto.

Two of the brothers of Xerxes perished while they were contending for the body of Leonidas. In this point of severe contest, the superior valour of the Greeks enabled them to repel the Persians no fewer than four times, till the party in their rear approached under the guidance of the traitorous Ephialdes.

Diodorus Siculus gives a somewhat different repre-

sentation of the celebrated battle of Thermopylæ. As soon, he says, as Leonidas found that he was circumvented, he availed himself of the approach of night to make a bold attempt upon the tent of Xerxes, which, however, the king had abandoned on the first alarm. The Greeks advanced in search of him from tent to tent, marking their track with the blood of multitudes whom they slew. In the morning, the Persians looked with contempt upon the insignificant number of their enemies, and closing upon them on three sides, still not daring to attack them in front, they soon slew them with their spears. In the poem before cited, Glover follows the narrative of Diodorus Siculus, but differs from the ancient historians, in representing the chief hero as perishing last—adhering less to historic accuracy, than to poetic effect.

—The Spartan king
Now stands alone. In heaps his slaughter'd friends
All stretch'd around him lie. The distant fogs
Shower on his head innumerable darts;
From various sluices gush the vital fluids;
They stain his faltering limbs, nor yet with pain
His brow is clouded; but those brazenous wounds
The sacred pledges of his own renown
And Sparta's safety, in serene joy
His closing eye contemplates. *Some one twine
No brighter laurels round his glorious head;
His virtue soars to labour fate forbids,
And lays him now in honourable rest,
To seal his country's liberty by death.*

Two trifling anecdotes of Leonidas are related by Plutarch, for which, amongst other omissions, he loudly censures Herodotus. When his wife took leave of him, she asked what commands he had for her. "Marry a good man," said he, in reply, "and bring him good children." Desirous of saving two of his relations who accompanied him to Thermopylæ, he pretended to give them messages to the senate of Sparta. "I followed you," says one of them, "to fight, not as a messenger." "What you enjoin," said the other, "is the business of a messenger; and immediately taking up his shield, placed himself in his rank."

The names of all the three hundred Spartans, whose Dienece, extraordinary self-sacrifice at the straits of Thermopylæ is so celebrated, were upon record in the time of Herodotus, and, as he expressly asserts, well known to him. Dienece is distinguished above the rest, as the bravest of the brave. Previous to the engagement, a Trachinian having remarked that the barbarians would send forth such a shower of arrows, that their multitude would obscure the sun itself; he replied with the utmost heroism, and with no contemptible degree of wit, "Our Trachinian friend promises us great advantages; if the Medes obscure the sun's light, we shall fight them in the shade, and be protected from the heat."

Alpheus and Maron, two brothers, the sons of Oris-Alpheus, phantus, are next commemorated; and, as most conspicuous among the Thebians, Dilyrambus, the son of Harmatidas.

Two of the illustrious band of Spartans survived the destructive battle—Aristodemus and Panties. The former had the general's permission to remain at Alpheus, on account of a violent inflammation of the eyes; or, according to some writers, he was dispatched from the army on some business, and might, it is said, have joined the battle, had he not lingered on his embassy. In consequence, he was branded with infamy

Aristodemus and Panties.

Biography. on his return: no one would speak to him, or supply him with fuel, and he acquired the odious epithet of *δ' ἰσπερος*, "the trembler;" but from this disgrace he redeemed his character subsequently, at the battle of Plataeae. Pandites having been sent into Thessaly on some business, felt so strongly what he deemed the disgrace of being absent, that on his return to Sparta, he committed suicide. Another soldier, named Eurytus, is celebrated for having hastened to share in the glories and the destruction of the day, notwithstanding the similar permission with that of Aristodemus, to remain at Alpenus for the recovery of his health, which he had received from his royal general-in-chief.

Monuments to the slain. The year after the extraordinary action of Thermopylae, the Amphictyonic assembly undertook the care of erecting monuments to the slain. Two structures of marble were, in consequence, reared, to denote the place of the conflict, with inscriptions which long remained. One was in honour of the Peloponnesians in general, without particularly mentioning the Lacedaemonians, who defended the pass; the other related solely to the latter, and their heroic leader and king.

They were in verse, according to the usual practice on such occasions. The former imports that "here four thousand men from Peloponnesus, fought with three millions;" the latter is as follows:

Ἦν ἱστ' ἀπὸ Παιονίας ἄνδρες ἄνδρες
κίοντες, τοῖς αἰσίοις Περσέων ἀνδράσιν.

It is thus translated by Cicero, in the Tusculan questions, who ascribes it to Simonides:

Die, hospes, Sparta nos te hic vidisse iacentes,
Dum sanctis patriae legibus obsequimur.

Or, in English,

Go, stranger, and to list'ning Spartans tell,
That here, obedient to their laws, we fell.

Herodotus speaks of a lion of stone, which was erected in honour of Leonidas. His bones were, about forty years afterwards, at the victory of Plataeae, conveyed back to Sparta by Pausanias, who reared a magnificent monument to his memory, near the theatre. Every year, a funeral oration was pronounced in that place, to the honour of the fallen heroes, and games were celebrated, in which Spartans were exclusively permitted to participate.

PAUSANIAS.

FLOURISHED ABOUT A. M. 3525, B. C. 479.

Biography. PAUSANIAS was by birth a Lacedaemonian, and attained to the highest honours which his country could bestow upon him, being appointed generalissimo of the confederate Greeks, at the critical period of the second Persian invasion; lineally descended from the kings of Sparta, the son of Cleombrotus, and regent of Lacedaemon for his cousin Pleistarchus, son of Leonides, who was yet a minor, at the time his countrymen ordered him to oppose Mardonius, the Persian commander. Previous to the departure of Pausanias from Sparta to oppose the Persian invasion, the Lacedaemonians appeared too little inclined to afford an active co-operation with the Grecian states, in support of their common interests; but they were, at length, brought to resolve upon more decisive measures, by the remonstrances of the Athenian ambassadors on the one hand, and by the reproaches of their own allies on the other; and immediately after this fortunate change, the Lacedaemonian senate dispatched Pausanias with five thousand Spartans, each attended by seven Helots, who were regarded as their light troops, to join the confederacy. This increased the number of the forces to forty thousand men. Pausanias marched secretly out of Sparta under the cover of night, and early in the ensuing morning arrived upon the confines of Arcadia. This procedure both surprised and disconcerted the people of Argos, who, according to Herodotus, had undertaken to intercept any Lacedaemonian forces that might attempt to leave Laconia. The Argives were, however, so blindly devoted to the Persian interest, that they immediately dispatched messengers to Mardonius, to communicate the intelligence of Pausanias, with his Lacedaemonian troops, having advanced into

Marches from Sparta.

Arcadia. No sooner had the Persian general received this information, than he retreated with the utmost precipitation from Attica, and retired into Boeotia, which being an open country, was much better adapted to the evolutions of cavalry, and moreover had the advantage of being nearer to his numerous magazines at Thebes. Having fixed his camp upon the banks of the river Asopus, he extended it from the Theban town of Erythrae, toward Hyacin, on the confines of the Platæan territory. Pausanias, in the mean time, continued his march towards the isthmus of Corinth; where, upon his arrival, he was joined by the rest of the confederate forces of Peloponnesus. Upon this expedition, he was attended by Tisamenus, a native of Elis, in the quality of prophet, or soothsayer, an office in high estimation. On consulting this soothsayer, after the performance of sacrifices, it was found that the omens were peculiarly favorable to the present enterprise.

Pausanias next advanced upon Eleusis, at which place he was joined by the whole of the Athenian forces, under the command of Aristides, who had been appointed to that high and honourable office by a special decree of the people. Sacrifices were again resorted to, and the augurs again returned favourable responses. The combined army of the Greeks now marched into Boeotia, and took a position at the foot of Mount Cithæron, directly opposite to the Persian camp; the river Asopus dividing the two hostile armies. The Persian general, Mardonius, deeply sensible of the strength of the position which his opponent had assumed, attempted, but in vain, to seduce him from his ground, into the open country, where his cavalry would be enabled to act with ad-

Contest with
Mastius

vantage. Finding that the skilful Spartan could not be induced to relinquish his position, which, at the same time, it was impossible to force in front, he immediately ordered Mastius, the master of the horse, to employ his cavalry in annoying and harassing the Grecians. The Persian cavalry, like those of Parthia, made use of a variety of missile weapons, such as darts and arrows; and after having discharged them at the enemy, they were accustomed to retreat with the utmost precipitation. Their general plan was to charge in small bodies in succession; and although they were extremely impetuous at the onset of the contest, as soon as they met with a firm resistance, they suddenly wheeled about and made good their retreat. With light cavalry of this description, Mastius repeatedly charged the Megareans, who were posted in that part of the Grecian line which was most exposed to such assaults. The Megareans were so harassed by the repeated attacks of troops, continually supported by reinforcements, that although they maintained their station with unyielding heroism, they sent messengers to inform Pausanias of their being under the absolute necessity of abandoning their post, unless he marched quickly to their relief. This induced an immediate call of a council of his generals, for the purpose of consulting upon the best means of opposing an effectual resistance to the harassing and desultory charges of the Persian horse. In this consultation he frankly confessed his own inability to devise any plan, and expressed his reluctance to give orders respecting a military service which was to him so perfectly novel. In this distressing and critical moment, Aristides and the Athenians offered their services; nor could there be an instant hesitation in accepting the co-operation of an officer who had served at the battle of Marathon, under the illustrious Miltiades. Aristides selected upon this occasion a soldier of the name of Olympiodorus, and placed under his command a chosen body of heavy-armed infantry, judiciously intermingled with a number of javelin-men and archers. Olympiodorus immediately marched to the relief of the Megareans, and effectually checked the advance of the enemy. Mastius enraged at this unexpected interference on the part of the Athenians, impetuously charged their heavy-armed infantry; but at the very onset, an arrow wounded his horse, and he fell to the ground, in which deplorable condition he was slain by the javelin of an Athenian soldier. The weapon, in spite of his valor, pierced his eye-ball, and penetrated the brain. The Persian horse made the most desperate efforts to recover the body of their general, who, according to the testimony of Herodotus, was second in command to Mardonius, and was very generally held in high estimation by the soldiery. The Greeks baffled their enemies in every attempt, which obliged the Persian cavalry to retire slowly and reluctantly to their camp.

Greeks
change their
position.

After the death of Mastius, the Greeks removed their camp from the present advantageous position, in consequence of experiencing a scarcity of water, which was occasioned by the numerous Persian horse scouring the bank of the river Asopus; and they took up a post near the fountain of Gargaphis, which lies within the confines of the Platæan territory.

No sooner was intelligence conveyed to Mardonius that the Greeks had changed their position, than he

struck his own tents, put his troops in motion, and pitched his camp directly opposite to theirs, still keeping the Asopus in front of his army. Cornelius Nepos, in his Life of Aristides, states that at this time the Persian forces amounted to two hundred thousand infantry, and twenty thousand cavalry, all of them picked troops; but Herodotus, in his enumeration of the force under Mardonius, states the numbers at full three hundred and fifty thousand, of whom fifty thousand at least were Greeks, principally Macedonians, and a few Phocians. The Grecian army was, at this juncture, no less conspicuous for its valour and discipline, than respectable for its numbers. Their forces, according to Herodotus, amounted in the whole to no less than one hundred and ten thousand men. It would, however, appear from the silence of Herodotus on the subject, that they had no cavalry—a deficiency which was most probably remedied by their light-armed infantry, among whom was judiciously mingled a considerable number of archers and dart-men, who were able to encounter the Persian cavalry, and defeat it, as is evident from the circumstance, that the Athenian troops of that description were fully competent to repel the assaults of the Asiatic horse under Mastius.

The Greeks, during their last encampment, marshalled their army in the following manner:—Five thousand Spartans held the post of honour, which was the first place on the right, attended by thirty-five thousand Helots; then five thousand Lacedæmonians, attended by five thousand light-armed Helots. Next in order were the Tegæans, about fifteen hundred strong; then five thousand Corinthians, three hundred Potidæans, six hundred Arcadians from Orcomeny, three thousand from Sicyon, eight hundred Epidaurians, one thousand inhabitants of Træzene, two hundred Lepæans, four hundred Mycenæans and Troezenians, one thousand Phliasiæns, three hundred Hermionians, six hundred Eretrians, four hundred Chalcidians, five hundred Ambraciots, eight hundred Leucadians, two hundred Palæans, five hundred Eginitæans, three thousand Megareans, six hundred Platæans, and lastly eight thousand native Athenians, who were placed at the extremity of the left wing, considered the second post of honour. These forces were all heavy-armed foot, amounting to thirty-eight thousand seven hundred men, exclusive of the Helots. Every Spartan, however, being attended by seven Helots, every Lacedæmonian by one, and every other Greek by a light-armed slave, the light-armed infantry amounted to sixty-nine thousand five hundred; to which number may be added eighteen hundred Thespians, who were not armed in the regular manner.

After the Persian army had taken up its position in front of the Grecian encampment, Mardonius kept his troops in a state of almost perfect inaction for eight days. The Persian general applied himself of this interval to get acquainted with the narrow passes of Mount Cithæron, through which the Grecian army was constantly furnished with provisions and other necessities. On one occasion, having received intelligence of the march of a convoy with supplies for the Grecian camp, he dispatched a strong body of cavalry to intercept them. The Persian horse falling in with the convoy at the point where the defile terminates in the plain, killed both men and cattle, and immediately retreated upon their own army.

Change of
position.

Wearied at length with a state of inactivity, and perceiving that the Greeks were pertinaciously resolved not to relinquish their present advantageous position by crossing the river Asopus, Mardonius, after a deliberation of two days, adopted the determination to give battle; and first taking the precaution of summoning the principal Grecian officers of his army, he stated his design of attacking the confederates on the succeeding day, commanding them at the same time to make the necessary preparations. Alexander, king of Macedonia, one of the Grecian officers dwelling pressed into the Persian service, was determined to communicate this intention of Mardonius to his countrymen; and as Plutarch relates in his life of Aristides, rode at midnight to the Athenian line, and demanding to speak with Aristides and his principal officers, communicated the plan of the Persian general. This being done, he hastily returned to his own camp; while the Athenian general conveyed this gratifying piece of information to Pausanias, the commander in chief. A council of war was immediately called in his tent, to deliberate upon the proper measures which ought to be adopted in this emergency, to resist the menacing attack. Pausanias, with his usual discrimination, proposed an important alteration in the order of the Grecian line. He had previously observed that the native Persians were placed on the left of the enemy's army, opposite the Lacedæmonians, and the Grecian heavy armed infantry in the Persian service on the right, opposite to the Athenian forces. He alleged that the Athenians alone had any considerable experience in real action with the Persian troops, and that they were full of spirit and enthusiasm from cherishing a lively recollection of the glorious victory of Marathon, as well as in consequence of their recent successful charge upon the enemy's horse. On these grounds, he proposed that the Spartans should move to the left wing, and the Athenians to the right; and with the concurrence of Aristides issued orders for the execution of this new arrangement. The Persians, however, the next day, deferred their intended attack, confining themselves to certain military evolutions; excepting only that a few desultory charges of cavalry were made along the whole Grecian line, and one attack of a more serious nature upon the Lacedæmonian troops, stationed at the fountain of Gargaphia.

At the close of the day, the Greeks found themselves destitute of water, and in some measure without provisions, owing to the activity of the enemy's cavalry in intercepting supplies. Upon this, Pausanias, for the third time, resolved to remove from his present situation, and gave orders to the troops to proceed during the second watch of the night, about the distance of a mile and a half lower down, from the Gargaphian fountain towards the town of Platæa. On this march, most of the Grecian troops were seized with a sudden and unaccountable panic, which induced them to pay but little attention to the orders of the commander in chief. Both Herodotus and Plutarch affirm, that all the Greeks, with the exception of the Tegæans, who were steadfast in their adherence to the Spartans, and of the Platæans, who were equally firm to the Athenian forces, fled in the utmost confusion to the temple of Juno, under the very walls of Platæa, a distance of nearly three miles from the springs of Gargaphia.

In this dilemma, it is probable that the fortunate obstinacy of a Lacedæmonian officer saved the whole confederate army from ruin, and unquestionably led to the celebrated victory which was afterwards achieved. Amompharetus, who united the characters of priest and soldier, absolutely refused to obey the orders which were given by the general to retreat, urging in vindication of his extraordinary conduct, the standing laws of his country. This circumstance produced a violent altercation between Pausanias and the subaltern officer in question, which occasioned the detection of the Lacedæmonians in their position. However, at break of day he desired the Athenians to observe the motions of his troops, as a guide by which to regulate their own movements, and commanded the Spartans and Tegæans to press forward to the ground which he had chosen for their encampment. Amompharetus at length ordered his squadron to follow the rest of the army, whose march was in the direction of the hills, whilst the Athenians only advanced along the plain. In the morning, the Persians, to their great astonishment, again perceived the Greeks in rapid motion. The cavalry immediately charged the rear of the Lacedæmonian army, and Mardonius construing the retreat of the Greeks into a flight, quickly brought up the Persian infantry to pursue the fugitives, as well as to support his own cavalry. The whole of the enemy's force followed in expectation of an easy and bloodless victory. At this juncture, the Grecian general found his rear so seriously annoyed by the reiterated and desultory attacks of the Persian light horse, that he was under the necessity of making a stand; and, accordingly, dispatched a messenger to Aristides, acquainting him with his intention, and requesting him to afford him some assistance in repelling the assaults of the enemy. But before the Athenian general could march to the relief of his colleague, he was himself vigorously attacked by the Grecian troops in the Persian service, and thus was effectually prevented from co-operating with the Spartans. The Lacedæmonians and Tegæans amounted, however, to eleven thousand heavy-armed foot, and more than forty thousand light-armed troops; and they were posted upon the declivity of Mount Cithæron, with the river Asopus in front, running at the foot of the hill. In this position, so advantageous for defence, Pausanias, with his Spartans, awaited the approach of the enemy. The Persian infantry, under Mardonius, made a most spirited attack upon the Grecian line; the shock between the contending parties was violent in the extreme; the Persians fought with resolution, and according to the very candid account of Herodotus, equalled both in strength and courage his own countrymen, although they were decidedly their inferiors in discipline and steadiness. The conflict was long and dubious; but in this, as in the former engagements, the Greeks had the advantage in close fight, in part from the short weapons and undefended bodies of their antagonists. These, nevertheless, made several vigorous charges upon the Grecian infantry, many of whom were seized and their weapons broken, but every effort they could make to penetrate the Lacedæmonian phalanx, proved totally unavailing, and the Persians began at length to give way. At this critical moment, according to Herodotus, the Spartans and Tegæans advanced upon them, and having made an impression on their line, pushed

Biography. forward, and soon threw the whole mass of the Persian infantry into confusion. Nothing could exceed the astonishment and consternation into which the Persian general was now thrown, on witnessing the unexpected repulse of his infantry by an enemy whom he had regarded as fugitives, and on noticing the provoking circumstance, that the victory was suddenly snatched from his eager and too confident grasp.

Dilemma of Mardonius. He was now in great suspense whether or not to sound a retreat, by which it is more than probable that his infantry would have been placed in a state of safety in the plain, under the protection of his strong bodies of cavalry; but on considering that his army was too numerous to find subsistence in a barren and mountainous country, and, perhaps, convinced that it was necessary to strike one decisive blow, in order to rescue his fame from the calumny to which it was now inevitably exposed, he determined to trust to one of those accidents which have so often interposed at an alarming crisis to turn the fate of battle; and which it is impossible for any human foresight either to anticipate or prevent. As soon as he had taken this resolution, he proceeded to place himself at the head of a select body of horse, and advanced full speed to the support and relief of his retreating infantry, and made a charge in person no less judicious than spirited notwithstanding the rugged, hilly, and generally disadvantageous nature of the ground. Although he did not succeed in breaking the Lacedæmonian phalanx, he was enabled by this vigorous attack to check their progress. Many gallant Persian officers and soldiers perished in this charge of cavalry; among the rest, Mardonius himself, after having behaved in a manner worthy of the magnitude and importance of the interests which were at stake. He fell covered with wounds; and instantly upon his death the whole Persian army betook themselves to flight. Artabazus, who was second in command to Mardonius, but who was not personally engaged in the battle, no sooner heard of the complete overthrow of the Asiatic infantry, than he retreated toward Phocis with a chosen body of forty thousand men under his own immediate orders, and by this well conducted measure, for which he is justly celebrated by the historian of Halicarnassus, saved the remains of the Persian army.

His fall. While the Lacedæmonians were victorious over the Persians upon the hills, the Athenians were severely engaged with the Thebans in the plain. The Boeotians, who were in the Persian service, were forced, after an obstinate conflict, to yield to the superior military talents of Aristides and the valour of the Athenian troops, and fled in haste and confusion towards Thebes. The rest of the Asiatic nations, upon the advance of the Spartans and Tegæans, disappeared in the utmost consternation, without waiting for the charge. The Persian and Theban horse, however, still maintained the field after the infantry were routed, and rendered material aid in covering the retreat of the fugitives. The greatest part of the Persian infantry took shelter in their fortified camp, which was advantageously situated within an enclosure of wood, and was the depository of all the magazines and treasures of the enemy. The Lacedæmonians and Tegæans being well acquainted with this circumstance, pressed on with ardour, and pursued them thither into the very entrenchments; but not being much accustomed to carry on sieges, or to

storm fortified walls, were perplexed in what manner to conduct their operations. On the arrival, however, of the Athenian troops, the Spartans, under the direction of the Athenian officers, and in conjunction with their confederates, again attacked the entrenched position, and after repeated assaults, accompanied with the most spirited efforts on both sides, completely succeeded in carrying it; improving or rather degrading their victory by a horrible slaughter of the enemy.

Of the Persian army, which originally consisted of about three hundred thousand men, only three thousand survived, with the exception of those who effected a timely retreat under the skilful conduct of Artabazus. He arrived in safety with his forces at Byzantium, and thence proceeded to Asia. In the course of only a few days, not a single Persian was to be found in Greece, and never since that memorable period has a Persian armament ventured to make its appearance on that side of the Hellespont. The battle we have now detailed, took place, if we may rely on the calculations of the most approved chronologists, on the fourth day of the Grecian month Boedromion, according to the Attic method of computing time, which corresponds with the nineteenth day of our month of September.

As soon as the work of slaughter had ceased on both sides, the conquerors proceeded to plunder the eastern camp of its riches and treasures. The spoil found by the Spartans was immense. In the magnificent tent of Mardonius, there were discovered prodigious sums of money in gold and silver, exclusive of gold and silver cups, vessels, couches, tables, necklaces, collars, and bracelets. This Asiatic display of pomp and wealth dazzled the eyes of the wondering Greeks, whose poverty in the precious metals, and whose general simplicity of life prevented their forming the least conception of the splendor of eastern princes. But these spoils, in the opinion of a judicious historian, became fatal to Greece, and productive of the most pernicious consequences, inasmuch as they first introduced a love of riches and luxury amongst her inhabitants.

The Tegæans, who first broke into the camp, seized upon its treasures, and began to appropriate them to themselves, as their right. Upon this, Pausanias immediately issued orders, that the whole of the plunder should be collected together, and fairly distributed among the respective nations and cities that had furnished their contingent of troops; and that the principal officers of the army, who had distinguished themselves in the field of battle, should be particularly and proportionally remunerated in this division of the booty. The Helots were then ordered to gather together all the spoils, with the exception of a brazen manger, which was conceded to the Tegæans as a testimony of their bravery and good fortune. Previously, however, to the division of the spoil among the gallant soldiery who had fought for it, the religious custom of the Grecians was observed, in which a tenth part of the whole was appropriated to the use of the gods. According to Herodotus, the treasure thus set apart furnished a golden tripod, which was dedicated to Apollo, at Delphi, and placed there by the express orders of Pausanias. It bore an inscription, purporting, "that he (Pausanias) had defeated the barbarians at Plataea; and that, in acknowledgment of that victory, he had made this present to Apollo." The Spartans were so enraged at this specimen of presumptuous

arrogance on the part of their general, that, in order to punish his vanity, and, at the same time, to perform an act of justice to their confederates, they caused his name to be erased, and the names of the respective cities to be inscribed in its place. This extraordinary man suffered his too ardent thirst after glory to plunge him into the error of committing an action, which has subjected him to the charge both of a want of wisdom and of modesty; and the high value which he set upon his own services was disadvantageously contrasted with the unostentatious moderation and unobtrusive temper of his illustrious colleague, Aristides. Pausanias, however, upon another occasion, gave a more favourable specimen of the true Spartan disposition, in a conduct worthy of the best days of Spartan integrity and simplicity. The trappings of the royal household were found in the pavilion of Mardonius, which had been left by Xerxes, on his sudden and hasty departure for Persia. These had been presented by him to his general and brother-in-law. Pausanias, a few days after the engagement, determined to give a sumptuous entertainment to the principal officers, whom he invited for the occasion. The domestic Persian slaves, who had survived the slaughter, were in waiting; the royal furniture of Xerxes was put in request; the side-boards were covered with a costly exhibition of gold and silver utensils; and one of the tables exhibited a profusion of the delicacies and luxuries which used to be served up at the table of Mardonius. Pausanias ordered another table to be spread, on which was placed his plain and frugal supper, prepared according to the Spartan manner; and, turning round to his officers, requested them to mark the difference between a sumptuous Persian entertainment and a Spartan repast. "What address," says he, "was it in Mardonius, who was accustomed to such a luxurious diet, to come and attack a people like us, that knew how to live without any such superfluities."

Entertainment given by Pausanias.

Burial of the dead.

After the distribution of the spoil by Pausanias, he ordered that the burial of the dead, which was deemed a peculiarly solemn and sacred office, should be performed. The slain were interred, according to the general practice of the ancients, in tumuli, or barrows; a custom which has prevailed among more modern nations, especially among the Celtic tribes. A single burying-place was appointed to the use of the Athenians, Tegeans, Megareans, and Philiatians; but the slain of the Lacedæmonians formed three separate burial-places; one for those who had borne the priestly office, another for the Lacedæmonians in general, and the third for their Helots.

Amompharetas and Aristodemus.

The two most distinguished characters among the Greeks, who fell on that memorable day, were the Spartans Amompharetus and Aristodemus, the latter of whom distinguished himself before all others in the battle of Platæa. Soon after the burial of the dead, a dispute arose between the Lacedæmonian and Athenian generals, to which of the two nations the *Apoteia*, or first honours of merit, should be awarded, for their valour in the engagement. The Corinthians, however, interfering as mediators, contrived to reconcile the differences of the contending parties, by proposing the Platæans as claimants for the honorary distinction; justly alleging, that the Platæans had covered themselves with glory by their valour and enthusiasm in the recent conflict, and, when the common cause had required, nobly

volunteered to serve on board the Grecian fleet, although they were an inland people. It is rather singular, however, that achievements of the troops of Platæa are not particularly recorded by any writer, and are entirely passed over in silence by the impartial and original historian of Hælicæ, Pausanias. The Greeks approved of the selection of the Corinthian commanders, and the Spartans and Athenians acquiesced in this determination.

In the next general assembly of the Greeks, which was held soon after the battle, Aristides proposed the following decree: that all the cities of Greece should annually send their respective deputies to Platæa to offer up sacrifices to "*Jupiter the Deliverer*," and to the tutelary deities of the city; that games should be celebrated there every five years, which should be called the *games of liberty*; and that the inhabitants of Platæa, who had distinguished themselves in an extraordinary manner, and received, for their services, the first honours of military merit, should be solely devoted to the service of the gods, considered as sacred and inviolable, and be employed in no other office than that of offering up prayer and sacrifices for the safety and prosperity of Greece. After this decree had passed into a law, the inhabitants of Platæa voluntarily engaged to solemnize an anniversary festival, in honour of those heroes who were slain in the plains of Platæa.

A few days after the battle, Pausanias called a council of war to deliberate upon what further measures ought to be pursued. It was then determined to chastise those Greeks who had been in the Persian service; and, with a view of carrying this resolution into effect, the army of the confederates, under Pausanias, ten days after the engagement at Platæa, marched into the Theban territories. The Lacedæmonian general, on his appearance before the gates of Thebes, insisted upon the surrender of Teniægeides, Attagnus, and some other principal Thebans; and, in case of refusal, he threatened to besiege the city, and plunder and lay waste the adjoining country. These proposals not being acceded to, Pausanias ravaged the whole territory for twenty days; but, upon the flight of Attagnus, the citizens delivered into the hands of the commander in chief of the confederate Greeks, Teniægeides and his family. The magnanimous Spartan immediately dismissed the innocent children, unburt, and detained the guilty father, for that punishment which the treachery of which he was guilty towards his country's welfare so justly merited. Pausanias, with his usual sagacity, saw the necessity of setting an example of salutary severity in the persons of these traitors; and, accordingly, after the confederate troops had marched to their respective cities and countries, had them conveyed to Corinth, where he caused them to be publicly executed. This was the last act of the Grecian commander, in his office of generalissimo.

About nine years after the battle of Platæa (A. C. 470), the Greeks, encouraged by the recent glorious success which had attended their victorious arms, both by sea and land, and perceiving the necessity of still further checking the Persian power, and also of delivering their allies from the Asiatic yoke, determined to send a considerable fleet to sea. When this naval armament was assembled, Pausanias, in consideration of his past services, was unanimously appointed by the confederates, commander in chief; and received,

as condutors, the judicious Aristides, and Cimon, the son of the illustrious Miltiades, who commanded for the Athenians. Pausanias first directed his course towards the island of Cyprus, where success soon attended his forces; he compelled the Persian garrisons to surrender, and restored all the cities to their former liberty. The fleet then steered its course to the Propontis and the Hellespont, attacking the city of Byzantium, which was the principal military depot of the Persians, and the key of communication with their possessions in Europe. After a siege of some continuance, the garrison capitulated, and he made himself master of the town. An immense number of prisoners were taken, great part of whom were of the richest and most considerable families of Persia; some of them were related to the family of Xerxes.

From the period of the capture of Byzantium, the mind of the commander in chief seems to have undergone a remarkable and total change. The frugal and austere mode of living, practised by the Spartans, disgusted him, when viewed in comparison with the pomp and luxury of Asia; and the splendour of his own renown, acquired at Hattusa, so dazzled him, that he began to consider the rigid and stern subjection required by the Spartan laws, as altogether intolerable to a man who had so eminently distinguished himself in the field of battle. It is probable, also, that his haughty and arrogant temper could not brook the indignity of descending from the eminent rank of commander in chief of the Grecian confederacy, to the comparatively insignificant station of a private citizen. Historians, both ancient and modern, consider this as the principal motive which induced him to make private overtures to the Persian monarch.

The arrogance and vanity of his temper may be inferred from the words already referred to, which he used as the inscription upon the golden tripod, presented to Apollo at Delphi; and was fully apparent in the subsequent haughtiness and insolence with which he treated the confederates. He entirely laid aside the Spartan customs and manners, imitating the Asiatics in all their luxury and magnificence, and invidiously assuming both the dress and haughtiness of the Persians. He never spoke to the officers of the allies, but with an insufferable haughtiness of manner and insolence of expression; he required extraordinary honours to be paid him, and, by his whole conduct, rendered the Spartan dominion over the rest of the confederate Grecians odious and insupportable. On the other hand, unhappily for the Lacedæmonian interest in the affairs of Greece, the character of Pausanias, when contrasted with the opposite dispositions of Aristides and Cimon, increased the general discontent of the allies. The courteous and affable deportment of Aristides and Cimon, their remoteness from all imperious and haughty airs, and their gentle, kind, and beneficent dispositions, in conjunction with the humanity which they displayed on all public occasions, were admirably calculated to conciliate the affections of the Grecian states.

Gongylus.

About this time, Pausanias became acquainted with Gongylus, a renegade Greek, whom he appointed governor of Byzantium, and entrusted to his charge the Persian prisoners of distinction. Soon afterwards, Pausanias spread a report throughout the Grecian army, that the Persian nobles committed to the

governor's care, had effected their escape by night; whereas, in fact, they were all liberated by the connivance of the commander in chief himself. Gongylus, the governor, was then dispatched to the court of Persia; and Pausanias sent a letter by him to Xerxes, containing proposals to betray his country, on certain stipulated conditions. He promised the Persian monarch to deliver into his power the city of Sparta, and the whole of Greece, on condition of his giving him his daughter in marriage, accompanied with a magnificent fortune. Through the medium of Gongylus, Xerxes returned a favourable answer to these proposals, and, at the same time, sent him large sums of money, for the purpose of winning over to his interest as many of the leading men of Greece as he should find disposed to enter into his designs. The Persian king also appointed Artabazus to continue this negotiation; and, to enable him to do so with the greater success, he recalled Megabates, and appointed Artabazus governor of all the cities situated on the sea-coasts of Asia-Minor. From this moment, the manners, dress, and table of Pausanias became entirely Persian; a style of living which naturally caused the greatest dissatisfaction among the confederates. At last, the general discontent publicly broke forth; all the allies were unanimously agreed to desert him, and placed themselves under the command and protection of the Athenians; and thus the Lacedæmonians not only lost that distinguished superiority which they had hitherto maintained over the confederate states of Greece, but conferred, though unintentionally, upon their rivals, the Athenians, the conduct of Grecian affairs.

The republic of Lacedæmon, recalling their troops, tried and summoned their general before a military tribunal, to give an account of his extraordinary conduct. Pausanias was brought to trial, but from want of sufficient evidence was acquitted of the charge of having entered into a correspondence with the Persian king. After this public investigation and fortunate escape, he went to the character of a private individual, without the consent and approbation of the commonwealth, to the city of Byzantium, from which place he was able to carry on his intrigues with Artabazus with the greater facility. During his residence in that city, his behaviour became so offensive to the Athenians, that they compelled him to retire to Colosse, a small town of the Troad. Here he received an order from the Ephori, to repair to Sparta and defend his conduct. He obeyed the summons, presuming that he should escape punishment by corrupting the principal men of Sparta with bribes. The event fully justified his expectations; for he was brought to trial a second time, and again acquitted, and set at liberty. But the guilt of Pausanias soon became evident, and too dangerous to the state to be passed over with impunity. One of his own slaves went to the Ephori, and produced before them a letter written by his master to the king of Persia, which he was to have earned and delivered into the hands of Artabazus himself. The slave, in concert with the Ephori, withdrew as a support to the temple of Neptune at Tenos, in order to secure himself from the vengeance of Pausanias. Two small closets had been purposely made there, in one of which the Ephori secreted themselves. Pausanias, upon hearing that his slave had fled to this temple, hastened to the place to inquire the reason, and the Spartan magistrates

Biography. had the fullest opportunity of satisfying themselves with regard to his traitorous intentions. The slave confessed that he had opened the letter, and finding by its contents that he was to be put to death, he had fled to that temple as an asylum. Pansanius, aware of the truth of this statement, did not deny the fact, but promised him a great reward, and besought him never to reveal the present conversation.

His death. The Ephori determined to seize upon him as soon as he returned to the city; but having received an intimation of their design from one of his friends, he basely fled to the temple of Pallos, called Chalcimcon. The entrance was immediately blocked up with stones by his pursuers, and according to Cornelius Nepos, his mother was the person who brought the first stone.

The Ephori secured the roof of the temple to be taken off, and not wishing by a forcible abduction to violate the sanctity of the asylum, left him exposed to the inclemency of the weather and the pangs of hunger; he was accordingly starved to death. But a little before he expired they drew him out of the asylum, when he died in the arms of his attendants, *a. c.* 469. His body was buried in front of the temple, and two brazen statues, according to the response of the Delphic oracle, were erected in honour of his memory. Some years after his decease, festivals and solemn games were instituted in his honour, and a funeral oration was spoken in his praise, in which his actions were celebrated, particularly his exploits at the battle of Platæa, and the defeat of Mardonius.

ALCIBIADES.

FLOWERISHED ABOUT A. M. 3604, B. C. 400.

Biography. This celebrated Athenian, among the numerous advantages showered upon him by nature and fortune, enjoyed the estimation arising from an illustrious ancestry. He was the son of Clinia, who after gaining considerable honour by fitting out a galley at his private cost, in which he fought at the battle of Artemisium, was slain in the contest at Coronea, where the Athenians were opposed to the Boeotians. Pericles was his near relative, and one of his guardians. He is said, indeed, by Cornelius Nepos, to have passed his childhood in the house of that powerful and magnificent statesman. Amyclas, a woman of Sparta was his nurse, and Zopyrus his early instructor. The information we have left us of these minute circumstances of his childhood have arisen, according to Plutarch, from the friendship of Socrates, which rendered him an object of interest to the admirers of that philosopher, who, therefore, recorded them in his writings.

Family and infancy of Alcibiades.

Early character of Alcibiades.

The haughty spirit of impetuosity and disdain, which so strongly marked his character when fully developed, was manifested by clear indications in his youth. As a cart was driven along the public road in which he was playing with his companions, and approached the spot just as he was about to throw, he required the driver to stop till his turn was past; and when he found that the man paid no attention to his demand, he threw himself on his face in the way of the horses, and defied the party to drive over him. The driver was so terrified at this daring conduct, that he stopped the horses and quietly waited until Alcibiades had thrown. When he feared that he should have been overcome in wrestling, he vehemently bit the hand of his antagonist, to whose reproach that he hit like a woman, he replied "no—like a lion." He pertinaciously resisted all efforts to instruct him in the art of playing on the flute, and ridiculed those who submitted to learn it. For he alleged that the exercise distorted the features and prevented the use of speech; and, therefore, was fit only for the Thebans who had no power of conversation, and ought to be rejected by Athenians, who

revered Minerva and Apollo as tutelary deities; the first of whom threw away the flute, and the latter stripped off the skin of one of its professors. By this railery, the youthful Alcibiades brought the knowledge of that instrument, before fashionable, into contempt, and caused it to be excluded from the arts which g-nlemen could honourably cultivate. It is reported by Antiphan, that he slew one of his own servants in the place of public exercises, by a blow inflicted with a staff; but Plutarch thinks that the authority of one, writing professedly to defame him, ought not to be received as satisfactory evidence of an instance of passion so fatal.

Amidst the irregularities of Alcibiades in his early years, there were doubtless indications of no common genius. These drew the attention of Socrates, and caused him to take a great interest in the welfare of one, whose future life must, he foresaw, be a course of splendid good, or of daring evil. It shows him, indeed, not to have been destitute of a love for virtue, that while surrounded by flatterers, he felt the value of the philosopher's regard, and repaid it with becoming reverence. The discourse of his great adviser would even affect him to tears, and appear for a time, almost to soften him into goodness, and charm him into wisdom. But he was not born long to endure even the gentlest control. His spirits were too elastic, and his sense of luxurious pleasure too intense, to suffer him to persevere in listening to the still voice of truth and of virtue. He perpetually broke from the instructions of Socrates into excesses of intemperance which no monitor was able to control. Thus, having haughtily refused the invitation of Amytus, to a banquet, and indulged at his own house in copious draughts of wine with his young companions, he sallied forth to the place where his presence had been requested, and commanded his servants to bring half the vessels of gold and silver which covered the tables, and to bear them away in triumph. The guests naturally expressed great indignation at this proceeding; but their host excused the intruder, and even said that he ought rather to

Friendship of Socrates for Alcibiades.

Biography. thank him for what he had left, than blame him for that which he had taken. His generosity had as little of reason or of justice as his outrages. An Athenian having sold his little estate, and presented the money derived from the sale to Alcibiades, he invited him, in return, to supper, and after the repast, returned to him his gold, desiring him to appear on the following day, when the public revenue should be offered, to farm, and offer a higher sum than any other bidder. In the morning the man appeared, and according to directions given him, offered a talent more than the usual price, which greatly disconcerted those who were accustomed to farm the taxes, because their custom was to pay out of the profits of one year the rent of the preceding. They demanded whom he would bring forward as his sureties, hoping that, by this means, they should prevent his design. But Alcibiades, who, from a distance, observed the success of his plan, deprived them of this resource by exclaiming that the bidder was his friend, and that he would answer for the fulfilment of the engagement with his fortune. They then began to entreat their opponent to retract, and offered him a talent, which, at length, at the advice of his prompter, he accepted, and thus obtained an ample sum for the relief of his distresses. Even the first feelings of admiration which Alcibiades cherished for the works of genius, he did not express without manifesting the arrogant disposition of his mind. Thus, when he had entered the school of a teacher, and asked him for one of Homer's poems, and received for answer that no work of that poet was taught there, he struck the master on the face, and abruptly departed. He made a fitter retort on another occasion, when a reply scarcely less provoking was given to the same question. The tutor had asserted that he had Homer corrected by himself, and Alcibiades retorted, that one able to improve Homer, might well aspire to teach men, instead of condescending to instruct children in the first rudiments of learning. His love of singularity was evident in his minutest action. Having bought a dog of great beauty, for seventy minæ, he ordered his tail which was his chief ornament to be cut off; and on being told that all Athens laughed at the absurdity of his conduct, replied, that he had then gained his desired object, for he was desirous that the citizens should find matter of discourse and censure in this affair, lest they should talk of worse things respecting him.

Marriage of Alcibiades. It is singular that one of the most wanton of his excesses ended in his marriage; an event, however, which had no power to make him adhere to virtue. From mere insolence, and to fulfil a boast made to his companions in riot, he struck Hipponicus, the father of Callias, a person of great wealth and importance, who had never offered him the slightest injury. The next morning he became sensible of the greatness of his offence; and, in anxiety to make atonement, went to the house of the party to whom the insult had been offered, and told him he was ready to receive the retribution which he might think it just to inflict. Moved by this conduct, Hipponicus not only forgave him, but shortly after permitted him to receive the hand of his daughter Hipparete, who was affectionately devoted to him, and deserved his love. His irregularities soon provoked her to leave him, and retire to the house of her brother. Of this measure he appeared regardless, and lived in the same course of dissipated

pleasure; but when his wife appeared, according to the laws, before the archon, to deliver in person the instrument by which she sought for a divorce, he seized her with his characteristic impetuosity, and carried her by force home, no one daring to attempt her rescue. After this, she did not offer to leave him, but remained in his house till her death, which occurred shortly after, during his journey to Ephesus.

Alcibiades, like all the young nobles of Athens, became early in life a soldier. In the field, Socrates was no less ready to defend him from personal danger, than he had been in the city to secure him from the perils of vice and corruption. They lived in the same tent, and fought side by side in the expedition against Potidæa, where they both exerted themselves with singular bravery. In one skirmish, when Alcibiades was wounded, Socrates saved him from being made a prisoner, and instead of claiming the prize of valour for himself to which he was entitled, gave testimony in favour of him whom he had rescued, and persuaded the judges to bestow on him that honour which he trusted would animate his youth in the pursuit of honourable fame. At a future period, Alcibiades had an opportunity of repaying a part of this obligation; for, in the retreat after the battle of Delium, as he was mounted on horseback, while Socrates was on foot, he refused to retire, until he had, with the hazard of his life, brought into a place of safety his philosopher, friend, and preserver.

The magnificent disposition of Alcibiades was not to be restrained within moderate boundaries by the councils of his great adviser. He kept a most splendid retinue, and in the number and beauty of his horses and chariots, far surpassed all rivals. At one time he sent seven chariots to contend at the Olympic games, which no one had ever done before him, and obtained the first, second, and also either the third or fourth of the prizes. On occasion of this brilliant success, not only individuals, but cities in their collective character, made him congratulatory offerings.

The Ephesians erected him a splendid tent; the Chians furnished him with provender and cattle for sacrifice; and the Lesbians provided him with wine, for the service of rich banquets, which he gave with his characteristic profusion. In the midst of these triumphant revellings, however, he was charged with an act of meanness, in having claimed a chariot as his own, which he had purchased for another; and legal proceedings were consequently instituted against him. We are informed that Socrates was his advocate; but we do not know either the result of the cause, or the justice of the accusation on which it was founded.

Addicted as Alcibiades was to pleasure, he soon felt a restless desire to share in the administration of public affairs. Of the daring cast of his politics, his youthful advice to Pericles, his guardian, afforded a clear indication. When he understood that statesmen to be perplexed how he should make up his accounts to present to the Athenians, he observed that it would be better for him to consider how he could altogether avoid accounting. He was endowed with an eloquence, the most insinuating and persuasive, one of the few endowments a politician could possess in a state like Athens. He was careful in the selection of his words and phrases, that he might gratify the nice ears of his critical audience; and so great a prepossession existed on his

behalf in the public mind, that his splendid sins were regarded as virtues, and the very lip which rendered his speech defective, praised as graceful. His first appearance in a public assembly, though accidental, was fortunate. On inquiring into the occasion of a crowd which he saw collected, and finding that some one was scattering money amongst them, he went into the mob, and began to exercise a liberality of the same description. His bounty was received amidst loud applauses, which so delighted him, that he forgot to secure a quail which he was carrying beneath his robe, and saw the bird escape; but it was instantly pursued by the grateful assembly, caught by a pilot named Antiochus, and restored to its owner.

Defeat and
humiliation,
by ostracism,
of
Hyperbolas.

When Alcibiades, with all the advantages of valour, eloquence, riches, popularity, and the friendship of Socrates, made his first efforts to acquire political influence, he found only Phæax and Nicias, who afterwards was so honourably distinguished amidst the Sicilian disasters, as his rivals. There was, indeed, another, named Hyperbolas, who, although a mean and despicable person, hoped to gain some importance by the divisions among his superiors. This man endeavoured to procure one of the three most conspicuous statesmen to be banished by ostracism, by inciting the party who favoured one of them against his opponents. Alcibiades, however, perceiving his design, united either with Nicias or Phæax to render the scheme abortive, and succeeded in making the sentence of ostracism fall on its proposer himself, who had not the least fear of such a result. The Athenians soon after repented that they had dignified him, by fixing on his baseless the penalty which they had consecrated to distinguished worth; and feeling that this instrument of their power was now debased, they never resorted to the ambiguous compliment in future.

Intrigues of
Alcibiades
against Ni-
cias, and
for the
breaking of
the peace.

This danger being thus averted, Alcibiades pursued the more ambitious design of overthrowing the power of Nicias. That accomplished general had, a short time before, procured a nominal peace between the Athenians and the Peloponnesians, which his youthful rival was anxious to see broken. His desire to plunge his country again into a ruinous war, arose not only from his jealousy of the reputation which Nicias derived from having brought a destructive contest to a close, but from his personal resentment against the Lacedæmonians, who had not requested his services in procuring the treaty, and had slighted his attempts to win their favour. Fortunately for his design, the Spartans had just given offence, by delivering up Pinaretus dismantled and injured, and making a separate alliance with the Bœotians, without consulting the government of Athens. These circumstances he made the themes of contact and bitter invective, and did not fail to include Nicias in his reproaches, as too much disposed to favour the Peloponnesian cause. As he saw the people of Argos were irritated against the Lacedæmonians, he sent emissaries to persuade them to sue for a separate peace with the Athenians, assuring them that it would be granted. By his persuasions they were induced to send ambassadors to Athens, who arrived there at the same time with those of Sparta, who came armed with full powers to settle all causes of dispute. This was a critical time; and Alcibiades perceiving its importance, exerted all his cunning to secure his purposes, with little regard to

justice or honour. Although the Lacedæmonian ambassadors had declared, in their audience with the senate, that they were invested with full powers, he prevailed on them, by promises to espouse their cause, to contradict the assertion in the assembly of the people, and affirm that they were only authorized to treat on definite conditions. When they had thus been guilty, through his machinations, of manifest prevarication, and expected his support, he vehemently inveighed against their want of faith, and represented the conduct which he had thus prompted, as a specimen of the Spartan character. Thus he succeeded in turning the voice of the people against them; but the assembly was adjourned, in consequence of the shock of an earthquake, without coming to any decision. His object, however, was only delayed. An embassy to Lacedæmon announced that, unless the Spartans would relinquish the alliance of the Bœotians, the Athenians would take the Argives into their league; being rejected, a treaty was concluded with the state of Argos, and the people of Mantinea and Elis. Alcibiades, whose policy had effected these alliances, was appointed to command the armies of Athens.

Alcibiades.
A. M.
3604.
B. C.
400.

In the succeeding summer, the new commander entered Peloponnesus with a small party of Athenians, and a number of confederates who had joined him on his march, for the purpose of erecting a fort upon the Pelium of Achaia, which would totally have destroyed the empire of Corinth over the seas. But the Corinthians and Sicyonians, justly alarmed at his design, rushed to prevent him in such overpowering numbers, as compelled him to retire.

Alcibiades
carries war
into Peloponnesus.

The hopes which the Athenians had derived from the new coalition were, in the ensuing year, blasted by the signal defeat of the confederates by the Lacedæmonians, at Mantinea, in the greatest battle that ever yet been fought among the Greeks. At the commencement of the ensuing winter, the Spartan army once more took the field, and advancing to Tegea, sent proposals for accommodation to Argos. Alcibiades, then in that city, attempted to procure the people to reject all the terms, but in vain. An armistice was at first agreed on, which was, after some time, followed by an offensive and defensive alliance, and the total separation of both Argives and Mantinians to the Athenian cause. Before the end of the year, in the presence of Lacedæmonian troops, and by Spartan influence, the constitution of Argos, hitherto popular, was subverted, and an oligarchy established in its room, after the Lacedæmonian model. But the people were little disposed to acquiesce in this abolition of their rights; and an opportunity soon occurred for the expression of their feeling. During the celebration of a festival at Sparta, they rose against their oppressors, and, after a conflict, in which they were victorious, established their former constitution. The nobles, driven from the city, brought the succour of the Spartans, who came to a resolution to march against Argos, but suffered considerable time to elapse before they attempted to execute their design. In the mean time, Alcibiades determined to secure the future co-operation of the Argives with the Athenians, hastened to their city, sent three hundred, who were suspected to favour the Spartan cause, to the neighbouring islands, and persuaded the citizens to build long walls reaching to the sea, which might obtain

expedition.

facilities for receiving succours from Athens. He also induced the Patrons to lengthen their walls in like manner, and for similar purposes. When these euzenæ were told that the Athenians would devour them in last, he replied that such a result was possible, but that at least they would do it gently, and by degrees, beginning with the feet, while the Lacedæmonians would begin at the head, and instantly destroy them. Such was, indeed, a just representation of that choice of evils which the two contending powers of Greece left to the states, who were forced to seek one or the other to become their ally and master.

Alcibiades was unremitting in his exertions on behalf of the Athenian cause. But in the midst of his schemes of policy, and his exploits in the field, he was unable to repress his love of pleasure, which betrayed him into constant violations of public decorum. He was perfectly careless of the opinion which might be formed of his excesses, and even ostentatiously proclaimed them. His insolent expression of disdain knew no bounds towards any who dared to oppose him. When a citizen named Tanres presumed to exhibit a spectacle in opposition to him, he descended to strike his rival. He forcibly detained Agatharchus, a painter, till he had executed the work he thought fit to prescribe, and then suffered him to depart, with a liberal remuneration for his labour. On one occasion, when he had obtained great applause by a public oration, Timon, the misanthrope, took him by the hand, and exhorting him to proceed, wished him increasing fame from the people, as he would soon repay them with abundant sorrow.

A new field for the ambition of Alcibiades was now opened, with the design of conquering Sicily. The Egæans had entreated succours from Athens against the Selinuntians and Syracuseans, and ambassadors, sent to ascertain their resources, had brought the most splendid reports of the treasures deposited in their temples. Fresh and glittering hopes dawned upon the people, as they contemplated in imagination the conquest of the whole of the rich and fertile island, which already they fancied an Athenian colony. This prospect was, indeed, contracted, when compared with that which Alcibiades saw; for he looked on the subjugation of Sicily only as a means of accomplishing vaster designs, and considered it as leading to the possession of Italy, Carthage, and Lybia, the opening of an almost unlimited succession of glorious victories. The Athenian youth caught his enthusiasm; and thought of nothing but the triumphs in which they wanted to share. Groups might be seen in the public places of exercise listening to the aged men discouraging on the old glories of the heroic times, or describing in the sand, the figures of those regions whose spoils they hoped soon to enjoy. The more wise and prudent, indeed, saw in these wild expectations the ruin of the Athenian grandeur. Socrates protested against the enterprise, by the advice, as was alleged, of his mysterious demon. Meton, the astrologer, foresaw the ill fortune of the war, and set fire to his house, either by way of counterfeiting madness, or that he might persuade the people to allow his son to remain with him at Athens after a calamity which appeared so distressing. Nicias, with the calm wisdom which marked his character, laboriously endeavoured to dissuade the senate from their purpose.

But all warnings were given in vain. A decree was passed, that a fleet of sixty ships should sail for Sicily, under the command of Alcibiades, Nicias, and Lamachus, who were directed to succour the Egæans, if possible to restore the Leontines to their places of abode, and further to act in all things as, according to their discretion, should tend to the benefit of Athens. When the time came for discussing the supplies for the expedition, Nicias solemnly entreated his countrymen to pause, and, finding the persuasive and brilliant eloquence of Alcibiades prevented his arguments from having any influence on his hearers, strove to deter them from their purpose by setting forth the vastness of the supplies, both of forces and of money, which it would be necessary for them to provide. But this speech produced an effect the most contrary to his wish: for the assembly were instantly convinced—not that their expedition must be abandoned—but that every nerve must be strained to support it; and they accordingly came to a decision, investing the generals with full powers to regulate the numbers of the army and the fleet, and all that they might regard as requisite for their success. The zeal of the assembly was answered by the enthusiasm of the people. All were eager to share in an expedition so promising; and a feeling of the most elevated hope pervaded all classes, as they witnessed the mighty preparations advancing.

Alcibiades now seemed to have obtained the means of realizing the most gorgeous buildings of his fancy. But, at this very moment, a sudden disaster blasted all his hopes. When the fleet was almost prepared, the statues of Mercury, which were numerous both in the temples and porticos of houses, were defaced in a single night, by some unknown hand. This circumstance, although attributed by some to the Corinthians, who might be supposed thus to attempt to deter the Athenians from invading Syracuse, their colony, was regarded with alarm either as a result of some conspiracy against the republic, or as a supernatural indication of the wrath of heaven. The enemies of Alcibiades, through the means of Androcles, sought to direct the general feelings of horror against him, by accusing him of having been the author of the atrocious sacrilege. They also affirmed that he had, with some wanton associates, derided the holy mysteries by a profane representation of their forms, in which the guilty parties acted the various consecrated officers. The accusers also referred to the whole tenor of his life, which they not only stigmatized as licentious, but as indicating a spirit which would not be satisfied till it had usurped the supreme power to the destruction of public freedom.

When Alcibiades heard these charges, he insisted on being allowed an immediate trial. He implored the Athenians not to suffer him to depart, as commander of so vast an expedition, with a charge of so great magnitude impending over him, or, while he was at a distance, to attend to calumnies which he could not answer. But his enemies, knowing the love which the soldiers bore him, and the partiality with which he was still regarded by many of the citizens, procured orators who urged that the voyage should not be delayed, but that, on the return of the commander, a day should be appointed for his trial. This advice was taken; the investigation suspended; and Alcibiades

Course of the armament.

Alcibiades compelled to depart, leaving his accusers to collect or suborn, without opposition, a mass of evidence against him.

The Athenian fleet sailed first to Corcyra, where it was joined by the ships of those allies who had consented to share in the glories and perils of the enterprise. Hence the commanders steered along the coast of Italy, and, being refused admittance or supplies by the maritime towns, anchored beneath the promontory of Regium. Hence they dispatched vessels to Egæta, to ascertain the amount of the promised treasures in that city, and found, by the intelligence thus obtained, that no such resources existed. On this, the generals were divided in opinion; but the advice of Alcibiades prevailed, to persuade the states, excepting Selinus and Syracuse, to join them, and afterwards to attack those against which they were sent, if they refused compliance to the demands of Athens. The Messenians having refused the offer of an alliance, the fleet sailed for Catana, where Alcibiades persuaded the citizens to join them. Here a message was received from Camarina, promising to unite in the Athenian cause, which induced the commanders to sail for that port; but, finding on their arrival, that the Camarinæans evaded the performance of their engagement, they returned to Catana, after a descent on the shores of the Syracusan territory, by which they acquired spoils. On their arrival, they found a messenger, with a vessel called the Salaminian galley, to order Alcibiades to return and take his trial, on the charges made before his departure.

Recall of Alcibiades.

Cause of it.

It does not appear that any clear proof had been discovered against the party accused during his absence. But his enemies were able to pursue their machinations without fear of the army, who were devoted to him, or of the Argives and Mantineans, who had joined the expedition solely from their desire to share his fortunes. Various rumours were studiously incited against him, till the Athenians became too impatient for the decision of his fate, to wait the issue of his mission. As, however, they wished the allies who were fixed in his interest to remain in the service, they directed their messengers not to arrest him, but merely to require him to follow them in his own galley. He accordingly yielded an apparent obedience to the requisition, and left the fleet in his vessel, with such of his comrades as were accused of having participated in his crimes. But when the Salaminian ship had passed the height of Thuria, he contrived to escape, so that all the endeavours of the officers to retake him were in vain. Being met, when on shore, by one who knew him, and asked whether he did not dare trust his country, he replied, "Yes, with all but my life; and when that is at stake, I would not trust my mother, lest she should mistake a black bean for a white one." When his flight was known at Athens, judgment of death was passed on him, his estate confiscated, and priests and priestesses ordered solemnly to pronounce him accursed. One of them, however, Themno, of Agrigento, declined to execute the order, observing that her office made it her duty to put up prayers, not execrations. When Alcibiades was informed that he was condemned to die by the Athenians, he replied, "I will make them feel that I am yet alive."

Alcibiades now sought, not only security, but ven-

geance. He fled from Thuria to Cybène, and requested permission of the Lacedæmonians to come protected to their city, engaging to repair the injuries he had done them by his services. This request being granted, he hastened to Sparta, where he found the Syracusans and Corinthians imploring the people to send military succours to Sicily. This demand the Ephori were on the point of rejecting, and of determining to send only ambassadors to Syracuse, who might prevent the Athenians from succeeding, by negotiation, to obtain a footing in the island. But Alcibiades urged the necessity of sending real aid, in a speech so lucid, animated, and convincing, that they determined to send Gylippus, with the Corinthians, to oppose Nicias and Lamachus, then commanding the forces of Athens. By his advice, also, the Lacedæmonians fortified Decelea, and resolved to attack their foes in domestic war. Their affairs seemed instantly to revive, as by magic, at the first influence of his counsils.

Alcibiades, now apparently identified with the Spartan cause, assumed with marvellous facility the character of his new associates. Accustomed to every luxury, he fed on the coarsest food; changed his dress from robes of purple and gold, to the simplest apparel; and laying aside the gorgeous insolence of his appearance and manner, seemed at once to have become humble, patient, and laborious. The transformation, so wonderfully wrought, was, however, only external. He found means to seduce the wife of Agis, the king, not, as he alleged, from the heat of passion, but from ambition that his race should sit on the throne of Sparta. The discovery, however, by the monarch, of the infidelity of his queen, frustrated the hopes he had thus indulged, and raised up most powerful foes against him in his new asylum. The hatred of these men increased in proportion as those successes advanced of which his advice had been the origin. The calamities of the Athenians in Sicily, to which his counsel had greatly contributed, only increased their envy. He still, however, had sufficient influence to procure assistance for the inhabitants of Chios, in preference to those of Cynicus and Lesbos, who all signified their desire of leaving the alliance of Athens. He soon set sail for Ionia, nearly the whole of which he induced to adopt the Spartan cause. But, while he was thus employed, Agis and his enemies sent private orders into that region to dispatch him, which he discovered, and was able to evade. He considered it, however, necessary to withdraw, and renouncing the Spartan cause in disgust, sought and obtained the protection of Tissaphernes, the lieutenant of the Persian sovereign.

The manners of Alcibiades were adapted, with peculiar felicity, to win the favour of his new patron. The natural love of luxury, and magnificence of disposition, which he had been forced to conceal at Sparta, he now indulged with perfect freedom, and assurance that they must be grateful to the Barbaric satrap. His talent for political intrigue had now ample room for its exertions. As both the parties, weakened by their long struggle, anxiously looked to Tissaphernes for aid, he saw the means of rendering himself once more important to all the parties of Greece. As the Peloponnesians had now the decided advantage, from the sad mismanagement of the Athenian affairs in Sicily,

intrigues for
his return to
Athens.

he advised his Persian friend to lessen his assistance, reduce the pay of the soldiers, and not suffer them to obtain any decisive triumph. He urged that it was the interest of the Asiatic monarch to assist the Grecian states, only that they might weaken each other, so that both might at last be deprived of all means of resistance to his will. This counsel was peculiarly agreeable to the crafty barbarian, who suffered Alcibiades to direct all his movements, and gave the most public indications of the control which he allowed him to enjoy. But Alcibiades was, in the midst of his oriental splendours, working out, from his interest with Tissaphernes, the means of his recall to Athens.

At this moment, indeed, it was in the power of this officer to give a finishing blow to that ill-fated republic, by bringing up the Phœnician fleet, which consisted of 150 ships, to the aid of the Spartans. This, then, was a most fortunate time for the intrigues of Alcibiades, who, by his open influence, seemed to have this illustrious state at his mercy. He caused it, therefore, to be insinuated among the commanders of the Athenian troops which were then at Samos, that their only hope lay in his return, for which the way must be prepared by rendering the government of the state oligarchical, instead of popular. The chiefs at Samos being generally inclined to favour such a revolution, not only freely discussed the proposal among themselves, but caused it to be intimated at Athens. Phrynicius alone opposed it; and when he found that he could not prevail by argument, attempted to succeed by stratagem. He endeavoured, therefore, by private messengers, to incite Astyochus, commander of the Lacedæmonian fleet, against Alcibiades, who, instead of assisting in his downfall, revealed to him the communication which was intended to destroy him. On this, Alcibiades sent to Samos, and accused Phrynicius of treachery; when that officer becoming desperate on the discovery of his scheme, offered to Astyochus to deliver into his hand the army and fleet of the Athenians, if he would, even now, favour his designs. This proposal, like the former, was disclosed to its intended victim, and was communicated by him to his confederates at Samos, by whom a deputation, with Pisander at its head, was sent to Athens, charged with the propositions of establishing an oligarchy, and recalling the celebrated exile. At first, the people were exceedingly irritated by the attempt to deprive them of their rights; but, on being persuaded that there was no other means of obtaining the friendship of Persia, and consequently averting destruction from the state, they gave their consent, and empowered Pisander to return to Alcibiades, with powers to agree to his proposals. He was now, however, unable to persuade Tissaphernes to abandon the line of policy which he had adopted with his advice; and, instead of holding the balance till each party was exhausted, throw all his power into the scale of the Athenians. Alcibiades, therefore, unable to fulfil his engagements, considered only how he should best conceal the decline of that influence on which he had presumed to make them. He accordingly made requisitions, with which it was impossible for the deputation to comply, and suffered all negotiations to be suspended.

Revolution
at Athens.

But Pisander and his associates, although their hope of obtaining the assistance of Persia was lost, resolved not to abandon the intention of changing the con-

stitution of Athens. They determined no longer to depend on Alcibiades, but to send part of the former deputation home, there to effect their purposes. While Diodotres established oligarchy at Thasos, Pisander sailed for Athens, overturning the popular establishments in all the dependant states at which he could touch by the way, and procuring aid to support him in his main design. On his arrival in the city, he found that his confederates there had been successfully engaged in preparing the minds of the citizens for the intended change. They had proposed that the affairs of the state should be committed to the wisdom of no less a number than five thousand; and thus engaged on their side such men as, from their influence and wealth, might expect to be enrolled among the privileged number. The power thus acquired by the aristocratical faction, was directed by great talents in its leaders. Of these, Antipho, Plirynicius, and Theramenes, were the most distinguished, and all were endowed with great ability, either for intrigue or persuasion. Nothing was further from the view of these men than the accomplishment of their professions, in dividing the power to which they aspired, among five thousand of the citizens. Having marked their real plans till they had ascertained their strength, they determined to proceed with a rapidity and boldness which might strike terror into the hearts of the people. They therefore moved that a committee of ten should be entrusted with preparing a decree—summoned the people—and proposed the removal of all existing authorities, and the choice of five presidents, who should select a hundred associates, and each of these thus chosen, should further elect three more to share in the legislative power. The audience heard these propositions with silent amazement, and suffered them to be without discussion. No sooner was the decree passed, than the four hundred took possession of the senate-house, expelled all the former magistrates, and entered peacefully on the administration of all the public affairs of the astonished and despairing citizens.

While the oligarchical party were thus triumphant at Athens, they were defeated at Samos by Thrasybulus and his soldiers. That noble-minded patriot resolved never to rest satisfied until he had restored his country to her freedom. This, however, he believed could not be effected without recalling Alcibiades from exile. He went, therefore, to Tissaphernes, conferred with Alcibiades, and conducted him to the forces at Samos. There, this ever-varying politician, who so recently had intrigued with the aristocracy, united with their bitterest foes, and promised to them, as he had done to their antagonists, the friendship of Tissaphernes, if they should succeed and recal him to share in their triumph; the soldiers burning with strong desire to destroy the tyranny of the four hundred, and only dismissed a plausible deputation from Athens, but were anxious to leave the Peloponnesians, to whom they were opposed, and sail at once for the Piræus. From this rash design they were wisely dissuaded by Alcibiades, who urged the necessity of more temperate measures, and was even ready to assent to a compromise with the oligarchy, on the terms that the *five thousand* should be actually, as they were nominally invested with the government of the state. In the mean time, Athens was reduced to the most wretched condition by domestic factions. Dissension now raged even in the ranks of the four hun-

Biography. *died*, many of whom terrified by the approach of danger, were anxious for the adoption of the plan with which Alcibiades was willing to agree. A naval defeat by the Lacedæmonians completed the misery which had, for a long time, appeared every hour to deepen. This dreadful blow was, however, the means of suspending, for a time, the intestine contentions by which the city was distracted. An assembly was held, in which the *four hundred* were deposed, and the government vested in five thousand, comprehending all the citizens who were enrolled for the heavy armour. All parties having agreed in giving their utmost efforts to raise their country from her melancholy humiliation, dispatched a deputation to Alcibiades and the army at Samos, exhorting them to use their most strenuous exertions for the public benefit.

Exploits of Alcibiades previous to his return. Alcibiades, although thus recalled, resolved to delay his return until he had performed such exploits as might throw fresh lustre over his name, and endear him to all classes of his fellow citizens. With this ambition he sailed with a small squadron from Samos, and having gained information that Mindarus, with the Peloponnesian fleet, had gone in pursuit of the Athenian navy, he hastened to afford his countrymen succour. Happily he arrived at the scene of action, near Abydos, at a most critical moment; when, after a severe engagement, the Spartans had, on one side, obtained an advantage, and were pursuing the broken lines of the Athenians. While both parties regarded his ships as come to aid the Lacedæmonians, he displayed the Athenian flag, and attacked the Peloponnesians with the fiercest energy. He speedily decided the fortune of the day, completely routed the Spartans, till then victorious, broke many of their ships in pieces, and took thirty from them; recovering all they had previously taken, and destroying their armament on the coasts, notwithstanding the opposition of Pharnabazus, who, from the shore, attempted to shield the fugitives. His vanity, after this signal success had, however, nearly destroyed him. For, being desirous of appearing to Tisaphernes as a conqueror instead of a fugitive, he hastened with a splendid retinue to visit him; when the crafty barbarian, thinking he should thus appease the suspicions of the Spartans, caused him to be arrested and confined in prison at Sardinia. Hence, however, he found means to escape, and having procured a horse, fled to Clazomene, where he rewarded the treachery of his Persian friend by affirming that he had conspired at his flight, and thus destroying the credit with the Lacedæmonians which the arrest was designed to secure. Hence he sailed immediately for the Athenian camp to diffuse fresh animation among the soldiers, and hastily cause them to embark on an expedition against Mindarus and Pharnabazus, who were then with the residue of the Peloponnesian fleet at Cyzicum.

Naval victory. As soon as he discovered the enemies' vessels, he ordered a number of his commanders to slacken sails, while he advanced with only forty ships, that the Spartans, who might otherwise have fled, should be incited to give him battle. The stratagem succeeded; Mindarus hastened to attack the Athenians, believing their force so inferior that he should find them an easy prey, and soon found himself encountered by fresh succours, which he was unable to resist. Terrified at so unexpected a check, his forces took flight in confusion, were pursued to the shore by the victorious commander, and there put to

the sword in great numbers. Pharnabazus and Mindarus, who there attempted to rally them, were defeated; the latter fell in the contest; and the former only found safety by precipitately retreating. Alcibiades pursued his victory, took Cyzicum without difficulty, and, staining his conquest with a cruelty with which he was not generally chargeable, put to death all the Peloponnesians whom he found within the city.

A very short space of time elapsed after this brilliant success before Alcibiades found another occasion to deserve the gratitude of Athens:—Discovering that Pharnabazus had fallen with great force, both of infantry and horsemen, on the troops under the command of Thersyllus, as they were laying waste the territory of the Abidenians, he hastened to assist them with his army, and, in conjunction with them, defeated their enemies, and continued a triumphant pursuit till night protected the fugitives. He then gathered spoil from the province of Pharnabazus; but while he scattered devastation through the region, displayed a feeling of respect for the sanctities of religion, by releasing all who assisted in the ceremonies of worship without ransom. He next prepared to reduce the inferior cities, which, in the hour of distress, had revolted from the Athenian cause. For this purpose he marched against the Calcedonians, and finding they had removed their cattle and grain, and placed them under the protection of their allies, the people of Bithynia, he sent to accuse the latter of thus assisting his foes. Upon this, terrified with the idea of his military prowess, they delivered up the deposited spoil, and sued for and obtained his alliance. He then returned to his original design, and invested Calcedon, by drawing his army round and enclosing it with a wall, to prevent it from receiving provisions. Pharnabazus soon advanced to its relief, and, at the same time, the besieged citizens made a sally; but Alcibiades dispatched troops with great promptitude against both parties, completely succeeded on all points, slew Hippocrates, the governor of the city, and compelled Pharnabazus once more to fly. While he sailed up the Hellespont to levy contributions, the commander, whom he left to prosecute the siege, made a treaty with Pharnabazus, by which, on their engaging to refrain from invading a province, he not only agreed to pay them a sum of money as the price of accommodation, but suffered the Calcedonians to return to the alliance of Athens, and promised to give the Athenian envoys safe conduct to the Persian sovereign.

Next Alcibiades proceeded to reduce the city of Selybria, which a number of his friends engaged to deliver into his hands. The signal for his entry agreed on was a flaming torch, which the conspirators were, in the middle of the night, to exhibit on the walls. One of them, however, wavering, the rest were compelled, through fear of a discovery, to light the torch before the preparations were completed. Alcibiades observing the flame, hurried on with only fifty men, as his army were not ready to join him, and entered the city, having commanded the rest to follow with all possible speed. Here, however, he was placed in the most imminent danger. He perceived the citizens advancing from the fortresses in numbers which he could not hope successfully to encounter; and while he felt that in a combat he must be destroyed, his proud spirit which had never yet known a check in battle, forbade him to retire. From this situation his ever-prompt invention

saved him without any blemish in his military fame. He paused—ordered a herald to proclaim that the Salyrians should not treat the Athenians as foes, and thus, at once, cooled the ardour of the citizens for the fight, and gave time for his whole army to enter. When he found himself thus supported, he granted peace on liberal terms, requiring only from them a sum of money, and leaving an Athenian garrison to secure the place from the Spartans.

Byzantium having revolted from the Athenians, was the city against which his efforts were next directed. He drew his forces round it, and held communications with parties within its walls, among whom were Anaxilaus and Lycurgus, to deliver up the place to him on his engaging to spare the lives and fortunes of the citizens. As soon as the arrangements for this purpose were completed, he caused it to be rumoured that he was called suddenly into Ionia to appease commotions there, and departed with the fleet, but only to remain concealed within a short distance from the harbour. As soon as night concealed his operations, he returned, disembarked great part of his troops in silence, and ordered the vessels with those who were left on board, to be rowed swiftly into the port, with terrible outcries as if a mighty naval force were destroying the shipping, and hastening to attack the towers from the shores. In the mean time his confederates quietly admitted him with his troops into the city, which, however, he did not win without a struggle. For his ships were repulsed from the shore by the hostile forces, who, after compelling the marines to return to their vessels, drew up in good order to oppose the progress of their more formidable enemy. A regular and well-contested battle then ensued, in which the Athenians obtained the victory, and took three hundred prisoners. Notwithstanding this unexpected opposition, Alcibiades strictly fulfilled the conditions on which he had been admitted, and would not allow the least outrage either on the persons or fortunes of the citizens. When Anaxilaus was accused at Sparta with the rest of his confederates of his treachery, he boldly avowed that he had felt and acted as a Byzantine, not as a Lacedæmonian; that he saw no possibility of relief for the city while the Peloponnesian army consumed the provisions, and his countrymen were left to starve; that he had acted on the simple principle of the duty of serving his country in preference to all other obligations, and had thus truly been actuated by a feeling which the Spartans themselves gloried to cultivate. This defence so pleased the Lacedæmonians, not from its reference to general humanity, but its application of that exclusive patriotism which they openly preferred to fidelity or justice, that they absolved all who had been charged with consenting to the proposal of surrender.

Alcibiades
returns to
Athens.

Alcibiades having raised the fortunes of his country from the lowest state of depression, not only by his brilliant victories, but his conciliating policy, felt now desirous to return and enjoy the praise of his successes. He entered the Piræus in a galley adorned with the spoils of numerous victories, followed by a long line of ships which he had taken from the foe, and attended by vessels bearing the ensigns of a greater number which he had destroyed, exhibiting the proofs of having deprived the enemy of two hundred ships, and restored the dear and long-lost maritime glories of Athens. But when he approached with his glorious retinue, his

heart sunk within him, from the remembrance of the Alcibiades. wrongs he had endured, and, perhaps, with some sad presage of the disasters he was yet to suffer. He did not venture to land till he saw his nephew and old companions stretching out their arms to him, and inviting him earnestly to meet them. His first reception, however, was as genial and flattering as his fondest hope or loftiest ambition could require. The whole city came down to the harbour to see and welcome him, and took no notice of Thrasylus or Theramenes, his fellow commanders. Thrasy presided around him with acclamations and blessings; those who could not touch, threw garlands upon him; and the aged who remembered the former glories and recent humiliations of their country, pointed him out to the young from afar, with tears of mingled sorrow and joy. While the people, with fond regret, attributed to his exile their disasters in Sicily, and all their subsequent miseries, they hailed him now as one who had again made them taste of victory, and who would become their second founder. An assembly of the people being convened, he addressed them in a gentle and modest speech, imputing his calamities not to their envy, but to some evil genius which pursued him. He exhorted them to take courage, bade them oppose their enemies with all the fresh inspiration of their zeal, and taught them to hope for happier days. Delighted with these assurances, they presented him with a crown of brass and gold, which never was before given to any but the Olympic victors, invested him with absolute control over their naval and military affairs, restored to him his confiscated wealth, and ordered the ministers of religion to absolve him from the curses which they had denounced against him. Theodorus, however, the high priest, evaded the last part of the decree, by alleging that he had never cast any imprecation on him if he had committed no offence against the republic. The tablets on which the curses against him had been inscribed, were taken to the shore and thrown with eagerness into the waters.

His next measure heightened, if possible, the brief lustre of his triumph. In consequence of the fortification of Decelea by the Lacedæmonians, and their having possession of the passes of the country, the procession to Eleusis, in honour of Minerva, had been long unable to take its usual course by land, and being conducted by sea, had lost many of its solemn and august ceremonials. He now, therefore, offered to conduct the solemnity by land, after the ancient custom, under the protection of his troops, thinking that if the Spartans should suffer him to pass unimpeded, he should add to his renown; and if they should attack him, he should fight in the cause of religion, and in the immediate view of his country. His proposal being gladly accepted, he placed sentinels on the hills; and, surrounding the consecrated band with his soldiers, conducted the whole to Eleusis and back to Athens, without the slightest opposition, or breach of that order and profound stillness which he had exhorted the troops to maintain. After this graceful act of homage to the religion he was once accused of refusing, he was regarded by the common people as something more than human. They looked on him as destined never to know defeat, and believed their triumph was certain so long as he was their commander.

But, in the very height of his popularity, the causes were arising of a second exile. The great envious hum

in proportion to the peoples' confidence, and that confidence itself became the means of his ruin. For as the people really thought the spell of invincibility was upon him, they were prepared to attribute the least falling off in his career of glory to a treacherous design. He departed with a hundred vessels, manned under his inspection, with colleagues of his own choice, to reduce the isle of Chios to obedience. At Andros he once more gained a victory over both the natives and the Spartans, who attempted to assist them. But, on his arrival at the chief scene of action, he found that he would be unable to keep the marines from deserting, unless he could raise money to pay them sums more nearly equal to those which the Lacedæmonians offered, than the pay he was able to bestow. He was compelled, therefore, to leave the fleet and go into Caria in order to obtain supplies. While absent on this occasion, he left Antiochus in the command, who, though well fitted from his experience in maritime affairs to preserve order, was too rash to be a fit judge of the proper time for battle. To this officer Alcibiades gave express directions that he should refrain from coming to an engagement, whatever provocations he might receive. Anxious, however, to display his bravery, Antiochus took the first occasion to sail out in front of the Lacedæmonian fleet, which lay near Ephesus, under the command of Lysander, and attempt, by insults, to incite them to attack him. Lysander, accordingly, pursued him; the fleets came to the support of their respective admirals, and a general engagement ensued, in which Antiochus was slain, and the Athenians completely defeated.

On receiving intelligence of this unhappy reverse, Alcibiades hastened to the fleet, and eager to repair the misfortune, offered battle to the Spartans; Lysander, however, did not choose to risk the loss of his advantage by accepting the challenge, and the Athenians were compelled to retire. This event, for which no blame really attached to Alcibiades, completed the ruin of his influence at Athens. It was believed that this, the first instance of his failure, must have arisen from his having been corrupted, or, at least, from a want of inclination to serve his country. He was also accused of leaving the navy under the direction of those who had no other recommendation to the charge but having been sharers in his luxurious banquets, and of having wandered about to indulge in profligate excesses, while the fleet of the enemy lay in sight of that of which he should have been the commander. It was likewise asserted that he had fortified a castle in Thrace, to serve as a retreat when his treacheries should have rendered it impossible for him to continue in safety at Athens. On these grounds, the people in his absence took from him his command, and confided it to other generals. As soon as he heard of this new piece of ingratitude, he resolved not to return home, but withdrew into Thrace, and fortified three castles, Bornos, Bvzia, and Macrloutichos, near to Perinthus. Here, having collected a formidable band, as an independent captain he made incursions on the territories of those of the Thracians, who acknowledged no sort of form of government, and acquired considerable spoils. But he did not resign his love for his ill-fated country, or refrain from exertions to succour the Athenians. The fleet which he had lately commanded lay in the river Egeos, and that of the Spartans under Lysander, was anchored at a short distance. He per-

ceived that the captains of the former were accustomed to sail out in the morning, and insolently offer battle to the foe, and then to return and spend the day in a state of tumultuous disorder. He feared lest Lysander should either protract the war till the small remains of the money by which the forces of Athens were supported was spent, or that he would improve one of the opportunities they so constantly afforded of falling on them in a state of security and confusion. At the same time he hoped, as the Lacedæmonian strength lay more on land than in their vessels, that he should be able, by the aid of the king of Thrace, to drive them from the shore, and compel them either to fight under great disadvantages, or to sue for peace. With these views he went to the Athenian camp, communicated his wishes, and warned the generals of their danger. They, however, treated his person and his counsils with a fatal disdain, which compelled him to retire without performing any of his proffered services. Too soon they felt the justice of his warnings. Lysander fell on them, when they were wholly unprepared to receive him, with such violence and success, that he destroyed the whole fleet, with the exception of six galleys, which escaped with Conon. This blow put an end to the long and ruinous contest. Athens had neither men nor spirit left to resist her foes. Lysander proceeded from this victory to the capture of Athens; burnt the shipping which lay in the harbour; razed the long walls to their foundations; and imposed thirty tyrants on the state which had been the cradle, and was now the sepulchre, of Grecian freedom.

Alcibiades was now the sole object of hope, to which the minds of his misguided countrymen were directed. They still had some confidence in his love for the country which had twice rewarded him with disgraceful exile, and could scarce believe, that while he lived the cause of freedom was desperate. In the estimate of his undying patriotism his Lacedæmonian oppressors unobscuredly concided, and felt that his death alone could secure their mastery over Athens. The feelings of both parties respecting him were well founded. Although he had been received with great cordiality by Pharnabazus, whose protection he had sought, and had been assigned a territory, from which he derived a considerable revenue, he was unable to enjoy a luxurious repose while his country groaned beneath intolerable oppressions. He saw the only hope of effecting its deliverance rested in obtaining the aid of the king of Persia. This he did not despair of obtaining, especially as he perceived with his usual political sagacity, that Cyrus, brother of the reigning sovereign, was about to raise war against him, with the assistance of the Spartans. If he could disclose this to the monarch he believed that he should not only lay him under obligation, which must conciliate his favour, but induce him, for his own security, to assist the Athenian cause against those who would soon appear as his own enemies. He, therefore, entreated Pharnabazus to suffer him to proceed to the king, with the design, like Themistocles, of offering his services, but for the purpose of raising not of destroying the state which had driven him from his efforts to avert its downfall.

But before he could execute this patriotic design, Death of Lysander, incited by the representations of Critias and Alcibiades, the other tyrants, whom he had placed over Athens,

entreated Pharnabazus to destroy him. He threatened that unless Alcibiades were delivered up, alive or dead, the Lacedæmonians would break off their alliance with his master. This threat induced the satrap to take immediate measures for destroying the fugitive whom he had protected. The victim of his treachery was, at this time, in Phrygia, with Timandra, his mistress, preparing for his journey to the capital. Thither Pharnabazus dispatched Sysamithres and Bagoas to murder him. But when they arrived at the place of his residence they durst not approach him, but surrounded the house with their band, and set it on fire. On perceiving the danger, Alcibiades threw clothes on the flames, and, seizing a sword, rushed through the fire without injury. He was now perceived by the barbarian troop, who, from a distance, threw their darts at him till he fell lifeless. Timandra then wrapped her vestments about his body and burned it in the flames of the house, as on a funeral pile. The assassins retired, without interrupting her in this last sad office of affection to the departed.

Character of
Alcibiades.

Thus fell Alcibiades, having scarcely passed the fortieth year of a most eventful life. Nature seemed to have lavished her utmost bounties upon him. A noble origin—a personal beauty—grace of manner—immense patrimonial riches—eloquence the most persuasive—acuteness the most penetrating—bravery the most undaunted—Pericles for his guardian, and Socrates for his friend and adviser—all seemed to mark him out as destined for a most happy and glorious career. Never, perhaps, was so fair a prospect dashed so early with clouds, and so soon overpiled with total gloom. Yet he can scarcely be said to have owed his ruin to the absolute preponderance of his vices. He possessed, throughout life, many virtues, to which even the plots of his adversaries bore witness. His love for his country, amidst all the injuries he received from her, was his ruling passion to the last. A second time an exile from her shores, after conferring numberless benefits on her, he died a martyr to his unshaken desire to effect her ransom. His public life—if we except the devious methods by which he sometimes proceeded to effect good designs, and his offer of advice to the Spartans after his first exile—was full of patriotism, forbearance, and wisdom. His great want was that of *principle*, and by that want he was undone. He acted from impulses which he had never learned to restrain. His love towards his country, though his strongest impulse, was essentially a personal feeling, and very different from a calm sense of duty or earnest desire for the general welfare. He had nothing which could lead him to become master over himself, and turn all his faculties into one unbroken channel. He often, indeed, adapted his manners with astonishing facility to

those of his associates; he was the most patient in Alcibiades. Lacedæmon, the most robust at Thebes, the most given to wine among the Thracians, and the most splendid and luxurious among the Persians; but, in none of his changes, was he actuated by any principle either false or true, but simply by a desire to surpass his colleagues in all which they esteemed most noble or dazzling. There was no common centre round which his mighty powers and vehement impulses could revolve. He gratified all his feelings of insolence, luxury, or pride, without regard to times or seasons, except when some temporary vanity gave him a short lived consistency of character. Never did any one, to whom interests so mighty were committed, suffer himself to be so often influenced by momentary fancies that destroyed the measures on which his dearest hopes were dependant. He was a partisan without revenge, and a victor without cruelty; but the feelings which made him thus distinguished availed him little, because he had not singleness of heart, or directness of purpose, to render his virtues effectual for his country's salvation. The constitution of his mind was oriental rather than Grecian. His personal character, and not that of his cause, predominated in all his actions. His sense of pleasure was too keen, and his pride too great, to allow of that absorption of himself in a state which alone could fit him for the subject, much less for the preserver of a republic. He could assume a thousand shapes, but in all he was but an actor. The abstraction of spirit, which made an ancient patriot lose all sense of personal identity, as a public character, in the idea of forming a part in a great whole;—which caused him to live only in the triumphs, and die with the fall of the body politic,—was totally averse from his nature. He would have risked his life a thousand times for his native city, but he would never have rejoiced with the Spartan that it contained three hundred worthier to govern. Hence he was unfitted to rouse the slumbering energies of a state in the cause of freedom. The bands which joined him were always actuated by regard to him as an individual, not by any general spirit inspired by his cause. His fortunes were strangely linked with those of a state, which, by casting him the first time from the summit of greatness, brought herself to the verge of ruin; and, after madly repeating the injustice, when his arm had raised her from the dust, sunk almost without a struggle. In his death, which she had once formally decreed, and now had remotely occasioned, she saw and felt her last hope expire. If he was not altogether worthy to be the preserver of the Athenian greatness, he merited the honour of casting the last rays of glory over it, and of having his fall identified with its destruction.

Family of Thucydides.

THE details which ancient authors have left as respecting the life of Thucydides, the immortal historian of the Peloponnesian wars, are neither consistent nor ample. The total absence of egotism, and even of individual prejudice, in his writings, while it gives us the highest ideas of his fitness for the great office he undertook to fill, prevents us from gathering from these imperishable records many hints of his personal qualities. We shall attempt, however, to collect the unexceptionable information existing respecting him, before we examine the great monument of his genius which he has left us.

Thucydides, according to the testimony of Plutarch, in his Life of Cimón, was of the same noble family with that illustrious Athenian, and Miltiades, his still more illustrious father. The latter hero had not only enjoyed large possessions in Thrace, but had reigned over the Dolonci, a people in that country, by a right derived from his uncle, until forced to abandon his throne, and seek refuge and glory at Athens. He had also enlarged his possessions by a marriage with the daughter of Olorus, king of Thrace. In what degree of relationship the father of Thucydides stood to the chief members of this celebrated family does not appear. As he bore the name of Olorus, it is probable that the appellation was given him from respect to his Thracian ancestor. So honourable was the family of Thucydides regarded, that Cicero has said of him, "his name would still have been remembered, he was so noble and dignified, even though he had not written a history." If, however, his name had descended to us, merely as a branch of a splendid family, his fame would have derived little benefit from a barren remembrance with which no kindling association would be connected.

Education of Thucydides.

The authors who have professed to speak of the education of Thucydides differ. Marcellinus represents him to have been the pupil of Anaxagoras, and affirms, on the authority of Antyllus, that atheistical opinions were imputed to him, on account of his devotion to the theories of that philosopher, who was commonly regarded as rejecting all belief in the existence of the gods. As, however, the charge, in as far as it relates to the master, was founded only on his contempt for the degrading superstitions of his time, it can have no weight when urged, on such ground, against his admirer or pupil. Indeed the writings of the latter contain ample materials to prove it fallacious. Some have represented Thucydides as the scholar of Antipho, and others have reversed the supposition, and made the former the latter's preceptor. These theories seem to rest only on probability and conjecture. By whomsoever he was instructed, he appears very early to have felt those impulses which incited him to devote his whole mental energies to his immortal production. In the fifteenth year of his age, having been taken by his

father to the Olympic games, he heard Herodotus read his history to the admiring assembly, collected from every part of Greece. After listening with the deepest attention, he burst into tears of admiration and joy. Herodotus is said to have observed his emotion, and to have congratulated Olorus on the early passion of his son for intellectual exertions.

The remainder of the youth, and the early portion of the manhood of Thucydides, are only subjects of speculation and conjecture. Some have conceived that he was opposed to Pericles, in the domestic administration of Athens, and banished thence by ostracism, through the influence of his more powerful rival. It seems, however, more probable, that the Thucydides thus driven into exile was a different person, though of the same family; and Dr. Smith, in the first preliminary discourse to his translation of the history, supposes the object of the resentment of Pericles to have been the son of Milesias, and a leader of the oligarchical faction at Athens. This will appear more plausible, if we remember that there is no trace in the writings of the historian of any strong political feelings, nor any other ground, in the memorials of his life, for supposing that he ever directed his views to an active share in the civil government of the Athenians. He has besides described too minutely the circumstances of Athens, previous to the wars which he celebrates, to leave us at liberty to suppose that he was not an immediate observer of all which he so vividly pictures in the introduction to his history.

It has been affirmed that Thucydides accompanied Lampro and Xenocrates, together with his great forerunner Herodotus, on an expedition sent by the state to found a colony at Thuria, in Italy. If this were the case, his absence from Athens could not have been of very long duration. He was certainly present in Greece before the breaking out of the Peloponnesian wars; for he perceived their first indications, watched their earliest movements, and in anticipation of their mighty consequences, determined, before they actually commenced, to become the historian of their progress.

Thucydides, like the old poets of Greece, took an active share in the events which he afterwards dignified by his genius. As every citizen of Athens was, in time of war, a soldier, he must have marched with Pericles to attack the country of Megare, since the whole force of the state, on that occasion, took the field. He informs us himself, that he was at Athens when ravaged by pestilence, with which he was himself afflicted. In the forty-seventh year of his age, he was appointed to a command in Thrace, from which region he derived a large revenue from gold mines, and which had been the country of his ancestors. This appointment, however, which appeared so well suited to his circumstances and feelings, became the occasion of his exile.

Occasion of
his exile.

Thucydides was stationed at the isle of Thasus, a Parian colony, when he received a message from Amphipolis, entreating his succour, as Brasidas, the Spartan general, had suddenly appeared before that city, and was plundering its environs. The party who had thus implored his aid were not, however, supported by the unanimous wishes of the citizens within the walls. A number of Argilinus who resided in the town were disaffected to the Athenians, and Perdiccas and the Caleidians had emissaries there who awakened in many a zeal for the Peloponnesian cause. Although, therefore, Thucydides immediately embarked with his forces, and sailed for Amphipolis, that city had been peaceably delivered into the hands of Brasidas before his arrival. A proclamation by which the Spartan commander promised to the Athenians as well as the Amphipolitans, the undisturbed enjoyment of their properties, liberties, and rights, or allowed them to remove within three days, with all their possessions, had completed the work which the intrigues of his partisans had half accomplished, and occasioned the surrender. The squadron of Thucydides, however, was far from useless. Brasidas had prepared to improve his success by the immediate seizure of the port of Eion, an important post at the mouth of the river, and only two miles from the place of which he was already in possession. But his adversary was, in this instance, able to prevent his design from being carried into effect; for, in the evening previous to the night when the seizure would have been made, he arrived at the harbour, and immediately prepared the town for defence against a sudden attack, as well as for the protection of those who might remove thither from Amphipolis, according to the conditions of the late surrender. When, therefore, Brasidas, after suddenly passing down the river, endeavoured to seize on the projecting point of land at its mouth, and, at the same moment, made an attempt to enter the town by land, he was repulsed in both quarters, and compelled precipitately to retire.

Exile.

It might appear impossible to ensure Thucydides for his conduct on this occasion. But with the people of Athens it was always criminal not precisely to answer the expectations they had formed, whether mere ill fortune compelled a general to fall short of them, or genius enabled him to rise above their level. They were as indignant at misfortune as they were covetous of superior worth. Incited by the miserable demagogue Cleon, they deprived Thucydides of his command, and sentenced him to exile.

Retirement
to Thrace,
and death
of Thucy-
dides.

But the conduct of his fickle and misguided countrymen does not appear to have been productive, in his mind, of any ungentle emotions. He might, indeed, well treat it with indifference, while he enjoyed already the perspective of an immortal and increasing fame. According to Plutarch, he retired to Scapteisyle, in Thrace, and there devoted all his energies to the composition of his history. The sentence of his banishment continued in force twenty years, at the expiration of which period it was, in effect, annulled by the general act of amnesty, passed while Euclides was archon, after the destruction of the Lacedæmonian tyranny. Whether, however, he availed himself of the liberty to return to Athens we have no means of deciding. He died in the year before Christ 391, at the age of eighty, and was probably interred at Scapteisyle, so long

the scene of his literary toils and delights, where a monument, supposed to have been a cenotaph, was erected to his memory. He is said to have left a son; but nothing is known respecting him.

Such is the brief sum of all that appears authentic of the details left us respecting the life of this great historian. Happily we are not reduced to gather faint glimpses of his literary as we are of his personal character. His great work remains fresh and uninjured by time, and seems destined to fulfil the design of its noble-minded author, who, in its introduction, declares that he placed it before the world to be a *possession unto it for ever!*

At first view, the subject of this mighty narration may appear to want importance, dignity, and grandeur. The contest celebrated is confined to a tract of country of insignificant size, and to a few years of duration. But its interest is not to be estimated by such standards. It was the mind, the virtue, the energy engaged, not the numbers of the armies, which ennobled the actions of the Grecian wars. Within the hills and rocks which encircled Greece with narrow boundaries, had the freedom, the arts, and the genius of the west found its birth-place and its cradle. All that was profound in thought, beautiful in poetry, noble in sentiment, and energetic in action, had there been developed in a perfection, of which the most extensive regions of earth had hitherto been blessed with no similar example. Genius there had known the mighty graspings, and boundless aspirations of its infancy; and the complete harmony of its prime heroic virtue, had there, not only assumed the sublimest and most unconquerable attitude, but, was at the same time, touched with the gentlest poetical bloom. Its band of illustrious conquerors and bards seemed destined to show the triumph of the spiritual over the material part of our nature; to prove that the smallest country on earth might become, by genius and prowess, the greatest; and that the intuitive faculties required no painful efforts or length of time to become at once gigantic and harmonious. When, therefore, Thucydides saw the energy of his hitherto unconquerable country, fresh from the triumph over the myriads of Persian invaders, divided, and about to be wasted in domestic war, he perceived that the destruction was preparing for institutions which might otherwise have lasted to delight or to astonish the world as long as it should endure. He perceived in the contest, the last and fatal exertions of a freedom which should have been immortal. With what deep interest then must he have contemplated struggles, in which every opponent was a hero, and the genius of the earth's mightiest sons was employed, by a dark and mysterious providence, to illuminate the ruin it was destined to prepare! The history of Thucydides contains a minute and most vivid picture of these events which extinguished the freedom of Greece; of the last efforts of her greatness about to pass away; of withering corruption clinging round, and poisoning her most heroic virtue; of her genius and valour nurtured from a gorgeous antiquity, in the madness of enthusiasm, putting forth their sublimest exertions to achieve their sepulchre!

This subject was not only grand and heroic, and calculated to excite his deepest emotions, but his opportunity and character peculiarly fitted him to write up "to the heights of its great argument." Before the actual commencement of hostilities, he was present

dides for
his work.

Biography. in Athens, and marked them with the serious accuracy of one who was to be a witness before posterity, of all the indications of the contest which he felt must terminate in its ruin. He was himself acquainted with martial affairs, by practice as well as theory, and held a command in the wars which he was preparing to celebrate. Had he continued a leader in the Athenian armies, the circumstance which added to his information must have affected the impartiality of his spirit. The injustice of his country, in a great degree, neutralized his feelings, and rendered him as impartial a witness as he was an intense observer. Banished from Athens, he refused to join with its foes, and in a dignified retirement looked upon the warfare with no emotions but those of a Greek, who saw in its struggles the bloom of Grecian virtue destroyed, and its glorious energies wasted. Never did historian do more ample justice to every individual whose actions he recorded. Not only are praise and censure equally measured to the Spartans and Athenians, but to the internal parties and statesmen, in the delineation of whom, personal feeling might be suspected to influence the colouring. The aristocratical and popular factions—Nicias and Alcibiades—Erasistratus and Pericles—are represented with the truth as well as the vividness of a spectator, who united the cool wisdom of a philosopher with the life, energy, and spirit of a poet. His impartiality is like that of a being looking down from a lofty abstraction on the scene; and yet he puts human life, vigour, and passion into all. He feels with every one of his characters as though he were a partisan, and judges of all as if the ebb and flow of love, hatred, or sympathy had come not near him. His deep and profound sentiment rendered him a most fit chronicler of the events in which the noblest institutions of earth were destined to perish. The tears which he shed, in youth, on hearing the works and witnessing the triumphs of Herodotus, proved how deeply lay the springs of thought, hope, and passion within him. He had no love for the applause of the multitude, no taste for "the garishness of joy." His sympathies were worthy to be linked for ever with the decay of the most venerable and stately of human things. He wrote with the dignity, the earnestness, and scrupulous truth, of one who felt himself bearing

witness of the fatal causes which led to the ruin of his glorious country, before generations who, in distant years, would fondly and devoutly cherish its august memorials.

The work of Thucydides is exceedingly different, in form and structure, from the most celebrated of modern histories. It is distinguished from them by its minute representations of events, and by the elaborate speeches in which the author makes his leading characters develop their views of policy. It is, in short, more dramatic, picturesque, and vivid, but less extensive, elegant, and finished, than the works of later historians. The descriptions of public assemblies, sieges, and battles, are given with a vividness of detail, and a freshness of colouring, only exceeded in the *Iliad*. The whole forms a series of grand tragic scenes, over which one spirit of mournful solemnity appears to brood. The beautiful clearness and simplicity of Herodotus find a worthy contrast in the stern majesty of his younger rival. Thucydides could not, with the sad presages of his country's ruin ever before him, imitate the undulating course of his predecessor, who loved to give ear to miraculous tales, and lead his reader away, at pleasure, to follow him through enchanting digression. The genius which follows the decline of Greece through the dark catastrophe of the Peloponnesian wars, seems ever impressed with the sternness of the subject; it is massive, stern, unbending, and sometimes obscure, from its force and solemn energy. The whole is in a harmony and keeping as perfect as the noblest of the ancient tragedies. It is at once the brilliant representation of the events preceding the downfall of Grecian liberty and rights, and a high and mournful dirge over their ruins!

The History of Thucydides has been translated into our language by Hobbes, the celebrated philosopher of Malmesbury, and Dr. Smith, distinguished as a scholar of great elegance and taste. The work of the former is singularly faithful to the text, and as singularly destitute of the spirit of the author; that of the latter is at once nervous and clear, and seems to do all, which an English version can effect, towards expressing the power and majesty of the great original.

Prepara-
tions by
Xerxes for
an invasion
of Greece.

IN the lives of Themistocles, Aristides, Pericles, and Alcibiades, we have taken occasion to describe, with considerable minuteness, those events to which their genius directed, and which form a very large part of the brightest portion of Grecian history. We have now to supply the outline by which those individual pictures will be connected; passing lightly over those circumstances which have been described in connection with them, and dilating on those parts of national history which our plan has induced us hitherto to omit, or to which it has enabled us only briefly to allude.

Xerxes, having succeeded Darius on the throne of Persia, resolved to avenge the stain which had been thrown on the arms of his country, at Marathon. It is even probable that his views extended beyond the conquest of Greece, and that he regarded this extension of his dominions but as opening the way to the subjugation of regions still further to the westward, in which his young ambition anticipated a series of victories. Incited by the exiled party of the family of Pisistratus, he sent heralds to all the cities of Greece, except to Athens and Lacedæmon, where the Persian envoys had, in the reign of Darius, been put to death, to demand earth and water, in token of their submission. With this demand, many of the smaller states thought it prudent to comply. The mighty preparations of the great king proceeded on a scale the most appalling (See XERXES). To a superficial observer, the fate of Greece must have appeared to be absolutely decided. Even the small force which its united republics could have opposed to the invasion, was divided against itself; many of the states had yielded; Ægina had been at war with Athens; the resolutions of Argos, Corcyra, and Syracuse, were doubtful. Minds, however, were happily found with energies equal to the danger. Themistocles had already provided Athens with a naval force, which effected, ultimately, the deliverance of Greece, and raised that state to the highest glory and power (See ARISTIDES and THEMISTOCLES). Peace was immediately concluded between Ægina and Athens; but Crete and Argos declined uniting in the general cause. A meeting of deputies from the confederated states, to deliberate on the best means of resistance, was summoned to assemble at Corinth.

The stupendous forces of Xerxes (which we have

described in our life of that sovereign) now passed the Hellespont, and advanced to attack Thessaly. A body of infantry, under the command of Themistocles and Evannetus, was instantly sent to dispute the passes, which accordingly took its position in the vale of Tempe, between the mountains of Ossa and Olympus. Here they were joined by the Thessalian cavalry, and constituted a force adequate to the defence of the road between the natural fortresses by which the boundary was protected. But they were induced to retire, by intelligence derived from Alexander, the son of Amyntas, king of Macedonia, that there was another passage by which the Persians might enter Thessaly from Upper Macedonia; and that unless they retired, they must be surrounded and cut to pieces. They left Thessaly, therefore, to the mercy of the invaders; and the people of that region, thinking themselves forsaken by their allies, received the army of Xerxes with open arms, and exerted themselves to the utmost in their favour.

The force of the Grecians was now concentrated within their narrow boundaries, which were defended almost in every part by the sea or the mountains. The ridge of Æta, extending from sea to sea across the southern limit of Thessaly, now became their frontier, was accessible only by one narrow road, scarcely wide enough to admit a chariot, and defended by a wall, and an inundation from the neighbouring hot baths, which gave it the name *Thermopylae*, by which it has since been remembered with associations so deep and inspiring. Near this most advantageous position was a bay where the fleet could anchor in safety. Here, then, it was resolved by the confederates, that the first strenuous resistance should be made to the progress of the invader.

But small, indeed, were the numbers which Greece could arouse to assist in the cause of freedom. Even of the states which professed to unite in the league, most were either paralyzed by terror, or deterred by jealousies, from putting forth their utmost energies. Thebes contributed only four hundred, Corinth four hundred, and Sparta three hundred soldiers. The force of Athens was necessarily employed on board her fleet, so that the great body of the troops was composed of Locrians, Phocians, Arcadians, and the citizens of the smaller republics. These, with Leonidas, king of Lacedæmon, at their head, took their

station near the pass of Thermopylae, while the fleet was drawn up at Artemisium, in order to assist them. But on the approach of ten Persian gallees, sent to explore the sea, the fleet retired, after losing two vessels, and anchored at Calcis. On this retreat, the vast armament of Persia advanced to Lepias, where it was met by a violent tempest, was greatly shattered, and lost, by the lowest computation, four hundred gallees. Hearing of this disaster of their foes, the commander of the Grecian navy once more took the station at Artemisium, from which they had ignobly departed. Soon after, fifteen hostile vessels, which had been separated from the rest by the storm, fell into their hands, having mistaken their fleet for a division of the Persians. This success served to awaken the energy of the Greeks from the state of despair in which it appeared to be expiring. Religion aided the love of liberty, and taught the Greeks to believe that heaven was with them. For the transactions at Thermopylae (See *LEGONIDAS*).

The Persian armies having passed Thermopylae, over the bodies of their heroic foes, advanced without opposition into the country of the Dorians. They respected the property of the people of Doris, but ravaged Phocia with fire and sword, and advanced, scattering ruin everywhere along the banks of the Cephissus. While the main body proceeded to Attica, through the territories of the Boeotians, a detachment was sent to Delphi, to secure the rich treasures in the temple of Apollo. Herodotus informs us that, on the approach of this band towards the steps on which the fane was erected, thunder from heaven struck them, masses of the rock fell on them with tremendous sounds, and the Delphians rushing from the caves, attacked them in their dismay, and put to flight all who survived the prodigies. It is probable this apparent miracle was the result of contrivance, which the situation of the temple was peculiarly calculated to favour. While its summits appeared to be deserted, troops might well be concealed among its deep woods, who could roll down fragments of the rock through the steeples, at once to break the lines of their foes, and strike them with supernatural horror. Storms of thunder must have been of frequent occurrence, in the situation of the isle, during the summer season. And with all the advantages of position, knowledge of the ground, and a religious panic in the Persians, the Dorians, though with numbers very inconsiderable, might have gained an easy victory. It was affirmed, that two figures, more than human, appeared on this occasion to encourage the Greeks, who were supposed to be Phylax and Autonous, old heroes of whom traditions existed in Delphi; but this is an invention which naturally arose from circumstances which the friends of the oracle would desire to heighten.

Meanwhile, fresh disunion arose among the Grecians. The Peloponnesians resolved to decline assisting in defence of Attica, and to draw their lines of defence across the isthmus, so as to confine their operations to their own regions. Although this resolution was as short-sighted and foolish as it was base, it threw the Athenians into a state of great distress and confusion. Themistocles happily, in the manner which we have stated in his life, made this apparent evil the means of triumph. By his address, his countrymen were induced to send their families and ef-

fects to Egina, Trezenes, and Salamis, and to hasten with all their resources in arms, on board their ships. Shortly after the Persians entered Athens, plundered the town, and invested the citadel, where the priests and poorer citizens had taken refuge. These superstitiously believing that Minerva would not permit her temple to be profaned, defended the place to the last, and were all put to the sword, on its capture.

Although of the two hundred and seventy one trireme gallees, which, with a few smaller vessels, formed the Grecian fleet, a hundred and twenty-seven were furnished by Athens alone; the allies refused to be commanded by an Athenian. Eurybiades, therefore, the Spartan admiral, though apparently little competent to the office, directed the fleet. Themistocles, however, by the influence of his policy, was happily able to overrule the councils of the nominal commander, who was desirous of retreating into the inland seas of Greece; and after an undecisive combat off Artemisium, to force the enemy to a battle at Salamis. The result was most glorious for the cause of freedom. The Persian armament was broken, dispersed, or fell into the hands of the Greeks, in the manner which the reader will find more particularly related in the Life of Xerxes, and also in that of Themistocles, who obtained the first honour of the immortal action.

After the battle of Salamis, the remains of the Persian fleet retreated towards the Hellespont, and the army, destitute of supplies, fell back into Thessaly. Xerxes returned towards Asia, with the residue of his forces, exhausted, afflicted with pestilence, and in the greatest distress for want of provisions, though friends and enemies were alike plundered by his troops, to contribute to the supply of their hunger. When he reached the Hellespont, his stupendous force seemed reduced to an empty shadow. He left, however, Mardonius with three hundred thousand men, the flower of his army, to prosecute those designs which he had been so unexpectedly prevented from accomplishing in person. But this great force served but little to excite the apprehensions of the victorious Grecians. They resigned themselves to rejoicings, paid devout offerings to the gods, and rewarded with cheap but highly prized memorials, the valour of their commanders. Calcedice, a state, hitherto submissive, revolted from the Persians, and asserted its right to freedom. But this measure seems to have been unfortunate; for a detachment of Persians, hastening to join Mardonius, took the city of Olynthus; and, with deliberated cruelty, which recent misfortunes alone could have inspired, forced the inhabitants to repair to a marsh, and put them indiscriminately to the sword. Potidea was besieged by the same party, but a rising of the sea forced them to retire with great loss; and they joined Mardonius in Thessaly. Meanwhile the fleet of the Persians made no fresh effort against the Grecian coasts, but continued, through the winter, at Samos.

It could be little doubted that this wonderful deliverance of Greece, was chiefly due to the Athenians. Mardonius, therefore, justly conceived, that if he could detach them from the confederacy, he should find the other states an easy prey. Offers were, therefore, made to them, through Alexander, king of Macedonia, that their temples should be rebuilt, their

nians again
embark.**

dominions extended, and their own laws secured to them, if they would enter into an alliance with the Persian sovereign. Incited by Aristides, the first of the Greeks in real virtue, they instantly rejected the proposals. We refer our readers to the lives of Aristides and Themistocles, for the particulars of this noble act of heroism and justice.

The Lacedæmonians, however, were so little sensible of the disastrous resolution of the Athenians in the common cause, that, when Marquis advanced towards Attica, they sent no troops to its defence; and the men to whom Greece owed its liberties, were compelled once more to retire with their families and goods to Salamis. Still, though the offers of the king were renewed, they disdained to give them attention; and an Lycidas, who wished to refer them to the people, was stoned to death by the populace, and his wife and children slain by infuriated women. Upon this, the Phocians marched into Attica, ravaged the country and took possession of its capital. In the mean time the Spartans were thinking only of their own security, and fortifying the isthmus with walls which would separate them from their nobler allies. At length, however, aroused by the remonstrances of the Athenian ambassadors, they sent a band of forty thousand men, composed of citizens and Helots, to co-operate with the allies. On hearing that this force was in motion, Marquis left Attica, which from his bills and steep declivities, was peculiarly unfavourable to the movements of his cavalry, and fell back into Boeotia, where he fixed his camp along the borders of the Asopos. The Greek forces now united, and composing a body of 100,000 men, took their position at the foot of Mount Cithæron, in the face of the Persians, on the opposite side of the river. After a warm skirmish, in which the courage of the Spartans was victorious, they marched to Plataea. They were followed by the Persians. Here a great battle was fought, Marquis slain, and the Persians completely defeated with tremendous slaughter. On this same memorable day, the naval forces of Persia received an equally signal overthrow at Mysele, and were compelled, with severe loss, to retreat. Thus, almost at a blow, the second mighty attempt against the liberty of Greece was frustrated, and terribly avenged on its authors. (See "ARISTIDES AND THEMISTOCLES.")

After these victories, the germ of future animosities between Athens and Sparta began to appear, in the contest for the *Aristeia*, or first honours of the war, but the immediate dispute was appeased by awarding them to the *Plutarchs*. Vengeance was next exacted against Thebes for their treachery to the common cause; on her refusal to deliver up *Timocleides* and *Attagnus*, who were accused of having occasioned the defection, the confederates laid waste the territories, and besieged the city of the Thebans. At length, *Attagnus* having escaped, his children, with *Timocleides*, and other persons, were delivered up to *Pausanias*, the Spartan general, who dispatched them to the *Laconians* unhurt, but put the rest to death, without trial, at Corinth.

The Greeks were now at leisure to indulge their joy, and express their gratitude for their victories. The Platæans, to whom eighty talents of silver were awarded in testimony of their heroism, employed the sum in building and adorning a beautiful temple to Minerva.

They were appointed to perform a grand ceremonial annually to the memory of the departed patriots, and in honour of the protecting deities. It was also resolved to mark every fifth year with a solemn festival. Two monuments of marble were erected at Thermopylae, one in honour of the Peloponnesians at large, and the other of those yet braver 300 who fought and died with the Spartan prince.

The Athenians did not in their haste to rebuild their city, forget the tribute due to their preservers. They instituted annual ceremonies, in which the praises of the heroic dead were celebrated by their most gifted orators. They raised columns on the general tomb of those who fell at Marathon, among which they paid a tardy respect to Miltiades, who died not there, but in prison beneath their injuries.

Athena had suffered, in the great contest, the destruction of her buildings and temples; but had acquired a rich compensation in power and renown. Sparta, whose superiority over all the other states, had hitherto been disputed only by Argos, began to entertain jealous fears of the advances of a more potent rival. These apprehensions, although scarcely generous, were not unfounded. By the possessions of the Themistocles, the Athenians had already begun to surround their city now rising from its ruins, with strong and extensive fortifications, and carried on the work with the most enthusiastic zeal. Against this proceeding, the Lacedaemonians thought fit to remonstrate, alleging that experience had shown that Athens fortified only would be a strong hold for the invader. Unwilling to relinquish their design, and unprepared by open force to defend their right to fulfil it, the Athenians had no course but to temporize and dissemble. Themistocles undertook this difficult task, for which he was most peculiarly fitted. He departed on an embassy to Sparta, where he amused the chief magistrates by various pretexts until the fortifications were completed. Having by his positive assertions, that those who affirmed the work to be in progress uttered falsehood, procured Spartan envoys to be sent to ascertain the fact at Athens, he boldly avowed the treachery, and confounded the Ephori, by informing them that their deputies would be detained as hostages, until he should return in safety. He was then permitted to depart, and return home, exulting in the success of his policy.*

Themistocles appears immediately on the expulsion of the Persians, to have conceived the design of raising Athens to the situation of mistress and arbitress of Greece. He therefore procured the proposition of Sparta, for excluding the states who had refused to join in the confederacy against Xerxes, from the right of sending deputies to vote in the general council, to be rejected. For he perceived that thus cities who were friendly to Athens, would be deprived of all the influence by which they could serve her. That his projects might not be defeated by their premature discovery at Lacedæmon, he required that they should be communicated to two chosen men, with whose concurrence they should be effected. In concert with these, he caused the harbour of the Piræus to be enlarged, and connected, by long walls, with the city. He im-

of Pausanias.

proved and increased the Athenian navy, and turned the energy of his mind towards the advancement of that moral power on which his bright hopes for his country's predominance chiefly rested. Being entrusted with the office of levying contributions from the allies, near the *Ægean sea*, towards the expenses of the war, he took every occasion to strengthen the interest of Athens, and preserve the way for that avowed ascendancy which he never ceased to meditate.

Notwithstanding the jealousies which were secretly increasing between Athens and Sparta, they continued to unite their efforts against the common foe. In the prosecution of these, however, fortune greatly favoured the aspiring views of the Athenians. Pausanias, the Spartan general, who at first commanded the fleet, soon became obnoxious by his pride to the minor confederates. After taking Byzantium, indeed, he became more than suspected of traitorous correspondence with Persia. He appointed one named Gongylus to be the governor, who connived at the escape of the most illustrious of the prisoners, and, after this, dispatched him to the court of Xerxes. There his offers are said to have been received with a favour, which quite intoxicated him with ideas of his approaching grandeur. The Peloponnesians retired in disgust, the chief of Chios and Samos publicly insulted him, and the Spartans themselves sent home accusations against him. Alarmed at his proceedings, the Ephori recalled him, and sent Dorcis to take his command. The inquiry, however, which Sparta had sustained in the afflictions of her allies, was too deep for this alteration to repair. Already had the people of Thrace, Asia-Minor, and the island of the *Ægean sea*, solicited Aristides and Cimon, the Athenian generals, to direct them. Their respect had been so conciliated by these virtuous men, that they refused to yield obedience to others. Dorcis returned, Sparta tacitly yielded to circumstances; and the Athenians, for the first time, appeared ostensibly at the head of the Grecian forces.

Desertion of
Pausanias
and Themistocles.

While the plan of Themistocles for the aggrandizement of his country, were thus successful, his own personal influence was declining. The stern virtue of Aristides, and the conciliating goodness of Cimon, effectually, though silently, reprov'd the conduct of a patriot, who, with all his courage, and consummate ability, showed on many occasions a want of noble principle. The people of Athens felt the immediate results of the administration of his rivals, and forgot to whom they were indebted for the origin of the consequences which they now saw unfolding. Instances of his pride and arrogance were studiously brought forward by his adversaries; and, having been accused, though perhaps without reason, of a guilty knowledge of the intrigues of Pausanias, he was sentenced, by ostracism, to exile. Pausanias, in the mean time, continued his haughty and luxurious career, until it ended in his total ruin. (See PAUSANIAS). After his death, the Spartans accused Themistocles of a participation in his treason, and demanded that he should be tried in a general council. He found means, however, to escape into Asia, and seek protection from the king, which he obtained, and under which he died in the manner which in our account of his life we have particularly related.

Policy and
success of
Athena.

It was the singular fortune of Themistocles to render great service to his country, both by his policy and his exile. His successful plans had rendered him so

obnoxious to the Lacedæmonians, that they never would have acquiesced in the ascendancy which they had procured for Athens, had he continued in possession of influence and favour. Aristides, his successor, on the other hand, was calculated to soothe their resentments, by his known inclination to the aristocracy, which they desired to uphold; and his nobleness of character which all agreed in revering. They offered, therefore, no obstruction to the plans by which he secured to Athens the management of affairs for all the states who had recently sought her alliance. He procured the place of meeting for the deputies, sent by the cities to the Grecian council, to be changed from Sparta to Delos, and thus deprived Lacedæmon of the external symbol of that superiority she had hitherto been permitted to assume. He fixed the sum which all the states should contribute to the support of that common freedom which their beaten, yet potent foe, still anxiously hoped to destroy. The tax, although amounting to four hundred and sixty talents, or 92,000*l*, was paid with a cheerfulness which could have been inspired by the virtues of its proposer. Of this treasure, Delos was made the depositary, and Athenians the guardians. Thus, on the death of Aristides, he left Athens in the course of acquiring, if she had not already attained, the first place among the Grecian republics.

Aristides was succeeded by Cimon, son of Miltiades, ^{Commander} in the chief control over the affairs of Athens. (See of Cimon, and his successor.) Appointed to command the confederate forces by sea and land, he resolved on delivering all the Grecian cities, both in Europe and Asia, over which the Persians still held dominion, from the yoke of the barbarians. He began by attacking Eion, a city of Thrace, on the river Strymon, with his fleet, where much spoil was expected. Its commander, however, finding there remained no hope of retaining the fortress, instead of accepting the offer of Cimon of liberty to pass unmolested into Asia, collected the treasures, built a funeral pile, and, ascending it with barbaric heroism, burnt them, together with himself and his family. Musænes, the governor of Doricæ, however, was more successful, for he retained the place for his sovereign during his life, though it was the only hold in Europe occupied by a Persian garrison. All other fortresses in Thrace, and on the borders of the Hellespont, submitted to the Athenian commander.

The Grecian states having been greatly molested by the piracies of the inhabitants of Scyros, commissioned Cimon to chastise them. He soon took possession of the isle, devoted its people to slavery, and supplied their place by a colony from Athens. The Naxians, also, who resisted the terms of the confederacy, were reduced to submission, and, by a measure without example, compelled to own subjection to the Athenian republic. The war in Naxos being concluded, Cimon advanced into Caria, where the Grecian city of Phaselis remained under the control of the Persians. He reduced this city, after some danger from the treachery of the Chians, who were connected in affection with its citizens, and who acquired great spoils. Hearing, however, that a Persian fleet were assembled in the river Eurymedon, near the coast of Pamphylia, and an army was at hand to co-operate with the naval commanders, he hastened to embark his troops, and offer battle to the enemy. He obtained an easy victory over the fleet, great part of which fell into his hands.

Prosperity
of Athens,
and distress
of Lacedæ-
mon.

and, landing his victorious forces, defeated, though after a severe struggle, the troops on the shores. The camp of the Persians, with all its riches, became his spoils, and the whole squadron of Phœnician gallees, which had been intended to assist the defeated fleet, were, shortly after, added to his spoils and his trophies. Shortly after, he repelled an incursion of the Persians into the Chersonesus, took thirteen of the hostile vessels, and completely expelled the invaders. These successes ended the memorable wars between the millions of Persian slaves, and the small but heroic band of Grecian freemen. All offensive operations on the part of the oriental sovereigns terminated here, and the Greeks had no task left but to which they were unhappily unequal, the consolidation of their institutions, and the maintenance of internal unity.

The chastisement of Thasos, and the possession of its mines of gold, added greatly to the riches and power of Athens. Possessed of great spoils, Cimon, with a taste as refined as his valour was hardy, adorned the city with porticos, plantations, and temples. (See CIMON.) While the Athenians were thus advancing in elegance as well as power, the Lacedæmonians were visited with the severest distresses. A terrible shock of an earthquake laid the city of Sparta in ruins, and buried the flower of its noble youths beneath them. Invited by the opportunity, the Helots, the oppressed and degraded slaves of the citizens, rose in arms to assert the rights of nature over their wretched masters. They were disappointed, indeed, in the hope of seizing the country by surprise, amidst its distresses, by the sudden appearance of a regular band; who, accustomed to an unrelaxed discipline, appeared in an instant, at the sound of the martial instruments, in military array. But, traversing the fields, they incited their fellows to join them, and soon greatly exceeded, in numbers, their late oppressors. They seized the strong fortress of Ithome, and thence took all occasions to harass their foe in keen revenge for former injuries. In the meanwhile, the Spartans were reduced to great misery, from the want of the assistance of the slaves in tillage, which, unaccustomed themselves to the arts of peace, they were little able to supply. In this state of difficulty and peril, they condescended to apply for assistance to Athens. Notwithstanding the jealousies which still existed, the aid required was granted, on the persuasions of Cimon. That noble-minded general marched at the head of an army to their deliverance, and rendered them most important services. Unhappily, however, the junction of the troops of Athens and Sparta gave occasion to perpetual irritations, which served to increase the hostile feeling existing between the republics. At length, the Athenians were dismissed by the Lacedæmonians, as those for whose assistance there was no further occasion. This measure so exasperated the citizens of Athens, that they renounced the alliance with Sparta, and made a league with its inveterate foes, the people of Argos. The Argives had, during the insurrection of the Helots, made war on the state of Mycenæ, the old antagonist of their pretensions, completely destroyed its forces, reduced its people to slavery, and razed its walls to their foundations.

Hatred of Sparta now became a very deep and pervading emotion in the breasts of the Athenian populace. It was heightened by Ephialtes, the leader of

the democratic party, whose love of a popular government quickened the other cause of dislike which he cherished towards the Lacedæmonian institutions and policy. So strong, indeed, was the feeling thus excited, that Cimon, who was anxious for peace with the Peloponnesians, and attached to oligarchy, was, notwithstanding all his victories, munificence, and equity, sentenced by ostracism to exile. Among those who joined in this popular act of injustice, was Pericles, the son of Xanthippus, who had acquired great popularity by his eloquence, during the absence of Cimon, when that general was engaged in extending the influence of Athens. After the banishment of Cimon, Ephialtes and Pericles continued to pursue, with great earnestness, their attempts to render the government purely democratic, and to aggrandize Attica, at the expense of the Spartan power. Fortunately for the views, a dispute between the states of Megare and Corinth, which had both been parts of the Lacedæmonian alliance, induced the former to leave its old protectors, now unable or unwilling to assist it, and to implore the alliance of the Athenians. The request of the Megarens was joyfully granted, and their city of Megare, and their port of Piræ, filled with Athenian garrisons. Meanwhile Pericles and Ephialtes gained a great accession of power, to the permanent injury of Greece, by persuading their countrymen to reduce the dignity and the powers of the court of Aropagus, and to take from it the direction of the public treasury. A decree, proposed by the latter, which gave the control over the state revenue, and the decision of important causes hitherto vested in that august tribunal, to the assembly of the people, was adopted by the flattered and deluded citizens. Thus were these chiefs enabled to bribe the people with their own treasures, and thus to secure the ratifications of any measures they thought fit to propose. They soon perceived the necessity of employing the confederates on some common enterprise, and accordingly sent Charitimus with two hundred gallees to reduce the isle of Cyprus. Scarcely, however, had the expedition departed, when Inarus invited the Athenians to assist in rescuing the noble country of Egypt from the dominion of the Persians. His offer was eagerly accepted by the chiefs of Athens, who hoped, in the riches of Egypt, to find spoils, which might attach even the fickle Athenians firmly to their cause. They, therefore, dispatched orders to Charitimus to abandon immediate designs against Cyprus, and assist the revolted battalions in Egypt. This distant contest was for a long time doubtful. Requests from the Persian monarch to Sparta, to make a diversion into Attica, which might draw the troops from Egypt, met with an honourable refusal. At length, a numerous fleet and army were sent to reduce Egypt, by whom the Egyptians were defeated, and their Grecian allies closely besieged in Prosopitis, an island in the Nile. This, their last hold, was taken, after they had long and vigorously resisted, and, though some escaped through Lybia to Cyrene, the greater number were put to the sword. Inarus, betrayed by his own soldiers, was crucified, and the whole of Egypt, with little exception, was compelled once more to submit to the yoke of the Persians.

During these disastrous operations in Egypt, the internal dissensions of the Grecian states continued to

Expedition
to Cyprus
and Egypt.

History. increase. The alliance with Megara naturally drew on the Athenians the resentment of the Corinthians and their Peloponnesian confederates. At Helia, the Athenians were defeated by the united forces of Epidauros and Corinth; but, shortly after, more than recovered the loss, by completely overthrowing the fleet of their foes, when assisted by the naval power of Ægina. After taking seventy vessels they landed and laid siege to the capital of the Æginetians, but were prevented from obtaining possession of its fortresses by large succours thrown into them by its allies. While the Athenians were engaged in blockading the town, the Corinthians, hoping to draw them from their main design, invaded the territories of Megara. Instead, however, of raising the siege, the people of Athens sent out a body of new recruits, composed of their old men and inexperienced youths, under Myronides, to repel the invaders. An action speedily ensued, in which the least in strength of the Athenian troops gained the advantage over their foes, and remained masters of the field. The Corinthians, on their return, being reproached as defeated by adversaries whom they had despised, returned to the place where the battle was fought, and erected a trophy. While they were thus engaged, Myronides sallied from Megara, fell on them while unawares, threw them into confusion, cut off their retreat, and pursued them with a slaughter so dreadful, that every Corinthian was slain. Ægina held out for some time longer, but was, at length, forced to capitulate, and to submit to the loss of its ships, the demolition of its fortifications, and the imposition of an annual tribute. After these successes, the Athenians began to build the long walls, from the city to its ports, which might secure to them the full benefit of that great arm of their power, the empire over the seas.

War between Doris and Phocia produces hostilities between the Athenians and Spartans. During the Corinthian war, Sparta had remained inactive, through weakness. She was, however, soon after incited to assist the Dorians, who were regarded with veneration as the first settlers of Peloponnesus, on an attack made upon them from Phocia. In the original object, the Lacedæmonian forces, under Nicomedes, were successful, as they repelled and enjoined terms on the Phocian invaders. But the democratic party, who now directed the affairs of Athens, resolved to oppose the return of Nicomedes to the Læonian borders, which their naval power and their possession of the Megaran territories afforded them the means of preventing. After suffering him to winter in Boeotia, they attacked him in the spring, near Tanagra, and met his troops in a fierce but indecisive set-piece. On the next day, by the aid of the Theban horsemen, who deserted from the Athenians, the Lacedæmonians obtained the victory. They, however, pursued the advantage no further than to secure their road homeward, through the regions of Megara, which they devastated in their passage.

Notwithstanding this check, the cause of Athens continued to prosper. The Thebans having entered into an alliance with Sparta, were opposed, with great vigour, by Myronides, who defeated them at Ænophyta, took from them Tanagra, and compelled all the towns in Boeotia, except Thebes itself, to submit to the Athenian power. This brave commander next secured Phocia, and terrified the Opuntian Locris into submission. Nor was the Athenian Fleet less successful than his army. Tolmides conducted it in a cruise round

Peloponnesus, during which he burnt the naval arsenal of the Lacedæmonians, at Gythium, defeated the people of Sicyone, and took Chalcis. He also collected the Helots, who, after holding Ithome for nearly ten years, had surrendered, on condition of leaving the peninsula, and settled them at Nisæus, under the name of Messenians. Thus another state was founded, naturally most hostile to the cause of Sparta, and devoted to that of Athens.

The Athenians were less successful in Thestaly, into which region they carried their arms at the request of its exiled prince, Orestes. Unaccustomed to contend against cavalry, they were forced, although commanded by Myronides, to retire. This repulse was soon counterbalanced by the success of Pericles, who, sailing with a squadron for Peloponnesus, defeated the Sicyonians, ravaged the Arcadian coast, and returned home with considerable spoils. (See PERICLES.)

The progress of the internal bustles of Greece was now, for a short time, happily suspended, by the recall of Cimon from banishment, on the proposal by his old antagonist, Pericles (See CIMON and PERICLES.) The influence of Cimon with the aristocracy and the Lacedæmonians, ensured, during the residue of his life, concord between the two great powers of Greece and their dependants and allies. To give employment to the citizens, whom continual wars had rendered unfit for the arts and duties of peace, he proposed the reduction of Cyprus. For this island he sailed with a fleet of two hundred gallees, and laid siege to its chief city, Citium. While his army were engaged in the blockade of this place, he died of a disease, and with him the hope of Grecian stability and repose expired. After his death his forces retreated, and fought victoriously for a passage to their ships. Having gained them and joined the relics of the numerous which had been an unsuccessful in Egypt, they sailed for Athens. Meanwhile Pericles restored to the Phocians the custody of the common treasures of Greece, at Delphi, which the government of Sparta had unjustly wrested from them, and given to the Delphians.

The death of Cimon was the cause of dissolving the amity which had recently been preserved by the veneration inspired by his character. Megara revolted from the Athenians, but was soon reduced to own their dominion. The Boeotians, who had been subdued by Myronides, threw off the alliance, and made inroads on the neighbouring regions. Against these Tolmides was sent, contrary to the opinion of Pericles, who expected no benefit from his plans. After taking Cheronea, he was attacked by a numerous force of the insurgents, slain in the action, and all those of his soldiers who survived it were taken prisoners. As many of the captives were related to the noblest families of Athens, the government of that city procured their deliverance by ransom, and a treaty, in which they resigned all claim to interference within the Boeotian domains. Eubœa next threw off the yoke of Athens; and, before Pericles could arrive there, to quell the insurrection, Megara once more rose against its Athenian masters. Nearly at the same time the Lacedæmonians resolved to take advantage of the difficulties which now beset their adversaries, burst, in great force, into Attica, under Pleistoneus, their youthful sovereign. Pericles, however, induced their army to retire, by bribing the tutor and confidential adviser of

Truce for thirty years concluded. Internal greatness of Athens under Pericles.

the inexperienced prince, who having received ten talents for the exertion of his influence, persuaded the king to give up the enterprise. The insurgents of Megara and Eretria were soon after reduced by Pericles. That accomplished general, however, perceived the necessity of consolidating the Athenian power, which so many dependants had shown a disposition to oppose. To obtain peace, he consented to resign Nisaea, Pegae, Achaea, and Trazene; to desist from all claim on Boeotia, and to permit every state, hitherto neutral, to enter into an alliance either with Athens or Sparta, according to its free preference.

Athens now enjoyed repose for six years, under the splendid administration of Pericles. Although deprived of somewhat of her external influence during the wars, after the death of Cimón, her internal greatness had been progressive, and had now reached its summit, after most rapid advances. The finest of the arts and embellishments of life had there been first developed, and then shortly appeared in their fairest perfection. Tragedy, but lately a rude ceremonial, had been elevated by Æschylus to the most heroic dignity, and softened by Sophocles into the most harmonious sweetness. Painters, who had attained the noblest parity in design, and the freest grace in outline, were employed to adorn the places of assembly with the forms of illustrious heroes. Sculpture had sprung to life at the magic touch of Phidias, and rendered every part of the city august and venerable by the breathing shapes of warriors and deities. At the head of a number of consummate artists, whom his noble works had excited to excellence, Phidias was engaged by Pericles in refining and adorning temples, of which the smallest portions still excite the utmost delight and wonder. The imagination can conceive nothing more glorious than this city—its halls and temples, all of the most beautiful materials and most exquisite workmanship—the dazzling whiteness of its buildings, relieved by trees of the freshest green—the multitude of statues, disposed with the finest taste, each limb and feature of which might hold the gazer in breathless delight—and all its far-stretching crowd of domes and columns, over-bung by a sky of the deepest blue, and connected by a noble line of fortresses with the free and sparkling ocean! Yet still more worthy of admiration were the actors on this gorgeous scene—poets almost the inventors, as well as the perfectors, of their art—orators endowed with powers to sway the passions at will—and a race of freemen, fresh from a triumph over millions! Unhappily, corruption was insensibly making way amidst this throng of noble spirits, too soon to destroy the energies which they lived to inspire. But we cannot dwell on the short-lived greatness of Athens, without a feeling of triumph that earth has known a grandeur so stately and a beauty so exquisite, even when those principles of truth and virtue were but imperfectly understood, by which alone they could be rendered lasting.

The Samian war.

The dissensions continually arising among the smaller republics of Greece offered perpetual temptations to the greater to interfere, for the purposes of extending their own domination. Thus, after six years of the truce had expired, the Athenians were induced to interfere in behalf of the Milesians, who were engaged in a war with Samos. Notwithstanding the power of Athens, the opposition made by the Samians was long, and the final triumph was not achieved

before the Athenians had sustained considerable losses. At first, Pericles, who, on this occasion, commanded in person, made an easy conquest of the island, and transferred the government from the nobles to the people. But a new and determined revolt soon after compelled him to return to the attack with increased forces. During a short absence from the investment of Samos, occasioned by false intelligence respecting the approach of the Phœnician navy, that part of his fleet which he had left before the island was destroyed by the Samians. He returned, however, with great vigour to the war, and succeeded in reducing the foe to submission, after a siege of nine months; in which, for the first time, tortoises and battering rams were employed for the reduction of hostile fortresses. (See PERICLES.)

This fiercely contested struggle served to inflame those animosities which were shortly to incite all the Grecian states to engage in a domestic warfare, in which all their glories were destined to perish. Another cause of provocation arose in a war between Corcyra and Corinth, which took place in consequence of the interference of the latter to settle disputes at Epidaurum, a colony of the former. The Corcyreans, though victorious, fearing the naval power of their foes, entreated the assistance of Athens; and the Corinthians, at the same time, sent deputies thither to oppose the request of their foes. Both parties were admitted formally to plead their cause before the people, which they did, in the elaborate orations which Thucydides has left us. In this agogostion the Corcyreans were, in some measure, successful, since they obtained a defensive alliance with Athens, and some naval succours to assist them. With these they engaged with the Corinthian fleet in a naval action, in which neither party obtained a decisive victory. A fresh squadron having arrived from Athens, intimidated the Corinthians from renewing the battle which incited by their foes; and the Athenians, not wishing further to irritate them, suffered them to retire without injury. Each party erected a trophy, and the war ended with no other result than that of increasing the feuds among the Greeks, and strengthening the feeling of hostility which numbers of them cherished against the Athenians.

Another cause of irritation afterwards arose in consequence of the intrigues of Pericles, king of Macedonia. This artful prince was desirous of inciting Corinth to war with Athens, in order that the latter state might be unable to continue its opposition to his ambitious designs against two neighbouring princes, his relatives, to whom it had extended its protection.

Fortunately for his purpose, Potidaea, a city within the borders of Macedonia, now a dependency of Athens, had originally been built by Corinthian emigrants. This town he now offered to restore to Corinth, its mother country, in expectation of the resentful such a step would occasion. Before he could execute his design, the Athenians received information respecting it, and sent to the Potidæans, requiring that they should demolish their walls, give hostages for their fidelity, and disavow their Corinthian magistrates. Having in vain attempted to obtain a remission of these orders, the Potidæans openly revolted, and were shortly after joined by the Chalcidians and Bottiæans, with whom they concluded a treaty. The Corinthians sent a considerable force, under Aristeus, to assist them; and Pericles gave them aid, by his troops and his

resused to
oppose
Athens.

councils. To oppose this combination, the Athenians despatched first Arehstratus, and afterwards Callias, with naval and military forces, who succeeded in compelling the enemy to take refuge within Potidea, and lay down before it. Aristarchus, however, found means to escape to Olynthus, and thence sent dispatches in Corinth, to entreat fresh succours, without which the city must be taken.

The Corinthians were now indefatigable in stirring up a confederacy against Athens. The people of Argina, who panted to be freed from their subjection, were most active in inflaming the resentments which the Corinthians had excited. All the foes of Athens applied eagerly to Sparta to take the lead in the general cause. These, at a public assembly convened at Lacedæmon, brought forward their charges, which the Corinthians most vehemently supported. Ambassadors from Athens, accidentally in the city, were admitted to hear and answer them. They disclaimed, however, to acknowledge the competence of the tribunal to judge the conduct of their republic, and offered to yield to the mode of decision, pointed out in cases of dispute, by the existing league. After all parties had withdrawn, warm discussions ensued among the Spartans, on the great question of peace or war; but a large majority voted for the contest, on a division. Another general assembly was, however, deemed requisite before further steps were hazarded, where the larger part, urged by the Corinthians, again declared for war. But the confederates were compelled to seek delay. An embassy was sent to Athens, under pretence of requiring the exile of all the descendants of those who were concerned in a pollution, which had been incurred by some with whom the family of Pericles was connected. This was met by a demand for a similar purgation of the sacrilegious guilt incurred by the Spartans, in the death of Pausanias and the execution of the Helots, who had been forced from the altar of Neptune. After this solemn trifling, requisitions were made by the Lacedæmonians that the Athenians should raise the siege of Potidea, open their ports to the Megareans, and renounce all dominion over the states of Greece. The Athenians, animated by the eloquent harangues of Pericles, returned for answer, that they would repeal their restrictions on the Megarean commerce, if the Peloponnesians would open their ports to them and their allies: that they would resign all authority over their dependences, if the Spartans would do the same; and that they would submit all other points in dispute to a judicial determination, according to the treaty with which the truce had been protected. These terms were, as was anticipated, refused; and all parties prepared with great earnestness for the approaching contest.

Summary
of the two
first years
of the war.

As, in the life of Pericles, we have related the chief events of the Peloponnesian wars which occurred until the death of that illustrious Athenian, we shall here only give such an outline of them as may be necessary to preserve the connection of the history. Before the principal states were ready for the battle, hostilities were commenced by an attempt of the Thebans to seize the small but heroic town of Plataea, which had always been distinguished for its fidelity to the Athenian cause. This attempt was attended with failure, and its circumstances, especially the conduct of the Plataeans in putting their prisoners to death, tended to heighten every hostile feeling, and render the contest more obstinate and more savage. The Pelopon-

nesians shortly after advanced into Attica, and laid waste its fields and villages, while the Athenians, following the councils of Pericles, persisted in declining a battle. They sent, however, a fleet to revenge the injuries committed on their soil, by devastating the coasts of Peloponnesus, which took Thorion and Argina, and secured the latter by placing in it an Athenian colony. At length Archidamus, the Spartan king, retreated, and Pericles sallied forth and plundered Megara. In the following year, the pestilence bringing confusion with it, enfeebled and distracted Athens, while the enemy again advanced to insult and defy its citizens. An expedition against Chalcis and Potidea proved disastrous, in consequence of the ravages of the plague, which destroyed the flower of the soldiery. Maddened by these calamities, the people rebelled against their great leader, set on him a line of eighty talents, and dismissed him from his officers of power. His domestic afflictions, arising from the baseness of one, and the death of both his sons, added to his public disgrace, seemed to fill up the cup of human wretchedness, for one whom a little before kings might have regarded with envy. He was, however, recalled to the helm of government for the short remainder of his days. Meanwhile, the Lacedæmonians ravaged the isle of Zacynthus, and the siege of Potidea terminated by its surrender to the Athenians. Pericles, soon after this success, expired through the influence of the disease which had rendered his house and the city desolate. The best hopes of Athens perished with him.

Unable to make any impression on Athens, or to incite its citizens to a battle, the Peloponnesians, under Archidamus, turned their arms against the Plataeans. They hoped by this course to bring some of the Athenian forces to the relief of their faithful allies, and thus to compel them to risk an engagement which hitherto they had carefully avoided. They first, however, offered to withdraw, on receiving the promise of the Plataeans to remain neutral. The citizens were desirous of accepting this offer; but, as they had pledged themselves to the cause of the Athenians, who were now protecting their wives and children, they thought it necessary to consult them on the measures which they should pursue. In answer to the application, they were desired to refuse the terms, and promised assistance. On this, they immediately, from their walls, informed the Lacedæmonians that it was out of their power to accept their proposals. Archidamus, when he heard this reply, solemnly invoked the gods to witness that the league was broken voluntarily by the citizens of Plataea, and prepared vigorously to besiege the city. Although the whole garrison consisted only of four hundred Plataeans, eighty Athenians, and a hundred and ten women to prepare food, the siege which followed the rejection of the conditions, is one of the most renowned in the annals of war. The Spartans began by surrounding the town with a palisade, and building a pile from whence they could make an assault on the fortresses. These works, for which they procured the materials from Mount Cithæron, occupied seventy days in their progress. Meanwhile the besieged threw up a frame-work from their walls, opposite to the mound, behind which they constructed a rampart of equal altitude. Finding, however, that they could not continue this work to a greater height without endangering its stability, they broke through the wall against which the mound was erected, and removed the earth which con-

stituted its foundation. For some time this scheme was undiscovered by the Lacedæmonians; but, at length, perceiving their work, though continually supplied, made no progress, they enclosed the earth in basket-work, which the enemy could not destroy. On this precaution, the Platæans undermined the work, and built an additional wall in the form of a crescent, to shield them if the outer fortification should be taken. At length the besiegers commenced the assault with battering rams, one of which placed on their mount shook the structure on the rampart, while the others were employed against various parts of the fortresses. These engines were disordered and broken by ropes let down from above, and fragments of rock hurled on them by the Platæans. Every means of attack was tried by the besiegers, and rendered futile by the courage and skill of their foes. At length the Spartans tried by stupendous masses of wood, dipped in sulphur, to set fire to the town; but a tempest of rain and thunder delivered it from this imminent peril. Finding all their efforts to take the city by force in vain, the besiegers had recourse to a blockade, and sat down before it to compel a capitulation for want of provisions. For more than eighteen months this heroic town continued to defy them. After the expiration of this period, as the garrison seemed likely soon to be destitute of provisions, Eupolipides, its governor, formed the bold design of escaping with his whole company. Only two hundred and twenty, however, persevered in the execution of the heroic plan. With these, in a dark and stormy night, he left the town, crossed the ditch, and advanced with ladders to the line of building which constituted at once the means of blockade and the place of rest for the besiegers. In the middle of the space between two turrets, six light armed soldiers mounted silently, gained the parapet unperceived, and waited for their companions. Others hastened to support them, and numbers had ascended, or were climbing, when the fall of a tile from a battlement roused the troops from their slumbers. Darkness, however, still favoured the Platæans, and their friends within the town, by a feigned attack on the fortifications, diverted the attention of the enemy. Meanwhile the party who had first gained the summit, had forced the towers on each side, and thence were able, by the discharge of missile weapons, to prevent any from approaching to obstruct the ascent of their companions. All, as they mounted, formed in regular line, and united with those on the turrets in protecting the passage until the whole had ascended, when they drew up the ladders, and descended in good order from the opposite battlements. In passing the ditch, which unfortunately was half frozen, much confusion arose, during which the enemy's guard approached them. Missile weapons, however, still availed them; they arrived in safety on the banks, and struck off instantly into the road towards Thebes, leaving the direction which the Spartans would least expect them to pursue. They judged rightly; the besiegers sought them along the Athenian road, as they perceived by the light of their line of torches. The heroic band soon changed their course, reached the passes of the mountains, and, with the loss of only one taken prisoner in the ascent, arrived in triumph at Athens. A different fate was reserved for the residue of the garrison who had declined the perilous enterprise. In the third year of the siege, reduced to the extremity of suffering by hunger, they accepted a proposal of the Lacedæmo-

nians for their surrender, on condition "that only the guilty should be punished, and even those not without trial." When, however, they came to this trial, the only question asked of them was, "whether, during the war, they had done any service to the Lacedæmonians or their allies?" Perceiving that this demand was only made in order to afford a pretext for their destruction, they urged their strong and unanswerable claims on the mercy and the justice of their foes. They alluded to their great services in the common cause against the Persian invaders, after which these temples now devoted to ruin, had been dedicated to that grateful worship which the Platæans were selected to perform. They urged that in seeking the alliance of Athens, they had only followed the councils of Sparta, who had declined receiving them into her protection, and that having once joined the Athenian cause, they could not without infamy forsake it. They reminded the Lacedæmonians of the assistance they had rendered to them when reduced to the deepest misery by the earthquake and the rebellion of their slaves. They, at least, asserted a right, if the terms of the capitulation were thus to be distorted, to be restored to the city which they had been induced to leave, that there they might choose their own means of perishing. The appeal was made in vain. The Thebans, the inexorable foes of the Platæans, incited the Spartans to the murder of their captives. The absurd question originally asked was repeated to each in succession; and as all answered it in the negative, they were, one after the other, led out to the slaughter. A deed at once so mean and so atrocious, was worthy only of the masters of the Helots, and can be accounted for alone by an education in which fierce and harsh emotions seemed to have been inspired even by their mothers!

During the protracted siege of Platæa, the war was vigorously prosecuted in other regions, both by sea and by land. The Athenians, under Xenophon, the son of Euripides, were defeated in Chalcidice; the general, and four hundred citizens slain; and the rest of the army forced to return to Athens. In Acarnania, on the other hand, the Athenian cause was crowned with success. The people of Ambracia having united in the Spartans' cause, laid plans for the conquest of Acarnania, and the reduction of Zacynthus, Cephallenia, and Naupactus, by which they would prevent the Athenian fleets from cruising in the western sea, and making incursions on the Peloponnesian shores. In the commencement of the operations for this purpose, they were joined by hands of the allies, and a number of Spartans led by Cnemus. Part of the army marching in confusion were attacked near Stratus with so great an effect, that Cnemus found it necessary to retire. Phormion, meantime, with only twenty Athenian galleys, gained a most brilliant victory over the Corinthian fleet of forty-seven ships, by an union of the most consummate skill, with the most determined valour. But finding that his adversaries, by using the utmost exertions to repair their loss, had collected a fleet of seventy-seven vessels, he sent to Athens for an addition to his squadron. Instead of directing a reinforcement immediately to join him, the rulers at Athens, now influenced by Nicias, suffered the forces intended for his aid, to make a descent on Crete in their way, where they only acquired plunder, and were detained by contrary winds. Phormion, however, while they thus delayed to join him, gained some wonderful advantages over the hostile

fleet, which was almost four times as numerous as his own. The Spartan commanders thus unsuccessful, resolved to attempt the redemption of their fame by an effort to surprise the port of Piræus itself, now left unguarded. They accordingly sailed from Nisæa with forty galleys, and would have succeeded, had not a contrary wind delayed their course, and induced them to land at Salamis. Hence, after taking spoils and a few prisoners, they returned to Nisæa, having given the Athenians a salutary lesson to keep an adequate guard for the defence of their harbour, on the safety of which their whole power rested.

During the winter, Situlæ, king of Thracæ, with whom the Athenians were in alliance, excited great alarm by his irruption with an immense army into Macedon, to wrest the throne from Perdicas, and bestow it on Philip his nephew. These movements, however, soon terminated in an accommodation, and the Thracians returned home without disturbing Greece. In the following autumn, the confederates invaded Attica; and, although they speedily retired, effected great damage on the ripening corn, and thus added to the internal distresses of Athens. That ill-fated city had now no Pericles or Cimon to direct its councils. Over these, Nicias and Cleon attained the chief influence: the first, generous, mild, of excellent disposition, and of elegant taste, but diffident and wavering; the latter, coarse, bold, and sarcastic, where eloquence chiefly swayed the lowest of the people. The decisive folly and imposing rashness of the latter, too often, as might be expected, prevailed over the calm wisdom of the former, which had firmness to support it. Great difficulties were experienced in raising supplies for the support of the war, which were obviated for a time by the expedient of raising a sum of four hundred talents by the contributions of the citizens.

While Athens was distracted by famine, disease, and misrule, news arrived that Mitylene had revolted, and that Attica was threatened with another invasion. This intelligence aroused the Athenians to put forth their utmost exertions. The rebellious city was invested; Ascepius, son of Phormion, was employed in a diversion on the Peloponnesian shores; and a fleet of a hundred galleys were manned, and sent out to intimidate the confederates. Sæthrus, an emissary from Lacedæmon, having found means to enter Mitylene, distributed arms to the lower citizens, who soon forced their generals to capitulate, on terms which placed the people at the mercy of Athens. Paches, the Athenian admiral, having taken Notium, and treacherously caused Hip-pias, the general of the Arcadian forces, to be slain, returned to Lesbos, and sent Sæthrus, and other chiefs, to Athens as prisoners. On their arrival, the people ordered the immediate execution of the Spartans; and, incited by the ferocious hurraque of Cleon, dispatched orders to Mitylene, commanding that all its males should be put to death, and its women and children reduced to slavery. The next day, however, Diodorus, the son of Encrates, succeeded in procuring a countermand to be issued, and his messengers happily arrived just in time to prevent the massacre.

Corcyra, which had been the immediate cause of the war, now became the scene of most tragical events, occasioned by a contest between the aristocratic party, who yet favoured Loricth, and the democratic body, who were devoted to the Athenians. The nobles, at first, succeeded in procuring a declaration of neutrality;

but venturing to accuse Pitbias, the leader of the opposite cause, they failed, and five of them became in their turns objects of prosecution, on charges of having cut stakes in the sacred groves, which subjected them to severe pecuniary fines. Unable to pay the penalty, they fled, and Pitbias, now master of the council, proposed an alliance, offensive and defensive, with Athens. Rendered desperate by this change in affairs, the five nobles left the altars where they had taken refuge, rushed with arms into the place of public deliberation, and, taking advantage of the surprise of the assembly, murdered Pitbias and sixty of his associates. Sallying from these murders into the city, they re-established their power over citizens petrified with fear and wonder. But a civil war shortly ensued, in which the popular party were joined by the slaves, and the nobles by auxiliaries from Epirus. The hostile hands came to a terrible engagement in the ports and the city, in which the women, inspired with the general fury, hurled down tiles and stones from the tops of houses on their enemies. In this combat, the aristocratic party was defeated, and only escaped to the port and arsenal, which they held, by setting fire to the buildings, which spread with tremendous fury. The next morning they were deserted by their allies, and saw no hope of being delivered from the hands of their infuriated countrymen. While affairs were in this condition, Nicostatus, commander of the Athenian fleet at Næpactus, arrived; and, while he restored the democratic government with great moderation and address, procured for the despairing nobles an indemnity, and the liberty of enjoying their rights as citizens. Fresh disturbances, however, arose from the distrust of the aristocratic party, and the resentment of the suspicion by the popular leaders. Four hundred of the oligarchical faction took refuge in the temple of Juno, where they quitted on the notice of the citizens to spare them, and retired to a neighbouring island; but soon after a Peloponnesian fleet, under Alcidas, appeared, and the supplicants, to prevent their co-operation, were removed to the sanctuary which they had quitted. An engagement ensued between this armament and the inferior squadrons of Nicostatus and the Corecyæns, in which the former gained an advantage, though, by the skill of the Athenian commander, it was prevented from becoming decisive. Alcidas, destitute of energy to improve his success, merely ravaged the fields of Leucimæ; and, on the approach of a fresh Athenian fleet, under Eurymedon, retreated. This commander having arrived, and Nicostatus having left the station for Næpactus, the democratic party at Corcyra gave vent to their fierce desires of vengeance. They caused their fleet to pass from one of their ports to the other, and threw into the sea all the crew who favoured the oligarchical faction. They then commenced a dreadful massacre in the city. For seven days they were employed in searching for and destroying their foes. The supplicants only who had taken residence in the temples, protracted a miserable existence a little longer. Some were induced to leave the sanctuaries by hunger and promises of a trial; but they were immediately condemned and slain. Others saw a wall built round their place of refuge, to immerse them alive living in the grave. Those who remained killed each other, or hung themselves in the sacred groves, to escape the lingering horrors which threatened them. Meanwhile, Eurymedon lay with his fleet

Battles of
Demosthe-
nes in
the west.

in the harbour, the quiet and guilty spectator of the accursed scene. Even yet the miseries of Corcyra were not ended. Five hundred of the aristocratical party, who escaped, harassed it from the opposite coasts; and, at length, invaded its fields, fortified a castle among the mountains, and thence making incursions on the country, made it experience all the miseries of a ferocious domestic warfare.

In the sixth year of the war the affairs of the Athenians seemed at first to decline. The pestilence, after two years' intermission, again ravaged their city. The Peloponnesians, under Agis, son of Archidamus, who had just before died, prepared to invade their territories, but were deterred by repeated shocks of an earthquake. After some unimportant operations under Nicias, Hippocrates, and Eurymedon, Demosthenes, with a fleet of thirty ships, was sent to Naupactus. After gaining some advantages in the Leucadian territory, he was induced, instead of proceeding to invest its capital, to employ his force on an expedition against the Ætolians, by whom he was completely defeated near Ægium. This misfortune was followed by the declaration of the Orgilian Locrians for the Spartan cause. But Demosthenes, who, after his defeat, had not ventured to return to Athens, soon retrieved his ill success by procuring a force from Acarnania and Amphiloehia, and putting to rout the army of the Amphibacians, commanded by Spartan leaders. Two of the hostile generals, Eurylochus and Macarius, fell in the battle. The conquering Athenian pursued his advantage, surprised detachments of the Amphibacians near Olyon, who were ignorant of the previous defeat, and cut them off with tremendous slaughter. After thus restoring the Athenian power in the west, the victorious general returned in triumph to Athens.

Transac-
tions and
defence of
Pylus.

The Athenians now began to project the conquest of Sicily, and sent forty ships thither with Eurymedon and Sophocles, desiring them, in their course to relieve the democratic party in Corcyra, who were now hard pressed by their domestic foes. With these they permitted Demosthenes to sail, without any nominal office, but with authority to exercise a control over the proceedings. He was anxious to execute a plan for fortifying Pylus, a deserted port of Messenia, and fixing there a garrison of Messenians, from Naupactus. They refused, however, to delay their progress, but were soon compelled, by a storm, to take refuge in the harbour. While they remained here, the soldiers, for their amusement, threw up fortifications, which they had refused to erect at the request of Demosthenes. As soon as the work was completed, he determined to remain there, with five galleys, which were allowed him for his defence. Here he was soon besieged by the Lacedæmonians, whom he gallantly repulsed, though they were commanded by the celebrated Brasidas. Thus baffled, the Spartans turned the siege of Pylus into a blockade, and regularly invested it. Meanwhile Eurymedon arrived to relieve it, and entering the harbour defeated the fleet of the besiegers. At this time 420 Spartans, with Helots, who had been chosen by lot from the troops, were in possession of Sphacteria, an island at the mouth of the harbour. Those in their turn, were now surrounded by naval forces, from which there appeared no hope of escaping. Alarmed at the danger of some of the most illustrious of the citizens, the magistrates of Sparta came to the camp, and per-

ceiving that no other hope of their deliverance was left, opened negotiations with the Athenians. A truce was granted by the generals, but not ratified by the Athenian people, who were justifying to reject the accommodation by the boisterous eloquence of Cleon. An Nicias weakly yielded to this demagogue, he was sent to join the forces of Pylus. Aided, however, with Demosthenes, he was, on this occasion, successful. After a most brave resistance, the island of Sphacteria was taken, and all the Spartans who survived made prisoners. The commanders, except Eurymedon, who proceeded to Corcyra, returned to Athens with the captives, who ordered them to be kept in chains, with a threat that they should be put to death in case of an invasion of Attica by their countrymen.

The Athenian ascendancy continued for some time rapidly to increase. Nicias made a descent on the shores of Corinth, and returned with his spoils. Anæstorium was taken by the Athenian force at Naupactus, and the inhabitants expelled from their possessions. In the following spring, the island of Cythera, governed by Spartan magistrates, and defended by Spartan soldiers, yielded to Anticles and Nicias. Thyrea, to which the remaining Æginetians had retired, was burnt, great part of its inhabitants slain, and the survivors, by a ferocious decree of the people, led out to slaughter. Meanwhile the wars in Corcyra were terminated with a catastrophe worthy of their origin. Eurymedon and Sophocles surrounded the remaining aristocrats, and compelled them to surrender. The prisoners were placed, for a time, in the island of Pylus, on condition that if any escaped, the whole should forfeit their claim to mercy. Thirsting for their blood, the democratic party persuaded them to attempt an escape, by which they broke the terms of capitulation, and subjected themselves to the vengeance of the Athenian commanders. They were then delivered to their infamous deceivers, who, having first shut them up in one edifice, called on them to pass from it, one by one, through their ranks, and stabbed them as they passed, each selecting the object of his peculiar hatred for his victim. After sixty had been thus butchered, the rest closed the entrance of the house, and refused to leave it. Their foes then unroofed the building, and poured missile weapons on them from above, while they remained totally defenceless. Those who endured the misery of surviving this work of horror, killed themselves during the night; so that, in the morning, when the murderers entered the scene of their expected revenge they found only the lifeless bodies of all their captives, whom death had released from their fury.

The Spartan affairs now seemed reduced to a state of hopelessness, and the cause of Athens to be, in all parts, triumphant. The hopes of Sparta, however, were soon revived by the courage, spirit, and virtue of Brasidas, who appears to have been endowed with the virtues without the vices peculiar to the Lacedæmonian character. He had already distinguished himself rather by merit than fortune, at the siege of Pylus. By his valour and policy he now procured the return of Megara to the alliance of Sparta, after it had revolted to the Athenians. He next, with a band of scarcely 5,000 men, marched into Thrace and Macedonia, procuring by his skill and power of conciliation, a safe passage through the hostile regions of Thessaly. By his policy he procured the accession of Arribæus, king of Lyncestis, to the Spartan al-

Successes
of the
Athenians.

Termina-
tion of the
contest in
Corcyra.

The Spartan
affairs im-
proved by
Brasidas.

History. Next, in conjunction with Perdiccas, he marched to Acanthus, and being singly admitted into the city, won the people by his eloquence, to revolt from Athens, and form a treaty with him. Shortly after, he procured the citizens of Stageirus to declare for the Spartans. The important city of Amphipolis, commanding a rich territory and a noble river, was surrendered to him on his promise to respect the properties of the people, and allow such as chose to retire, five days for their departure. Thucydides, the historian, came too late to relieve this port, but succeeded in preventing the seizure of Elion, a port at the mouth of the river. Notwithstanding the great success of Brasidas, he was regarded with so much envy at Sparta, that the government there refused his application for an increase of his forces. He still, however, continued his exertions with unabated vigour. All the cities of Acte, except Sane and Diium, yielded to his arms. He took Torone, one of the chief Chalcidian sea-ports, and became master of the neighbouring fortress of Leceythus, to which the citizens and such of the Athenians as were with them had resorted. Meanwhile, the Athenians, attempting to revolutionize Bœotia, were completely defeated by the people of that territory, at Delium. These fluctuations of fortune inclined the Athenians to pacific measures, and they agreed to a truce for a year, on the terms that each party should keep what it had acquired, and that the dominion over the seas should be conceded to Athens.

This arrangement did not completely suspend the hostilities of the two rival republics. Before it was known in Thrace, Brasidas had succeeded in disconnecting Scione from the Athenian cause; on which, the citizens of Athens, by the instigation of Cleon, passed a decree equally cruel and impolitic, that the town should be invested, and all its inhabitants destroyed. The effect of this savage denunciation was to provoke the people of Mende, a neighbouring city, in the peninsula of Pallene, to enter into an alliance with the Spartan general. Having removed the families of the citizens of both places to Olynthus, in order to protect them from the vengeance of Athens, Brasidas went to assist Perdiccas, who was now at war with the prince of Lyncestis. In a joint invasion of the territories of the latter chief, the soldiers of the king of Macedonia, on the defection of the Illyrians, fled, and he followed them without communicating his design to his Lacedæmonian allies. Thus deserted, Brasidas was compelled to retire; but conducted his retreat in so masterly a manner, that it became almost a victory. Unhappily, the irritation of his troops at the behaviour of Perdiccas, could not be restrained within prudent boundaries. They committed aggressions, and heaped insults on the Macedonians, which induced the prince to break his alliance with Sparta, and renew his engagements with Athens. In consequence of his influence, Brasidas and his army were refused permission to pass homeward through Thessaly.

Meanwhile Cleon, by his ranc and boisterous eloquence, obtained the chief direction of affairs at Athens. By his advice, his countrymen added another to their numerous acts of injustice. He imputed the reverse of fortune which their arms had recently experienced to the vengeance of the gods, on account of a deficiency in purifying the consecrated Isle of Delos, and urged them to expel thence all its unoffending inhabitants, and to appease heaven by solemn lustrations. The pious

design was executed; and the Delians, forced from their homes and possessions, found an asylum on the Æolian coast, through the charity of the Persian satrap Pharnaces. Cleon was now, however, attacked by a most potent weapon, directed by a masterly hand. Aristophanes dared to hold him up to ridicule, in the play of *The Knights*; in which, from the fears of the actors, the poet himself was obliged to perform the character intended for Cleon. The hazardous attempt was completely successful. Popular odium immediately fell on the object of this most caustic satire. His foes took advantage of the common feeling, to prefer a charge against him of secreting the public treasures, upon which he was convicted, and fined five talents. But the feebleness of his public opponent Nicias, and his own singular boldness, soon restored him to his wonted power. He caused all proposals tending to peace to be rejected, and a formidable expedition to be sent into Thrace, of which he himself should take the command. He accordingly sailed, with the flower of the Athenian youth, for the scene of action. On his first arrival, he succeeded, during the absence of Brasidas, in taking Torone by surprise. But he was far indeed from possessing ability to oppose the Spartan commander. The skill of Brasidas compelled him reluctantly to engage in a general battle near Amphipolis, in which he was defeated and slain. The victor fell mortally wounded in the action, and only lived to hear that his army was victorious. His death was not only a great disaster to Sparta, but also to all the Grecian republics. His personal bravery was only equalled by his skill and wisdom. The neglect of his country had no power even to chill his energies for her welfare. His humanity towards prisoners affords a refreshing contrast to the usual conduct of his own countrymen, and of their foes. All the Peloponnesian troops with their allies, under arms, attended his funeral. He was buried in Amphipolis, where the place of his sepulchre was ever regarded as sacred. A monument was erected over his ashes, and solemn honours were decreed to be every year paid to his memory.

The chief obstacle to peace was removed by the death of Cleon. Sparta was inclined to repose, by the loss of the ablest of her generals, and Athens by a series of reverses. Nicias, now left in possession of the chief influence among the Athenians, had the satisfaction of performing a task, in every way fitted to his disposition, in concluding a general treaty. By this arrangement, Sparta resigned Amphipolis without conditions, agreed that Acanthus, Stageirus, Scolus, Argilus, Sinctolus, and Olynthus, should be suffered to join in the Athenian league, and agreed to procure the restoration of Panæcius, which had been taken by the Bœotians. Athens consented to restore Pylus and the surrounding country, Cythera, Methone, Pteleum, and Atalanti to her rival. All prisoners were to be set at liberty without ransom. The garrison of Scione was to leave its fortress, and the people to be left to the mercy of the Athenians. Against these terms the Lacedæmonians, Corinthians, Eleans, and Megarenses protested, but they met with the concurrence of a majority of the allies of Sparta. The treaty was confirmed by solemn sacrifices, at which fifteen Lacedæmonians, and seventeen Athenians assisted. Columns were erected at Olympia, at Delphi, at the isthmus, in the citadel of Athens, and in the Amyclæum of Sparta, as monuments and pledges of the apparently felicitous union.

Cleon ad-
vises the
expulsion
of the Del-
ians.

History. But the treaty thus concluded was not likely to be lasting. While it gave satisfaction to the two great contending powers, it left the smaller states occasion for murmuring. The Corinthians, who had originally fomented the war, were indignant that it should be brought to such a conclusion. Their deputies, with others from the states of the late confederacy, who were still at Sparta, remonstrated against the conditions. These, flinching they had no hopes of altering the disposition of the Lacedæmonians, determined on soliciting the aid of Argos, which had once claimed the precedence in Greece by ancient privilege, and had been increasing its power and resources, in a state of peaceful neutrality, during the late contentions. The people of Elis and Mantinea, having each cause of complaint against Lacedæmon, also brought the Argives to grant them their alliance. They found abundant disposition in Argos to listen to their proposals. A league was speedily formed, in which Argos, Corinth, Mantinea, and Elis were the leading members. Meanwhile, jealousies were excited between Athens and Sparta, in consequence of the inability of the latter to fulfil the stipulations of the treaty. The garrison, after some hesitation, was withdrawn from Amphipolis; but the people of that city protested against the transfer. The Boeotians declined to restore Panactum, and when they, at length, agreed to evacuate its fortresses, destroyed them, and left them in ruins. Athens, on the other hand, insisted on holding Pylos, as a pledge for the performance of the still unexecuted conditions. At the earnest request of the Spartans, however, they consented to withdraw the Helots and Messenians from it, who were necessarily and peculiarly offensive to their neighbours, and suffered the Athenians alone to possess it. In taking possession of Scione, the citizens of Athens once more stained their reputations with a deed of horror, by sentencing all the men surrendered to their mercy, to the sword, and reducing women and children to the condition of slaves. On the other hand, conceiving that they had incurred the displeasure of heaven, by the expulsion of the Delians, they restored them all to their possessions.

Athenian confederacy. The new confederacy, of which Argos was at the head, opened up small field for intrigues throughout Greece. A change of administration at Sparta, by which the power was thrown into the hands of men favourable to the Corinthians and the other seceders, had nearly given the whole weight to the Lacedæmonians, and placed them at the head of their old confederates, with the important addition of the Argives. Although the refusal of the Boeotians, to conclude an alliance with Corinth, occasioned a delay in the prosecution of the scheme, it seemed approaching its completion, by the treaties which both Boeotia and Argos made with Sparta. But its accomplishment, which would have necessarily been destructive to the Athenian preponderance, was prevented by a great stroke of policy. The author of this important measure was Alcibiades, who had just appeared among the candidates for political renown and influence at Athens. (See *ALCIBIADES*.) He perceived that the Argives had altogether mistaken the real state of parties in making their hasty alliance with Lacedæmon, and that they might easily be awakened to a perception of their error. He knew that the prejudices of Argos must be more congenial with the Athenian, and the Lacedæmonian cause, because their government was not aristocratical, but popular, and they yet retained the memory

of their old friendship and connection with Athens. He had personal friends at Argos, whom he so effectually employed to promote his design, that deputies from that city, as well as from its allies, Mantinea and Elis, shortly arrived in Attica to negotiate a general league. Alarmed at this circumstance, the Lacedæmonians sent an embassy to Athens, to remonstrate against the measure, which would place their rival precisely in the situation they had aspired to occupy. The ambassadors were entrusted with full powers, and declared their commission to be thus extensive in their interview with the council. Alcibiades persuaded them to contradict themselves in the general assembly of the people, and to affirm that their instructions only allowed them to agree to certain specific conditions. He then turned against them the treachery he had prompted, and thus threw discredit on their mission, and the national character of their masters. Although an embassy was sent to Lacedæmon, on the advice of Nicias, in which that pacific negotiator was included, it returned without success, as the terms demanded by Athens could not be complied with by her rival. Alcibiades then succeeded in his utmost wish; an alliance was concluded with Argos and Elis for a hundred years; and Athens became the head of a confederacy, in which the leading states of the Peloponnesus itself were included.

This, as might have been expected, did not, however, occasion the renewal of direct hostilities between Athens and Sparta. The treaty between these states continued nominally in force, although, by both parties, it had been virtually broken. But war between the Lacedæmonians and the Argives soon arose in consequence of the recent league. A dispute between the people of Elis and Sparta, contributed to heighten the animosities which already existed. The people of Lepreum having refused to pay the accustomed tribute to the Eleans, appealed to Sparta, and were declared by the latter free, and protected by a Lacedæmonian force. This conduct the Eleans had never forgiven. They now, as presiding over the Olympian festival, accused the Spartans of adopting hostile proceedings after the conclusion of the armistice, and procured them to be entered in a fine of two thousand minæ. The Lacedæmonians refused either to pay the sum, or to restore Lepreum; and when the Eleans excluded them from partaking in the solemn games, of which they were the directors. A Spartan, however, named Leichas, being desirous of contending in the chariot race, caused a chariot to be entered on the lists, as belonging to the Boeotians, and, under this disguise, obtained one of the prizes. On this success, his vanity would not allow him to keep the secret, and he stepped forward to crown the victorious driver with a chaplet. His boldness was checked by a blow from one of the officers, who, in the execution of their duty, knew no distinction of persons. This insult passed unrevenged at the time, but it was not of a nature to be forgotten. Sparta, thus incited, was, at length, aroused to open war by the oppression of her faithful allies, the Epidaureans, whom the Argives, on the most frivolous pretences, had invaded. Her rulers felt the necessity of putting forth all the strength which they, or their allies, could bring into action. Agis, with a considerable force of citizens and Helots, took the field about the middle of the summer. He was joined by the Tegeans, by a large

force of Boeotians, by considerable bands from Corinth, and by a number of recruits from Sicyon, Epidaurus, Megara, and Pallene. The Argives were supported by the troops of their allies, the people of Mantinea and Elis.

The movements of Agis brought his adversaries into a situation, in which it appeared impossible that they should escape destruction. But from this peril, they were extricated by the bold determination of Thamyllus, and Alciphon, Argives of high rank, who went unattended to the tent of the Spartan king, and pledged themselves to induce their countrymen to join in the Spartan alliance. They succeeded in their mission; a truce for four months was proclaimed, and Agis retreated. So little, however, were the Argives aware of their danger, and so insensible were they consequently to the value of their deliverance, that they accused Thamyllus of treason, in having deprived them of a certain conquest over their foes. They confiscated his estate, and only spared his life from reverence for an altar, to which he had fled for protection. Soon after the retreat of the Spartans, a thousand Athenian infantry, and three hundred cavalry, under the command of Nicostratus and Laches, arrived at Argos. The aristocratic party would have dismissed them, but the partisans of democracy, urged by Alcibiades, and supported by the allies of Elis and Mantinea, prevailed in retaining them, and in procuring the recommencement of the war.

The conduct of Agis in permitting the foe to escape him, naturally drew on him the censures of the Spartans. They were on the point of condemning him to the payment of a heavy fine, and the destruction of his house, when he entreated the opportunity of effacing the stain cast on him, by agio leading the army. His request was granted, and he took the command; but, with the aid of ten councillors, without whose concurrence he was not to lead his troops beyond the Spartan boundaries. Meanwhile the allied forces moved against Orchomenus, where the hostages from the Arcadian cities of undoubted fidelity had been placed, took the city, and procured its union with their cause.

The Eleans now urged their march to recover Lepreum, but they preferred attempting to gain possession of Tegæa, which so offended the soldiers sent from Elis that they peaceably retired to their own city. Tegæa was soon protected by a force which rendered the design of the allies abortive, and the Spartan army advanced into the territory of the Mantinians.
